MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Every week that passes gives us less to say about the Kaffir Circus. The state of the market forbids description. Prices sink day by day, a trifle at a time, until the monotonous fall becomes quite heartrending. There is talk of liquidation from this quarter, and that of bulls being squeezed out, and so on, but we cannot trace selling of an important kind. Really large offerings would knock the bottom completely out of the market. Realising undoubtedly goes on in a small way, but it is more the total absence of support that causes the constant sag. The public does absolutely nothing, and the big Kaffir houses are too bunged up with paper of all sorts, good, bad, and indifferent, to be in a position to give a lead. We can see no hope for this market. It has had its day. The Kaffir leaders have cleaned out the public and left them sick at heart, with no means to begin the play again, even if they had the inclination. With the exception of one or two days the trend of the market has been persistently downward for a fortnight at least. Almost the only incident of the past week was the sudden spurt in Brakpans and of the parent company's shares the Transvaal Coal Trust. No one knew the reason when the rise occurred, but next day a cable came to the effect that the reef had been intersected by the shaft at 3,100 ft. When the shaft is through samples and assays will be taken.

Land and Finance shares were just as dull and neglected as gold descriptions, but Diamonds were not a very grand market. Some of the Bulls are evidently sick of waiting for the conclusion of the compact between De Beers and the Premier, and as Paris threw over a few De Beers the price experienced a considerable fall, going well below 21. The next dividend announcement is not due until December, but in view of the Jagers reduction the market is already speaking of a probable drop in the distribution. Premiers displayed some resistance to the dulness elsewhere, but the smaller priced things were weak and lower. Tanganyikas continue to absorb all the attention in the Rhodesian corner. They have moved about somewhat wildly, but as a rule showed a distinct inclination to collapse. The call just due on that debenture issue is the latest reason advanced for the miserable condition of the market. It amounted to £1 and was due on Tuesday, but in view of the fact that these £8 debentures, with £4 paid, stand at a heavy discount, it was said that one large holder had refused to pay the call, contending that, unlike shares, there was no obligation to do so. That raises a nice legal point, but it is not probable that many people will go to such an extreme length, however dismal the prospect. There was said to be some buying of Eldorados, but we could not trace it.

Fortunately for holders, West Africans were very rarely mentioned, but the weakness of Australasian things generally continues, the broken Hill group in particular remaining flat, although the fall in the price of lead has not been so very serious. Kalgurlis had a bad fall for no particular reason that could be discovered, but Ivanhoes pulled up on good developments. New Zealand shares were somewhat irregular, and anyone who bought Zincs on Monday had lost money by the end of the week.

Copper and copper shares moved so persistently one way that the market can be dismissed in a very few sentences. Another cut took place in the metal in America, and here the tendency was always adverse. The dividend paid by the United Metals Selling Company was maintained, but the Anaconda distribution was reduced 50 cents to $1¼ and the Amalgamated dividend will also be lower for a certainty. Anacondas braced up a trifle when the dividend was announced because it was certainly no worse than had been expected, but Tintos and all other copper shares went back almost every day, the first-named going below 69 at one time. Mount Morleys were helped downwards by the announcement that the usual monthly dividends will be suspended pending the recovery of the metal market and the completion of the railway.

United African Explorations.—By some means or other the directors of this company managed to produce a "balance of shares and investments account" of £46,083 during the year to June 30 last, being, we suppose, the profit on changes in the investments. Another £16,150 came in from dividend and interest, making £62,233, and after meeting all charges £39,127 remains. The whole of the investments have been valued at cost or at the price at which they could have been sold on the market, whichever was the lower, and in accordance with this principle the profit of £19,309 by valuation of shares for which credit was taken last year has now been written back. This is deducted from the profit named, but £6,188 was brought forward, and the sum available is £46,006. Already an interim dividend of 10 per cent. has been paid, and the directors now propose a final 5 per cent. and a bonus of the same amount, making 20 per cent. in all, transferring £20,000 to the reserve fund and carrying forward £6,006. Investments have been spread as much as possible, and the largest amount invested in any one security is slightly in excess of £20,000. In view of the recent performances of the shares it is interesting to note that the holding in the Tanganyika Concessions has been largely reduced at a fair profit on the original cost. The company is largely interested in the Esperanza Copper and Sulphur Company, the reports from which are said to be excellent. Great confidence in the company is expressed and the directors expect that further substantial profits will be derived from this source. Other business is on hand which it is believed will prove profitable. Altogether the investments are valued in the balance-sheet at £62,206, which seems a low figure, and there are loans on security of £93,141, of which £64,000 has been repaid since the accounts were made up, and cash £10,832.

West Roodepoort Deep.—This unfortunate Rand mining company continues in a state of suspended animation, the directors once more reporting that no work has been done at the mine, which remains in charge of a caretaker. The machinery and buildings have been kept in good order and repair. Expenditure has been kept down to the lowest possible level, and no fees have been drawn by the directors. Total general expenditure was £2,413, but £296 was received on account of interest and sundry revenue, leaving the outgo at £2,117. This increases the sundry expenditure to the nice little sum of £48,427. With the exception of an intimation that some plant and machinery has been sold for £3,824, the report covering the twelve months to June 30 contains no further information, but the chairman's speech at the meeting held in Johannesburg on August 21, although brief, was decidedly to the point. A shareholder seems to have written asking if there was any chance of a reconstruction or of the mine being worked, and the chairman answered as follows: "The replies to these queries are that your company cannot resume work until it is placed in possession of further funds, and the question of providing further funds at the present time is one which presents insurmountable difficulties. It is unnecessary for me to refer at length to the causes which have contributed to the existing state of affairs, as you are all aware of the fact that at the present time investors are not ready to put further capital into companies which have not got beyond the development stage." The shares have stood at a good premium in their time, but there is no market for them now.

Hercules Company.—Some comical changes took place in the directorate of this Rand company during the twelve months to June 30. First of all Mr. R. W. Schumacher and Mr. W. H. Lilienfeld resigned their seats and Messrs. H. C. Boyd and A. G. Gill were elected to fill the vacancies. Later on Mr. Boyd beats a retreat and Mr. Schumacher came up smiling for re-election. All this chopping and changing was duly confirmed at the recent meeting held in Jo'burg—or should it be "Joe" burg?—Sir George Farrar and R. W. Schumacher, who retired in rotation, being at the same time retained as a matter of course. The company fairly went the pace in the matter of shaft-sinking, getting the hole down from 1,487 to 3,018 ft., representing a monthly average of 127·6 ft. sunk at a cost per foot of £20 6s 4d. The total cost of sinking the shaft to its present depth—namely, 3,018 ft. was £86,719, or an average cost per foot for the total period of £28 14s. 8d. Unfortunately, the company blew all its money in doing this work and on June 30 came to a dead stop. There is still a bit of money in hand, roughly £12,000, after meeting small liabilities, and this will be used to pay licences, &c., until "such time as it is opportune to raise additional funds to continue the development and equipment of the property." The consulting engineer estimates that the reef should be intersected at 4,100 ft., so that a good deal still remains to be done. The negotiations referred to in the last annual report with the Angelo Deep and the Cinderella Deep Companies for the connection of this company's main shaft with those on their properties were not concluded when work was discontinued. Up to the date the equipment of the property, which has a balance-sheet value of £138,880, has cost £50,001, and apart from shaft-sinking, which appears in the accounts at £87,477 and in the engineer's report at £86,719.

Read's Drift Land Company.—The chairman of this company has just come back from South Africa after a stay on the property extending over six months, and is anxious to acquaint shareholders with particulars of the work accomplished during this period, to which end a full statement will be made at the annual meeting called for October 2. As a preliminary, a few details are afforded in the report for the year ended December 31 last, which has just been issued. To put the position and prospects as briefly as possible, it may be said that systematic prospecting operations have failed to reveal any diamondiferous ground or mineral deposits of any significance, and it is intended to undertake agricultural operations, particularly ostrich farming and stock raising, on an extensive scale, the chairman believing that with proper local management and a judicious expenditure the company will be brought to the profit-earning stage. The adoption of this proposal would necessitate the irrigation of a portion of the estate, for which purpose 350 acres of suitable land in the farm Katlani have been selected. In order to establish ostrich farming on a satisfactory basis and to carry out various other schemes for the development of the property, agriculturally and otherwise, the board proposes to augment the amount of working capital still available, which amounts to almost £11,000, by means of an issue of debentures, particulars of which will be submitted to the meeting. Expenditure was evidently kept down to the lowest possible limits during the past year, the outlay in South Africa and London being £884, against which there was a revenue of £814, so that the debit carried forward is increased by £70 to £9,573. Negotiations are proceeding for the sale of certain of the farms which are not considered essential to the success of the enterprise, the company in all cases retaining mineral rights.

Broken Hill Proprietary.—This company's operations for the half-year ended May 31 were attended with considerable success, the continuation of high metal values resulting in the satisfactory profit of £308,238 as against £314,285 for the previous six months, notwithstanding an increase in wages and other heavy charges which have come into operation since November last. The advance in wages was equal to about 2s. 2d. per ton, so that the profit per ton of £1 0s. 9d. against £1 1s. 1d. must be considered good. Actual gross profit for the half-year amounted to £331,125, from which £22,887 has been allowed for depreciation. Two dividends of 1s. 6d. together with two bonuses of 1s., or 5s. in all, have been paid, absorbing £240,000, and after making due provision for all outstanding liabilities the company has liquid assets in cash bullion and other convertible stocks representing a total value of £686,420 inclusive of the reserve and insurance funds which now aggregate £260,000. The total output of silver was 2,695,800 ozs., inclusive of the contents of the zinc concentrates sold as against 2,413,006 ozs. for the preceding six months, the average nett price realised being 2s. 9 45-64d. per oz. Soft lead produced was 29,427 tons against 29,383 tons, while the nett price obtained gave an average of £18 6s. 5d. per ton compared with £16 5s. 5d. Notwithstanding the fact that the fire in Block 11 still continues to smoulder it has in no way interfered with underground operations, and the water curtains are said to have acted most satisfactorily in entirely preventing any extension beyond the limits to which the fire is confined. Considerable development work has been carried out in the period under review, both as to driving on the lode and in prospecting with diamond drills. The opening up of ore bodies at the lower levels is estimated to have added 245,000 tons of ore to the reserves, and as the ore extracted was 290,000 tons the total reserve is a little less than at the end of the previous period. Cost of development work during the half-year was £25,621 or equal to 1s. 9d. per ton of ore, while extra expenditure necessitated on account of the fire was £4,690 or 4d. per ton of ore extracted. The concentration plant has done satisfactory work, the recovery of metals showing a slight increase over the previous period. Alterations to the Zinc Corporation plant have been carried out during the six months in the direction of deepening the pans, and as a result an improved concentrate has been obtained. An enlargement of the sulphuric acid plant will be put in hand. In consequence of the slimes drying more slowly in the winter months the tonnage available for treatment at the sinking works will be reduced during the current half-year and the weekly output of lead and silver will be affected for about two months.

Central Chili Copper.—High prices ruled for copper during the period covered by this company's accounts, the year to December 31, but coal and coke and practically all other commodities required for mining enterprise were also dear. The company has been troubled with labour difficulties, and the introduction of 300 Spanish miners did not prove a success, because a good many of the men deserted to the nitrate fields, where they get better pay. The Chilian Government is looking after the question, and will probably recruit and bring in miners at their own expense. In the past year just over 43,000 tons of ore were smelted for a return of regulus containing 1,857 tons of fine copper. The gold and silver recovered were valued at £7,118. As in previous years a large proportion of the copper produced was derived from ores purchased from neighbouring mines at prices varying in proportion to the London prices for standard copper. The company's own properties yielded 19,000 tons of ore of 3.86 per cent. copper, while there were purchased 24,200 tons of ore containing 7.42 per cent. copper. Revenue under all heads was £192,553, and the outgo £160,086 leaving £32,467. Trifles came in for interest, commission, and transfer fees, making £32,883, but there were further deductions on account of administration, depreciation, &c., so that the actual nett balance was £24,913. From that is deducted the debit brought forward of £711, a credit of £24,202 being carried to the new account. The compressor and machine drilling equipment has just been finished and put into operation. This is the first employment on the company's properties, and it is expected the rapid development of the Panulallo mine will be thereby greatly facilitated. The extensions of the smelting plant are well in hand, the whole of the machinery for this purpose having arrived on the mine and the general manager advises that the new water jacket blast furnace will be in operation in October. The contract with the American Metal Company of New York under which the company disposes of its production has recently been modified by extending its scope to include Chili bars as well as regulus and Bessemer bars. It is anticipated that the outstanding balance of the debentures amounting to £8,076 will be paid off this year, thus leaving the company free from encumbrance and in a position to apply its nett earnings to the payment of regular dividends.

Foldal Copper and Sulphur.—This company's report covers the period from incorporation to February 28 last, and states that the time has been occupied mainly in carrying out the initial equipment and development of the property. Through the energetic action of the contractors favoured by an exceptionally mild winter the ropeway, which is 21 miles in length, was completed well up to time, and has worked very satisfactorily. It is guaranteed to convey 120,000 tons a year, working day shift alone. The harnessing of the waterfall and the erection of the electric plant have been carried out, and the installation is working without a hitch. On account of the requirements of the buyers of the class of ore produced at the mine, who are mostly manufacturers of sulphuric acid, it is necessary to arrange contracts a long time ahead, and these have been fixed up for almost the whole production of 1907, a considerable part of 1908 and a portion of the production of the following two or three years. Since February 28 the ore produced has been 31,000 tons and the quantity shipped 27,000 tons, while the quality is fully up to the prospectus statements. A considerable amount of unexpected outlay has had to be met, and the directors some time ago realised that the working capital which was guaranteed and paid up was not sufficient, and they therefore issued a further 10,000 of the preferred shares at par, giving the option to the subscribers to call up to 30,000 of the remaining preferred shares at any time before February 28, 1909, at par. Capital expenditure, apart from the purchase price of the properties, £224,000, has been £80,206, and formation expenses amounted to the pretty considerable sum of £19,995.

North Cerro Muriano Copper Mines.—This company's report covers a period of nearly 16 months, and it is encouraging to hear that good progress has been made with the development of the mine, the total measurement of the shaft-sinking, driving, and cross-cutting accomplished up to June 30 being 2,873 ft. These operations have been concentrated upon four of the lodes traced on the surface and three shoots of ore described by the superintendent as of payable quality have been discovered at various depths. Capital called up on the 120,000 subscribed shares amounted to 11s. per share or £66,000, of which £65,850 had been received at June 30 last. Since that date a further 3s. per share, payable on the 3rd inst., has been called up. On the transfer of the property to the company the cash purchase consideration of £29,500 was paid and 14,000 shares forming part of the purchase consideration were allotted as fully paid. The balance of 116,000 shares are due to be allotted as fully paid to the Cerro Muriano Mines, Limited, the principal vendors, when called for. The latter concern has the right to borrow £20,000 at 6 per cent. from the North company, and while no payment has yet been made under this arrangement it is anticipated that an advance will shortly be called for.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

The Grand Trunk of Canada Railway.

The gross receipts of this large system of railways rose by £359,578 in the June half-year, as already stated in summary, but of this only about £58,000 remained to be added to the nett income because of an increase of £302,000 in the working expenses. The gross receipts, in other words, came to £3,381,260 and expenses to £2,486,544, so that the nett revenue from traffic was £894,716 against £836,860 in the corresponding half-year, the ratio of expenses to receipts having been 73.54 per cent., as compared with 72.31 per cent. Other receipts of the usual description were added which swelled the free nett revenue to £1,025,793 or nearly £81,000 more. The only noticeable change, however, in these additions was an increase of rather more than £23,000 in the receipts from "general interest." In spite of the good show of nett gain thus made the balance available for dividends on the company's preference stocks after meeting rents, debenture stock interest, &c., was little more than £5,500 higher at £315,319, but then the deficiency to be met on account of the Canada Atlantic Railway was £87,800 against £30,296, and instead of a surplus of £1,192 shown by the Detroit line in the first half of 1906 there was last half-year a deficiency of £10,970. No wonder, then, that the board was only able to pay the dividends on the first and second preference stock with £14,640 left to carry forward. To be sure, a pension fund was instituted to which £40,000 was assigned by way of beginning, but even without that the exhibit is not startlingly impressive. In the

course of the six months the company spent £432,580 on capital account, of which no less than £360,329 was debited to new rolling stock. It is explained that the Canada Atlantic Railway Company would have apparently done worse than it actually did had it not been for the diversion of some portion of the traffic from other parts of the system in order to relieve congestion. Business was less satisfactory in passengers on the Grand Trunk Western Railway, but although there was a decrease of 10,730 in the numbers carried the receipts, including mail and express, were £10,832 or 7.30 per cent. up. Considerable progress continues to be made with the Grand Trunk Pacific Railway, the directors say, and about 40 miles of rail have been laid on the Lake Superior branch, besides 135 miles on the Western division. It is expected that at least 200 miles of additional line will have been laid before the close of the season. The length of line owned by the Grand Trunk Company is now 4,500 miles and doubling is going on steadily, £39,792 having been spent on that account from capital during the past half-year, yet maintenance of way, &c., shows no increase compared with the same period of the preceding year; indeed, the amount is less in proportion now than it was then, but both maintenance of equipment and traffic expenses show increases on the comparison of half-years and so does general expenses. Taxes, however, exhibit a remarkable reduction, having been only £40,882 in the past six months against £77,702 the year before. Rents paid continue unchanged, but the debenture interest shows an increase of about £1,000, and as the burden of the Grand Trunk Pacific capital grows the amount left for distribution on the parent company's preference stocks is but too likely to show diminution in coming years. At present the capital account is in debit to the amount of £2,650,883, but the credits possessed against this debit do not appear to be of a kind which must impel the directors to make an immediate issue of fresh stock.

Buenos Ayres Western Railway, Limited.

With an additional 145 miles open at 1,111 miles, the gross receipts for the year ended June 30 showed a further improvement of £215,303, or 12.09 per cent., at £1,995,765. Of this increase passengers contributed £67,668, owing in some measure to an exodus to the suburbs caused by the enhanced cost of living in the city, particularly in house rents; luggage and parcels rose by £13,484 and goods traffic by £131,651, but live stock fell off by £7,751. The reduction in live stock carried is due partly to the fact that sheep-breeding is being superseded by agriculture and partly to the diversion of this traffic to the new market and freezing establishments at Bahia Blanca. In goods the quantity of hay carried over the line was a trifle larger in spite of practically all the tramways having electrified their systems and of the introduction of automobiles. The maize crop was abundant, and 129,146 more tons were carried yielding an additional £52,041, while the wheat traffic, notwithstanding that something like 25 per cent. of the crop was lost through damage by frosts in November, was 151,223 tons larger and the receipts therefrom £63,067 up. Expenses were heavier by £182,025 at £1,122,578, of which £111,062 was due to an increase in the wages bill, partly owing to the greater number of employees required to handle the traffic and partly to the higher scale rendered necessary by the great demand for labour, and £67,902 to the additional consumption and extra cost of the coal used. The proportion of expenses to receipts was 3.42 per cent. higher at 56.25 per cent., and the gain in nett revenue was consequently only £33,278 or 3.96 per cent. at £873,187. A much larger balance of £103,459, however, was brought forward, and with miscellaneous receipts from interest, exchange, &c., the nett income was £102,791 up at £1,003,769, but against this more capital ranked for dividend. In order therefore to maintain the distribution at the rate of 7 per cent., which has now been paid for five years in succession, it was necessary to reduce the allocations to the various funds, and the general reserve receives only half last year's amount at £50,000, while £40,000 is put to the fire insurance fund, compared with £45,000 to permanent way renewal fund and £10,000 to staff pension fund a year ago. After transferring these amounts and putting another £5,000 to the benevolent fund £140,491 or £37,032 more is carried forward. Capital expenditure for the year was £1,409,339, of which £1,047,011 was for rolling stock, but £45,103 was deducted for rolling stock withdrawn and other credits, so that the nett addition was £1,454,236, making a total of £10,824,101 and leaving a balance in hand of £714,240. With regard to the prospects for the current year, the manager reports the maize crop as bad, as practically one-half of it was lost by the prolonged drought in January and February, and in some districts by the damage by locusts, but the area under wheat is 20 per cent. larger, and provided all goes well a bumper harvest is looked for. An increase of 30 per cent. in the carrying capacity of the wagon stock was made during the year bringing the total up to 152,000 tons, and another 142 wagons giving 5,680 tons more have still to be built, while 71 new engines were added. Notwithstanding this, the manager fears that in the event of the harvest being abundant the preparations to satisfy the requirements of the company's customers will be rendered futile as the accommodation in the Madero Port has not been enlarged to any appreciable extent and difficulties will in consequence arise through the congestion of traffic.

Standard Bank of South Africa, Limited.

Close upon Lord St. Aldwyn's review of the gloomy state of affairs in South Africa comes the report of this bank to bear witness to the continuance of the depression in business during the half-year ended June 30. All things considered, however, the bank did very well, and perhaps even better than [illegible] been expected, as its gross profits were only £28,[illegible] lower at £96,856. A saving of £5,564 at £232,187 was effected in expenses and rebate on bills took £4,435 or £8,419 [illegible] with the slightly smaller balance of £[illegible] brought in the decrease in nett income was £15,248 at £[illegible] Careful management in the past has so strengthened the [illegible] bank that the directors feel they may well ignore this [illegible] tively small shrinkage, so they maintain the dividend at the rate of 16 per cent. per annum, and by putting nothing to the pension fund compared with £13,000 a year ago, are able to carry forward only £2,249 less at £37,271. As was to be expected, practically all the items in the balance-sheet show more or less substantial reduction. With a smaller business doing, less currency is required, and the note circulation has consequently dropped by £51,727 to £1,012,125, deposits and current accounts are £2,118,913 down at £17,785,870, drafts outstanding and acceptances under credit come to £1,071,582 or £241,170 less, and bills for collection on account of customers are £82,406 smaller at £2,829,271. On the other hand, cash is £459,719 lower at £4,067,074 and remittances in transit are £177,188 down at £504,048, but native gold in hand shows a trifling increase of £6,100 at £33,228. Bills discounted and advances to customers have been reduced by £1,217,068 to £10,006,123, bills of exchange purchased by £408,559 to £4,034,522, and loans on securities at short notice or, in other words, contango business show a further drop of £218,068 to £352,266. Investments have been written down to £4,[illegible] by the withdrawal of £97,050 from reserve, but that fund still stands at the high figure of £1,900,000 against the paid-up capital of £1,548,525.

Colonial Bank.

The directors state that with the exception of the destruction by earthquake and fire of the city of Kingston, no event of serious importance to this bank occurred during the half-year ended June 30, but that disaster would seem to have been bad enough. Contrary to the forecast of the previous report the sugar and cocoa crops did not come up to expectations, and although the production of cotton increased, the improvement was not in proportion to the larger area sown. Under all these adverse influences a reduction of £7,328 to £49,767 in gross profits for the six months is not to be wondered at. The saving in expenses was only £392 at £33,873, but a decidedly larger balance of £30,615 was brought forward in order to provide for the losses by earthquake, so that the available total was actually £840 up at £46,529. Provision, however, has to be made for the losses, so the dividend is repeated at the reduced rate of 6 per cent. per annum established for the previous half-year, leaving £28,509 or £3,740 more to be carried forward. The directors are able to make the satisfactory statement that the profits for the half-year after paying this dividend, added to £2,000 from the amount brought in will provide fully for all loss accrued or likely to accrue through the catastrophe, except the reconstruction of the bank building, which will be met out of the fire insurance fund. Deposits and current accounts have gone up by £93,427 to £2,004,093, and the note circulation is £28,851 higher at £472,806, but bills payable and other liabilities are £135,670 down at £607,133. Specie, on the other hand, has been reduced by £68,642 to £372,638, investments show a decrease of £43,425 at £937,037, and cash at London banks and at call and short notice is £33,906 lower at £326,724, but bills receivable come to £83,442 more at £1,233,003, bills discounted in the colonies amount to £753,139 or an increase of £8,807, and the indebtedness to the bank on current accounts in the colonies is £41,083 larger at £267,010.

Indian Specie Bank, Limited.

The first report of this institution, which has an office in London, has just come to hand from Bombay. Already the business seems to have reached considerable dimensions and the concern doubtless has a useful and profitable career before it. In the period from November 17 to June 30 there was a gross profit of Rs. 95,362, and after meeting expenses of every kind the nett revenue came to Rs. 64,741. This sum enables the directors to pay interest at 5 per cent. on the instalments on capital as paid up, to commence a reserve fund with Rs. 25,000, and to write Rs. 4,741 off the preliminary expenses, which were by no means heavy at Rs. 10,045. On June 30 last the paid-up capital was Rs. 40,42,080, but the average amount paid up during the period under review was only Rs. 11,35,000, and the nett profit on the latter amount was at the rate of 9.25 per cent. per annum. Since the close of the accounts some more capital has been subscribed, making the total just one million, and the Rs. 100 shares are to be paid up to the extent of Rs. 50 per share, leaving an equivalent amount uncalled. Deposits have already been made to the substantial amount of Rs. 49,29,120 and against this the cash balance kept at the Bank of Bombay head office and branches is almost half this sum, namely, Rs. 23,80,231. Loans on Government and other authorised securities amount to Rs. 41,47,420 and bills discounted and purchased amount to Rs. 17,75,954. Credits on Government and other authorised securities have been granted to the amount of Rs. 5,28,598, and overdrafts stand for Rs. 2,44,021, the total of the balance-sheet being Rs. 91,37,678.

Raglan Cycle and Anti-Friction Ball Co., Limited.

The spell of good fortune experienced a year ago has not been long-lived and the company is now, to all appearances, drifting back to the old days when it found it impossible to earn a decent return on its capital. With £13 or £4 more from transfer fees the trading profits showed a decrease of £2,675 at £4,270.

and after meeting all charges and writing off an additional £94 at £887 for depreciation the nett surplus was £2,671 down at £1,358. A much smaller balance of £668 was brought forward, giving £2,026 to be dealt with against £4,887, so not only must the managers go without a bonus but the reserve, which a year ago got £2,057, gets nothing on the present occasion, and the dividend is reduced from 5 per cent. to 2½, leaving £1,076 or £408 more to be carried forward. During the year the £38,400 of debentures outstanding were paid off in accordance with the terms of issue, partly by the issue of a fresh amount of £17,800 and partly by means of a loan of £17,200 from the bankers, and the reserve fund was credited with £580, being the premium saved on debentures purchased prior to date of redemption. Liabilities to sundry creditors have increased by £12,107 to £15,351, while debtors are £10,918 up at £39,052, and stocks are valued at £17,786 or £1,096 more, but cash and bills, now stated in one item instead of separately as hitherto, have been reduced by £7,601 to £10,759. The depreciation allowance is not on a very liberal scale, and has been much more than offset by fresh expenditure, with the result that fixed plant and machinery show an increase of £1,036 at £11,384, and loose tools are £479 up at £3,893, while freehold land and buildings are much about the same at £13,166.

Bretts' Stamping Co., Limited.

The growth of the motor industry has brought prosperity to this company, and its trading profits for the year ended July 31 showed a very substantial increase of £3,479 at £7,685. Of this £2,220 or £793 more is allowed for depreciation, debenture interest took £418 and directors' fees £200, leaving £4,847 against £2,161, so the dividend on the ordinary shares goes up from 3 per cent. to 7½ per cent., and after transferring an extra £766 at £1,500 to reserve, £850 is added to the balance forward, making it £1,152. Freehold land is valued at £1,704, freehold buildings, plant and tools, &c., at £21,893 and stocks and work in progress at £3,537, the increase in the total of these items being £838, while goodwill remains at £19,332. Against these the reserve will now amount to £2,500, a small enough figure, and even that is all employed in the business. Liabilities to sundry creditors are practically unchanged at £1,623, but the company seems to have done a larger ready-money business as cash has increased by £2,544 to £5,100, while sundry debtors are £182 down at £3,945.

New Zealand Shipping Co., Limited.

A minimum of information is afforded by the directors of this undertaking in their annual report and we can only record the statement that nett profits for the year ended June 30 amounted to £42,143, after deducting depreciation, insurance, London and Colony charges, and directors' fees. Adding £13,752 from the previous account the disposable total was £55,895, of which "balance of interest account" took £21,442 and the dividend of 5 per cent. £23,692, leaving £10,561 or £3,191 less to be carried forward. The allowance for depreciation is one of the things the directors do not reveal to the shareholders any more than they give particulars of the fleet, but a new vessel has recently been added and the book value now stands at £974,497. Other assets consist of investments £83,941, and offices and stores, &c., at various places £44,370, against which there is a reserve of £100,000. In the midst of the mystery surrounding the position one thing stands out clearly and that is that the company is very hard up. Sundry liabilities in London and the Colony stand at £165,783, bills payable, including £141,000 for new steamers, at £168,482, and balances of uncompleted voyages amount to £21,992 or a total of £348,357, while on the other hand sundry debtors owe £190,609, cash and bills come to £36,975, and even if we take in £9,812 for coal and other stores and unexpired insurance premiums there is a big gap to be bridged.

Robinson and Cleaver, Limited.

A further improvement of £770 to £49,181 was recorded in gross profits for the year ended July 31, to which were added £31 from transfer fees and £4,541 or £3,827 more brought forward, making a total of £53,752 to be dealt with compared with £49,162. Slight reductions were made in the managing director's salaries and trustees' and auditors' fees at £4,915, and in the amount required for income-tax at £1,554, and after providing £7,600 for debenture interest, £4,081 for leases redemption fund and £4,184 for depreciation, the nett surplus was £4,882 larger at £31,422. The dividend on the ordinary shares, however, is maintained at 3 per cent. in order to permit of £10,000 against £5,000 being transferred to reserve, and £4,423 or £118 less is carried forward. Capital outlay during the twelve months was £3,316, but after deducting the leases redemption fund of £33,878, the £12,480 previously credited for leases sold and the allowance for depreciation, the property account stands at £489,064 or a nett decrease of £5,981. The reserve, with the present addition, will amount to £45,000, but it would be better if this fund were represented by separate investments in the same way as £42,514 or £5,217 more is held on account of the sinking fund. The current position seems comfortable enough, as against an increase of £3,862 to £47,134 in the amount due to sundry creditors the company has £44,436 or £1,829 more to come in from sundry debtors, and stocks are £13,401 larger at £170,208, while cash shows a decrease of £722 only at £13,534.

Martinez, Gassiot, and Co., Limited.

This business of port wine shippers has not been brilliantly successful since it was converted into a limited company, but better results were obtained for the year ended June 30 last, and the ordinary shares will get 5 per cent. as compared with 4 per cent. in the previous twelve months and 3 per cent. in each of the two preceding years. Gross profit from sales of wine, &c., including transfer fees, were £25,583, of which £4,421 was absorbed in difference of exchange, expenses in London came to £7,284, and discount allowed took £1,165. Balance of nett profit, therefore, was £12,714 and £1,340 was brought forward, making a total of £14,054. The preference dividend at 6 per cent. per annum requires £6,000, and after providing 5 per cent. on the ordinary shares £1,000 is written off goodwill and the credit forward is raised to £2,054. At present the goodwill account amounts to £64,000, and seeing that a commencement has not yet been made with the creation of a reserve fund, the necessity for steadily reducing this item is apparent. Stock of wine and brandy at Oporto and London is valued at £88,635 and the directors keep on the safe side by converting it into sterling at 42¾d. per milreis as compared with the actual rate of exchange on June 30 of 52d. The company does not need or possess anything much in the shape of premises, the casks, vats, plant, furniture, &c., being valued at just £2,994. Debtors owe £29,735 as against £10,213 due to creditors, bills receivable are £7,573, and the cash balance comes to £28,330. In future it is proposed to pay the preference dividend on February 1 and August 1 instead of on the first days of January and July, the latter dates being too near the receipt of the accounts from abroad.

Halifax and Bermudas Cable Co., Limited.

The earthquake at Jamaica interfered with this company's business for something over a month, and it also suffered from an interruption of the Bermuda-Turks Island section from March 14 to April 27. In addition to these, a fault developed in the company's cable, the first for 16 years, which had to be cut out at a cost of £2,094. Notwithstanding these adverse circumstances, the revenue from messages and subsidies, &c., increased by £474 to £18,107, and the total income, including interest and transfer fees, was £402 up at £19,143. Expenses, however, with £1,606 for debenture interest and £8,914 transferred to the trustees for the debenture holders took £15,960 or an extra £493, leaving the nett profits rather lower at £3,182. But with £18,010 or £774 more brought in the directors are able to repeat the usual dividends making 5 per cent. for the year, and after writing off the above-mentioned cost of repairs they carry forward £1,412 less at £16,598. A further £9,000 of the debentures was paid off during the year, leaving £28,900 outstanding. Sundry creditors and traffic balances come to £722 or £985 less, while, on the other hand, debtors owe a trifle more at £1,624, bills receivable amount to £1,800 and investments remain at £27,406, but cash has been drawn upon pretty freely, and is £4,131 down at £1,368.

Direct West India Cable Co., Limited.

This company likewise found the earthquake in Jamaica a very costly affair, as it had to pay out no less than £7,276 for repairs to its cables, apart from the disadvantages caused by the interruptions to its business. Messages, subsidies, &c., yielded £1,458 less at £16,856, but interest and transfer fees were £163 more at £2,622, and the decrease in the total revenue was therefore £1,295 at £19,478. A reduction of £484 to £8,465 in the amount paid over to the trustees for the debenture holders more than accounted for a saving of £280 in expenses, and with £36,125 brought in the directors had £38,223 at their disposal compared with £38,824 a year ago. Out of this the usual dividends making 6 per cent. are paid, and after charging the cost of the repairs, £7,276, a balance of £29,147 or £6,978 less is carried forward. Liabilities for traffic balances are light at £723, and sundry creditors and bills payable are also small at £396 against which sundry debtors owe £257, and traffic debit balances come to £870. Cash is £6,243 down at £10,630, owing no doubt to the above-mentioned special outlay, and investments are still carried at their nominal value of £60,492. During the year a further £8,500 of debentures was paid off, leaving £57,000 outstanding.

TRADE AND PRODUCE.

Wheat.—The prospects this year from the sellers' point of view are distinctly favourable, for at present the average price of wheat is 5s. 11d. higher than at the same time last year, farmers' deliveries for the week coming to 84,438 qrs. averaging 31s. 8d. against 83,907, at 25s. 9d., in the same week of 1906. Foreign wheats also are much dearer, ranging from 4s. to 10s., and though it must not be forgotten that the average of last year was much below that of 1905, it looks as if this year's will go a good deal more than as much above. There is no sign that they will get easier at present, each week, in fact, seeing them moving steadily upward. Markets have been fairly active, foreign supplies selling freely, and English wheat, if small in quantity, is a good deal better in quality than was expected. Imports continue fairly liberal, this week 515,271 qrs. coming from abroad against 387,357 imported in the same week of last year, and Dornbusch estimates the quantities of wheat and flour on passage to the United Kingdom at 2,110,000 qrs. against 2,120,000 qrs. last week, while 1,760,000 qrs. go to the Continent against 1,520,000 qrs. last week. American markets were quiet, with bearish tendencies most of the week, but latterly they became more active; and strengthened by the attitude of European markets, prices went cents higher. Very heavy export purchases took place—about 2,000,000 bushels—which also

helped to strengthen the tone. The visible supply shows a decrease of 259,000 qrs. on the week.

Wool.—The London sales have continued this week with the same animation and demand that characterised those of last, home and foreign buyers readily paying the advanced prices. Messrs. Jacomb and Sons report in their circular that merinos have been in great request, and even with the increased clip supplies have not been sufficient to go round. Fine crossbreds also went at the highest point of the series, but medium and coarse grades have not risen since the opening of the sale. The cost of colonials is turning attention to home-grown wools, and prices for them are very firm and here and there quotations are going up. They are already too high to make manufacturing a profitable business, but with consumption still in excess of supply it is difficult to see when any drop in them may come in. Spinners are busy with sufficient work in hand to keep their machinery employed, and are endeavouring to force rates down a little, but without success.

Cotton (from our Manchester correspondent).—We have experienced a series of uneventful markets during the past week, and the actual sales in yarn and cloth have not been important. The general tone of the market is fairly healthy, and the outlook for business in the future is not discouraging. Further official figures have come through from the States with regard to the crop. The statistics, however, have not affected prices very materially. Although the growth is late the forward movement is fairly satisfactory. Egyptian cotton has also been rather easier, and it is expected that this crop will be larger than last season. The outlook for the supply of the raw material for next year is generally healthy. In most countries where cotton is grown the plant is making fairly good progress. Scattered cloth business has been put through for various markets, but no particular outlet has shown much prominence. Buyers for the East have not shown very much activity. The easier tendency of the raw material is, to some extent, affecting the attitude of shippers. Calcutta seems to be the best market of our Dependency at the present time, and numerous offers for shirtings have come through, but few are of a practicable character. Piece goods have been in quiet request. Producers who use bought yarns do not easily meet with prices which leave anything more than a bare margin of profit. China has not provided much new business, although there continues a moderate turnover in fancy cloths. The nearer markets of the Continent have not been active by any means, goods on the other side, however, are understood to be going into consumption more quickly, and the position generally is improving. Home trade demand develops rather slowly. The mild weather is affecting the turnover in heavy cloths. Most kinds of goods suitable for home consumption are fairly well sold, but certain makers of fancy descriptions are rather wanting business. Printing cloths have not commanded very much attention, and Burnley makers have complained loudly of their poor position. T-cloths and Mexicans still move off slowly, pressure for fresh orders showing itself in most directions. American yarns for home use have been in quiet request. Wefts are somewhat irregular in price when tested. Twists maintain their strength fairly well. Many spinners owing to their engagements are difficult to deal with. King yarn is not so active as some weeks back. Shipping yarns have met with a fair inquiry, but the weight of business is nothing like so heavy as a short time ago. Continental demand is not so important. Single yarns for India are deeply sold, and buyers have declined to pay to-day's stiff rates and give such long time for delivery. Bolton spinnings are strong in both carded and combed descriptions. A fair export turnover has taken place, but home users have not been in the mood to purchase freely.

Sir Jacob Behrens and Son's report gives the gist of the American Bureau report published on Wednesday, and it makes the average condition of the crop 67.7 this month against 72.7 last month and 71.6 last year. The immediate result of the Bureau report was a violent break in New York of some 30 points, as the market had anticipated a less favourable report. A rally followed under good buying, and prices moved slowly upwards, the market closing steady with a loss of about 20 points. Liverpool lost 5 points on Wednesday, and a further 4 to 6 points on Thursday.

Coal.—Coalowners are doing their level best to resist the adverse influences in the market and the efforts to discount their prosperity. They insist that prospects are as good as ever, and that last week's easing off in prices was only a temporary lull. In Wales business is being done for next year at 3s. 6d. above current contract prices, and demand here and elsewhere is better than it was. Prices for steams are stiffer again, and altogether the reaction seems a little further off than it did a week or so ago. Coke is easier, the demand from abroad having lessened a little.

Copper.—A heavy business has been done every day in the market, but nearly always at weakening prices. Prices at the opening on Monday dropped under pressure to sell and the weak advices on the American position, and though they improved a little the next day at first, the close of each session saw a further fall in quotations. Yesterday they touched £61 10s. for both cash and three months, but to-day a recovery set in which left closing values at £62 17s. 6d. for spot and £62 2s. 6d. for three months. Messrs. H. Merton and Co., Limited, give the visible supply as 12,138 tons against 14,220 a month ago. Total supplies for September were 25,044 tons, and the deliveries 28,026 tons against 29,787 tons and 28,474 tons respectively for August. Stocks in England and France amount to 7,138 tons against 7,820 a month ago. Chili Charters total 1,500 tons.

Tin.—Eastern advices at the opening disclosed a fall in price, business at Penang being at £101 12s. 6d. c.i.f. London, and the market under this weakness displayed considerable irregularity. But under the influence of favourable statistics they advanced again, though Tuesday's advices from the East were still lower. Under pressure to liquidate and bear sales a reaction then set in, and the price came down to £156 10s. for cash and £154 10s. for three months. Later a firmer tone exhibited itself, and to-night's final quotations were £158 for cash and £154 10s. for forward metal. Messrs. Strauss and Co. give the visible supply as 12,790 tons against 12,393 tons a month ago. Quantities on spot and landing amount to 2,828 tons, against 2,427 at the end of August. London deliveries were 1,388 tons, and in Holland 898, making 2,286 tons against 3,127 in August. The Straits shipments aggregate 3,995 tons, made up of 2,770 tons for London, 345 for America, and 790 for the Continent.

Iron and Steel.—Again the market for pig-iron has been unsatisfactory, and the prospects for the month are not very favourable. All prices are down, and export demand has fallen off considerably, but it would seem that in one respect the trade is better, for home consumption is increasing, judging by the fact that production is not reduced and the stocks in Connal's Stores steadily decrease. Hematites, on the other hand, have a slack home demand as well as foreign, and makers are shutting down some of their furnaces. Neither is the steel trade very encouraging. Orders are not sufficient to give mills full employment in some parts of the country.

Tea.—Indian auctions were heavy this week, 48,201 packages being brought forward, but the market did not break under the weight, and inquiry was strong for all teas up to 7d. per lb., according to Messrs. W. J. and H. Thompson's circular, and with practically no leaf under 6½d. a recovery of ¼d. per lb. must be recorded from the low levels of about three weeks ago. Some qualities showed a rise of from ½d. to 1d. per lb., and the average obtained was 8.19d. against 7.78d. a year ago. Although no complete news of Indian outturns during September is yet to hand, continues the circular, favourable weather for the most part seems to have been experienced, especially in Assam, and at present it looks as if the total crop secured would show a small increase on 1906. Meanwhile, mail advices confirm previous cables of exceptionally heavy direct shipments from Calcutta to outside markets, so that the quantity available for the United Kingdom should be rather less than last year. This probability has conduced to the activity prevailing this week. Arrivals of Ceylon continue to show improvement in quality, and in them also the finer teas showed a considerable rise in quotations. Common sorts were very firm, and the average came to 7.92d. against 8.27d. in 1906. In sympathy with other markets the 2,472 packages of Javas had a good sale, fine kinds showing an advance on last week's rates.

Sugar.—More favourable weather kept the market flat, and May beet dropped from 10s. 1½d. to 9s. 11d. but rallied 1d. above the lowest. The idea generally seems to be that prices are not too high, considering, says Mr. Czarnikow's circular, that the factories cannot contract roots in sufficient quantity at the price they are bidding of 9s. 6d. At the same time, continues the circular, invisible stocks should be low everywhere, and a reduction in consumption and shipments abroad must take place if we are to keep up old stocks at the present rather moderate level. We are shipping no beet to the United States, and against shipments to Argentina we receive more cane; consumption is falling off in America, and it is difficult to say how much of the decrease is caused by the inferior fruit crop or the financial situation, and how much by reduction in trade stocks, to be made up later. In Europe, however, the consumption has been very fair, and even September seems to show no falling off in United Kingdom, though the Continent may not be quite up to last year's. America just now appears to have sufficient supplies owing to the Louisiana excess and Javas afloat; she even allows various cargoes to go to Europe, but for next summer a deficiency in Cuba may make itself felt, to be covered by another increase in Java shipments if possible, or by beet. Cuba has not had sufficient rain; the drought in spring was followed by thunderstorms in June-July and by dry weather in August-September; there has been no regular rainy season, and very favourable weather must prevail in October-December to avoid a serious deficiency. The increase in Louisiana seems, anyhow, not likely to cover the shortage in Cuba, Demerara, Mauritius, &c., but as to consumption, after previous experience, nobody can say anything: the safest basis for judging the future is the cost of production, and, with present prices of wheat, this will be apparently not far off 10s., with fair weather and yields. The American markets remain unchanged, with quotation for centrifugals at 3.05 cents, and landings for the week were 39,000 tons, meltings 41,000 tons, leaving stocks at 233,000 tons.

The Union Bank of Australia has opened a branch at Geraldine, New Zealand.

The following circular has been sent by the board to the holders of Bruce Peebles and Co.'s preference shares:—"It is not intended to pay the interim dividend on the preference shares, which is usually paid at this time. As the shareholders are aware, however, there is a special reserve fund invested outwith the business of the company for securing payment of the preference dividends. The fund is more than sufficient to pay the whole of the current year's dividend, and the matter will fall to be dealt with when the year's accounts are completed in March or April next."

DIVIDENDS ANNOUNCED.

RAILWAYS.

Buenos Ayres Great Southern.—Balance of 4 per cent. on the ordinary stock, making 7 per cent., for year ended June 30, carrying forward £173,590.

Buenos Ayres Western.—Balance of 4 per cent. on the ordinary stock and ordinary shares (which in accordance with the terms of the issue ranked for dividend with the ordinary stock as from July 1, 1906, in respect of the £5 per share then paid), making 7 per cent. for the year, placing £50,000 to general reserve, £40,000 to fire insurance fund, £5,000 to benevolent fund, and carrying forward £140,491.

Great Northern (U.S.A.).—Quarterly of 1¾ per cent. on the preferred stock, payable Nov. 1.

Great Western of Brazil.—Interim in respect of the year ending Dec. 31, 1907, of 6s. per share on both the preferred and ordinary shares.

Isle of Man.—Interim on the preference shares for half-year ended June 30 at the rate of 5 per cent. per annum and on the ordinary share capital at the rate of 4 per cent. per annum.

Nitrate.—Interim on the ordinary (unconverted) shares and the preferred converted ordinary shares at the rate of 3 per cent.—*i.e.*, 6s. per share (less tax)—payable Nov. 1.

Western of Havana.—Balance of 8s. per share, making 7 per cent. for the year, placing £18,000 to reserve and £2,000 to fire insurance fund and carrying forward £8,649.

BANKS.

Bank of Adelaide.—Interim for past half-year at the rate of 9 per cent. per annum.

Bank of Scotland. For half-year ended Aug. 31 at the rate of 16 per cent. per annum.

London and Brazilian.—Interim of 10s. per share for half-year ended July 31, being at the rate of 10 per cent. per annum.

TRAMWAYS.

Calcutta.—Interim of 3s. 6d. each on the ordinary shares (being at the rate of 7 per cent. per annum) for half-year ended June 30.

Mexico.—First at the rate of 4 per cent. per annum.

MINES.

Anaconda Copper.—$1.25 per share, payable Oct. 16.

Ivanhoe Gold.—Second quarterly interim in respect of 1907 of 5s. per share, payable Oct. 29.

MISCELLANEOUS.

A. Vedrine and Co.—Interim of 5 per cent. for year to Sep. 30.

Alliance Tea of Ceylon.—Interim of 3 per cent. on the shares on account of 1907, payable 30th inst.

Angela Nitrate.—Interim of 5 per cent.

Argentine Land and Investment.—Interim of 2½ per cent. (2s. per share) on the 5 per cent. preference shares, payable Oct. 24.

Bombay Gas.—Interim of 3 per cent. for half-year ended June 30.

British Aluminium.—Interim of 7 per cent. per annum on the ordinary shares; also payment of six months' interest at 5 per cent. per annum on the conversion shares and at 4 per cent. per annum on the funding certificates, in respect of 1907.

Calcutta Electric Supply.—Interim on paid-up share capital for half-year ended June 30 at the rate of 6½ per cent. per annum, payable Nov. 15.

Cammell, Laird and Co.—Interim at the rate of 5 per cent. per annum for half-year to June 30 on both the ordinary and preference shares, payable Oct. 1.

City of Santos Improvements.—Interim of 2½ per cent. on the ordinary share capital in respect of 1907.

Dickins and Jones.—Interim of 9 per cent. per annum for half-year ended July 20 on the ordinary shares.

Dunham Bridge.—£1 10s. per cent., being 15s. per share, for the financial year.

Eastern Extension Australasia and China Telegraph.—Interim for quarter ended June 30 of 2s. 6d. per share.

Edison and Swan United Electric Light.—For year ended June 30, of 2s. 6d. per share on the "A" shares, partly paid, and 4s. 2d. per share, fully paid.

Edinburgh Investment Trust.—Interim for half-year ended Sept. 15 on the deferred stock at the rate of 10 per cent. per annum.

Goldsmiths and Silversmiths.—Interim at the rate of 7½ per cent. per annum on the ordinary shares for the six months to July 31.

Hannan's Land.—Second interim for 1907 of 2½ per cent., payable Sept. 30.

Hove Electric Lighting.—Interim at the rate of 8 per cent. per annum for half-year ended June 30, payable Oct. 15.

John Barker and Co.—Usual interim for six months ended August 19 of 8d. per share on the ordinary share capital.

Kenilworth Water.—6½ per cent. for the year ended June 30.

King Insurance.—Interim at the rate of 5 per cent. per annum for half-year ended June 30.

Lunuva (Ceylon) Tea and Rubber Estates.—Interim of 9d. per share.

Neuchatel Asphalte.—Interim on the ordinary shares of 3s. per share, payable Oct. 15.

Reuter's Telegram.—Interim of 4s. per share, being at the rate of 5 per cent. per annum, for half-year ended June 30.

Rangalla Tea.—Interim of 3 per cent. on account of 1907.

Shaw, Savill and Albion.—Interim for half-year ended June 30 on the preferred and ordinary shares at the rate of 5 per cent. per annum.

Sunderland Steamship.—Interim at the rate of 7½ per cent. per annum for past six months.

The Stock Exchange.—Interim of £5 per share.

Trust and Agency of Australasia.—Interim at the rate of 5 per cent. per annum for half-year ended June 30, payable Nov. 19.

Val de Travers Asphalte.—Interim at the rate of 5 per cent. per annum (6d. per share) for six months to June 30, payable 16th inst.

Van den Berghs.—Interim on the ordinary shares at the rate of 8 per cent. per annum for six months ended June 30.

W. H. Chaplin and Co.—Interim on the ordinary shares at the rate of 5 per cent. per annum.

MINING RETURNS.

Barrett Gold.—349 ozs., valued at £1,400.

Balaghat.—4,700 tons quartz, 2,247 ozs.; 4,368 tons tailings, 390 ozs.; total, 2,637 ozs.

Bonanza.—Crushed 2,570 tons, 623 ozs.; cyanide and slimes 2,908 tons, 644 ozs.; total, 1,267 ozs.

British Broken Hill Proprietary.—2,886 tons crude ore produced 387 tons concentrates, containing 236 tons lead and 10,449 ozs. silver.

Broken Hill Proprietary.—Fine silver, 281,968 ozs.; soft lead, 4,425 tons; antimonial lead (estimated), 54 tons; zinc concentrates, 7,899 tons, containing 134,462 ozs. silver, 837 tons lead, and 3,317 tons zinc.

Champion Reef.—4,110 tons stone, 8,468 ozs.; 18,458 tons tailings, 2,469 ozs.; total, 10,937 ozs.

Chinese Engineering.—Output of coal, 20,500 tons; sales, 17,000 tons; consumption, 1,425 tons.

Dharwar Reefs.—Crushed 1,020 tons, 426 ozs.; tailings assay per ton 4 dwt. 12 grains.

Duff Development.—Prospecting dredge 29 oz., and No. 3,117 oz.

Glynn's Lydenburg.—Crushed 2,564 tons, 592 ozs.; cyanide 1,666 tons, 687 ozs.; slimes 898 tons, 393 ozs.; total, 1,672 ozs.

Golden Pole.—Crushed 1,515 tons crude ore, 736 ozs.; 1,490 tons sands, 226 ozs.; total, 962 ozs.

Kelly's Queen Block.—Treated 700 tons quartz, value £2,447.

Koffyfontein.—3,650 carats diamonds, 365,000 loads blue ground on floors.

Lace Diamond.—Loads washed, 32,102, yielding 2,526 carats, equal to 7·86 carats per 100 loads.

Le Roi No. 2.—Josie: Shipped 1,900 tons; nett receipts £6,146, being payment for 1,776 tons shipped, and £212, being payment for 68 tons concentrates shipped.

Lloyd Copper.—Production 47 tons.

Mysore Gold.—16,300 tons quartz, 15,161 ozs.; 15,000 tons tailings, 1,993 ozs.; total, 17,154 ozs.

North Broken Hill.—Treated 2,330 tons crude ore, producing 400 tons concentrates, containing 277 tons 8 cwt. lead and 8 200 ozs. silver.

Nundydroog.—6,900 tons quartz, 5,367 ozs.; 7,290 tons tailings, 718 ozs.; total, 6,085 ozs.

"O K." Copper.—Treated 852 tons crude ore, producing 71 tons fine copper.

Ooregum.—10,226 tons stone, 4,998 ozs.; 8,961 tons tailings, 855 ozs.; total, 5,853 ozs.

Peiser Diamond.—18,760 loads washed, yielding 1,857 carats diamonds, an average of 9·89 per 100 loads.

Queensland Copper.—Ore treated 1,520 tons; production 314 tons of matte, containing 173 tons fine copper; shipments advised, 498 tons matte.

Stratton's Independence.—285 tons shipping ore, averaging 1 oz. 14½ dwts.

Sulphide.—15,005 tons ore milled, producing 2,419 tons leady concentrates; also 22,649 tons tailings treated, producing 7,141 tons zinc concentrates and 83 tons leady concentrates; also 2,666 tons leady concentrates, 123 tons residues, and 2,318 tons purchased ores smelted, yielding 1,500 tons lead, containing 133,660 ozs. silver and 8,347 ozs. gold; also treated 313 tons zinc concentrates, producing 93 tons spelter,

Tasmania Gold.—Crushed 4,844 tons quartz, 1,985 ozs.; 187 tons concentrates, 473 ozs.; 2,400 tons cyanide, 124 ozs.; total, 2,582 ozs.

Tasmanian Consols.—Crushed 1,450 tons; gold recovered, including cyaniding, 635. ozs.

Tasmanian Smelting.—Silver lead bullion shipped contained 980 tons lead, 138,000 ozs. silver, 496 ozs. gold.

Tolima.—65 tons, value £3,500.

Voorspoed Diamond.—18,392 loads washed, producing 3,974 carats.

Books Received.

Co-operative Industry. By Ernest Aves. (London: Methuen and Co., Essex Street, Strand, W.C.) Price 5s. nett.

Magazines: *Grand*, *Strand*, and *Sunday Strand*. (London: George Newnes, Limited, 5, Southampton Street, Strand, W.C.) Price 6d.

Baku Russian Petroleum.—Production of crude oil for week ended September 28 was 266,000 poods, equals 4,288 tons.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending September 29 was 233,000 poods, equals 3,757 tons.

State of San Paulo Five per Cent. Exchequer Bonds.—Messrs. J. Henry Schröder and Co announce the receipt of a cable from their Santos agents advising them that they have further encashed £21,400 in respect of the surtax collected for the service of this loan, making a total of £181,450 encashed since August 1.

COMPANY MEETING.

MONTE VIDEO WATERWORKS.

An extraordinary general meeting of the Monte Video Waterworks Co., Limited, was held on Monday, at the offices, 52, Moorgate Street, E.C., Mr. James Anderson (Chairman) presiding.

The Secretary (Mr. G. Proctor) having read the notice convening the meeting,

The Chairman said: Our meeting to-day is a special one, for the purpose of passing a resolution for the increase of the capital of the company, but before we pass to the special matter under consideration it would doubtless be of interest to you to have from me some particulars about the progress of the business since the last accounts were issued. The rapid development of the business, which was so marked in the years 1905 and 1906, is being continued in even greater ratio in the current year. Although the company has been established for nearly 30 years, the use of the company's water is by no means universal in the city, a large proportion of the inhabitants being still dependent for their domestic supply on rain water stored in underground cisterns. This method of supply is obviously open to objection on sanitary grounds, and in consequence the health authorities favour the extension of the company's works and the gradual elimination of the rain water cisterns. So you will see that besides the increase of customers through the building of new houses, we have an immense number of prospective customers in those householders who still depend on rain-water cisterns, and whom we hope in time to convince of the superior purity and convenience of the water supplied by the mains of this company. Our business, therefore, is of a progressive character, and capable of very large expansion, and we are consequently bound to take into account not only the present demand for water, but to consider and provide for what may be the requirements of a good many years ahead. The directors applied to the Government as far back as May, 1906, for permission to lay another duplicate pumping main of large size between our pumping station and our high level service reservoirs at Las Piedras, but it was only a week or two ago that the necessary consent was given. The delay is a little unfortunate, as works of the nature we have in view will require at least two years for completion, and by that time our business may have so increased that the demands of the city in times of drought may be somewhat in excess of what the present mains can comfortably supply. The new works, however, will be proceeded with with all despatch, and when completed they will be capable of supplying all the water the city is likely to want for many years to come. The cost of these extensions is estimated at about £200,000, and we propose to raise the money by the issue of a like amount of ordinary shares, to be offered to the shareholders *pro rata* at par. This will be equal to an allotment of 40 per cent. on existing holdings, or two new shares for every five shares now held. The question will naturally be asked of the board, what are the prospects of your being able to pay dividends on the increased capital? Well, I am happy to say that the shareholders need have no misgivings on this point. We have now had some four months' experience of the working on the reduced basis, and I am happy to tell you that the increased sale of water has already made up a considerable part of the loss of income sustained through the reduction in price. We calculate that our present earnings, even on the reduced tariff, will enable us to pay 7 per cent. dividend on the new shares when fully paid up, as well as on the old, and to leave a fair margin over. It is hardly necessary to point out that the issue of these new shares at par is equal to a substantial bonus to the shareholders. We propose to call up the money on the new shares by easy instalments extending over the whole of next year. With these remarks I will move:—"That the capital of the company be increased to £750,000 by the creation of 12,500 new shares of £20 each, numbered 25,001 to 37,500, inclusive, and that the directors be empowered to issue the same at such times and on such terms as they may think fit."

Mr. Frederick S. Isaac seconded the resolution, which was carried unanimously, and a vote of thanks to the chairman and directors concluded the proceedings.

NEXT WEEK'S MEETINGS.

MONDAY, OCTOBER 7.

Brett's Stamping.—Coventry, noon.

TUESDAY, OCTOBER 8.

Alliston and Co.—10-12, Bread Street, E.C., noon.
Central Chili Copper.—Winchester House, noon.
Kent Collieries.—Winchester House, noon.
New Zealand Shipping.—138, Leadenhall Street, E.C., 12.30 p.m.
Robinson and Cleaver —Belfast.

WEDNESDAY, OCTOBER 9.

Colonial Bank.—13, Bishopsgate Street Within, E.C., 2 p.m.
Delhi and London Bank.—123, Bishopsgate Street Within, E.C., noon.
Entre Rios Railway.—River Plate House, noon.
Novello and Co.—160, Wardour Street, W., 4 p.m.
Raglan Cycle and Anti-Friction Ball.—Coventry, 3 p.m.
Willans and Robinson.—Cannon Street Hotel, 2.20 p.m.

THURSDAY, OCTOBER 10.

British Thomson-Houston.—83, Cannon Street, E.C., 2.15 p.m.
Foldal Copper and Sulphur.—Cannon Street Hotel, 12.30 p.m.
Grand Trunk Railway of Canada.—Cannon Street Hotel, noon
Mount Roudny Gold.—8, Union Court, E.C., noon.
New Eastern Investment.—Winchester House, noon.

FRIDAY, OCTOBER, 11.

Anglo-Sicilian Sulphur.—Winchester House, 2.45 p.m.
Belfast Banking.—Belfast, noon.
Coltness Iron.—Glasgow.
Glenboig Union Fireclay.—Glasgow, noon.
Theatre Royal Drury Lane.—Drury Lane, W.C., noon.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and September 30, 1907:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Sept. 30, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Sept. 30, 1906
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
REVENUE.			
Customs	31,923,000	16,147,000	16,739,045
Excise	35,965,000	16,130,000	15,902,685
Estate, &c., Duties	18,697,000	9,700,000	9,958,351
Stamps	8,000,000	3,990,000	3,740,000
Land Tax and House Duty	2,600,000	400,000	350,000
Property and Income Tax	30,500,000	5,920,000	5,457,000
Post Office	17,600,000	7,450,000	7,080,000
Telegraph Service	4,400,000	2,300,000	2,180,000
Crown Lands	500,000	230,000	220,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	688,500	681,685
Miscellaneous	1,550,000	1,075,302	803,462

Bank of England	2,627,585	3,257,116	
Bank of Ireland	945,550	942,192	
		3,573,135	4,199,308
Total		78,563,725	77,729,279

NOTE.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), as to respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

MEM.—Treasury Bills outstanding on September 30, 1907:—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Treasury, October 1, 1907. Total	£15,713,000

The Standard Bank of South Africa announces that owing to the removal of the seat of administration in North-Western Rhodesia from Kalomo to Livingstone, its branch at Kalomo has also been transferred to Livingstone.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for 9 days ended September 30, $5,081, increase $217; aggregate from July 1, $55,307.

Argentine North Eastern. — Traffic receipts for week ended August 30, £2,817, decrease £886; aggregate from July 1, £25,903, decrease £1,083.

Assam Bengal.—Traffic receipts for week ended August 31, Rs. 80,861, decrease Rs. 9,079; aggregate from July 1, Rs. 7,73,784, increase Rs. 88,316

Bilbao River and Cantabrian.—Traffic returns for August £10,501, increase £3,933; aggregate from January 1, £75,633, decrease £6,149.

Canadian Northern Railway.—Traffic receipts for 9 days ended Sept. 30, $206,200, increase $25,300; total from July 1, $2,618,200, increase $795,100.

Egyptian Delta.—Traffic receipts for week ended August 31, £4,643, increase £339; aggregate from January 1, £103,442, increase £15,939.

Lucknow Bareilly Railway.—Traffic receipts for week ended August 31, Rs. 30,277, increase Rs. 10,180; aggregate from July 1, Rs. 2,13,300, increase Rs. 19,595.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—October 5, 1907

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 510. New Series. SATURDAY, OCTOBER 12, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Nine Months' Foreign Trade.

For the month of September alone, which completes nine months of the year, the figures are in a way satisfactory and yet suggestive that the turn has come, or at least a pause so far as the import trade is concerned. Imports last month amounted to £45,341,276, which is only £281,441 higher than the figures for September of last year, and both months contained the same number of working days. This is an increase of only 0.6 per cent. Exports, however, have gone up by £4,361,167, or 15.1 per cent., to £35,150,320, and there is also an increase of £421,549 in the value of the exports of foreign and colonial produce, which totalled £5,942,312, the increase being 7.6 per cent. No inconsiderable portion, however, of all the increases is due to augmented prices, and we are now paying much more for all food grains than we did twelve months ago. Our raw materials are also dearer now than a year ago without an exception, so that if the account had been, so far as values are concerned, on the same price basis as a year ago import value totals would have shown a noticeable decline. No doubt better prices are being obtained for our exports in some instances, even copper of all kinds showing an increase in value compared with a year ago, and as long as our exports continue to swell in volume, as they also do, there is no ground for uneasiness, and we may regard the dip in imports as merely a passing phase, the outcome of which may very likely be a revival of business some time later. For all that we look upon the figures for the past month as suggestive of a pause, if not of a recoil, in the country's trade.

As nine months of the year have now elapsed, it will be more interesting to see what the broad results for that period have been. They look, and are, magnificent. Imports have risen by nearly £31,000,000 and exports by £45,231,000, if all kinds of commodities including gold and silver are taken into account, and yet for the nine months the excess of import values of all kinds over export has diminished by £14,274,000 compared with the same period of 1906, and by nearly £25,000,000 compared with 1905. The two sides of the account have thus sensibly drawn nearer to each other, and we do not know that this is a good sign. Judging from past experience, the excess of import values over exports should approach £150,000,000 for the entire year, and any material narrowing in the margin in favour of this country thus shown would, if prolonged, suggest that the export trade at least is being over-stimulated by one cause or another. The profit on that trade may also be declining, and will certainly be so if, in spite of the relative decline in imports, the prices paid by us for food and raw materials are going up too fast or too far. There is as yet no cause for alarm on this ground either, and the approximation of the two sides of the account is merely pointed to as another indication that the wave of prosperity has reached its crest, and perhaps begun to recede. For all that the business of the nine months has been remarkably expansive, both on the import and on the export side. For the whole period imports of merchandise alone show an increase of £32,126,000 against the same period of last year, and the total is £64,747,000 above that of the first nine months of

1905. Moreover this increase is for the present year exclusively attributable to articles of food and drink and raw material used in our manufactures, the category of "articles wholly or mainly manufactured," many of which are raw materials to us, showing a slight decline. Of food, drink and tobacco imports have been about £2,670,000 greater than in the previous year and £9,841,000 larger than in 1905. Imports of raw materials have gone up £29,670,000 compared with last year and £44,046,000 compared with two years back. Compared with two years back manufactured articles imported show an increase of £10,745,000, but compared with last year there is a decline of £175,417. It is thus in every way notable that the manufacturing business of this country has been unprecedentedly flourishing, and that at the same time the "foreign producer" is making no further inroads upon us. Two years ago we imported barely £133,000,000 of raw commodities up to the end of September, and this year the imports of such have aggregated £176,810,000, the most notable increase being in raw cotton, which has gone up £15,309,000 in value, no other class of commodities having increased as much as £5,000,000. Our imports of oil seeds, nuts, oils, fats and gums have, however, been £4,289,000 larger and we have imported £3,836,000 more wool.

What bearing have these striking increases in import values upon the position of the export trade? They are to a great extent the natural counterpart of the magnificent increase in that trade, an increase which for the nine months amounts to £41,227,000 over last year and £76,886,000 over the first nine months of 1905 in merchandise alone. Towards this increase food, drink and tobacco contributed only £1,380,000 and raw materials only £8,285,000, including £6,934,000 due to coal, &c., whereas the increase in the export of articles wholly or mainly manufactured in the United Kingdom has been no less than £31,048,000. Compared with two years ago it is almost £60,000,000, and in this year's increase over last cotton yarn and textiles lead with £8,017,000, iron and steel manufactures following with £6,868,000 and machinery coming after with £3,617,000. Woollen goods come next with an increase of £2,152,000. There is not an individual class of articles manufactured in this country that has not shown an increase this year over last with the single exception of electrical goods other than electrical machinery and telegraph and telephone wires, the decline for which for the nine months is £234,000. In every other instance the export trade shows a more or less notable expansion, and when we contrast the unprecedented development of our exports of British manufactures with the decline in the imports of foreign manufactures, we get an illustration of the benefits of Free Trade that ought almost to convince Mr. Henry Chaplin of the folly of Protection. Our business in foreign and colonial merchandise imported and then sold out of the country is also steady and good, but shows nothing like the development of our domestic business. Still for the nine months the value of this trade in the current year was over £5,942,000, an increase of nearly £422,000 on the previous year and of £421,000 on two years ago.

And where are our increased exports going, or in what do they consist? As already mentioned, nearly £7,000,000 of the increased exports of raw materials is ascribable to exports of coal, and the greater part of that increase is still a matter of quantity—tons up 5,775,000, value up £6,934,000—notwithstanding the recent remarkable increase in price. And our coal has been bought in larger quantities by almost every continental customer; in fact, Russia, Sweden and Spain alone among European Powers show smaller purchases measured by quantities than a year ago. Germany has taken 1,526,000 tons more, the Netherlands nearly 1,500,000 tons more, France about 1,000,000 tons, Belgium 147,000 tons and Italy nearly 300,000 tons more. This increase has undoubtedly followed the abolition of our export duty, and enables us in some measure to guess at the evil results that duty was calculated to produce upon the whole foreign business of the country had it been maintained. By the restriction it imposed upon our capacity to sell it was inevitably tending to limit our power to buy; still worse, reducing the competing force of our mercantile navy. But have these countries which have been buying so much more of our coal sent us larger quantities of their goods in return? There is no table in the monthly returns of the Board of Trade to enable us to answer that question in detail, but we may safely in a general way say that our imports have been stimulated and enlarged in various directions in consequence of this increase in our exports of coal. The other branches of our foreign trade are also good, and the most profitable

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

among them continues to be our textile trade, particularly the trade in cottons. Perhaps, though, this statement is hardly in all respects accurate, because in the mere matter of ratio of profit the exports of machinery and of many kinds of iron and steel manufactures are probably the most wealth yielding of all, but great as these branches of our trade are, they are not, individually, of anything like the magnitude of our cotton trade. For the nine months, for instance, the aggregate value of cotton piece goods alone shipped abroad was £61,062,000 and of piece goods and yarns together over £72,000,000, or including also hosiery and thread, &c., £82,595,000, whereas the total value of iron and steel and the manufactures thereof exported was little more than £35,623,000, but two years ago the value was only £23,257,000. The value of cotton piece goods exported has risen to its present figure from £52,638,000 two years ago. If, however, we add cutlery, machinery and millwork to the value of other iron and steel manufactures exported we get a total for metal manufactures of about £64,000,000, and even this does not include the value of ships exported, which has this year been over £8,225,000 against £7,382,000 last year, and only £4,422,000 two years ago. Nor does it include exports of brass, copper, lead and tin, the aggregate value of which has been £9,239,000 in the current year or about £2,000,000 more than last year, and nearly £3,000,000 more than two years ago. Putting together the whole of our exports of manufactured fibres of every class and the whole of our machinery, ship and other manufactures from metals, the fibres will be found to outstrip the metals by many millions. The value of all metallic exports this year to date, partially or wholly manufactured, has been only about £83,000,000, whereas the value of yarns and cloths, &c., sent abroad has been £123,000,000. But what an "only" the smaller of these totals is!

These particulars confirm the opinion often expressed here that the export trade of the country was probably never on a sounder basis or more solidly flourishing. We say this notwithstanding the fact that many of our customers continue to pay for the goods they buy with capital raised in this country, either in the shape of stocks or debentures of joint-stock companies or by State and municipal loans. This reservation cannot be said to apply in any definite manner to the textile trades, nor does it now materially influence our exports of cutlery and hardware or the demand for British-made sewing machines, or even that for mining machinery, which, however, is at present comparatively poor. Our trade in agricultural machinery is also slipping back, both with countries in Europe and with South America. The demand from Australia has been heavier this year, but that perhaps must be ascribed to the coming of the new tariff there. But the larger trade done in locomotives still comes exclusively from quarters to which the stimulus of money borrowed in London is applied. Thus countries in South America have this year taken £1,301,000 worth of locomotives from us, and two years ago they barely took £453,000 worth. British India again has imported £710,000 worth this year as against £597,500 worth last year and £696,000 two years ago. Australia and New Zealand have also been larger buyers this year than last, but apart from these great customers and from some passing increase in the demand from Spain, our foreign trade in locomotives cannot be described as elastic. It is a weak branch of our export business, and the same holds good of agricultural steam engines and other agricultural machinery, in which there is ample room for expansion.

Buenos Ayres Great Southern Railway Company.

The wonderful prosperity of the Argentine Republic is still unabated, and so long as the present state of affairs in the political world exists we see no reason why the country should not continue to develop. Its natural resources seem capable of indefinite expansion, especially now that landowners are realising that they can get more out of their property by a proper rotation of crops than by exhausting the soil through a continual planting of wheat or any other cereal. New industries, too, are springing up all over the country in a way which makes for economic expansion, and now the chairman of the local committee of this railway reports that copper deposits have been discovered near its line, which are to be worked by a company with a capital of $900,000, so that it may not be very long before minerals are added to the country's resources with beneficial results to all concerned. In the meantime the business of this railway continues to expand in every way, and in the twelve months ended June 30 the gross receipts from operations improved by no less than £357,121 to £4,524,009. Unfortunately Argentina is no more free than other countries from labour troubles or from the increasing cost of stores and materials, and it was consequently impossible to reduce the ratio of expenses from the somewhat high level of a year ago. In fact, this was a shade higher, as working charges rose by £209,943 to £2,449,330 or 57·58 per cent. compared with 57·47 per cent., but the nett revenue nevertheless showed a satisfactory advance of £147,178 at £1,804,679. The balance brought forward was £85,126 larger at £198,830, and interest on reserve funds, &c., gave a few pounds more at £21,527, but, while the profit on remittances, transfer fees, and general interest, &c., was about double that of last year at £20,876, interest on loans, discount on bills, &c., took £20,100, with the result that instead of any augmentation of revenue from this source, £5,230 had to be deducted, leaving the surplus £216,383 up at £2,019,806. A large amount of new capital ranks for dividend on this occasion, and an extra £136,623 at £1,246,215 had to be found to meet debenture interest, rents, income-tax, and the usual interim dividend of 3 per cent. on the ordinary stock. Out of the balance of £773,590 remaining a final dividend of 4 per cent., making 7 per cent. for the year, is again paid, but for the reason just given there is nothing available for either the staff pension fund or the benevolent fund, which received £10,000 and £5,000 respectively in 1906, and the sum carried out has to be reduced by £25,240 to £173,590.

Coming back to details of the growth of gross revenue we find that the passenger traffic showed an enormous increase of 3,100,461 in numbers at 13,099,664. Two-thirds of this is in second-class traffic, which has been considerably augmented by the large number of artizans who have been compelled to move out into the suburbs through the high cost of living, and the receipts consequently did not improve to a corresponding extent, the gain being only £157,215 at £1,241,219. Luggage and parcels, which include dairy produce, fruit, &c., yielded an extra £22,332 at £249,185, but it was naturally in the goods traffic that the greatest development took place. The total tonnage was 947,177 tons larger at 4,891,320 tons, and receipts rose by £200,195, of which general goods contributed an increase of nearly 250,000 tons, and the manager points out that this result is all the more remarkable in that it has been obtained in spite of a falling off during the later months owing to the disappointing yield of the crops and the restriction of credit caused by the tightness of the money market. Shipments of wool showed a small increase in weight, but receipts were a trifle lower, and wheat gave only 46,351 more, as the area cultivated for the 1907 crop was reduced owing to dry weather at ploughing time, and the yield in some districts was below the average. Maize, however, contributed £42,220, barley and oats £22,598, linseed £8,014 more, while hay, potatoes and flour all gave better returns. Stone and lime also improved substantially, as an exceptional demand for paving stones existed in Buenos Ayres, and the building trade was active both there and in Bahia Blanca. Materials on capital account were up by 272,600 tons and £40,752, and Western Railway coal and mate-

rials by 30,547 tons and £1,267. Receipts from live-stock fell off by £56,163 owing to a decrease in the number of sheep, to the shorter average distance hauled, and to the reduction of tariffs put into force on July 1, 1906.

Business at the Bahia Blanca port showed a further expansion, although the number of vessels dealt with at the moles at Ingeniero White was slightly lower at 352. The total tonnage handled was 1,112,810 tons against 1,079,240 tons, of which 155,570 tons represented imports or an increase of 53,377 tons, due in some measure to materials for the gas company and the new waterworks. Including £3,959 more from imports the receipts from the wharves were £5,173 up at £99,071. Work in connection with the construction of the new grain elevator moles is progressing satisfactorily, and it is expected that the first section and one elevator with a loading capacity of 750 tons per hour will be ready for dealing with the coming season's harvest.

During the first half of the year a somewhat heavy outlay was incurred in order to put the permanent way into thorough running order while men were available, but the money seems to have been wisely spent, as it enabled the company to effect considerable economies in the second half, and the nett result was a decrease under this heading of £77,320 at £434,466. Maintenance of locomotives and rolling stock cost rather more than usual owing to the vehicles having been kept so fully employed in 1905-6, that only absolutely necessary repairs could be effected, but the principal increase in working charges was in running expenses, and was due to the advance in wages and to the cost of coal, the latter item alone accounting for over £33,000 of the extra expenditure under this heading.

The company is still spending liberally on its property, and after deducting £118,064 received for the section from Puan to Guatraché, which has been transferred to the Bahia Blanca and North-Western Railway Company, the capital outlay for the year reached the enormous total of £4,725,166. In addition to this £259,934 was spent on account of special revenue renewals, while the stocks of construction stores and materials in hand on June 30 were valued at £1,357,016. Much of this expenditure is still unproductive, but one extension of 90 miles from Tres Arroyos to Loberia was opened on October 1, another of 55 miles from General Guido to Juancho is expected to be ready by the end of the year, and work in a third of 81 miles from Gardey to Defarari is well in hand. Further, 115 miles of second track have been laid with a third track for 2½ miles from the sorting sidings to Lanus, additions which should materially help the working of the company during the busy produce season. Considerable progress has also been made with the relaying of the older sections of the line with heavier rails and improved ballast, affecting a total length of 926 miles, and a large amount of new rolling stock has been added to the equipment.

The company's petition to the Senate for extensions and supplementary branches was favourably reported upon by the Committee, but on being discussed in the Senate itself certain restrictive conditions were introduced into the Bill, which rendered it unacceptable to the company, and the matter is now in abeyance. In the meantime the National Congress has passed a law for the general unification of the conditions affecting railway concessions, which the directors hope will enable the company to continue to provide the additional railway facilities necessary to secure the proper development of the districts contiguous to its present system. Mr. White points out that August 30 was the fiftieth anniversary of the inauguration of the first railway in the Argentine Republic, and since that date only some 20,000 kilometres have been laid down, and he claims that there are extensive areas that still remain uncultivated and unproductive through lack of transport. The Argentine Government, however, can evidently be relied upon to do all in its power to remedy this state of affairs, both by granting generous concessions and by working in other ways. Less has been heard recently of the locust plague which used to afflict the country so seriously, but it has still to be reckoned with, and a commission has been appointed for the purpose of raising funds for destroying these pests. Government aid is to be given and authority has been granted to appropriate the proceeds of $10,000,000 paper in National bonds with 5 per cent. interest and 1 per cent. amortisation for the purpose of acquiring materials, &c., required. These bonds have been offered to the principal commercial houses, banks and railway companies, and as the last-named have a very direct interest in anything which will encourage agricultural development this company has subscribed for $500,000 of the bonds at 90 per cent.

Economic and Financial Notes.

Stock Exchange Reform.

Two incidents of the week induce us to return to this perplexing and thorny subject. We do so with the full consciousness that the present time is not opportune for a calm and helpful discussion upon it. The Stock Exchange is much too sick and impoverished to be able to enter into the technicalities surrounding the methods of business followed or to accept the drastic proposals which must be made if the reform is to be real. One of the financial newspapers, however, tells us this week that a scheme is now being matured for the establishment of a Mining Exchange which will deal first in Mining securities and afterwards in American Rails. The suggestion is that the Stock Exchange is about to be supplanted in these directions, and much sneering is indulged in at the "skylarking" habits of the "House." It has no business to do, we are told without hint of tongue in cheek, because the outside bucket-shop is drawing it all away, and as there have been no recent noticeable bankruptcies among bucket-shopkeepers, although some are no doubt due, this sort of talk impresses the Stock Exchange member who is hard up and can find no other relief from the monotony of his misery than just the little "skylarking." There should, however, seem to be plenty of vitality in the institution, seeing that its managers have just been able to declare an interim dividend of £5 upon the £12 paid share, and there is really little danger of any opposition worth being afraid of springing up against the central market, still backed up as it is by wealth greater than that of any other similar market and supported as it is by all the joint-stock banks of the three kingdoms. We should indeed like to see a separate "Mining Exchange" started to deal in mines and Yankees, so that we might test what the power of the irresponsible sharepusher and option-vendor is when deprived of the help of banks obtained through the Stock Exhange and of the Stock Exchange member. Necessarily an outside Exchange would have to stand alone, war would be declared against it by the old institution, and there would be no possibility of undoing bargains there, or very little. We are by no means sure either that the game of selling call options against a rotten market can long remain a fat source of bucket-shop income.

Dismissing this "rival institution" talk as idle, at any rate for the present, let us turn to the subject of the Stock Exchange itself. Many people talk lightly of its being "reformed," and all sorts of schemes are ventilated from time to time, amongst them one for establishing a daily Stock Exchange newspaper, which we judge would be employed to advertise the members and to display the wares in which they deal. All schemes, so far as we can see, recently put out fail to get at the root of the matter, and most of them would effect no substantial improvement in the form and habits of the market even if adopted. We must never forget that the Stock Exchange has grown with time as the oak grows. It has not been formed on a definite plan, laid down beforehand and built up like a railway viaduct or a church. On July 15, 1773, a newspaper of the day said: "Yesterday brokers and others

at New Jonathans came to a resolution that instead of its being called New Jonathans it should be called the Stock Exchange, which is to be wrote over the door. The brokers then collected sixpence each and christened the house with punch." Such was the beginning of the Stock Exchange, which has expanded to what we now see. As time went on it developed in many ways, enlarged its scope, took in new groups of securities, the foreign market for a notable one, and made not a few valuable improvements in its methods of doing business. For all that it remains a haphazard or happy-go-lucky kind of assemblage, without any real cohesion or well-ordered organic unity, and possessed of governing bodies capable of doing less than needed in the way of ruling with wisdom and profit even when they act together. And that dividend just paid gives us the key to the weakness of the market. It is not a market dwelling in its own house. The proprietors in the shape of shareholders are its masters, and its funds, drawn from entrance fees and subscriptions, go, after meeting interest on debt and current expenditure, to pay dividends to these proprietors. We have long insisted that while this duality of interests that must necessarily come now and then into sharp conflict continues, there can be no genuine Stock Exchange reform. Therefore the first thing requisite is to frame a scheme by help of which the proprietorship now vested in shareholders will become vested in the whole body of members. In other words, the shareholders must be bought out by the creation of a security guaranteed by the whole free revenue of the market, to be given in exchange for the shares. Until this is done it is almost useless to discuss such questions as collective liability of members for the malfeasance of individuals; dealings at nett prices; daily auctions in sluggish stocks; liberty to advertise within dignified limits, or anything of that kind. Until the market as a whole is its own master and reaches a position that will permit it to accumulate a reserve fund and to exercise full control over individual members, there is no genuine or lasting reform possible.

The Railway Year.

It is a pity the officials of the Board of Trade are not able to issue their summary of railway accounts for the past year earlier than in the month of October. Very likely, however, the delay is not the department's fault, as it may be that the railway officials are slow in sending in the returns. A good many details, moreover, have to be carefully worked out, and as the staff has much to do in other directions we can hardly blame if some of the returns are long in making their appearance. Interest, however, is diminished in these railway figures by the delay, and yet they should be full of instruction to proprietors. The summary with which alone we can deal this week shows us that very little addition was made to the total length of the roads last year which, at 23,063 miles, is only 210 miles longer than at the end of 1905, but the lines were doubled to the extent of another 118 miles, and 582 miles of additional sidings and side tracks were constructed. Even so this hardly seems enough to account for the increase that took place in the capital sunk during the year. Deducting the £945,000 of nominal additions the actual expenditure of new capital would seem to have been £13,337,000, bringing the total actual capital represented by the railways up to £1,091,597,000. This is at the rate of more than £47,300 per mile of line open, and although the boards appear to have refrained last year from initiating new undertakings involving large emissions of new stocks, we fear capital expenditure is still excessive, prospects looked to, and that the cost per mile continues to expand. It does so in no small measure because of the constant additions to rolling stock which the companies continue to charge to permanent capital account as if it were imperishable. Of the total capital mentioned above £390,734,000 was ordinary, and the nett increase in the ordinary for the past year was £4,700,000. As the total expenditure for the year was upwards of £13,000,000 it follows that fully £8,500,000 of the new was represented by preference and debenture issues, and the overload of preferential, debenture and other charges is really one of the causes producing unfruitfulness of dividends for the ordinary stockholder. Last year, however, the ordinary capital did receive a trifle more than in the previous year. Gross earnings came to £117,228,000, including nearly £9,000,000, the income from steamboats, canals, hotels, &c., and working expenses to £72,782,000. This left £44,440,000 as nett income, or an increase of £980,000 on the nett earnings of the preceding year, or of 2.3 per cent., and of that gain the ordinary capital received 1.8 per cent., the actual increase in the average dividend paid on the said capital being just 0.06 per cent. As gross receipts rose 3.3 per cent. this was surely a mean product. On the whole, however, the proportion of nett earnings to the capital outlay has diminished with scarcely an intermission for the last thirty years. The average proportion of such earnings to the capital outlay for the five years ended 1875 was 4.56 per cent., and for the five years ended in 1905 it was 3.38 per cent., the lowest for the whole period. Probably these figures give roughly a just enough idea of the progress of our railways towards unprofitableness, but the recent proportions of nett income to capital must really be higher than the table compiled by the officials indicates, they having made their calculations on the basis of the nominal capital. To be correct, however, they should have first deducted the total amount of "water" or ornamental capital added through conversions and duplications of stock during the period. Altogether, for example, £195,280,000 of the nominal capital of £1,280,883,000 represents mere water, and if we work out the percentage of nett earnings to real capital for the past year we find it comes to about 4.042 per cent., which is not so bad after all. Will 1907 show up as well? Hardly, for working expenses will be greater.

Dunderland Iron Ore Co., Limited.

It was started in 1902, and after five years all the directors can say is that "within the next six months the output of briquettes should reach 800 tons a day, at a cost which, unless some great and unexpected depreciation in the price of first-class iron ores occurs, your directors consider will enable the company to provide the interest on its debenture stock and leave a considerable balance of profit." On the strength of this opinion, its board is about to raise more money in the form of debenture debt. Already it owes £500,000, and the shareholders are to be asked to permit the board to raise the debt to one-half instead of one-fourth of the amount of capital paid up. At present the share capital is £2,000,000, half in preference, half in ordinary £5 shares, whose holders have got never a farthing out of the enterprise by way of dividend. The preference dividends, however, were guaranteed and paid out of capital up to June 30, 1904, and they are cumulative, so that 10s. 6d. per share or £105,000 was due to their owners on March 31 last, and all that contingent debt will have to be wiped off before the holders of the ordinary shares can hope to receive a farthing. What the company has lost during the five years of its life we do not know, because no profit and loss account has been submitted, but it paid £1,209,179 for the land, rich ore mines, rights, &c., &c., acquired, which so far have failed to show a value of as many shillings. In addition, £280,459 has been spent on railways and a harbour, £539,828 on buildings, houses, fixed plant and machinery, and £120,823 on rolling stock, loose plant, and machinery. Beyond these items there is a further £123,833, representing mine development, adjustment of plant, &c., &c., but this has been brought down to £107,517 by deducting the £16,316 received last year for the briquettes sold and delivered. Add to this the arrears of preference share dividend, and the company will be found to be about £273,000 behindhand, irrespective of the £952,000 or so sunk in what may be called mining adjuncts and preliminaries.

And as its cash was but £23,475 at the date of its balance-sheet, the urgency of the need for further capital becomes obvious. What are the shareholders to do in the circumstances? They can do nothing that would help them to get back their money, but we are disposed to think that they should resist any further creation of debenture stock or debentures, because should the debt be raised, as seems to be contemplated, to £1,000,000, reorganisation with a reduction of capital to an amount in conformity with the earning capacity of the business will be made most difficult. If, however, the shareholders do not agree to allow more debt to be put in front of them it is possible enough that the present debenture stockholders may be driven to foreclose, since there is plainly no immediate hope of a nett revenue sufficient to meet interest charges. These must be paid out of capital now. "It has not yet been possible to bring the blowing and separating processes to a high state of efficiency, but the results obtained are encouraging," say the directors. Is that good enough to create more debt upon? How many tons of briquettes were sold last year to produce £16,316? Does the saving of "several shillings per ton" in the cost of production mean profit? We cannot say. Reticence such as this report and these accounts exhibit is the reverse of encouraging, and we trust the board will display rather more frankness at the meeting of shareholders to be held next Tuesday. Let the chairman plainly tell us all about it, and own up if a blunder has been made. Then it may be possible to see whether further help should be given or not. Nobody likes to admit defeat, but better that than go on until defeat becomes disaster.

Imperial Cold Storage and Supply Co., Limited.

In a very real sense it appears to grow more limited, as witness this paragraph from the report: "The trading operations of the company . . . have resulted in a nett profit of £23,272. The interest on the debentures and loans, however, for the twelve months ended March 31, 1907, amounted to £24,680. After payment of that a debit balance of £1,408 is carried forward to profit and loss account." Yes, and the reduced share capital, on which less than nothing is thus bestowed, stands even now at £875,000, and the debts of the company, fixed and floating, have swelled up to £752,585, of which £250,942 is due to "sundry creditors." Ah, but "sundry debtors" owe the company £421,639 after £11,999, of which £7,576 comes off the past year's profits, has been written off for bad and doubtful debts, and the company owns ordinary shares and mortgage debentures of other companies in the same line of business to the aggregate book value of £285,382, and its other assets, including stock in trade £126,798, and cash £92,033, bring the total of the assets up to more than the total of the debt. Quite true, but aside from the cash and stock in trade, what are these assets worth? Asking no more than 4 per cent. on the £707,000 invested by or owing to the company, the income from interest, &c., should have been over £28,000; it was actually £18,387 for the company's past year, and the inference therefore is that a further large, but indefinite, proportion of these assets should be written off as lost. That is another way of saying that the sums assigned against bad and doubtful debts in the past two years have been shockingly insufficient.

We can estimate in another way whether the investments and amounts due by debtors represent the truth or not. Trade profits fell last year to £59,415, a decrease of £77,545 on the total for the company's preceding business year, and yet the amounts due by the company's debtors rose by £36,315 to the sum named above, because "additional advances" to the extent of £40,115 were made to subsidiaries. Why were these additional advances necessary at a time when the business done by all of them was presumably shrinking? Had the overshadowing company to come to their rescue, and if it had, is the book value of these credits and investments the true one? We very much doubt it, and incline to the opinion that the whole of the remaining share capital has probably been already lost. Were it in the hands of the original concocters of this precious affair we should not sorrow overmuch. Incidentally the directors themselves appear to admit that the business is in a well-nigh hopeless mess, notwithstanding the reduction in the nominal capital by £1,150,000, of which £250,000 was in "reserve shares." How tremendous the greed was the promoters exhibited is illustrated by the fact that goodwill, now eliminated, stood at £404,566. Besides this £333,060 has been written off properties, buildings, &c., and £34,811 off shares and investments, while a debit balance of £82,059 standing in profit and loss as well as £20,504 excess value of sundry miscellaneous assets have also disappeared. And last year the company failed to earn its debenture interest, partly because £9,380 had to be used to meet further depreciation over and above the small assignment to bad debts. It is all "abnormal depression" in South Africa, the directors say, but they likewise hint that this may be permanent: "material decrease in the population," reduction in credit facilities to customers, "reimposition of Customs duties" on frozen meat, oxen dearer, price of meat not correspondingly advanced, and so on. Against all this we have "substantial economies" in working the business, the disappearance of the London board and other precious helps, but the Government contract for meat had not been received up to August 20, the date of the report, and we sadly fear meat-eaters in South Africa are either going to other sources of supply or diminishing in numbers. As flocks and herds are replenished there will also be less use for a company of this kind, which aimed at the establishment of a pernicious monopoly and failed.

New Eastern Investment.

We thought we had finished for the time being with the various South African finance and holding companies, but the report of this unhappy enterprise has just cropped up to make us miserable. There is a refreshing frankness about the way the ghastly losses are set forth, and no small credit is due to the directors that no attempt is made to minimise the serious nature of the position. In accordance with the usual practice, the loss resulting from the revaluation of the assets has been passed to the debit of profit and loss. In ordinary circumstances, say the directors, this practice can scarcely give rise to any misconception, but in view of the exceptional character of the depression which has prevailed during the last two years they think it wise to summarise the results of that period. And we cannot do better than transfer this summary to our columns. It is too significant and instructive to be lightly passed over, and needs to be seen to be appreciated. Here it is:—

	£
The total depreciation in the shareholdings of the company for the year ending December 31, 1906, was..	197,074
To this must be added the depreciation shown in the report for the year 1905, *i.e.*.....	342,686
Making the depreciation in the course of two years	539,760
The realised loss during these two years, after deducting profit, was.....	5,440
And the excess of expenditure over receipts.....	5,991
Bringing the aggregate loss to.....	551,191
From this we must deduct the profit balance brought forward at December, 1904	20,445
Thus accounting for the loss now shown of	530,746

Such is the position in black and white, and there is no need for us to pile on the agony. Such investments as are quoted have been written down to the market price at December 31, 1906, while those for which there is no quotation are taken in the balance-sheet at or under cost. Before proceeding to examine these interests let us take a glance at the balance-sheet. The capital, all issued, is £800,000 in shares of £1 each, and more than five-eighths had been lost by depreciation up to the close of 1906. Is the shrinkage greater now, or less? We think it must be far more serious. Investments and participations are entered at £245,588 and mining claims at £115,349, being the

price at which they were taken over. Whether this means more loss or not we cannot say. Sundry creditors are down for £91,795, with no immediate means at the date of the balance-sheet of meeting their claims so far as one can see, and it is equally difficult to discover how shares purchased to the market value of £62,703 for future settlement were provided for, because sundry debtors were no more than £38,147, shares sold for future settlement £5,750, and cash £19,048. What are the prospects for the future? Just glance at the subjoined schedule of principal interests and judge for yourself :—

Angelo Deep	Developing.
Booysens Estate.....	Undeveloped.
French Rand Deep	Undeveloped.
Hercules Company.....	Shaft Sinking Suspended.
Klippoortje Mynpacht	Undeveloped.
Main Reef Deep.....	Undeveloped.
Main Reef East	Undeveloped.
Palmietkuil	Undeveloped.
South Nourse	Developing.

The holding in Rand Mines Deep mentioned in the last report was sold during the year. To all the companies mentioned above we have from time to time referred, the Hercules only last week and the Main Reef East and Deep in the current issue at the end of our notice of the parent company, the Consolidated Main Reef and Estates. As to the Angelo Deep and the South Nourse, these being the two developing mines, the directors themselves append some particulars, not, we fear, of a very encouraging nature. Referring first to the Angelo Deep, the directors, of whom there are only three by the way, say that active development continues on the property, and while the Western shaft in the Eastern section has opened up a fair length of payable reef, the Eastern shaft has not disclosed any large continuous body of pay ore. It is, however, expected that as work extends into deeper ground better values will be found, as was the case in Witwatersrand Deep and Knight Central mines, which the Angelo Deep resembles in many respects. The company has still nearly £350,000 in cash. As to the South Nourse, owing to want of funds work has been limited to the Western shaft. Values in the upper levels were low, but a considerable improvement is shown in depth. A sum of £40,000 has been lent to the company by Wernher, Beits, the Consolidated Goldfields and the New Eastern Investment. There is not much more to be said. After the usual reference to the terrible financial depression "owing to a combination of unfavourable circumstances of a political, financial and industrial nature," and the uncertainty regarding unskilled labour, the directors speak of the drastic economies effected in all branches of expenditure, which "will enable the company to await, without undue strain upon its financial position, an improvement in the present condition of things." We wish it could be seen in the immediate future.

Rio Tinto.

It is probably no exaggeration to say that more dealings have taken place in Rio Tinto shares during the past twelve months than in any two other Stock Exchange securities. With the vagaries of the copper and copper share market during that time we are all familiar, with the gamble that took the price of copper metal up to something approximating £110 per ton and copper securities in proportion, and with the inevitable and equally sensational slump. It used to be an axiom that Rio Tinto shares were worth the current price of copper. When copper stood at, say, £50 per ton a Tinto share was worth £50. So far as price movements are concerned, this appears still to hold good, the two values always being in fairly close relation. These reflexions are provoked by the issue of the Rio Tinto company's interim report giving the usual indications of the position of its magnificent property and prospects for the immediate future. Rumour has been as busy as a bee in midsummer concerning the company's affairs, but, as usual, the jade has been lying atrociously. Not so long ago, only in August, in fact, there were vague stories in circulation that a fire in the mine was threatening the sulphur contents of an immense body of ore, some said a million tons, but these are now proved to have absolutely no foundation. It must be considered doubtful if there was a fire of any sort, let alone one of such a serious nature, because "the board have no adverse news to convey to the shareholders regarding mining or other operations, all of which are in a satisfactory state." It is admitted that the water difficulty has been acute—we fancy lengthy reference was made to this matter at the last meeting—and obviously the great and unprecedented drought must have been a serious anxiety to those in control. However, there was no suspension of operations, and it is hoped the year's output of fine copper at the mines will not fall short of 1906 by more than from one to two thousand tons. The rainy season has now commenced, and already the company has enough water for four months' consumption in the reservoirs. An additional reservoir is also in course of construction. Concerning the actual operations, the directors say that the deliveries of pyrites in the United Kingdom have this year again been rather below those of former years. The Continental consumption, however, is higher than that of 1905 or 1906. The copper contents of pyrites shipped to all markets has been about the same, while the consumption of noncupreous sulphur ore is in excess of 1906. All that seems fairly satisfactory, but the chief concern of shareholders will be as to how the company has fared over the slump in prices. Here is the directors' story. The price of copper was very high during the first few months of the year. In May and June, however, a crisis in financial affairs in America disorganised business generally, and consumers have since then not been purchasing as freely as formerly, a severe fall in the price being the consequence. The company's output, however, is fairly well sold in advance, and the drop in price will probably in itself have the effect of preventing any general over-production in the future. As to the stories of immense accumulations in the States, the shortening of output by many leading mines, and so forth, readers are doubtless as well informed as we are. However, in declaring an interim dividend of 47s. 6d. a share the directors gave "bears" a bit of a fright, the lowest estimate having been 35s. and the highest 42s. 6d. The payment is only 2s. 6d. less than a year ago, and it is perhaps questionable if the interim distribution would have been so high if the directors did not see a prospect of at least repeating such sum six months hence.

American Business Notes.

That monetary stringency so long regarded by us as inevitable has now laid hold of the Wall Street market, and may drive it to such extremity as to force the bankers to make great sacrifices in order to import gold. We are not sure whether it is in their power to make these sacrifices, but unless gold is imported it seems plain that there is going to be extreme distress and no small confusion in American credit circles this end of the year. Last week's Bank figures show the beginning of the strain which the Western demands for currency for crop moving purposes are certain to put upon the available credit resources of New York. Loans and discounts showed a decrease of £2,260,000 and the specie and currency reserve fell off by £1,524,000, at the same time that the average of nett deposits dropped by £3,700,000. The surplus reserve was accordingly nearly £000,000 worse and amounted to only £530,000 compared with £1,885,000 in the same week of last year. The National City (Standard Oil) Bank alone is said to have curtailed its loan averages last week by £1,404,000, and there was a diminution of about £800,000 in its cash. While this is going on the banks are being obliged to finance the embarrassed purchasers of the securities pouring in on Wall Street from European markets, and although the

loan and discount averages fell off last week it is probable that the diminution was the product of shifting to other centres more than of actual repayments. The market, in short, is rapidly approaching a position of deadlock, and as the general insolvency of the financial cliques and monopolist becomes more manifest the state of the credit market will get more helpless, Cortelyou or no Cortelyou. He is only the momentary Necker or saviour of the State, and his resources are not very overwhelming. Plainly the banks are not relying on him much, for they are said to be calling in loans on copper and copper securities, and to have intimated that they will not renew advances on industrial securities. In their distress they are thus forcing Wall Street towards a fine, full-flavoured panic, to the intensity of which financial robberies and malversations of all degrees of magnitude are opportunely contributing.

A valuable and suggestive summary of the figures relating to joint-stock banking in the American Union has been issued by the United States Controller of Banking. This shows that on August 22 last there were 6,544 national banks in the Union whose paid-up capital amounted to about £180,000,000 and whose reserves were stated at about £105,000,000. Their liabilities on deposits came to £864,000,000 and their loans and discounts to almost £940,000,000, while they held gold and gold Clearing-house certificates to the value of nearly £40,000,000, gold Treasury certificates to the amount of £42,000,000 and legal tenders to the value of £34,000,000 odd. Altogether their cash, including over £5,000,000 of silver coin and nearly £20,000,000 of silver certificates, amounted to about £139,000,000, money most of which is totally useless by way of general or emergency reserve. Some portion, indeed, of the total is probably enough borrowed money. The most interesting thing, however, about this return is found less in aggregate figures such as we have given than in the fact that such a preponderating number of the banks are quite small. Many of them have been started with the minimum capital of £5,000 allowed by the Gage law, and the multiplication of these small banks has been unusually active of late. A goodly number seem to have come into existence between May 20 and August 22, the date of the latest return. In that period new banking capital to the amount of £2,552,000 has been brought into existence, of which, however, fully £1,000,000 represents additions to the capital of already established banks, the balance being that furnished by new banks. These new banks numbered 115 and their average capital was only £14,000, but as 18 of them started business in populous districts and contributed about £800,000 to the total additional capital ascribed to the whole number of new banks, it follows that the remaining 97 banks began business with a capital of £5,000 each. In a sense this kind of banking may lead to or insure soundness; that is to say, the business community is not likely to be seriously crippled by the failure of a few or a few dozens of them. On the other hand, these small and weak pillars of the credit structure cannot be relied upon for help in time of extremity. They are certain to be suckers when not mere dead-weight. Most of the small new banks seem to be located in the middle and Western States, and only 13 of them in the South, and doubtless it follows from the creation of all these new credit-generating agencies that, in spite of the great contraction of business at the larger credit centres, the total of the loans, &c., shown by all the banks together has gone up by £9,500,000 since May 20 last and is now the highest ever exhibited in the Government return. The cash on hand has also gone up, but only by about £2,000,000, or if the comparison is made with the return of January 26, by £1,200,000, but the money now held is sensibly more white and less yellow. That is to say, the gold holdings between May and August fell off by £3,600,000, so that the increase shown in the aggregate of cash held consisted of silver and paper. Deposits also fell off, but most of the decline of nearly £5,000,000 is ascribed to withdrawals by the United States Government.

Owing to the fight going on unusual interest probably attaches to the report of the Illinois Railroad Company for its year ended June 30 last, but it really differs in no respect we can discover from the statements issued for so many years back when the railway was under the control of Mr. Stuyvesant Fish. All the old tables of figures are duly displayed and a variety of details about the working of the property are set forth with a minuteness that must excite the envy of railway shareholders in this country. The new board, too, continues the 7 per cent. dividend given for several years now on the company's ordinary stock, and appears to have been well able to do this. Gross receipts, for instance, came to $56,611,000, and working expenses to $40,066,000, so that the nett revenue was $16,545,000, exclusive of $2,819,000 received as interest from investments and as miscellaneous profit from the sales of land and other sources. Altogether, therefore, the free income was $19,364,000, and after meeting the funded debt interest and rents and adding in a surplus brought forward from the previous year, there was $13,100,000 left, out of which the 7 per cent. stock dividend took only $6,653,000. Thus the board was able to set aside $3,988,000 for improvements, together with $1,000,000 transferred to the credit of profit and loss, and still had $1,360,000 left to carry to the new year. Traffic receipts went up by nearly 10 per cent. and working expenses by rather more than 10 per cent. Expenses are also still going up, and make the outlook for the current year less promising, although the margin should be large.

In spite of the liberal assignments of revenue to capital purpose, for the time being at least, the funded debt of the company is also increasing a little. Only $1,159,000 of Illinois Central 3½ per cent. gold bonds were issued last year, but its dependent, the Yazoo and Mississippi Valley Railroad Company, seems to be in want of hard cash, and the $13,598,000 of its 4 per cent. improvement bonds belonging to the Illinois Central Company are evidently to be issued as soon as possible, since the Illinois Central has undertaken to guarantee principal and interest on the bonds. But possibly the Illinois Central Company itself wants the proceeds to recoup its own treasury, for it has a floating debt of nearly £2,200,000. The debt rose by £1,723,000 during its past fiscal year owing to pulls made upon its purse by its offspring, and its credit is continually being pledged to secure advances to a number of subsidiary roads created by it or under its control. There are no less than six of these small roads besides the Yazoo line and the Indianapolis Southern, or eight in all, but one of them is the Memphis Terminal Railroad Company, a joint undertaking promoted by all the railroads running into that city; ten of them, in fact, have apparently joined in guaranteeing the cost of the new undertaking, which promises to be very heavy. During the past year the subsidiary lines of various descriptions got money to the amount of £1,517,000 to help them along, or nearly £800,000 more than in the preceding year. It follows from all this that the company is getting hard up for capital and must soon raise it one way or another.

We note, too, that its lines continue to be shockingly ill-equipped compared with the English standard. The management seems rather to boast that it is improving the standards of maintenance, and in the report the board draws attention to the fact that the average weight of rail laid in the main line is 74.77 lbs. per yard as against 74.08 a year ago. This may be so, but none the less is the bulk of the line shod with a very low weight of rail, as a valuable detailed table accompanying the report exhibits. Little more than two miles, for instance, was laid with 100 lb. rails out of a total of 5,100 miles, and about 1,500 miles were still laid with rails of between 50 and 70 lbs. weight, and even 2,146 miles of which 85 lb. rails have been laid down cannot be considered up to European standard, nor sufficiently well equipped to bear the enormous loads now thrown upon the lines by the modern heavy

locomotive and large freight car. In the past year the average tonnage capacity of the freight car has risen from 34.78 to 36.22 tons. The directors do not say how many people were killed or maimed on their lines last year, and the entry "compensation" is not admitted into American railroad balance-sheets.

A separate report has been issued by the Yazoo and Mississippi Valley Railroad Company, but it does not require much notice at our hands. Its gross receipts came to almost $9,500,000, and the growth has been steady over a long term of years. In 1893, for instance, the gross income was only $3,319,000. The nett income, however, has not expanded at the same speed, and was only about $114,000 more last year than in 1905-6, as against an increase of about $700,000 in the gross income. During the year the company issued $1,029,000 of its 4 per cent. gold improvement bonds at par, but presumably the buyer was the Illinois Central. Expenses, including taxes, consumed nearly 85 per cent. of the gross receipts. And the free revenue, after meeting fixed charges, was only $71,207. This is rather a better display than the previous year's, when the balance was but $29,018, but poor indeed against the $1,066,000 of 1901 or even the $656,000 of 1905. What has happened since perhaps Mr. Harriman and his strenuous associates can say.

We are getting tired of referring to the Standard Oil Company and its proceedings. There is, however, one item of information given by its officials to the Public Utilities Commission of the State of New York worth noticing. The Standard Oil Company of New Jersey, it must always be explained, is the mothering or holding company, and seems to have about 67 subsidiary concerns at home and abroad in its control. It creates them, sticks to their capital and seizes the profits. From these various companies in the year ended December 31 last, according to the official return, it received $53,227,000 of income. This is exclusive of the Jersey Company's own earnings, which came to $9,572,000, and as only $39,335,000 were paid away in dividends there was a handsome surplus at the year's end. It should have been a surplus of $19,000,000 but the bookkeepers of the company made it up to $39,335,000 by adding in $20,323,000, representing the nett increase in the value of corporate stocks held as investments by the New Jersey Company, this item, it is explained, being "credited to uncollected earnings." If this kind of bookkeeping has prevailed throughout the history of the New Jersey Company we should judge the concern to be rather hollow, gaseous in fact, and that the total profit and loss surplus of $261,062,000 exhibited at the year's end as the accumulation of past years is of the nature of a bogus entry. Mr. Rockefeller and his friends could not prop up their banks or carry their stocks of copper by means of a surplus made up of "uncollected profits," but the phrase is happy in its way—quite skilful.

The scandals connected with the New York City railways are not of very great interest in this country, but gossip says that they are going to excite an enormous amount of interest on the other side of the Atlantic, no less than £4,000,000 to £5,000,000 having been stolen, it is alleged, by the promoters, combiners, mergers, &c., &c. Some say, indeed, that the amount misappropriated is more than £5,000,000 and the "steal" is described as being greater and more successful than anything that the past generation ever saw in railroad thieving. Some of the highest names on Wall Street are declared to be implicated through having shared in the spoil. Millions of dollars borrowed for specific purposes have been diverted to any purpose the wizards of boodle thought fit to apply them to, and sales and re-sales, combinations and duplications have been carried through until the whole tangle is difficult to unravel. In the meantime some portions of the great combinations have gone into bankruptcy, and the probability seems to be that they will all go that way.

What is the meaning of Mr. Ryan's sudden dangerous illness? He is president and Mr. Rogers vice-president of the Amalgamated Copper Company of the Standard Oil monopolists, and both are now shelved. Can it be that the available money of the New York Life Insurance Company and others has been utilised to aid the copper forestallers in carrying their stocks of metal and scrip? We have long had a suspicion that help came from such a source, and look to the copper smash to solve more than one puzzle. Ryan, by the way, is reported to have received his share of £200,000 which the organisers of the New York City Railways combine paid for "a comparatively worthless franchise" known as the Fulton, Wall Street Ferries Railway. There was no such railway, but this sum was handed over, first to a man named Brady, who took £50,000 of it and divided the remaining £150,000 between Ryan, Dolan, Elkins, Witney and Widner, the brokers, Moore and Schley, also getting a picking. Two of these men are dead, but apparently an action is to be begun against the others. This is but a trifling item in the general scoop.

Telegraphic summaries of other railway accounts sent over during the week tell us amongst other interesting things that of the 10 per cent. dividend paid on Union Pacific ordinary stock, 6 per cent. came from the earnings of the line and 4 per cent. from the company's investments. The surplus, after providing for all charges and dividends, is made to stand at $10,853,000, which looks a nice tidy sum on paper. The details need not be mentioned until we get the report. The Chicago, Rock Island and Pacific Company also makes a fine exhibit, the surplus after paying all charges and dividends being $2,526,000 larger. The Union Pacific Company, however, has put $2,240,000 less into the property out of revenue last year than in the year before. Another company—the Northern Pacific—which has disappointed the market by restraining the dividend on its stock to 7 per cent. per annum, shows an increase of $7,311,000 in its gross earnings for the year ended June 30 last and a decrease of $742,000 in the nett income, but then it put $2,844,000 more into the property out of current receipts. Its final surplus is consequently $1,858,000 down. Figures of this kind show us what a haphazard and pastrycook sort of business American railroad bookkeeping is.

Official crop reports put the yield of maize in the United States for the current year at almost 2,492,000,000 bushels and the estimated outturn of wheat, spring and winter together, is put at 625,576,000 bushels, while the oats crop is guessed at 741,521,000 bushels. The maize crop would thus seem to be much larger than that of the previous year, the biggest, indeed, since the harvest of 1899, but the wheat crop is the smallest of the last three years, and has been only three times lower in the last eleven years. The oats crop is also considerably below recent figures, the lowest, in fact, for eight years.

Canadian farmers and financiers are consoling themselves for the now acknowledged miserably small crop of good wheat produced in the Canadian North-West by the fact that better prices will be realised, and again it has to be pointed out to these gentlemen that this by no means follows so far as this particular wheat is concerned. They say that out of a total crop of 70,000,000 bushels there will be 40,000,000 bushels of "good milling wheat," but that is doubtful. If the crop has been blighted so that the grain to such a large extent is too poor to be worth milling, what is the value of the portion considered good? Is it likely to be up to the average of good wheat from other quarters? We very much doubt it.

Passing Events.

From two authoritative quarters we have received assurances that the losses of Manchester banks through the Egyptian troubles are nothing like what was reported on the Stock Exchange last week. Although perfectly independent of each other both informants agree remarkably in their estimate of the losses that may ultimately have to be borne. In one instance the original commitments appeared at first to indicate a

loss of £50,000, and this estimate has now dwindled to a point that leads the officials of the bank to estimate the ultimate loss at no more than £5,000. There is not a bank in Manchester, another authority assures us, that can lose as much as £50,000, and except in one instance, perhaps, the limit should be no more than half that amount. In another case where the loss seemed likely to be £20,000 it has now dwindled to less than £10,000. People forget that the managers of the Manchester banks were not such fools as to lend without security and that they held goods against the advances made, which goods have not vanished or depreciated to a dangerous extent in value. We judge, therefore, that the public mind may be set completely at rest so far as Manchester banking is concerned. It is in the hands of some of the shrewdest bankers in the kingdom, and the general business they have done during the past five years, if not longer, has been so excellent and so uniformly profitable that, as we said last week, even the most tremendous loss talked of could be borne without producing any disastrous consequences.

We have been interested in reading the criticism of Admiral Germinet on the *Dreadnought* form of fighting ship. He must be wrong in thinking that our naval constructors elaborated this monster of the deep because of the success of large guns in the battle of Tsushima, for these gentlemen had fallen victims to the big ship some time before in their eagerness to make away every year with as much as possible of the British taxpayers' money, and to display their own genius regardless of cost. But the French admiral's criticism is sound in the main, and comes to much the same as our own. He does not believe that the gigantic 12 in. gun with which the *Dreadnought* class of vessel is armed is of as much efficiency in sea fighting as smaller guns, and instances the victory of the Japanese over the Russians as proof that most mischief was done by small shells of high explosive capacity. Into the technicalities of the dispute we cannot enter, being ignorant, but any criticism of these gigantic vessels is to be welcomed which tends to magnify the folly of those who are responsible for bringing them into being. It is not common-sense to put the hazard of war upon a few enormous ships, heavily armoured, any one or all of which may be sent to the bottom by the impact and explosion of a small torpedo. We could construct five or six first-class and most death-dealing ocean murder machines for no more money than one *Dreadnought* now costs, and were our efforts to be limited to half that number of reasonably-sized vessels in exchange for one *Dreadnought,* we would soon have a fleet of war more numerous and powerful than those of any three other nations combined, a fleet, too, costing millions a year less than we now pay. As it is we not only spend something between £1,750,000 and £2,000,000 on each *Dreadnought,* but we have to pay for the upkeep of these huge vessels, the current outlay upon which is becoming a very heavy and irreducible item in the annual budget of the navy.

The directors of the Royal Mail Steam Packet Company announce their decision to ask the proprietors to sanction the creation and issue of debenture stock to an amount not exceeding two-thirds of the capital of the company for the time being issued and paid up. At the present time the paid-up total of this capital is £1,500,000, so that debenture stock to the amount of £1,000,000 might be created under the new liberty sought. The existing terminable debentures amount to £500,000, and become repayable on January 1 next, so that, after these have been paid off, as they would be out of the new stock, there will be just another £500,000 in borrowing powers remaining to be exercised as expedient for the general purposes of the company. And money is wanted to provide for the great expansion in the company's business, a business, the directors are glad to state, which "indicates a continuous financial improvement." In order to get permission from the shareholders to make this issue a special meeting has been called at the Cannon Street Hotel at 12 o'clock noon on Thursday next, when the necessary resolutions will be submitted. We hope the board will not be compelled by the state of the money market to pay too high a price for the accommodation.

We wish it were possible to put as little faith in the statements of fact forwarded to the English Press by Reuter's Simla correspondent as may safely be given to his scraps of political prejudice or malignity. Unhappily there is no reason whatever to doubt that when the correspondent sends news about the condition of the people or about Indian finance he is to be relied upon, and the news received from him this week with regard to harvest prospects over a large area of our Indian dominions is most ominous of an approaching famine. The crop situation, he says, is fairly good in Burma, Eastern Bengal and Assam, also we judge that a portion of Bombay and Madras will give fair results, but in the west of Bengal the crops are suffering. In the United Provinces the harvest is a failure, and distress there will probably be widespread, necessitating relief measures on a large scale. In the Punjab and North-West Frontier Province and in Rajputana the position is also now critical, and if rains fail for the spring crop it will become disastrous. In Central India there is only a quarter crop, and in Gujrat prospects are poor. Already, it would seem, famine prices are being approached in some of these districts, and in Lahore the rupee now buys only 8 sears of inferior flour, whereas the usual quantity bought by that coin in these regions is about twice as much. And the worst of it is that the people have no reserves, so the only remedy the Central Government can apply at the outset of the trouble is to remit the land revenue. That land revenue, however, is continually acting as a stripper, and it is no wonder if India seethes with discontent. The people are overtaxed, systematically, without any of the ghastly robbery, raids and illegalities of the old rulers of the country, but with a steady, unrelenting pressure which must in the end produce a deeper, a more hopeless and more widespread degradation than anything India ever endured or exhibited in former times. We mean well and work hard, but this is the result. Had money been spent in providing great irrigation reservoirs and canals over these regions so frequently afflicted with drought, the population would certainly have been better able to endure seasons of famine, but even then the militarism which is cursing and ruining our Indian dominion would have spread its blight and wrought its desolation in the long run.

It is well that the board of the Chartered Company should have sent a deputation of its members into Rhodesia to listen to the complaints of the miserable settlers there. These settlers have been meeting Lord Winchester and other representatives of the great men of London and formulating their complaints. They want the Chartered Company to give up the 30 per cent. vendor interest it holds in mining companies, to improve the titles to the land and to liberate for free settlement the land not already sold. Some of the demands may be conceded by the directors, others we fear they cannot afford to concede. Their position is, indeed, pitiable in view of the commitments they have lightly entered into, the enormous interest obligations the company has undertaken for railways and the absence of any real free revenue. Bankruptcy waits for the grandiose abortion round the next corner, and nothing the directors can do will avert that natural end, not even the transfer of the cost of the government to the Crown. Obviously the idea of effecting a change of this kind is at the back of the whole proceeding, hence the dandling of "federation" as cure all. The directors have gone to South Africa to see whether some job of the kind cannot be patched up by help of which the Transvaal or the South African colonies together may be induced to enter into certain engagements whereby the Imperial Government might be deluded into accepting the transfer to it of the administration part of the show and induced to bear part of the expense. We shall, therefore, have to be vigilant lest some deal be

perpetrated more gigantic and fertile of loss to the home taxpayer than anything surrounding the transfer of the East African territories and of Nigeria to the Home Government. But even this relief would not save the Chartered Company because no British Government could now venture to pay millions to it for the honour of superseding it.

South Africa, indeed, is full of problems that seem only solvable by a sort of bankruptcy composition with the creditors or liquidation under the supervision of the creditor. Trade in Cape Colony continues to diminish, and the position in the Transvaal is financially none too comfortable in spite of the continued increase in the output of gold. The whole mining industry, indeed, is upon an unsecure economic foundation, inasmuch as it is not conducted to any measurable extent for the benefit of the communities amid which the mines are situated. Hence Cape Colony and Natal are wrestling with usurers to prevent this very sliding into insolvency, and the whole political situation is charged with problems that look to the distant observer well nigh insolvable.

We are glad to see that Judge Thomas, a stipendiary magistrate in Liverpool, spoke out strongly about those bond investment impositions which the *Manchester Guardian* did so much to expose some time ago. He had before him the case of the British Investment Assurance Co., Limited, which has only been a short time in existence, and whose business it was to foist these delusive bonds upon the public, and he dwelt with emphasis upon the presence on the board of men presumably of social honour, if not of intelligence, like the Earl of Essex and the Marquis of Queensberry who had allowed themselves to be beguiled. The company was registered in Guernsey, and naturally in its short life has only done mischief. The system, Judge Thomas said, is, on the face of it, unsound, and a company doing such business can only maintain for any length of time an appearance of solvency by forfeiture seizures and fines. While admitting that the peers mentioned and Mr. Ribbentrop may have been genuinely convinced that the scheme was a successful one, he none the less disapproved of their presence on the board. It is to be regretted, he said, that gentlemen in the position of these respondents, who must have known that their names would be used to attract applications for shares, should not have had a higher sense of their responsibility and their duty. We venture to think it a pity that a lesson through the pocket cannot be administered to such gentlemen who lightly do mischief, often doubtless from a vague sense of showing a benevolent interest in the poor. The liquidator's action was confirmed, but no particular punishment was meted out to anybody, probably because the judge did not have the power to punish.

It seems a pity that the total amount of Treasury bills outstanding on the market should have again risen to £13,213,000, exclusive of £2,500,000 held presumably by the National Debt Commissioners. Add that sum, and the entire amount of floating debt in this form now current is £15,713,000, which is fully twice what it ought to be, and the amount in the possession of the market might soon prove to be inconvenient were its credit resources straitened at all by pressing demands from other quarters.

We are much in agreement with Mr. Charles Bright, the well-known telegraph engineer, in the remarks made by him to the *Morning Post* one day this week with regard to the Marconi system of wireless telegraphy. He believes in the new system up to a point for less important messages, but that belief does not seem to carry him far, and he gives it emphatically as his opinion that the cable companies are not in the least degree endangered by this new rival. Perhaps the Marconi system may be useful for social messages, he suggests, which are now rarely sent by cable; and for sending news over short distances from ship to ship or from ship to shore the system may also be useful, but it is neither reliable enough nor swift enough yet to satisfy the demands of commerce. The speed of a cable telegram may be as much as a hundred words a minute, he said, while that of a wireless message is between twenty and thirty. If this speed is increased for these wireless messages, it can only be done by adding to the power with the danger of different messages meeting in the air and confusing one another. Wireless telegraphy, in short, is to-day, whatever it may be in the future, "comparatively unreliable, comparatively slow, comparatively lacking in secrecy and comparatively inaccurate." That is just what we have maintained throughout, and therefore we have always insisted that shareholders in cable companies ought not to be scared out of their property in the manner so many of them have been.

While on Marconiisms it may be well once more to refer to the scandal, for we fear it must be regarded as a scandal, in connection with the sale of shares of the Canadian Marconi Company in Australia. From the latest letters that have reached us we learn that the shares sold in Melbourne and Sydney by a representative of a firm called Munroe and Munroe, which is said to have offices both in New York and Montreal, have not yet been delivered. Apparently the American people have now ceased even to offer any excuse for non-delivery. Formerly they blamed the lithographers, or the directors, or the want of paper, or made some equally ridiculous excuse; now they follow the precedent of Brer Rabbit. The thing, therefore, begins to look like an imposture pure and simple, and so far as we know there may be no such people as Munroe and Munroe. That there is a Canadian Marconi Company, however, is proved by the reference books, and really it seems the duty of the directors of the parent company in this country to make some effort to put a stop to a sort of trading that looks like imposition, and to compel restitution to those unfortunate people in Australia who parted with sometimes thousands of pounds of their money, apparently on false pretences.

The great Senator Cox, of the Canada Life Assurance Company, and director of the Grand Trunk Railway, has been intervening on behalf of Asiatic labour. Is this philanthropy? Not more so than his insurance management. He wants cheap Asiatic labour to help in building the Grand Trunk Pacific line. $17,000,000 or $18,000,000, he said, is lying on deposit at banks in the Mother Country waiting to be spent by the Grand Trunk Pacific, but men to spend it on have not been procurable. "If more men were available there would be a greater distribution of capital, and the general condition of the country would be improved," said this great patriot. Therefore, he would encourage labour from every land. It was a mistake to close the doors to Japanese or Chinese when the country was suffering. We fear this sentiment, just though it may be and prudently selfish, will not commend itself much to Mr. Cox's fellow citizens, and that the problem of Asiatic *v.* European will not be smoothed away by any such utterance. It is a problem that may come to threaten the peace of the world at no distant day unless passions abate.

The *Manchester Guardian* wants to know what Mr. Haldane will do when the cost of his territorial army begins to rise and the demands for savings in the army expenditure grow in insistence. That is just what we should like to know. For the time being he has cut down the expenditure upon the army, but it is still many millions in excess of what it stood at before the South African War, and, as we said last week, he seems to have laid the foundation for an indefinite increase in future expenditure. That does not seem to us to be the height of political wisdom, and in fact the absence of anything like systematic and well-ordered efforts at economy in the expenditure upon our fighting services is one of the facts which most incline us to despair of the future of Imperial finance.

Surely it is not possible that the French Government has agreed to permit the Government of Russia to try and float a loan in Paris for over £130,000,000 early next spring. We should have thought half that amount fully as much as the French bankers could possibly tackle, seeing that they will have little sup-

port either from England or Germany. It is, however, now stated from various quarters that a loan of 1,300 million roubles is being got ready, and we can quite imagine that Russia requires every penny of the money it can hope to get by this desperate looking step. Perhaps, however, the formidable total is put forward merely to shock people and to familiarise us all with the idea that one more gigantic, nation-pawning financial operation is contemplated by the Government of the Tsar. When launching day comes the real loan may prove to be considerably less, and it would undoubtedly be good tactics to play this game. People's minds would be relieved if a loan of £75,000,000 or £80,000,000 were offered instead of the rumoured loan of £130,000,000, and under the influence of the sentiment thus excited it is possible that something like a subscription to the smaller loan might be secured. Between now and next spring, however, many things might happen, even the crippling of the French financial magnates and their banks, who, taken together, form probably the strongest group of money-lenders in the world.

A curious dispute has arisen between Germany and France, or rather between German and French financiers. In their distress German financial leaders have apparently been making efforts to get German stock admitted to a quotation on the Paris Bourse. They have done this in the hope that French purchasers might be found for the stock and a channel be opened up whereby French money might be drawn into Germany. Paris, however, will have none of it, and the *Echo de Paris* has published a vigorous article pointing out how unwise it would be to open the French Bourse in order to assist German financiers and the German people in maintaining the portentous military system brought into being by the empire. Germany, the writer says, has a formidable army, but does not know where to find the £200,000,000 that would be indispensable even for a short war. That is quite true, and it is in this inability that the hope of peace finds its surest foundation. If Germany and France and ourselves were not spending such ruinous amounts every year in maintaining excessive fighting agencies and appliances they might quarrel and come to blows any day. As it is, all civilised nations aiming at greatness are smothering themselves beneath the armour they have put on. And France is really not able to assist Germany, even if willing; but she is not willing, and the cosmopolitan financier who knows no patriotism and cares nothing for human misery or wholesale shedding of blood finds himself cornered. His diligence has wound bonds of debt around the limbs of modern nations to an extent that threatens to paralyse them and in the end to destroy his trade.

Mr. H. H. Dobree is sanguine about the future of the Colonial Bank, in spite of the danger threatening the House of Lords and the monstrous attacks of Socialists and other depraved creatures upon landed property. We do not gather from his speech that any serious body of political agitators is bent on taking away the land from its present holders without paying for it, and even if it were it should be hard to connect the unprofitable business done by the Colonial Bank in its past half-year with political agitations at home. By Mr. Dobree's own illustrations, it should be the other way about, for he points out that ten years ago Mexican 5 per cent. bonds stood at 98 and Consols at 112, whereas to-day Mexican bonds are above par and Consols barely 83. Money would thus seem to have been going abroad—and, indeed, he says so. For all that he was quite right in insisting that there was nothing wrong with the bank, and that the decrease in the profits by nearly £7,000 was due to exceptional circumstances—losses incurred through the earthquake and fire in Kingston, Jamaica, and other untoward events. The future looks like bringing more prosperity, and the cultivation of Sea Island cotton is said to be making progress in the West Indies. These Crown Colonies do need new industries, for they have not made as much as they might have done out of their sugar.

A tremendous amount of space is occupied in the financial daily newspapers with a report of the second ordinary general meeting of Kent Collieries, Limited—is it No. 3 or No. 13?—and really there was an immense outpouring of words, so much so that the name of the chairman, Sir Owen R. Slacke, C.B., appears to be suggestive. "Slack" is not unconnected with coal anyway, but there does not seem to be any alarming abundance of this fuel in the pits of the company. It is "getting coal daily" out of the 1,272 ft. seam, which is 1 ft. 8 in. in thickness, and intends to open up another seam of the same thickness at 1,500 ft. There appears to be also a 2 ft. seam somewhere down in the bowels of the earth, and the statement was made at the meeting by Mr. G. W. Lancaster that with the uncalled capital there should be enough money to complete the three shafts down to that seam, and to do some opening out. We hope this will, indeed, be so, but fear that the coal supply from Kent mines is not going to help the London householder to cheap coal for a good long while yet. Incidentally we are told that £1,200,000 of capital, much of it probably nominal, has already disappeared in this enterprise. The present company's balance-sheet adds up to about £339,000, but that of the one which preceded it was in September, 1904, £1,522,000. The difference has vanished, and this likewise forbids undue optimism. But there is coal at depth no doubt, only even a 2 ft. seam must be very costly to work, because no miner can burrow underground within a narrow space of that kind. He must dislodge and remove a great quantity of rock, or clay, or chalk, or whatever it is that overlays the seam, and all that work has to be paid for as pure waste.

At the meeting of Entre Rios Railway shareholders Mr. Jason Rigby, who presided, pointed out that in the last seven years the length of the company's line had been extended by 30 per cent., and in the same period the receipts per mile worked had risen by over 93 per cent. He gave an account of Argentine prosperity fully in unison with others that have appeared, and predicts a fine harvest and a growing business in the current harvest year. He also mentioned that outside the traffic in cereals, the agricultural, or, as we should call it, pastoral, industry of the republic is rapidly assuming magnificent proportions. The increase in the cattle transported by rail was no less than 110 per cent. in numbers and 97 per cent. in receipts last year over the previous one, and he believed that this traffic was only in its infancy. By January next it is hoped that the connection between this company's system and Buenos Ayres City will be opened, and meantime the Government has granted the company a valuable concession for a port for ocean-going steamers at Ibicuy.

Since our note on the Imperial Cold Storage Company went to the printer we have received a most vigorous and outspoken letter from one of its unfortunate shareholders. The language he uses is in places not safe to print, but he raises some points which appear to deserve notice. Referring to Sir James Sivewright's statement to the effect that amalgamation spelt monopoly, he wants to know what has become of the profit from the supply of meat to the Chinese and Kaffirs at work on the Witwatersrand mines. These number, he says, about 120,000, and were the profit from the supply furnished to 100,000 men only 6d. per week this would mean £130,000 per annum. No such profit is displayed anywhere in the slender accounts furnished by the company, and this shareholder would like to know whether the monopoly which Sir James Sivewright said the amalgamation would secure has been a failure or whether the mine magnates are cheating the men out of their due allowance of fresh meat, or whether the company is supplying it at cost price to the benefit of the mines, or whether some of the money is disappearing in the form of secret commissions. These questions seem worth putting.

Quite an amusing speech was delivered at the special meeting of Klerksdorp shareholders last Monday by Mr. C. E. Hogg. He dwelt much upon the "three-penny share business," as he called it, which has in a

way flourished now and then for brief spells in London, thanks primarily to the existence of so many concerns whose history is similar to that of this Klerksdorp Gold Company. Apparently the gentlemen who undertook to rouse this company's shareholders to assert themselves and stop further loss of money were a couple of lawyer's clerks, who issued a circular and got support from discontented shareholders, and moved the court to have the Klerksdorp company wound up, and did various other things which are habitual with people in this line of business. It was all in vain, and Mr. Hogg is triumphant. Klerksdorp is going to live after all, and Mr. Parke, who is on the spot, says that all the money needed to properly start the mine and carry out the necessary development work to start the battery is only £8,500. Are shareholders going to grudge a paltry amount like that? Were it three times the money they would surely find it and never grumble. But the gold? Oh, the shareholders have still some left apparently, and mining elsewhere is not really necessary to their happiness.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

O. E. G.—The shares are too much of a market counter to be a good investment even at their present price. More capital is being raised, and as the expansion in this direction does not seem nearly at an end, we expect the shares will go down rather than up.

Cardigan.—There can be no comparison between the two. No. 1 is a decidedly risky speculation, as much of the company's prosperity in the past has been unreal, and its business now seems to be dwindling. No. 2, on the other hand, is a flourishing and well-managed concern.

J. D. S.—(1) We are afraid this company's business is a declining one, and that the new department added this year will not do much to re-establish its fortunes. Perhaps you had better sell. (2) The price has had a sharp fall during the past few months, but we doubt whether it has yet touched bottom, and would wait a little before buying. (3) We have never had any faith in this company's future, but the present is hardly the time to realise. Hold your shares meanwhile, but do not buy more.

Ernest.—The bonds have gone down with everything else owing to market conditions, but they should be good enough, and we think you should hold them.

Timothy.—Hold your shares for the present. It is said that an arrangement is pending which will do away with the present excessive competition.

G. R.—So far as we can learn the prospects of this company are very good, and the shares, if they can be got at anything under the price you name, seem a fair speculative purchase.

W. G.—The company has achieved so little that the shares can only be regarded as a speculation, and not an over-promising one at that.

J. A.—The stock is good enough, and should recover in time, but it is a pity that you bought with borrowed money, a course we are constantly warning our subscribers not to adopt.

H. Bayley.—(1) If you have a profit, take it, as we do not see much scope for further improvement. (2) There is no hurry to buy just now. The price has recovered a little recently, and in the present condition of the metal market are likely to recoil again. (3) It might have a temporary effect, but that is all, and even at the present price the shares seem worth buying. (4) So far as we can see, there is no reason why this group should go lower, as all the mines in it seem to have very good prospects.

A. C.—We thought we had been as enthusiastic over these as the position warranted. The company is doing better just now, but it has only recently turned the corner, and the future is consequently not altogether assured. Still, we repeat, the bonds are a fair investment.

Spero.—These are not tempting enough in the present condition of the market. You could buy better class bonds to yield 1 per cent. more.

C. J. S. (Montreal).—Although you have such a handsome profit there is no reason to sell these unless you need the money, as the company is in an exceedingly strong position. If it is a case of necessity you may as well wait until after the meeting. This is only one question, and we have therefore put 4s. to your credit.

Union of London and Smiths Bank.—Deposit and current accounts on September 25 came to £35,276,900, acceptances and liabilities by endorsement to £4,464,403, and other liabilities to £570,222, while assets consisted of cash in hand and at Bank of England £5,773,020, money at call and short notice £6,428,200, investments including reserve fund £6,050,973, and discounts, loans and other advances £20,855,504.

PUBLIC INCOME AND EXPENDITURE.

* Gross.

This Prospectus has been filed with the Registrar of Joint Stock Companies.

The LIST will OPEN on SATURDAY, the 12th October, 1907, and CLOSE on or before WEDNESDAY, the 16th October, 1907.

The Buenos Ayres and Pacific Railway Company, Ltd.

(Incorporated under the Companies Acts, 1862 to 1900.)

SHARE CAPITAL.

5 per cent. First Preference Stock, issued and fully paid	**£1,200,000**
5 per cent. Second Preference Stock, issued and fully paid	**1,000,000**
Ordinary Stock issued and fully paid	**4,000,000**
200,000 Ordinary Shares of £10 each, issued and fully paid	**2,000,000**
	£8,200,000

DEBENTURE CAPITAL.

4 per cent. First Debenture Stock, issued	**£2,925,000**
4½ per cent. Second Debenture Stock, issued	**2,075,000**
5 per cent. Debenture Stock, issued	**1,250,000**
4½ per cent. Consolidated Debenture Stock, issued	**1,000,000**
	£7,250,000

ISSUE OF £1,000,000 FOUR-AND-A-HALF PER CENT. CONSOLIDATED DEBENTURE STOCK.

Secured by a Trust Deed reserving to the Company the right to create further Debenture Stock for £4,000,000, of which the present issue forms part, carrying interest at 4½ per cent. per annum and ranking in all respects *pari passu* with the £1,000,000 Consolidated Debenture Stock already issued, and a further amount at the rate of £4,000 per mile of additional line hereafter acquired by the Company or of new line for the time being constructed or in course of construction, or about to be constructed (including the extra track taken at £4,000 a mile where existing lines are doubled) in excess of the mileage belonging to the Company in operation on 28th May, 1907, and also for such a further amount as shall be sufficient to redeem prior issues at not exceeding the par value of the Stock for the time being redeemed and any premium payable on redemption under the terms of the issue thereof.

At 97½ per cent., payable as follows:—

£5 0 on	Application.
30 0 ,,	Allotment.
20 0 ,,	15th November, 1707.
20 0 ,,	16th December, 1907.
22 10 ,,	15th January, 1908.
Total £97 10	per £100 Stock.

Bearer Scrip will be issued to be exchanged for Debenture Stock Certificates on completion of all the payments, the registered Debenture Stock being transferable in amounts not involving a fraction of £1.

The interest is payable by warrant to the Registered Holders of the Stock on 1st January and 1st July in each year.

The first payment of Interest will be made on 1st July, 1908, and will be calculated upon the instalments as due.

Payment in full on Allotment and on the Instalment dates can be made under discount at the rate of 4½ per cent. per annum.

The Directors of the Buenos Ayres and Pacific Railway Company, Limited, have authorised the London Joint Stock Bank, Limited, and Martin's Bank, Limited, as Bankers of the Company, to receive applications for £1,000,000 4½ per cent. Consolidated Debenture Stock of the Company.

The whole or any part of the Consolidated Debenture Stock is redeemable at any time at the Company's option after 30th June, 1920, at 110 per cent., on six calendar months' notice to the Stockholders. This Stock is secured by a charge upon the undertaking of the Company (subject to the First, Second, and Five per Cent. Debenture Stock), under Trust Deeds, dated 28th May, 1907, and 11th October, 1907, made between the Company and the Trustees.

The Company owns and has in operation 905 miles of broad gauge (5 ft 6 in) railway in the Argentine Republic, extending westward from the City of Buenos Ayres to Villa Mercedes, the main line forming part of the system which is to connect the Atlantic and Pacific Seaboards of the South American Continent. Beyond the branch lines already opened to public traffic the Company has under construction or is about to construct additional branches of a length of about 420 miles, and has recently been authorised by Congress to construct two further branches, viz., one about 180 miles in length from Alberdi to Sampacho, on the Andine Railway, and the other about five miles in length from a point in the neighbourhood of Caseros to junction with the Buenos Ayres Western Railway near Liniers.

For some time past, the Company has worked the Bahia Blanca and North-Western Railway (563 miles now open) and the Villa Maria and Rufino Railway (141 miles). On the 1st July last the working of the Argentine Great Western and Argentine Transandine Railways (609 miles now open) was also taken over and, by means of this arrangement, the control of the whole trans-continental line from Buenos Ayres to Valparaiso, in so far as it is situate in Argentine territory, has been secured by this Company. The Bahia Blanca and North-Western Railway has been building a line 292 miles in length to connect with this Company's system, 168 miles being opened to public traffic at the commencement of the present year; the remaining portion of the line was delivered to public service on the 1st instant, and this Company is, therefore, in possession of through communication with the rapidly developing Port of Bahia Blanca.

The continued expansion of the working results since 1900 is shown by the following table:—

	1900-1.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.
	£	£	£	£	£	£	£
Receipts	600,878	584,267	718,001	959,306	1,263,636	1,618,365	2,074,591
Expenses	332,405	304,467	347,407	533,083	719,111	882,404	1,199,842
Profit	268,473	279,800	370,594	426,223	544,525	735,961	874,749

After including the receipts of the Argentine Great Western and Transandine Railways for the purpose of comparison in the 1905-6 figures, the estimated receipts of the system from 1st July last to the 5th instant show an increase of £71,622.

The large increase in the traffic of the Company's own Railway has rendered it necessary from time to time to acquire more engines and Rolling Stock, provide additional Stations and Sidings, secure adequate Terminal facilities in and around the City of Buenos Ayres, and to improve the carrying capacity of the Railway generally.

Past expenditure of Capital has been abundantly justified by results, as will be seen by the statement tabulated above. Dividends at the rate of 7 per cent. per annum have been paid on the ordinary Stock and shares of the Company since the year 1902-1903, and the balance dividend to be paid for 1906-1907 will enable this rate to be maintained. The annual interest on the Company's Debenture Capital is £317,875, which will now be increased by £45,000.

The proceeds of the present issue will be applied towards the cost and equipmen of branch lines and for the general requirements of the railway.

A preference in the allotment as regards 40 per cent. of this issue will be given to applications from existing Shareholders and Debenture Stockholders of this Company, the Argentine Great Western Railway Company, Limited, the Argentine Transandine Railway Company, Limited, the Bahia Blanca and North-Western Railway Company, Limited, and the Villa Maria and Rufino Railway Company, Limited.

Applications on the form accompanying the Prospectus, together with the deposit of £5 per cent., should be forwarded to the London Joint Stock Bank, Limited, 5 Princes street, London, E.C., or to Martin's Bank, Limited, 68 Lombard street, London, E.C.

If no allotment is made the deposit will be returned without deduction. Should a smaller amount be allotted than applied for, the surplus paid on application will be appropriated towards the balance due on allotment. Non-payment of any instalment upon the due date will render the amount previously paid liable to forfeiture.

Application will in due course be made to obtain a Stock Exchange quotation for this issue.

Apart from the contracts made by the Company in the ordinary course of business, the following have been entered into within the two years immediately preceding the date hereof:—

Contracts dated 24th April, 1906, and made between the Company and the Villa Maria and Rufino Railway Company, Limited.

Contract dated 16th May, 1906, and made between the Company and the Bahia Blanca and North-Western Railway Company, Limited, and the South American Light and Power Company, Limited.

Contract entered into on the 29th May, 1906, between the Argentine Government and the Company for the construction of lines from Bunge to Buchardo; from Chacabuco to the Alberdi branch; and from Rawson to a point near O'Higgins.

Contract dated 4th December, 1906, and made between the Company and the Bahia Blanca and North-Western Railway Company, Limited

Supplemental Trust Deed dated 12th December, 1906, and made between the Company and the Trustees for the 5 Per Cent. Debenture Stock securing £500,000 of such Stock.

Contracts dated 23rd April, 1907, and made between the Company and the Argentine Great Western Railway Company, Limited.

Trust Deeds dated 28th May and 11th October, 1907, and made between the Company and the Trustees for securing the 4½ Per Cent. Consolidated Debenture Stock.

Contract dated 30th May, 1907, and made between the Company and Messrs. Sheppards, Pelly, Price, and Pott, for underwriting the previous issue of Consolidated Debenture Stock.

Contract dated 16th July, 1907, and made between the Company, the Argentine Great Western Railway Company, Limited, and the Argentine Transandine Railway Company, Limited.

Contract dated 11th October, 1907, and made between the Company and Messrs Sheppards, Pelly, Price, and Pott, for underwriting the present issue.

The above Contracts may be inspected at the Offices of the Solicitors on any day while the List remains open, between the hours of 11 and 4.

15,000 Deferred Shares of £20 each and 5,000 Second Preferred Shares of £20 each were allotted as fully paid in 1888, as part of the consideration for the construction of the Railway (subsequently converted into Second Preference and Ordinary Stock).

A Brokerage at the rate of a Quarter per cent. will be paid by the Company on allotments made to the public in respect of applications bearing a Broker's stamp.

Prospectuses and Forms of Application may be obtained at the Offices of the Company, Dashwood House, 9 New Broad street, London, E.C.; of the Bankers; and of Messrs Sheppards, Pelly, Price, and Pott, the Brokers of the Company.

Registered Offices: Dashwood House, 9 New Broad street, London, E.C.

The Investors' Review.

The Week's Money Market.

Bank Rate 4½ per cent. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

Bill brokers have had a good time of it this week, thanks to the fine margin between what they paid for money and what they got on bills. Some days bankers have had difficulty in getting 3 per cent. for seven-day loans, but that has been the general rate, while call money has fluctuated between 2 per cent. and 3 per cent., being dearer oddly enough in the beginning of the week than any day since, but with a slightly hardening tendency towards the end of the week. This morning call loan rates sometimes rose above 3 per cent., but before business finished there was plenty about at 2 to 2½ per cent. till to-morrow, and the seven-day rate continued at 3 per cent. The India Council, however, got 3¼ per cent. on a small renewal into November.

The Bank return shows how the floating credit supply has been improving in spite of the decrease in the reserve, other deposits being £1,416,000 up on the week. This improvement, however, will very soon vanish if gold continues to leave the country, as it must, and as the taxes come in. One estimate had it that as much as £1,500,000 may go to Egypt to-morrow or enough to wipe out all the gain on other deposits, which are now at a smaller figure than they were a year ago. Underwriters, however, are said to be objecting to insure more than £1,000,000 by one ship, and it is probable that the amount withdrawn for Egypt will be under £1,000,000. Gold has also been going to Italy, and, in fact, there is no knowing where it will not go in present circumstances. No wonder then that discount rates have been firm, held at 4 per cent. as a rule for three and four months' remitted bills, and rising yesterday almost to 4¼ per cent., which was the rate at the beginning of the week on six months' bills. Fear of gold exports has helped the bill brokers to get these rates in spite of the cheapness of money, and we quite expect to see the open market close up to Bank before many days are over. It would be nothing surprising, indeed, were the Bank rate to be put up to 5 per cent. within a fortnight at the latest, and any large unlooked-for demand on the Bank's stock of bullion would make it go up next week. In this connection it is significant that Wall Street should have been disturbed yesterday by a report that French bankers were so keen after gold that they had offered to pay interest on any of the metal picked up in New York during transmission to Paris. Afterwards the offer was withdrawn, but Paris doubtless has power to take gold because of the Pennsylvania Railroad notes soon falling due, as mentioned last week, and other maturing Yankee debts there. The return of the Bank of France quite indicates that the metal will come in handy in spite of a reduction of £1,219,000 in the Bank's note circulation last week.

There are plenty of bills in our market, especially American produce bills, and that fact should help to keep rates firm. The rate on short paper, however, is still depressed by the abundance of cheap call and week-to-week money, and the quotation for November bank bills is said to be little better than 3⅞ to 3⅞ per cent., while bills due within the year are still taken at 3⅞ per cent.

Although £1,036,000 nett in gold was withdrawn from the Bank for export during its week, the market was able to make a reduction of £1,103,000 in its debt to the Bank, while yet money remained abundant in the short-loan market. This was because the Treasury gave the market about £3,500,000 represented by a decrease of £1,978,000 in the Government or public deposits, and a loan of £1,500,000 obtained from the Bank to enable the quarter's dividends to be paid. Dividend payments helped to disperse £819,000 in coin, but as £358,000 in notes came back the reserve was not depleted to the extent which might have been expected, it being only £1,497,000 down. It still amounts to over £24,139,000, which is £5,849,000 larger than at the same date last year, but the total is now within little more than £1,000,000 of the minimum which would compel the Bank to raise its rate.

Comparatively little help is being given at the moment by the mines for only about £500,000 in gold is due for Monday's market. The price of bars is nominally 77s. 10½d. per oz., but French competition is looked for, and it may harden. French gold coin to the amount of £71,000 was again withdrawn from the Bank for export to-day, and is said to be for Italy.

From Germany likewise the warning is given that financial distress may drive the Reichsbank to call for gold. Its position has improved a little on the week, thanks entirely to a reduction of £5,020,000 in the active note circulation, but that circulation is still £19,766,000 above the legal minimum. At the same time cash in hand has fallen off £325,000. The Reichsbank will, therefore, have to put up its rate to try and pull gold in from abroad. No matter where we turn gold appears to be wanted, unless perhaps by Russia, which seems to be the only happy country amongst them all, since the return of the Imperial Bank for the past week shows an increase of about £1,300,000 in the gold reserve held abroad, whose total now amounts to nearly £28,500,000. That may not be much against Russia's ever pressing foreign liabilities, but it at least leads us to hope that there will be no financing in anticipation of the coming loan in order to buy any of our gold. Amsterdam, however, is said to be in want of a little of the metal.

The India Council was thought to have done rather well in its sale of six months bills this week, because it borrowed the money at an average discount of £4 3s. 3d. The highest rate paid on the £1,000,000 offered was £4 5s.

Calls due next week amount to about £1,770,000, the heaviest item being due on Monday, when £510,000 is payable on Argentine Government 5 per cents. Next in magnitude comes a call of £375,000 due Thursday on British Coalite shares, and third in rank is Friday's call of £325,000 payable on Argentine Great Western new £10 shares. Most of the other calls are of small importance, but £280,000 is payable next Wednesday on Antofagasta Railway 5 per cent. debenture stock, and £100,000 on Tuesday on the new £20 shares of the British Bank of South America. No other individual call amounts to £100,000.

Silver.

According to the latest currency return the Indian Government now holds 1,987,500 ozs. of silver in addition to the 25¼ crores in the reserve, and apparently this quantity is deemed sufficient to provide for present requirements. Purchases from that quarter, at any rate, have ceased for the time being, and as the Eastern markets likewise appear to be fully supplied with the metal the market for bars has been a dwindling one all week. Bear selling from the bazaars has also helped to depress quotations, and the cash price is now down to

29 3/16d. per oz., the lowest point touched since March 13, 1906, and 1½d. below that current on Friday last, while forward metal is 1 7/16d. lower at 29 7/16d. per oz. At the decline, however, a little support was forthcoming and the market closed with a steadier appearance. Tenders for the Rs. 30,00,000 India Council drafts on Wednesday reached a total of Rs. 3,03,70,000 in bills and Rs. 31,30,000 in telegraphic transfers. Of these Rs. 26,94,000 were accepted in bills and Rs. 3,06,000 in transfers, applications at 1s. 3 31-32 and 1s. 4d. per rupee respectively receiving about 5 per cent. The amount to be offered next week is again Rs. 30,00,000.

The Stock Markets.

It hardly needs to be said that the account arranged this week on the Stock Exchange was smaller than ever. Every member we come across tells the same story. He never in his life had such a small amount of stock to carry as he has to-day. This is really the one cheering fact connected with markets, and affords ground for hope that our Stock Exchange will now be able to stand any strain that may be put upon it. Unhappily the danger of pressure is by no means over. It comes through the distress of other markets, which becomes more acute with every week that passes. This week we have suffered from the liquidation in Amsterdam. Dutch speculators are proverbially tenacious and hold on to what they buy like grim death, but latterly they have been obliged to throw their possessions overboard in a way that indicates desperation. We have been told that piles of unmarketable securities have been thrown out by them along with good securities in a perfectly reckless fashion. This Amsterdam liquidation has told severely upon the Wall Street market, where likewise the accumulation of miseries goes on until no man can estimate what the end is going to be. Paris is also by no means happy, and we must again emphasise the universality of the present crisis and the complete inability of one market to come to the assistance of another. In reality ours is still the strongest market, and for that reason it gets buffets at short intervals from one foreign market or another that make it stagger. Yet there has been a certain amount of good investment buying going on all the time. The public is absorbing securities to a greater extent that we should have beforehand surmised, the truth being that people of this country are making money in trade, some portion of which they are impelled to invest. All is not black, therefore, in the home outlook, but very much the contrary, and if we could only see some end to the liquidation of foreign markets we should be disposed to conclude that the worst is over.

This is just a conclusion we dare not adopt. On the contrary, it seems to us that both in the United States and Canada and on the Continent liquidation is not nearly completed. Along certain lines it hardly seems to be beyond its initial state. It is therefore imperative upon us to strengthen ourselves by every possible means, and, above all, on the Bank of England, to take early and vigorous measures to avert dangerous inroads upon its much too slender stock of gold. Should it fail to do this or should the circumstances of other markets drive them to come here for gold whether they would or not, then liquidation may again become the distressing dominant characteristic of the London Stock Exchange.

CONTANGOS.

From what has just been said it may be inferred that contango rates have been light enough, rarely more than 5 per cent. on Home Railway stocks and generally rather less. Both Brighton "A" and Dover "A" stocks proved to be much oversold, and bargains for the rise in them cost either next to nothing to carry forward or commanded a small "back." On Foreign securities money was generally to be had at about 4 per cent., which left very little profit to the lender, as bankers charged 3¾ per cent. on account to account advances to the market. The general rate on American Railroad shares was about 4 per cent., sometimes a

little less, sometimes 4½ per cent. On Grand Trunk stocks the charges were moderate on the whole, but higher on the third preference than at the previous settlement. Money was again lent on Argentine rails at 5½ per cent., but the contango was rather stiffer on Hudson's Bay shares and on Mexican Railway stocks. In a great many securities there appears to be no account at all open.

Consols and Other Trustee Stocks.

Evidence of public buying is visible in the improved prices for Consols and other British Imperial securites. The most notable advance of all during the week has occurred in Local Loans stock, which is 25s. higher than it was a week ago, but Consols have also gone up 12s. 6d. for cash on the week, and India stocks are better, while outside the mere British Government list Water Board and County Council stocks show minute improvements, which, however, have not extended to the stocks of other home municipalities. These drag on at previous figures for two reasons; one is the amount of floating debt, as it may be called, which a good many of these municipalities have been driven to contract through their inability to issue fresh public loans at prices they have been spoiled by past favours into deeming their due. They will not be able to issue any more stocks on the old terms, and, as we have often said, the time may be not far off when some of the best of them will have to pay at least 4 per cent. for accommodation, and others would not to-day be able to sell a loan in the open market at a rate of interest appreciably below 5 per cent. Colonial inscribed stocks also hang back, and the business in them continues to be perfectly insignificant. The same must still be said about Colonial and Foreign Municipal stocks.

Foreign Government Bonds.

As a whole, the Foreign market is steadier than might be expected looking at the adverse position abroad. Russian bonds even have not been depressed more than a mere fraction or two by the report noticed elsewhere of a forthcoming gigantic loan, but the bonds of Russian Government Railways have sometimes flinched considerably, and there has been some little recoil in Japanese issues. The weakest security of all, however, in the Foreign market has been Portuguese Three per Cents. This weakness has not arisen from any actual change in the state of Portugal, which is always financially bad, but comes altogether from the complications on foreign bourses. One part of the Foreign market, however, has shown renewed strength, the Argentine, and the 4 per cent. Rescission bonds in our table are 1¼ up on the week, while the 4 per cents. are as a rule 1 higher. The favourable anticipations of the coming Argentine harvest and the excellent exhibit made by the Buenos Ayres Great Southern and other Argentine Railways have contributed to excite a fair amount of English buying. Brazilian bonds, on the other hand, have been heavy, but none of them have given way to any noticeable extent, although the loan issued last week must be regarded as an almost perfect failure so far as the public is concerned. Messrs. Rothschild and their co-subscribers are, therefore, left with the bonds, but are doubtless powerful enough to hold them until circumstances arise to enable them to "make a market." Greek bonds have been heavy, and there has been no substantial recovery in German Three per Cents., but Prussian Consols are higher in spite of the unhappy position of German bourses. Brussels has fallen into a comatose condition.

Home Railway Stocks.

Changes in the Home Railway market are much less unfavourable than might have been supposed consideringwhat a rumpus continues over the question, Strike or No strike. We have never believed that a strike was intended or could take place, and see no reason now to change that opinion in spite of the apparent doggedness of railway boards to move an inch from the attitude they have taken up towards Mr. Bell and his association of 100,000 employees. Our scepticism arises in no small measure from some knowledge of Mr. Bell's character, and still more from the newness of his association. A year ago we doubt if its membership was much more than half what it is said to be to-day, and a brand-new organisation of this description cannot possibly possess funds upon which to base a great strike. It must wait therefore, probably for years, and agitate and attune labour of all descriptions to support its representative in the House of Commons in worrying and obstructing railway boards to the utmost of their power. It is in Parliament that we look for retaliation upon the directors, not in a strike amongst their hands. The boards possess a weapon in provident and savings-bank funds, which they have collected from their servants, and utilised to the last shilling in their capital account, that would alone be sufficient to drag back the more well-to-do and responsible amongst their staffs from any violent proceeding. For all that the Home Railway market has been sickly throughout the week and except for the stocks of the Brighton Company, which have had the support of the "bears" and of a transient improvement in the traffic figures, and some recovery in City and South London stock, the changes are nearly all the wrong way. Scotch stocks, however, have shown firmness, thanks to the efforts being made by the Caledonian and North British boards to minimise competition and reduce expenses. Dover "A" stock has also gained a trifle on the week, but the "heavy" stocks, especially Great Western and North-Western, have sensibly lost ground, and Metropolitan stock has again been unpleasantly flat. The greatest weakness, however, has been shown by Central London deferred, and we really cannot guess what is going to happen to that over-capitalised concern. Those tempted to look at its deferred stock by the fall must never forget that the promoters of the line took about £1,000,000 to themselves as "pocket money."

United States and Canadian Railways.

Take the Canadian group first because it is prominently interesting this week through the half-yearly meeting of Grand Trunk stockholders held on Thursday. At that meeting the president of the company, Sir Charles Rivers Wilson, was most cheerily optimistic, saw no cloud anywhere in fact, and went so far as to hint with emphasis that a higher dividend may be forthcoming for the third preference stockholders at the end of the year. We do not believe that a higher dividend can be safely paid on that stock in view of the harvest position in Canada, or of the heavy obligations the company has come under on account of the far from completed Grand Trunk Pacific line, but this and other statements soothed and pleased the meeting and the market so that Grand Trunk stocks went up a bit. Criticism, of which there was plenty at the meeting, passed unregarded, and there was no serious opposition even to the pension fund assignment. This fund, Sir Charles said, may cost the company £14,000 to £15,000 a year in times to come, but he also made it plain that the "nucleus" begun with £40,000 is not yet fully formed. It was most adroit, though, to justify this policy on the ground that it would give the company a better hold over its stock. Of that there can be no doubt. Indeed, to gain this advantage might be worth £25,000 per annum paid out of the nett revenue. Canadian Pacific shares have not followed the lead given by Grand Trunk stocks, and that lead was really trivial except in the third preference, which is £2 up on the week. Canadian Pacific shares, however, barely hold their own, and the business in them has not been nearly so active here of late. New York and Berlin, however, appear to control the prices for Canadian Pacific shares at present, and they have helped Amsterdam in causing one or two violent slumps during the week, giving the "bulls" a hard job of it.

A description of the state of the Yankee market is hardly needed in present circumstances. It presents

the same aspects week after week, and is invariably professional except when the unfortunate victims of Wall Street rapacity are forced to unload. Occasionally during the week the market has reached the verge of absolute panic, and yesterday it was obviously with difficulty that this ultimate remedy for dishonest financial ingenuity was avoided. Some little stay was given to the downward crash of prices near the close by what in the customary euphemism is called "powerful interests," but it only just prevented the market from going over the brink into the gulf. Every influence was adverse, and the outpouring of shares by Amsterdam seemed like the last straw. Locally, however, the revelations, actual and promised, about the New York Traction Company's scandal, as it is called, had more influence still in demoralising the market. It is now alleged that "steals" amounting to £10,000,000 will be proved against the organisers of the Traction combine. And obviously these gentlemen felt themselves perfectly emancipated from all moral considerations in dealing with the public. No wonder then that prices are heavier or that the probabilities are in favour of a still more fatal decline. Already receiverships are beginning to be talked of, and it was roundly alleged during the week that the Southern Railway was about to be made bankrupt in this way. The allegation was flatly denied, but in all likelihood the step is only postponed. Next year, however, seems likely to be much more fertile in exhibitions of this recurring phase of American Railroad finance than the present one, because next year inconvenient lumps of short term notes will fall due for payment, and as many of the companies will not have the means to meet the obligation receiverships may be plentiful enough. Our tables and price movements will show the effect of the week's wrestle with fate, and we need not dwell further on this painful subject. There is but one consoling fact that can be cited; as yet the bond market has not begun to tumble much, and only issues like Southern consolidated mortgage or one or two of the Atchison, New York Central and Baltimore issues have been depressed during the week.

Foreign Railways.

Argentine Railways have shown considerable strength this week, thanks to the issue of reports mentioned above, but the revival has only come towards the end of the week, and the more important stocks still closed rather lower last night than they were a week before. Buenos Ayres and Pacific first preference stock is even as much as 2 down, and apathy appears to haunt the market, in spite of every stimulus applied to it. Elsewhere amongst Foreign Railways prices have seldom changed much, business being so poor, but the shares of the Nitrate Railways are again lower, Mexican Railway stocks have not gained much, just about held their own, and Brazilian Railway stocks are heavier, particularly Leopoldina and San Paulo ordinary. Colombian National Railway bonds have also given way, and the market throughout is very limp.

Banks, Breweries, Industrial and Other Issues.

Space does not permit us to deal at any length with these minor or miscellaneous departments of the Stock Exchange, and there is really little to dwell on. Among Banks, Hong Kong and Shanghai and Standard of South Africa shares are weaker as well as those of the Canadian Bank of Commerce, but there has been no great amount of selling, and the general list is colourless. Brewery securities were likewise disposed to recede when they moved at all, but the difficulty is to do business in most of them. A buyer can get supplied, but to sell is not an easy matter. The largest fall on the week has been in Truman, Hanbury 4 per cent. debenture stock, and except distrust we see no reason why this weakness should exist. Dock securities have not moved at all.

Among the Commercial and Industrial groups, Portland Cement shares have shaded off slightly, Argyll Motors debentures are weaker, but Amalgamated Press preference shares have recovered to par, and no extraordinary weakness has developed at any point. The shares of Motor companies in general are on the whole firm as well as shares of some of the Manchester Warehouse companies, but Electric Construction shares have declined, and there has been quite a slump in the dollar shares of the Ingersoll-Rand Company, a Yankee affair. Some shares in shopkeeping companies are likewise rather weaker, and Niger Company's shares have lost ground a little, but there has been a recovery in Nobel Dynamite shares, in Industrial Dwellings ordinary stock, in Liberty and Co.'s preference shares, in C. Arthur Pearson's preference shares and a few other items. Underground Electric Profit Sharing Notes, however, have dropped to about 50, and Dutch selling has been continuous in United Lankat Tobacco shares, which are accordingly 7s. 6d. down on the week.

Prices have seldom moved in the Electric troup or in Financial Land and Investment things, but Chartered debentures are lower and Hudson's Bays have failed to rally in spite of occasional demonstrations by the "bulls." This part of the market, indeed, is most uninteresting, and we need only mention further the week's recoil in Peruvian Corporation stocks. This brought the ordinary stock down to 8¼, which should be low enough to please the most fanatical "bear." Passing by Financial Trusts, where prices are usually steady with nothing happening, and Gas stocks, to which the same remark applies, we come to the Insurance market, and there we find a fair number of movements mostly slightly unfavourable. London Assurance shares, however, have improved as well as Sun Fire shares and British Law Fire.

In the Iron, Coal and Steel group prices have not been favourable, but the declines when they did occur seldom exceeded 5s., which has been the loss on Cammell, Laird and Pease and Partners ordinary shares. Outside Home stocks of this kind, the common and preferred shares of the Carnegie Steel combine have been poured upon the market, until the ordinary has dipped here to little more than 26 and the preferred to 89. Yesterday the prices of both were lower still in New York. United Collieries debentures, it might be added, which is in a sense an American affair, have dropped to little more than 70. Tea shares, however, have been firm on the whole, but no rally has yet taken place in the securities of Cable companies, although the selling has dwindled away to almost nothing, nor has anything good occurred in the market for Tramway and Omnibus securities, although B.E.T. shares, both issues, have rallied a trifle.

Friday Evening's News.

No trouble came to the surface this pay-day, and there was very little talk of trouble even in the mining markets. This does not mean that cheerfulness prevailed, for the very reverse was the fact. Consols even weakened a little in the morning, and it does not take much stock to move them one way or another, for dealers are afraid to commit themselves. The Home Railway market has also been listless and bent downwards, although the buying back of some speculators for the fall caused Brighton "A" stock to rally. The only subject of talk is still that dispute with Mr. Bell's Railway Servants' Association. Yankee shares began flat, and they continued so with very little interval throughout the day. Grand Trunk stocks also lost some of the slight improvement of yesterday, and Canadian Pacific shares were never a buoyant market. Argentine Railway stocks also fell back a little on the news of the Pacific company's issue of debentures, but the principal weakness seems to have again been in the Copper share market, and Rio Tintos finished at 60½, the lowest of the day. The news from Paris is also depressing, and telephonic advices from the Bourse there aver that this has been one of the worst days the market has gone through for a very long time. Industrial securities have betrayed weakness, and altogether the Stock Exchange is miserable enough.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2¾ p.c. Ann. ⅛, to 89⅞-90⅛, 2½ p.c. Ann. 1905 and Ac. both ⅛, to 81-81⅛, Irish Ld. Stk. Ac. ¼, to 84¾-85¼, Bk. England 2, to 273-278, India 1948 Ac. ½, to 85½-86½, do. 1926 Ac. ½, to 72-73.

Critical Index to New Investments.

Buenos Ayres and Pacific Railway Co., Limited.

Although it was only as recently as the beginning of June last that this company issued £1,000,000 4½ per cent. consolidated debenture stock at 96, its business is growing with such rapidity that it is again in the market with a further £1,000,000 of that stock, which it is offering at 97½. The company owns 905 miles of its own, in addition to which it has under construction branches of about 420 miles, and has recently been authorised by Congress to construct two further branches of about 185 miles. In addition the company works the Bahia Blanca and North-Western and the Villa Maria and Rufino systems, and on July 1 took over the control of the Argentine Great Western and Argentine Transandine Railways, by which means it has secured control of the whole transcontinental line from Buenos Ayres to Valparaiso in so far as it is situated in Argentine territory. Since 1901-2 the gross receipts have steadily improved from £584,267 to £2,074,591, and the profit has increased from £279,800 to £874,749. Dividends at the rate of 7 per cent. per annum have been paid on the ordinary stock and shares since 1902-3, and the balance dividend to be paid for 1906-7 will enable this rate to be maintained, and as the addition to interest charges involved by this issue is only £45,000 the margin is certainly ample. As usual, a preferential allotment as regards 40 per cent. of the issue will be given to applications from existing share and debenture stock holders of this company, and of the other companies controlled by it.

Java Rubber Plantations, Limited.

This company acquires an estate of 2,371 acres in the province of Djember, Java, from a Dutch company which has owned it since 1901 and has planted 1,034 acres with coffee, cacao, pepper and rubber. The whole estate is valued by Mr. R. C. Wright, a director of the company owning the adjoining estate, at £21,103, but by purchasing the shares of the Dutch undertaking the company secures it for £17,500, of which £11,500 is paid in cash and £6,000 in shares. Some of the rubber trees are seven years old, and the directors estimate that the yield from these and the crops of cacao, coffee and other produce should give sufficient to pay a fair dividend for the first year, which should be substantially increased as the rubber and cacao trees come into bearing. The new company is a modest enough one, with a capital of only £35,000 in £1 shares, of which 9,500 are held in reserve leaving 19,500 to be offered for subscription. No underwriting commission was paid, but the directors and their friends applied for a considerable number before the issue of the prospectus, and as they receive preferential allotment the chances for the ordinary investor are small.

Plasmon Bread, Limited.

Every reader of a daily paper knows the name of Plasmon, which is a form of milk albumen said to be suitable for mixing with articles of food, and an enterprising baker thinks he sees his way to make a nice little profit out of a combination of Plasmon and flour. He has accordingly bought up four small bakers and confectioners' businesses with five shops to add to his seven shops, making 12 shops in all, and has also secured an agreement with the International Plasmon, Limited, permitting him to make and sell Plasmon bread within a certain area. For the bakers' businesses, which possess tangible assets valued at £6,612, Mr. Lowe asks no less than £25,212, the other £18,000 being for goodwill, and this sum is to be satisfied as to £13,550 in cash or shares at his option and as to £11,662 in shares, out of which he pays away £10,550 in cash and £1,062 in shares. The agreement, which apparently was got for nothing, is not included in this transaction, and another £10,000 in shares has to be given for it, out of which Mr. Lowe's co-promoter will get £6,000. Nominally the capital of the company is £100,000 in £1 shares, but only 49,000 shares are to be issued at present, so that just over 57 per cent. of the company's resources will be locked up in what is practically goodwill. The accounts of the various businesses for periods ranging from 18 months up to four years have been examined by accountants, who state that as the records are incomplete so far as some items of expenditure are concerned they have made certain adjustments and estimates. These calculations, they say, are more fully detailed in the separate report made upon each business, but that report is not disclosed in the prospectus, and the public are merely told that the average profits of the combined business were not less than £5,945, after allowing for repairs and maintenance, but before making provision for depreciation. This is not a very satisfactory sort of certificate, and the report on the properties is even less so, as all the valuers will commit themselves to is an opinion that with the fresh capital to be introduced and the economy of management to be effected by the amalgamation the businesses are capable of considerable development. The directors proceed to show that 100 sacks of Plasmon flour per week would give a profit of £8,493, while if the ovens were worked to their full capacity a profit of £23,781 might be looked for, but neither this nicely worked out arithmetical problem nor the opinion above quoted makes the shares look at all attractive when put alongside the small amount of tangible assets to be acquired.

Great Southern Cemetery Crematorium and Land Co., Limited.

An issue of 30,000 £1 shares out of a total capital of £40,000 is offered by this company, which has been formed to acquire about 80 acres of freehold land at Streatham, with the object of laying out either the whole or a part as a proprietary cemetery. The property is bought from Messrs. James Pain and Son for £17,300 in cash, and is resold to this company for £20,000 in cash and £2,000 in shares, the company to pay all legal expenses connected with the transfer. A considerable part of the land, it is said, can be developed as a building estate, and other portions may be utilised as club grounds. So in one way or another the directors are confident that they can earn dividends of at least 10 per cent., although neither of the similar undertakings to which they point as evidence of the remunerative character of the venture can come quite up to that level. The company, however, is promised the support of influential members of the funeral furnishing and allied trades, both with regard to the raising of the capital and to the introduction of business, so that it may succeed.

City of Edmonton.

The Bank of Montreal is authorised to receive subscriptions for an issue of £139,400 sterling 5 per cent. debentures at par, which is offered by the above city. Edmonton is the capital of the Province of Alberta, Canada, and requires the money to repay its present floating debt, and to carry out works already in hand. The nett assessment of immovable property for the current year is £4,400,000, and the borrowing powers amount to £880,000, while the total debenture debt, including this issue, is only £404,000. The debentures are redeemable at par by series between 1915 and 1947, and allotments will be made, so far as can conveniently be arranged, so that each applicant shall receive a *pro rata* proportion of each series, but no applicant will be entitled to claim debentures of any particular series. It is estimated that the population of the city is 16,000, so that the debt works out at about £25 per head, which seems a fair weight.

The Week in Mines.

It has again proved a very unsatisfactory one. Further pronounced weakness set in on Monday, and slight rallies in Kaffirs alone interrupted the downward course of the entire South African market. Except in isolated cases, it cannot be said that selling was on an extensive scale, but the liquidation that appeared to be proceeding in other departments of the House had its inevitable influence, and dealers were faced with a rather dreary making up. The speculative position has undergone very little change so far as surface indications tell us anything, but there is something particularly rotten about one or two spots, and efforts to locate the actual source of the trouble have so far proved fruitless. People with no axe to grind profess themselves quite ignorant of the true position of affairs, and interested parties merely shrug their shoulders and declare they know nothing. We shall get at the truth presently, no doubt, and the story of the De Beers and Tanganyika slumps ought to make entertaining reading.

The general rate of the South African descriptions of all sorts was again 6½-7½ per cent., with exactly the same exceptions. Thus Rand Mines and East Rands were done at 4-5 per cent., Gold Fields were continued at 4½-5⅛ per cent., and Randfonteins, Modders, and Johnnies at 5⅛-6⅛ per cent. On De Beers the rate hardened from 3½-4½ per cent. to 4½-5½ per cent., a sure sign that a lot of real stuff has come out, and on Premiers, Jagers, and New Vaals the charge was 5½-6⅛ per cent. The Tanganyika rate reflected the fairly extensive bear selling, the contango being only 3-5 per cent., but Chartered, after beginning at ¼d.-¾d., hardened to ½d.-1d. per cent. West Africans, Siberians, and practically the whole of the West Australian group were taken in at 6-8 per cent., exceptions being found in the case of Boulder Perseverance, Oroyas, and Great Fingalls. Other Australians could be borrowed on at 5-7 per cent., and that charge also ruled on Miscellaneous shares, but the American list cost a little more. Making-up prices looked sickly all round, with violent declines in De Beers deferred, down 1 1/16, and Tanganyika and Premier deferred each 1 3/16 lower. Jagers deferred, Roberts Victor, and Central Minings all showed losses of ⅝, Apex fell 5/16 in the fortnight, Premier preference, Gold Trusts, and Ferreiras each ¼, and plenty more 3/16 or less. Nothing worth noting happened in the West African division, but among West Australians, Kalgurlis were ½ down, and losses of ⅛ to 3/16 appeared in Horseshoes, Hainaults, Great Fingalls, and Oroya Black Ranges. Barrier shares were lower, Broken Hill Proprietary being down ¼, and South Blocks and Junction Norths each 3/16. Of the copper shares contangoed in the Foreign market, Rio Tinto were down 2½, Cape ordinary and preference 1⅛ and 1 respectively, San Miguel ⅞, Tharsis ⅝, and Anaconda ⅜. Losses in the others were also heavy, Great Cobars being down 1⅛, after making allowance for the dividend of 15s. per share, Spasskys 1 1/16, Bostons ⅝, Utah ½, and Namaquas 7/16. Tin things were mostly down, and among Miscellaneous shares generally, Siberian Proprietary dropped 3/16, while Sesans were up ¼. Dharwar Golds were also 3/16 easier, and Mysores showed a fall of 5-32.

The new account runs for 19 days, and before the end of the week dealers had reason to recall the old superstition regarding the evil nature of these lengthy periods. Just for a little while the market was inclined to firm up, and in one or two quarters a slight improvement in business was reported. The individual crushing and profit returns to hand made fairly good displays, and some of the "Rand for the English" patriots expressed satisfaction that a good deal more work was being forced out of the white miners by the cosmopolitan Randlords since the strike in the early summer. The enthusiasm, however, did not last very long, and prices were all off again before the end. The Brakpan assays came to hand—the news reporting the striking of the reef was sent last week—and make a pretty poor show. We are told not to attach too much importance to the figures, and that is just as well, as the main reef has given the brilliant result of 2 dwts. 5 grs. over 24½ inches, and the main reef leader, which is 114 inches above main reef, 5 dwts. over 9 inches. Geduldes show a firm front, the past quarter's developments opening up a considerable amount of pay ore in the northern portion of the mine. The average value is said to be 10 dwts. over 30 inches, which would pay. The Van Dyk also sends encouraging news, ore of the assay value of 24½ and even 31½ dwts. having been encountered, although in the west drive the stuff has averaged only 1½ dwt. The Eastern Rand is very erratic.

It is almost unnecessary to say that Land and Finance shares went the same way as Kaffirs, and although there was no outstanding incident the group showed pronounced dulness. It was the Rhodesian and Diamond section that provided the sensations of the week. There is clearly something up in connection with the De Beers-Premier negotiations. That much is admitted by the most reserved, and evidently the greatest possible difficulty is being experienced in adjusting the differences which have arisen. We understand that no actual breakdown of the negotiations has occurred, but some people would not be surprised any day to hear that the *pourparlers* were off. This, of course, is not the only trouble of the diamond share market. It is a well-known fact that the demand for stones has fallen off enormously during the last two or three years, thanks to the Yankee slumps and other causes—hence the necessity for the compact between the big producers—and it is reasonably certain that dividends have got to be reduced, perhaps heavily. De Beers and Premiers plunged down in a most alarming fashion, and someone is bound to be badly hit when a share like De Beers deferred falls between £3 and £4 in a month. This week they have fallen about ¾, and Premier deferred have done much worse. The Rhodesian section has also been distinguishing itself. Let us deal with Tanganyikas first. On Monday the price simply fell to pieces. It began about 3¼ and was steadily worked down to 3. The "bears" kept hard at work, and when a break below this figure was accomplished the bottom was knocked clean out. Down the shares rushed, for all the world as though an earthquake had shifted the "mountains of copper" into the sea, and 2 7/16 was reached before the fall was stayed. Then a few "bears" climbed in, and the quotation was got back to 2 19-32. That was a fairly good performance for one day, and it was exciting enough to alarm some people more or less connected with the company, because on the following day a statement of a sort was issued, but it did not tell anything very useful or carry us much further. It was to the effect that the visit of Mr. R. J. Frecheville to Katanga was not undertaken on behalf of the Tanganyika Concessions, but on account of the Consolidated Mines Selection Company and "friends," for the purpose of looking into and reporting on a business proposition which that company was considering. This report cannot be received until Mr. Frecheville's return, so it is said. In the meantime, the rumour is denied that a fresh issue of shares is contemplated. The whole business is a perfect mystery, but someone knows something, of that we may be sure. Eldorados have also provided an object lesson. For about a week the shares were quietly pushed up a fraction at a time, and it was darkly hinted that good news might shortly be looked for. Eldorados reached 2¼ and Rhodesian Bankets 1 5/8, Mr. Abe Bailey's return to England being anticipated with much enthusiasm. Then something happened, no one knew quite what, but Eldorados were down to 1¾ almost before you could wink. It was declared that the Scotch banks were "killing someone," but others had it that those who had so freely tipped the shares were using Glasgow as a blind to mask their selling operations. The only thing we can be certain of is that the first crushing may come at any moment, and well, wait and see. All other Rhodesian shares showed pronounced weakness, and the market is still waiting for the public. But they—the public—are not all fools.

West Australians might have been worse, despite occasional weakness in Lake Views, Oroyas, Black Ranges and Associated. A very welcome recovery occurred in Broken Hills, the settlement disclosing a very small supply of shares and the colony being again disposed to buy. The Block 14 Company maintains its dividend at 2s. 6d. per share, and the output could be increased were more miners available. The setback in the prices of silver and lead did not stop the rally. Zincs ran up to 3s. 6d., but Deep Leads were still on the down grade, Jungles were not over grand and most movements were the wrong way. The Taquah return shows that the plant is not yet in full working order, although it probably will be very soon.

Copper metal commenced better, but the share market did not begin very well. A much better tendency, however, was soon produced by the Rio Tinto demand, which at 47s. 6d. was only 2s. 6d. less than last year, and was considerably in advance of forecasts. Tintos ran up to 70 and other things improved in proportion, but later on the quotation for copper went back quickly and the entire market became weak again. Tin shares were also flat, the metal being the cause.

Among Miscellaneous things, Mexico El Oros were better on good development advices and there was a harder tendency for Le Roi issues, San Franciscos and Camp Birds. Indians proved a stronger market and Siberian Proprietary were the turn harder. New Zealands were rather off colour. Ceylon Pearls, which are included among mines, eased on the report.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Transvaal Gold Returns.—During September the output of gold from the Witwatersrand was 517,746 ozs., and from the outside districts 20,288 ozs. or a total of 538,034 ozs. valued at £2,284,425 as against 555,027 ozs. valued at £2,357,602 last month. The decline compared with August is 16,993 ozs. entirely accounted for by the fact that the month contained a day less. In the subjoined tables we show the output and values for several years:—

* Includes £33,766 not declared previously.

Native and Coolie Labour.—The statistics for September show that the natives distributed to the mines by the Witwatersrand Native Labour Association numbered 10,743 as against 7,345 lost by time expiration and other wastage, making the gain for the month 3,398, and increasing the number of "boys" employed to 95,312. In the subjoined table are shown the number of natives and Chinese employed on the Rand during the past year:—

Month.	Natives Joined.	Natives Left.	Net Gain or Loss.	Natives Employed end of Month.	Chinese.
September, 1906	8,367	6,755	1,612	77,858	54,922
October	9,845	7,387	2,458	76,035	53,134

* Net Loss.

It will be noted that while the number of Chinese discharged for repatriation was 2,811, the native labourers increased by 3,398. During the past four months the Chinese departures have been 7,149, and the Kaffirs employed have increased by 3,643.

Consolidated Main Reef Mines and Estate, Limited.—During the year ended June 30 this parent company crushed 222,272 tons of ore for a yield of 47,245 ozs. or 4.251 dwts. per ton, while the cyanide works gave 29,506 ozs. or 2.655 dwts. per ton, bringing up the total yield to 76,751 ozs. or an average production or 6.906 dwts. Value of the gold was £322,431, being 29s. 0.148d. per ton, a decline of 1s. 5d., while the expenditure was £231,064 or 20s. 9.494d. per ton, a saving of 3d. only, leaving the nett profit at £91,367. Including £15,264 brought forward and other items, the revenue was £113,267, and the directors act wisely in charging capital expenditure to the amount of £20,851 to profits. The year was also made historical by the payment of a first dividend of 5 per cent., which was forthcoming in December last. Another 2½ per cent. might have been managed, but the directors have decided to defer a further declaration in order to make provision for excess development that might be necessary. From the look of things we should say that this excess development will be absolutely essential, because the payable ore developed amounted to only 142,830 tons, meaning that the reserves have decreased about 90,000 tons. Since the strike in the latter part of May development has been retarded by the shortage of white labour, but most of the drives, &c., have now been restarted, and it is expected that very shortly everything will be again in full work. At present the state of affairs in the eastern section is said to appear very favourable for increasing the ore reserves. The 7th to the 13th level, excluding the 8th east drives on the south reef, should together expose some 18,000 tons per month, most of which will probably prove payable. At present the ore reserves are put at 210,620 tons of 7.6 dwts. ore, and after deducting 15 per cent. for waste the nett milling reserves are 179,027 tons or far less than one year's supply of the mill. There is nothing much to say about the two subsidiaries, the Main Reef East and the Main Reef Deep. The shafts on the parent company's property are being sunk as expeditiously as possible, with the double purpose of developing the lower levels of that company and of being in a position to open up the ground of the offshoots through these shafts.

Matabele Reefs and Estates.—This company's debit balance was only increased by £6,816 in the year 1906, making it £15,155, the loss being much smaller than anyone who has given a thought to Rhodesia during the last few years might reasonably have expected. In various ways a revenue of £40,032 was received during the period, and only £38,571 was spent, so there was a profit on actual operations of £1,461 converted into the debit named by debenture interest. The company is the outcome of the fusion of two Rhodesian fiascos, the Matabele Mines and the Matabele Reefs, the shares of both being at one time pushed up to a high figure. The chief interest possessed is in the East Gwanda Mines, itself an amalgamation of four old wrecks known as the Geelong, West Nicholson, Jessie and Eagle Vulture, appropriate name the last, and the parent of these four mines was the Matabele Gold Reefs. See? The company has plenty of other assets, of course. There are 730 gold claims, 120 Wolframite claims, 72 farms, 3 machinery and dam sites, a pipe line, a railway siding, sundry diamond interests and goodness knows what else. But don't you make any mistake about it, the East Gwanda is going to be a great success in the sweet by and bye, despite the terrible labour troubles hitherto encountered, and the fact that everything was paralysed by a disastrous flood in December last. But the company has plenty of labour now, very decent chaps they are too, and things are clearly going to hum. No progress has been made with the sand settlement scheme, but Colonel Owen Thomas—what a lot of colonels discover they are mining and agricultural experts—is dead sure of getting settlers on the company's lands in the near future. They can't starve provided they can manage to digest Ceara rubber. Sisal hemp and Cassara, which are being grown on Essexvale with encouraging results. There are a couple of thousand head of cattle, too, but an unfortunate disposition exists to sell these, and the settlers may have to be content with meat, say, once a week.

Kleinfontein Deep.—This company's engineer is very miserable because operations had to be suspended just when the shaft was getting within measurable distance of the reef. In face of enormous difficulties, the eastern shaft was got down to 1,106 ft. during the year, making the total 1,225 ft., and it is estimated that the reef would be struck at 1,443 ft., hence the agony of the engineer. He ventures to predict that were the work of sinking and development to be permitted to continue in conjunction with the erection of an up-to-date reduction plant, the company would be able to enter the dividend-paying stage within a reasonable period of its commencement to crush rock. But miners won't work without pay, and as the cash is down to less than £2,000 there was nothing for it but to temporarily stop operations. One way and another the company has managed to get rid of some money. The property cost £335,847, machinery and plant £23,520, east and west shafts £55,459 and railway siding £11,834, while general expenditure has run away with £33,448. Eighteenpence a share has still to come in on 200,000 working capital shares, but this £15,000 will probably be required to keep things going during the suspension of operations.

Lake View Consols.—Lake Views past and present provide an interesting psychological study. To think of the mine in the heyday of its prosperity, when the shares were put to £30 and people were talking of their subdivision into a shilling denomination and then into penny units, and to think of it now. The Lake View mine still exists, but the company cannot live on that alone, and the directors have gone far afield in their efforts to provide the undertaking with fresh means of livelihood. During the year to June 30, 1907, 136,174 tons of ore and 1,365 tons of old tailings were treated, producing gold to the value of £168,796, the revenue from all sources being £176,151. The quartz gave a yield of 24s. 9½d. per ton, and it is very satisfactory to note a further important reduction of 3s. 2d. at 18s. 6d. per ton in the working costs. After meeting expenditure of every kind, there is a balance of profit amounting to £21,593, increased to £26,642 by the sum brought forward. The directors have deemed it wise to write off the interest in the Siberian Gold Dredging Company, requiring £7,786, although they hope that the larger portion may be saved, and propose a dividend of 1s. per share absorbing £17,492. General manager's remuneration is £175 and £1,109 is carried forward. Total ore reserves are estimated at 158,321 tons, of the average value of 28s. per ton, the quantity being up 36,847 tons on the year, while the value is about 2s. 9d. per ton less. This, however, is largely offset by the reduction in working costs. What the directors call the mines investment account includes all the outside interests acquired prior to June 30 last. Its total is £22,932, which represents 58,525 Broken Hill South Blocks £1 shares and £18,770 6 per cent. first mortgage convertible debenture stock, 75 per cent. paid, and 10,000 £1 shares in the Burma Mines and Railway and Smelting Company, both of which appear to be making progress. Since the close of the financial year an option expiring December 31, 1908, has been obtained to purchase a further amount of £12,000 Burma debenture stock and shares on favourable terms. The company has also lately acquired a large interest in a Western Australian company, at present nameless, which has already opened up about 20,000 tons of ore, estimated to yield a profit of at least 15s. per ton. The chute on the bottom level, 500 ft., is opened up for about 250 ft. in length, with an average width of about 15 ft., and average value of 45s. per ton. Developments have been started to prove the continuation of this chute at greater depth. The company has 203,544 shares of 5s. each, 4s. paid, out of 353,195, and has an option to acquire a further 146,805. Sundry other interests have been entirely written off.

Mount Lyell Blocks.—In the six months to the end of June last this company treated 33,247 tons of ore, which produced about 274 tons of copper, whereas in the previous half-year 38,515 tons gave 397 tons of metal. The falling off in the tonnage is attributed to the shortage of water during the whole of the period under review, and, as the results indicate, the copper contents of the clays were very considerably smaller. The extraction, however, is reported to be very satisfactory. Concentrates account gave a revenue of £25,973 and unclaimed wages brought in £7, making £25,980 in all. Mine working expenses, maintenance and development absorbed £21,583, leaving £4,722 as profit. To it is added balance brought in £13,895, and interest £43, and after providing for administration expenses, &c., a sum of £17,142 is left to be carried to the new

account. The result is extremely disappointing in view of the considerable profits earned in the previous six months and the high price of copper ruling during much of the period, and nothing is forthcoming in the shape of dividends compared with two sixpenny payments for the second half of 1906. The working costs were about the same as before, but the manager advises that owing to the great expense of keeping the workings in safe order the expenses are likely to increase, and some portions of the mine may not pay to work. The quantity of ore in sight is estimated at only 24,350 tons of an average value of 1 per cent. as compared with 37,450 tons available at the commencement of the half-year, but the calculations do not include anything below the level of the Consols Tunnel, which is now being developed. On the advice of the mine manager a working option has been secured over leases known as the Queensberry mine, situated between Strahar and Zeehan, from which high-grade galena has been obtained previously in considerable quantities by a co-operative party.

Broken Hill South Silver Mining.—This highly prosperous enterprise produced metals and minerals worth £221,849 in the six months to June 30, and earned a nett profit of £107,964. Two dividends, absorbing £80,000, have been paid, 10 per cent. has been written off plant accounts, additional expenditure of £1,145 on the new plant has been provided, £1,000 is set aside for Government royalty, and a credit of £95,905 is carried forward. Nett liquid assets, including mine stores, amount to £102,059, but as large payments have to be provided for the new mill and plant, no addition will be made to the reserve fund, which consequently remains at £45,000 against the share capital of £161,576. Reference is made to the operations of the Zinc Corporation in which the company is interested, and in order to give this unfortunate concern every possible chance, contracts have been revised and made easier. The erection of the new mill is well advanced, but the directors speak of the all-round increase in wages and price of materials, especially since the new duties were imposed, and point out that this must greatly enhance the cost. Ore reserves are estimated at no less than 3,000,000 tons, say 10 years' mill supply, but shareholders are asked not to be too exacting in the matter of dividends for a little time, because it is a most difficult thing to keep up the production from the old mill and at the same time arrange to transfer the whole system to the new. It is also impossible to properly develop the mine and prepare for the largely increased output without increasing the mine costs. If metal prices keep up when the new mill is completed the company should be able to give very satisfactory returns. There is no anxiety as regards the immediate water supply, but the second source of supply at Umberumberka is urgently needed, and the directors are co-operating with other Barrier companies, who are doing all they possibly can to push on this work.

Palmarejo and Mexican Gold Fields.—A brief circular to the shareholders states that further reports up to the week ended August 24 of La Blanca development are of a most satisfactory character. Calculations of ore reserves in this portion of the mine alone now being developed in levels Nos. 10, 11, and 12 amount to over 80,000 tons, while the values disclosed are considerably in excess of the average grades of ore that of late has been treated in the company's Zapote mill. The further extent of the ore body beyond the above reserves can only be measured up as development proceeds on the lode, which extends into the mountain to the east and shows increase both in size and value. The management reports that the benefit from this new supply of higher grade ore should be seen in the mill return for September and onwards as the contents of the ore bins and deposits containing residue of lower grade supplies will have been treated and disposed of. One result of recent operations is that a more rapid and economical transmission of the ore from the newly opened section to the company's railway has been arranged. Concerning the Oxman Prospecting Company, the new mill commenced to run on 21st inst.

Mexico Mines of El Oro.—After providing for all general expenditure in Mexico and London and a small sum for depreciation, this company made a profit of £44,107 in the year to June 30. The new mill was not in operation during this period, and the profit arose from the sale of 2,739 tons of high-grade ore, which realised £61,454. This has enabled the directors to provide the funds necessary for the erection of the new mill for the development of the mine, and all general expenditure. The reduction works comprise a cyanide plant provided with crushers, rolls and 40 Californian stamps of 1,180 lbs. each, and is equipped with six tube mills and every modern appliance ensuring a high degree of metallurgical efficiency. The entire plant is operated by electric power, is expected to treat 200 tons of ore per day, and will be completed within the original estimated cost. The directors are advised that the mill commenced operations in full running order on the 1st inst. Ore at present available for extraction is estimated at 178,000 tons of an average value of $11.53 gold and 6 9-10 ozs. of silver per ton, but this does not include the high-grade shipping ore exposed in the stopes above the Nos. 3 and 4 levels. Expenditure in the year on plant, machinery and buildings was £42,350, making a total to date of £48,166, and on development £10,878, raising the aggregate to £40,709. There is a credit to profit and loss of £41,901, which has largely provided this outlay.

The Right Hon. Lord Cheylesmore has joined the board of the National Mutual Life Association of Australasia, Limited, 5, Cheapside, E.C., in room of Sir George Sydenham Clarke, G.C.M.G., recently appointed Governor of Bombay. Lord Cheylesmore is President of the National Rifle Association, a member of the London County Council, &c., &c.

Company Reports and Balance Sheets.

*** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the Investors' Review, Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

United Railways of the Havana and Regla Warehouses, Limited.

Nothing to warrant the depreciation that has taken place in this company's ordinary stock is found in the report of the board for the year closed June 30 last. Unpleasant incidents there have been perhaps, but the business of the year has been good and profitable. Comparison cannot be made with the preceding year because since it began the United Company has absorbed the Cardenas and Jucaro Railway and the Matanzas Railway. Gross income from the entire system came to £1,733,645, and current expenses to £986,240 or 55.63 per cent. of the income. After meeting debenture stocks interest and preference dividend, besides providing for outlay in connection with additional rolling stock bought on the hire purchase system, the free balance was £322,000, out of which two dividends of 2½ per cent. each, making 5 per cent. for the year have been, or will be, paid on the ordinary stock, absorbing £238,000 in all. Of the balance £50,000 is used to begin a reserve fund, £15,000 transferred to general renewals account, and £6,000 set aside to meet damage done by the insurgents. A balance of about £13,000 will then be left to carry forward. Owing to £22,040 nett received as premium on the debenture and preference stocks issued during the year the total capital reserve in premiums is now £71,072. What the capital expenditure was during the year is difficult to state, because the accounts are not clear on the point. The seeming confusion, however, probably arises from the extensive absorptions made by the company since it was organised out of the old company. Up to the end of June, however, the total expenditure had been £9,176,188 and there was still £983,812 in hand or available. In the balance-sheet £37,942 has appeared as an asset, being the amount claimed by the company as due by the Spanish Government to the old company. It is now recommended that this should be written off as irrecoverable, but the old company, we take it, bears the loss. Stock and bondholders of the Havana Central Railroad are reminded that they have the option to exchange their securities for United ordinary stock and 4 per cent. debentures and debenture stock.

Western Railway of Havana, Limited.

A large variety of adverse circumstances afflicted this railway during the year ended June 30, any one of which would have been counted sufficient excuse for a lack of improvement or even a set-back in the revenue earned. First of these was the revolution which broke out on August 18 and continued until September 20, with the result that traffic was seriously interfered with, and for one week was completely stopped, while the line itself was damaged at a good many points. Another influence which indirectly affected the company through the possibilities of a loss of traffic was the danger of the tobacco crop proving a failure, partly through the delay caused by the revolution and partly through the long drought experienced. Altogether, therefore, the outlook at the commencement of the year was none too bright, but the heavy rains in February did so much good that the tobacco crop after all gives promise of being equal to if not in excess of the normal, and as in other directions business revived with great rapidity the gross earnings exceeded those of any previous year. Carriage of tobacco, it is true, fell off by 5,613 tons in weight and £8,614 in receipts, but sugar rose by 4,367 tons, manure by 13,689 tons, provisions and miscellaneous, consisting of supplies from Havana to the interior, by 30,324 tons, and palm leaves for thatching by 2,475 tons, with the result that the total receipts from goods traffic increased by £13,455 to £141,003. Passenger traffic improved by £3,072 to £82,315, special trains by £856 to £1,170, hire of rolling-stock by £1,055 to £3,251, and telegrams and sundry receipts by £2,110, and with smaller gains in other directions the gross revenue from operations was £20,905 up at £234,071. Working expenses at the same time were only increased by £10,071 to £119,433, the ratio to earnings being 50 89 per cent against 51 62 and nett revenue. The balance brought forward was £12,026 larger at £17,433, interest gave £227 more at £1,265, and difference in exchange £1,213 compared with £10, and the total available, including £67 from transfer fees, was £25,254 better at £135,210. Of this £13,064 or an extra £2,694 is put to special renewals fund and in addition £7,550 is reserved for damages by revolution, £18,000 is transferred to general reserve, and £2,000 to fire insurance fund against nothing a year ago, and after again paying a dividend of 7 per cent. on the share capital the sum carried out is reduced to £8,649. The extension of the main line from San Juan to Guane is expected to be ready for traffic next month, and work has been commenced on the extension to connect the Havana terminus with the commercial centre of the city, while surveys and estimates are being made for a further extension of about 20 miles to the Remates district. More capital will be required for this work, and as the capital account is already overdrawn to the extent of £50,051, it is proposed to create an additional £100,000 share capital.

Central Uruguay Railway Company of Monte Video, Limited.

The prosperity enjoyed by Uruguay under the presidency of Dr. Williman is made a subject for congratulation by the chair-

man of the local board of this undertaking, who says that they could hardly desire anything better than to be able to report the continuation of the actual conditions now ruling. That there is reason for this hope is shown by the satisfactory advance of £51,599 to £493,682 in the gross receipts of the main line for the year ended June 30, an increase to which practically all classes of traffic contributed. Passengers rose by 165,272 in numbers, and produced £18,516 more, parcels and luggage, owing to the greater quantity of milk carried to Monte Video, yielded £5,899 more, and goods traffic rose by £29,239, while animals gave £1,859 less. There was a small reduction in wheat and maize traffic was £7,240 down, owing to the poor harvests of the 1905 season, but the crops harvested in January last were decidedly better, and there was a good deal of both wheat and maize remaining to be carried on June 30. Sundry grains, on the other hand, gave a larger amount of traffic, owing to an excellent linseed harvest. Limestone and building materials again showed substantial improvements, and a further gain in general goods is also noted with considerable satisfaction. The falling off in live stock was entirely in cattle and was due to the increased import duties recently imposed by the Brazilian Government on beef from the River Plate, forcing the jerked beef factories into Brazilian territory. That country, however, cannot yet produce the necessary quantity of live stock and must still draw heavily on Uruguay. Working expenses rose by £32,457, mainly owing to the increased cost of coal, which on the combined system accounted for no less than £10,225. A new and higher scale of wages which came into force on January 1 also helped to swell the expenses, while larger contributions were made to the respective funds for renewals of permanent way, rolling stock, &c. Nett profits, nevertheless, showed a decided improvement of £19,142 at £248,760, but interest on Government bonds was £1,800 down at £1,136, and profits on remittances, &c., produced £7,317 less at £4,661, so that with £18,492 brought forward and £23,992 from interest on Western Extension 6 per cent. debenture stock, the disposable surplus was only £10,473 larger at £307,041. Debenture interest took only a few hundreds more at £112,181, but North Eastern Railway rent was increased by £3,187 to £55,015, the Western Extension Railway advance under guarantee was £4,475 up at £13,338, and after providing for income-tax the directors again pay 5 per cent. on the ordinary stock and transfer £5,000 to permanent way renewal fund against £2,000 put to pension fund a year ago, leaving £17,613 or £879 less to be carried forward. The whole of the company's outstanding claims against the Government in connection with the 1904 revolution have now been arranged, and in settlement the company has received $49,165 or nominally £10,461 in bonds of the 1905 conversion loan, plus $5,256 or £1,118 in cash for bonus and interest to June 30. During the year $48,200 Uruguay Unified debt bonds were sold and the nett proceeds amounting to £8,962 were credited to the general reserve fund. Capital expenditure on the main line and North-Eastern line for the twelve months amounted to £139,364 and as the overdraft on this account is now £205,670 the directors recommend that the capital be increased to £2,500,000 by the creation of 50,000 shares of £10 each.

Central Uruguay Eastern and Northern Extensions.

Gross earnings of the Eastern Extension for the twelve months to June 30 amounted to £113,627 or an increase of £6,147, of which £3,503 came from passenger and parcels traffic and £5,771 from goods while live stock gave £3,128 less. Working expenses rose by £2,985 to £55,173, this sum representing 48.56 per cent. of receipts payable to the parent company under the agreement, and nett profits consequently were £3,162 up at £58,454. Adding £2,168 brought forward, the total available was £60,622 or £3,290 more, but £3,067 had to be refunded to the Government on account of advances against £1,659 for the previous year, while the company only received £795 against £1,059, and after providing for debenture interest and other charges £33,174 or £1,256 more was left. An interim dividend of 4s. per share was paid for the half-year to December 31 compared with 3s. 6d., and the directors now declare a final distribution of 5s., making 4½ per cent. for the year or ¼ per cent. more and reduce the sum carried forward to £1,674. On the Northern Extension an improvement of £10,051 to £73,488 in gross revenue was accompanied by an increase of only £2,356 in working expenses owing to the proportion retained by the Central Company being reduced from 60 to 55 per cent. in accordance with the agreement. Nett revenue was therefore £7,695 better at £33,070, but as the Government guarantee was reduced by £6,660 to £40,144 and a smaller balance of £1,043 was brought in, the disposable surplus was slightly lower at £74,256, and the dividend is therefore maintained at 4 per cent. with a drop of £334 to £709 in the carry forward.

Anglo-South American Bank, Limited.

After the amalgamation of the Bank of Tarapaca and London with the Anglo-Argentine Bank in 1900, this institution, which then became known as the Bank of Tarapaca and Argentina, made very rapid strides towards a position of importance. Business was particularly good during 1904-5 and 1905-6, and the directors began to consider the extension of operations over a still wider field, a plan which was carried out in January last with particularly happy results. The capital was increased by 100,000 new shares of £10 each, of which half was to be paid up, and these were issued at a premium of £2 per share; but on June 30 there were still instalments of £400,000, including £100,000 on account of the premium, outstanding, so that the actual addition to capital resources was only £300,000. Yet gross profits for the twelve months ended June 30 showed a further improvement of £158,631 at £454,898, and with £27,966 brought in gave a total of £482,864 or £167,989 more. Charges at head office and branches were £34,553 higher at £139,641, rebate on bills, &c., took an extra £8,807 at £30,094, but after meeting income-tax and contributing £2,269 to the Chilian earthquake fund the nett profits were still £121,917 larger at £305,983, the gain being nearly double that of the preceding year. Of this £100,000 is again put to reserve, but in addition £60,690 is utilised to write down the capital employed in Chili to 15d. per dollar, and £20,000 is written off bank premises, so that the surplus is handled in the careful manner which the directors have taught us to expect from them. Then the dividend is increased from 7 per cent. to 9, and after putting £4,600 or £1,000 more to the pension and guarantee fund the staff is given a well-deserved bonus of £10,000, and the sum carried forward is raised to £38,193. The reserve fund is further increased by the premiums on the new issue, and with £100,000 credited on July 1 will amount to £700,000 against the capital of £1,250,000. Liabilities on current, deposit, and other accounts are only £371,563 up at £5,836,625, but bills payable come to £5,702,055 or £1,762,741 more. On the other side of the balance-sheet, cash is a trifle of £52,504 lower at £1,172,855, but money at short notice has risen by £26,024 to £121,455. English and Foreign Government securities, &c., at valuation are £18,391 up at £467,661, bills receivable show an increase of £1,787,620 at £5,302,241, and advances, &c., one of £851,914 at £6,117,643. Bank premises stand at £109,151 compared with £86,819, but the sum now written off leaves the item only £2,332 larger.

Yokohama Specie Bank.

Probably because there has been less finance business to transact for the Japanese Government, gross profits were smaller in the half-year closed June 30 last than in the first half of 1906. Including yen 901,147 brought forward, the total was yen 12,171,078 or about yen 979,000 less. Against this, however, there was a saving of yen 520,000 in the working expenses, interest paid to depositors, &c., so that the directors had no difficulty at all in paying the usual dividend at the rate of 12 per cent. per annum, and after that has been provided for they are able to add yen 500,000 to the reserve funds, leaving yen 1,350,000 to be carried forward, or nearly yen 450,000 more than was brought in on January 1. Liabilities on current and fixed deposits, &c., are yen 27,112,000 up at yen 150,601,000, and the increase a year back was yen 23,714,000. Bills payable, acceptances, &c., are yen 8,656,000 higher at yen 98,051,540, but a year ago the item showed a decline of yen 44,813,000. Bills receivable, &c., on the other side of the account are up yen 16,300,000 to yen 112,607,000, and bills discounted, loans and advances at yen 122,191,000, compared with a total of yen 89,346,000 twelve months ago, investments stand at yen 15,433,000, and cash in hand and with bankers composes the handsome total of yen 58,253,000, this being exclusive of bullion and foreign money held to the value of yen 1,389,000. Bank premises are entered at yen 1,804,000, and the aggregate of the balance-sheet is now up to yen 296,244,000, equal to about £30,000,000 or fully £6,000,000 more than it stood at a year back. The reserve fund, it should be added, will now exceed yen 15,000,000. The note circulation is yen 6,071,000.

Cleveland and Durham Electric Power, Limited.

The response with regard to the participating ordinary shares offered by this company in July, 1906, was not particularly brilliant, as only 32,111 out of a total of 70,000 shares were taken up, while 65,931 of the preference shares found buyers. In the case of 54,942 preference and 18,582 ordinary shares only £3 15s. per share has been paid up, and with the 59,392 deferred shares issued in terms of the prospectus the paid-up capital amounts to £695,265. Investments in associated companies, including £106,772 lent to the Northern Counties Electricity Supply, come to £718,145, and another £28,770 has since been spent on the construction and equipment of sub-stations, &c., while preliminary expenses took £21,371. This last item has been written down by £3,710 to £17,661 out of part of the interest on investments accrued to date of incorporation of the company; but, allowing for that, the outgoings have exceeded the capital receipts. A good deal of credit has consequently had to be obtained, and creditors on open account total up to £90,144, while the bank overdraft is £11,575 against which sundry debtors owe £36,903, stocks are valued at £4,374, and cash comes to a trifle of £57. Development of the business has been steadily kept in view, and in January last the new power station at Grangetown was so far completed as to enable a commencement to be made with supply to the Tees district. Arrangements have been concluded whereby a supply in bulk is now being taken at Bishop Auckland, Hebburn, and Felling, and a similar supply will soon be available at Blyth, Spennymoor, Hartlepool, and Consett, which, it is expected, will result in substantial reductions in the working expenses. Connections to the systems aggregate 9,172 horse-power compared with 1,000 horse-power on June 30, 1906, and mains have been laid in Middlesbrough, Thornby, Stockton, and throughout a large portion of the Cleveland iron mines district and the Auckland district coalfield. Several new agreements have been made for the supply of current for terms of years, which, when in full operation, should keep the plant available profitably employed. Amongst others the Corporation of Middlesbrough has arranged to take a bulk supply, while the Hartlepool Corporation has transferred its electric lighting provisional order

to the Cleveland and Durham County Electric Power Company for 42 years. In the period from July 18, 1906, to June 30 last the revenue from all sources was £25,942, of which working expenses took £9,481, directors' fees £600, and interest on loans, calls in advance, &c., £1,173. After writing £3,710 off preliminary expenses as above noted the nett surplus was £10,978, out of which dividends aggregating 5 per cent. are paid on the amount called up on the preference shares, and £3,227 is carried forward.

Edison and Swan United Electric Light Co., Limited.

The spurt made a year ago by this company, when the nett revenue was increased by about £5,000 seems to have exhausted its energies, and the gain in nett profits for the twelve months ended June 30 was a mere trifle of £527 at £54,237. Debenture interest, however, took £340 less at £16,390, owing to the gradual reduction of the amount outstanding, and after providing practically the same amounts for depreciation and bad and doubtful debts at £12,477 and £1,355 respectively the surplus showed an improvement of £865 at £24,015. The sum brought forward was £2,172 larger at £9,007, giving £33,022 to be dealt with against £29,985, so the directors repeat last year's distribution of 4½ per cent. on the "A" shares, and transfer an extra £2,500 at £7,500 to reserve, leaving £9,543 or £536 more to be carried forward. Even with this addition the reserve will only amount to £12,500, while the item of cost of establishing the business, goodwill, remaining patents, &c., stands at the figure of £390,432 to which it was written down in the re-organisation of the capital two years ago. The debt of the Altrincham Electric Supply Company for goods supplied prior to December, 1902, has been reduced by £341, but is still heavy at £15,819, and the total interest of this company in the undertaking, including the debentures and shares held, amounts to £64,640. The Altrincham Company, however, appears to be making some progress, and paid a dividend of 5 per cent. for the year ended December 31, 1906. Additions to capital account totalled £7,658, and after deducting depreciation allowances the freehold and leasehold properties were £3,594 down at £71,464; but stocks and plant, less £582 for profit realised on the purchase of debentures, show an increase of £1,889 at £234,121. Some little improvement has taken place in the current position as, against a decrease of £3,918 to £25,259 in sundry creditors, sundry debtors are practically unchanged at £53,444, and cash is also about the same at £8,989, while a trifle of £405 has been added to the investments at £19,241.

West Ham Corporation Electricity Supply.

An interesting report has been issued by the engineer and manager of this public undertaking, Mr. Hugh Seabrook, for the year ended March 31 last. Apparently the business was not very profitable as it showed an adverse balance of £1,829 for the year, but this is explained by the reduction in prices made during the year which came to £9,500. Estimates as to the increased business likely to arise through these reductions were not fulfilled during the year, and hence the deficiency. Before it closed, however, there were indications of improvement, especially in the use of electricity for lighting. Reductions in the price for this service were put into force from March 31, 1906, but in spite of persistent advertising and canvassing the next two quarters showed decreases compared with the corresponding periods of the previous year, and only in the third and fourth quarters did the business begin to recover. The receipts from power supply were also 300,000 units below the estimated improvement, but even so the business would seem to be a sound one judiciously managed.

Enfield Cycle Co., Limited.

This company's business in the year ended August 31 suffered not only from the unseasonable weather but also from the dislocation of the organisation through the removal of the works and trading profits consequently dropped from £28,547 to £21,512. On the other hand, the allowance for repairs and depreciation was cut down by £3,074 to £3,231 and a saving of £232 at £392 was effected in professional charges, so that after providing for income-tax and directors' fees and writing off £1,248 or £114 more for bad and doubtful debts and £1,695 for cost of removal the nett surplus was only £4,077 down at £13,085. Adding £7,908 or £2,003 more brought forward the disposable total was £21,293 as compared with £24,267, out of which the ordinary shares again receive 10 per cent., but the sum transferred to reserve is reduced by £2,000 to £3,000, and only £6,034 is carried to the new account. Expenditure on machinery, plant, &c., during the year amounted to £21,886, and after deducting £1,052 for depreciation, the book value of this item is £40,605, while land and new buildings have gone up by £18,833 to £25,732. Goodwill, patents, &c., remain at the old figure of £58,074 and against these the reserve with the present addition will amount to £28,000. Even that is practically all in the business, as the directors, in view of the heavy outlay, have sold the holding in the Autocar Company, and investments are now down to £1,040. Liabilities to sundry creditors have risen to £21,071, and although on the other side debtors owe £2,612 more at £29,078 and stocks are £2,502 up at £24,414, cash and bills show a heavy decrease of £24,288 at £12,780.

Ceylon Company of Pearl Fishers.

In the past year ended June 30 this company's gross profits came to only £69,307 and the nett to £28,911. From the nett, however, £7,643 was written off on various accounts, so that the free balance was £18,268, to which £16,784 brought forward was added. There was thus £35,052 available, and the directors utilised £29,735 of this in paying a dividend of 7½ per cent. on the £1 ordinary shares, together with one of 9d per share, or 75 per cent., upon the 1s. deferred shares. The directors also received £212 as further remuneration, representing 5 per cent. on £4,235, the amount by which the surplus exceeded £21,000. It is stated that the fishery of 1906 was conducted by the Government of Ceylon for and on behalf of the company, but that the company's own officers are now in charge with more satisfactory results. Altogether 14,315,311 oysters were sold compared with 44,737,735 in 1906. Owing, however, to the new and improved methods adopted, much better prices were obtained, the average realised per 1,000 oysters having been £4 15s. compared with £2 1s. in 1906. There is nothing at all to criticise in the balance-sheet, which shows an extremely strong position, the company having £100,000 in money lent at short call on security, besides £7,953 lying with its bankers. Its additions to plant and machinery cost nearly £1,000 less than the amount written off, and the original cost of obtaining the lease, £11,000, has now been reduced to £3,667.

Western Canada Land Co., Limited.

On June 30 last this company's accounts showed a credit balance of £26,657, which is all treated as profit for the year then ending. It had sold within that time 49,424 acres for £87,229 or an average of £1 15s. 3½d. per acre, and still had 450,576 acres left out of the 500,000 originally bought for about £543,000. Apparently the whole of this profit is handled as free revenue for the year, and the directors accordingly pay a 5 per cent. dividend on the ordinary shares, taking £22,500 and leaving £4,157 to carry forward. Land, however, was sold on the instalment system, and we cannot gather from the profit and loss account that the whole of the money was really in hand. The nominal price obtained was £87,229 and the cost price of the land sold £53,637, so that the nominal profit was £33,592. From this agents' commission took £4,998, leaving only £28,594 as apparent free revenue, but the question is how much of this had been received at the date of the accounts? If a large part of it is still to come in on the deferred payment system, then whence comes the money out of which this 5 per cent. dividend is to be paid? Already the company owes £17,000 on loan, although nearly £63,000 nett had been received by it in the shape of premiums on the 300,000 £1 shares subscribed for. Will its board have to borrow most of the dividend now to be paid?

Bath Stone Firms, Limited.

The board of this company continues to sail close to the wind. For the half-year to June 30 last they bring out a nett profit of £9,142 and pay away £9,084 in declaring and paying a dividend at the rate of 8 per cent. per annum on the shares. Gross profits came to £18,305, but general expenses took £7,309, interest on debenture stock £1,760, and reserve for remuneration of the directors £400, so that the free profit was as stated, and the balance carried out was only £58 higher at £12,363 than the balance brought in. We cannot discover that any substantial writing down has taken place, and the cash in hand or at bankers was only £1,809 at the date of the balance-sheet. Capital expenditure, too, appears to be going up, although only £266 was laid out in the past half-year, and the total is £316,700 after writing off the amount realised by sales of railway trucks, plant, land and premises, and sundry credits. The only provision for depreciation made in the past half-year was £3,618, and the total amount of that depreciation merely brings the cost of the properties further down to £211,670. This may be low enough, but we should have liked to see a larger reserve fund and some provision for paying off the £88,000 of debenture stock forming a first charge upon the property.

Smith and McLean, Limited.

This Glasgow business of steel and iron sheet and bar manufacturers does not issue a profit and loss account, but the directors state that, after providing for depreciation and all charges the nett profits for the twelve months ended July 15 were £22,762. With £4,089 brought forward, the disposable surplus was £26,851, of which £8,000 is put to a special reserve for securing the preference dividend and £3,000 to an ordinary reserve, and after meeting the preference dividend the ordinary shares receive 10s per share or 5 per cent. leaving £3,070 to be carried forward. Expenditure on capital account during the year was £6,729, and the allowance for depreciation £7,012, leaving the property and goodwill account at £182,071, and loose tools, material and stock in trade are valued at £50,000 against a paid-up capital of £120,000 and heritable bonds for £30,000. The ordinary reserve fund consists of the £3,000 just set aside, and might with advantage be augmented considerably, but the special reserve totals £30,000, and is largely represented by investments valued at £21,403. In other respects the company is comfortably situated, as with £45,432 due to sundry creditors it has £72,513 to come in from sundry debtors and holds £15,350 in cash and bills.

Salinas of Mexico, Limited.

In the prospectus offering £200,000 debentures of this undertaking issued in May, 1906, the directors estimated that with the new works they proposed to erect the net profits would reach at least £50,000 or more than double the amount earned by the original concern. The new installations, however, did not come into use in time to benefit to any appreciable extent the results for the year ended May 31, and the results fall a long

way short of the forecast. For one thing the manufacture of salt by solar evaporation was considerably affected by abnormal climatic conditions, and for another operations were hampered by the inability of the railways to provide sufficient wagons. Gross profits consequently amounted to no more than $206,286 or £21,085, which was about £1,000 more than for the previous year, but still some £12,000 below the average for the five years 1900-1904. Adding £329 from interest and transfer fees the total income was £21,414, of which directors' fees and London office charges took £2,328 and £336 was reserved for bad and doubtful debts. Out of the balance the participating debentures receive their fixed interest of 5 per cent., and £1,000 is written off for plant renewals and depreciation, leaving £4,491 to be carried forward. This is not a very exhilarating start considering that so much water was pumped into the capital that the vendors were able to give away £130,000 of their shares in addition to 5 per cent. in cash to the underwriters of £190,000 of the debentures. The total purchase price was £516,500, of which £26,402 was for stocks, and as the company has since paid out £28,069, while the rebate of 5 per cent. on the debentures is included in the capital account, the property, after deducting the £1,000 now written off, will stand at £526,667. Stocks of salt, &c., are valued at another £32,500, and as the issued share and loan capital is £580,070, there is still a balance unspent which accounts for most of the £21,855 held in cash. Creditors are light enough at £2,849, while debtors, less the reserve, come to £6,388.

Lambert Brothers, Limited.

Hitherto this company has made up its accounts annually to December 31, but the directors think it would be better in future to make the financial year end on June 30, and with that object they now issue a report for the first half of the current year. The profits of £33,521 shown after providing for depreciation might have seemed fairly satisfactory had the company been capitalised on a more modest scale, but as it is the return made upon the ordinary shares is nothing to boast of after the activity which prevailed in the coal exporting trade. With £5,437 brought forward the available total was £38,958, of which managing directors' and Port Said manager's remuneration and directors' fees absorbed £2,300, and after meeting the preference dividend a much needed £5,000 is transferred to reserve and the ordinary shares receive a dividend at the rate of 5 per cent., leaving £9,783 to be carried forward. The amount of the allowance for depreciation is not specified, but it cannot have been very large as the item of property and goodwill stands at £427,633 or about £22,000 less than it did eighteen months ago. Of this nearly £300,000 represents goodwill against which the reserve even now only stands at £15,000, but the fund may be said to be separately invested, as investments in shipping property and shares are valued at £32,744. In other respects the position seems good, as with £88,070 due to sundry creditors the company has £113,871 to come in from sundry debtors, and in addition to stocks of coal taken at £39,112 holds £52,689 in bills receivable and £18,679 in cash.

Hans Crescent Hotel Co., Limited.

In submitting their report for the year to June 30 last the directors of this wretched venture desire to draw attention to the "kindly surrender" by a few gentlemen in May last of ordinary shares to the extent of £12,200. This is all very well in its way, but before the capital account can bear any decent relation to the profit-earning capacity of the business, something much more drastic must take place. The thing is hopelessly over-capitalised, and all vendor-held shares ought to be forthwith surrendered. Here we have a hotel company with a property account of £312,680, and which possesses a capital, share and debenture, of no less than £312,795, after deducting the £12,200 mentioned, whose total turnover in twelve months was just £35,695. Food and wines consumed cost £11,738, working expenses were £10,885, and £4,223 was spent on repairs and renewals. The directors waived fees to the amount of £492, but even so the nett credit was only £2,436 after providing debenture interest of £5,900. True this profit is £800 more than in the previous twelve months, notwithstanding the expenditure of an extra £1,000 on repairs and renewals, and while the capital surrender has improved the financial position, the directors can only say they are hopeful "that, with anything like good business, they will be in a position at the end of the current year to consider the advisability of the recommendation of some kind of dividend on the preference shares." A cheerful prospect.

Theatre Royal, Drury Lane, Limited.

It is not a very brilliant report that the directors of this famous old house issue for the year to June 30, and shareholders are to receive only one-half the dividend they did for the preceding twelve months. But the year before that there was no distribution at all, thanks to the heavy alterations required by the L.C.C. Profit in respect of productions and refreshments, after deducting part of the managing director's salary, was £22,625 or £3,381 less than in 1905-6, and with the addition of £388 brought in and sundries of £611 the full revenue is £23,624. Under all heads the outgo was £18,928, which takes into account depreciation, renewals and repairs, interest, directors' remuneration, and lease redemption premium. Balance of profit, therefore, is £4,695, which income-tax reduces to £4,447, and the directors propose to pay a dividend of 2½ per cent., carrying forward a considerably increased credit to the new account. Property account remains at the old figure of £104,413, no additions having been made during the year, and, as is known, a redemption policy has been taken out for the ultimate repayment of £100,000. Another £2,000 has been repaid to bankers, leaving the debt at £16,000, but the general finances are not too strong.

Maynards, Limited.

This business of confectioners has something over 100 retail establishments in London and the provinces, and managed to earn a gross profit for the year ended June 30 of £15,084. With £211 from interest and transfer fees the total income was £15,294, of which expenses took £5,289 and depreciation £3,784, leaving £6,221 as nett profit. Adding £2,399 brought forward the amount available was £8,621 compared with £10,805, but the dividend on the ordinary shares must be maintained at 10 per cent., so the reserve only gets £1,000 against £3,000 a year ago and £2,514 is carried forward. The allowances for depreciation seem good at just over 25 per cent. on plant, machinery &c., at factories, 10 per cent. on leases and on fixtures and fittings at shops, and 5 per cent. on utensils at shops, but goodwill is left at the old figure of £25,583 and the reserve after ten years' existence of the company stands at no more than £6,000. Sundry creditors at £11,423 exceed debtors by £1,762, but stocks are valued at £27,129 and cash is fair at £8,727.

TRADE AND PRODUCE.

Wheat.—Activity and firmness have characterised all markets this week. English wheat has been brought forward in larger supply, farmers' deliveries amounting to 108,964 qrs. averaging 32s. 6d. against 87,200 qrs. averaging 26s. 1d. in the same week of last year. Imports are less at 421,400 qrs. against 515,271 qrs. last week, and 319,223 last year, but the quantities of wheat and flour on passage to the United Kingdom are 2,295,000 qrs. against 2,110,000 qrs. last week and 2,040,000 are going to the Continent against 1,760,000 last week. So far supplies have not been in excess of demand for prices are again 6d. to 1s. higher on the week for English wheat, and occasionally stiff figures have been asked and given for some of the imported grain, particularly Indian, where crop reports are anything but good. American markets have been active also all the week, the market developing some excitement in the last day or two, and speculation was rife.

Wool.—Out of the 89,000 bales sold last week in London the home trade took no fewer than 54,000 bales, the Continent 33,000, and the United States only 2,000, the monetary affairs of that country being in too unsettled a condition to allow manufacturers to commit themselves heavily. Prices hardened at these sales, but according to cablegrams from Australia they do not yet touch the level of colonial figures where they are said to be dangerously high. Merinos over here have advanced a little in consequence, but not crossbreds, except in one or two individual cases for fine grades, and this week has even shown a slight easing in medium and coarse grades. The position of home-grown wools is strong and healthy, demand being large, and the higher prices readily given. Spinners also are holding out for higher prices, and are actively employed. Manufacturers in general are also pretty well supplied with work. Repeat orders for winter are still coming in, and one or two firms working on spring orders for fine goods have difficulty in meeting demands.

Cotton (from our Manchester correspondent).—A firm feeling has prevailed in practically all sections of our market during the week under review. The all-round inquiry for both yarn and cloth has been rather better than in the previous week. The steadier tone in American cotton has stimulated buyers to operate a little more freely. No news of any importance has come through with regard to the prospects of the American crop. The acreage is undoubtedly larger than last year, and owing to the high prices obtainable, it is thought that the planters will endeavour to raise a large yield. No frosts of a killing character have yet appeared, but a good deal depends upon the weather during the next few weeks as to what the output will be. Manchester, on the whole, is looking forward to an extensive growth. In piece goods for export a fairly healthy miscellaneous demand has been dealt with. No market has bought freely, but in various directions an encouraging turnover has transpired. China buyers have shown rather more activity, and some fair sales have taken place in shirtings and fancy cloths. An improvement in the demand for Japan has been welcome, certain sellers meeting with a healthy business. India buyers have plenty of orders to place, and the inquiry is extensive, but in numerous instances the offers have not been of a practicable character. Sales for Calcutta, however, in shirtings, and for Bombay in finer cloths have been arranged. Although some bad news has come through during the week with regard to the outlook for India, private advices received by local shipping houses scarcely confirm the report of a well-known telegraphic agency. Certain sellers have met with a rather better demand in heavy goods for the Levant, but business has been confined to small lots chiefly of a sorting up character. The prospects in Egypt are said to be improving, but no business of weight has transpired. South American markets have bought here, and there to a moderate extent. The demand for home trade cloths has been of fair dimensions, but buyers have adopted a hand-to-mouth policy in purchasing. Sheetings in most descriptions are well sold and firm in quotation. Flannelettes have met with a fairly healthy demand. Printing cloths have moved off rather slowly, and in the com-

moner Burnley makes the bids coming forward are much complained about. In American yarns for home use spinners have held for late rates. A fair turnover has transpired in the medium and finer numbers. Coarse counts are doing badly, the demand being rather poor, and the margin is not very remunerative. The production of yarn is increasing, but the looms appear to fully absorb all brought upon the market. In shipping yarns a rather quieter feeling has prevailed. There has been business offering for the Continent, but very little has been put through for our Eastern markets. Bolton spinnings well maintain their strength with a steady business from day to day. Pressure for delivery is a feature in this section.

Sir Jacob Behrens and Sons report that: "A slight reaction has taken place in the values of American cotton during the past week. 'Bulls' are circulating rumours as to a December squeeze, and also make the most of reports as regards frost; but as Messrs. Neill Bros., in their circular of the 8th inst., point out, these reputed killing frosts nearly always occur this moon, and sometimes do as much good as harm. This authority attributes the slow movement of the crop, not so much to the lateness of the season, as to the indifference of buyers on the one hand, and to the holding back now practised by farmers on the other. Messrs. Neill Bros. adhere to their estimate of 12¾ million bales as the total consumption of American cotton last season. This is in excess of other estimates. They estimate this season's acreage at 34 million acres, which they consider may produce anything from eleven to fifteen million bales, according as the conditions are favourable or otherwise.

Coal.—Last week we said that the reaction seemed a little further off. This week signs are very visible that it has already begun, though many coal owners still insist that we shall be well on into 1908 before prices definitely decline. Already contracts for that year are taken at quite 1s. per ton less than was asked a month or two ago, and prices for present business are easing off for steams, for coke, and even in one or two districts for house coals. Hull trade returns for September show an increase of 92,416 tons over the same month of 1906, and an increase during the nine months of the year of over 1,100,000 tons, so it can afford to go a little easier for the remaining three months of the year. The largest foreign customer last month was Holland, and Northern Russia ranked next. To show how well some of the coal owners have done this year, the wages of miners in Northumberland were raised last week another 8¾ per cent., making a total of 23¾ per cent. rise during the last nine months.

Copper.—At the end of last week prices were lower than they had been any time during the past three years, and this week sees them lower still. The market was active enough in the early part of the week, and on Monday the cash prices closed 30s. up, but neither rise nor activity lasted long. The fall in copper shares weakened the price for the metal, which, after fluctuating within narrow limits, fell to £61 2s. 6d. for cash and £59 5s. for three months.

Tin.—Occasionally prices rallied a little from the worst, but the rise was never more than temporary, and disappeared at the close of each day. Eastern advices have been weak, and with aggressive forward selling and large realisations have forced the market down. Yesterday the closing price for cash was £141 15s. and for three months £139 15s.

Iron and Steel.—The hematite trade, East Coast and West, is not satisfactory, and the outlook seems to point to a persistent fall in prices. They are down another 6d. and more this week. Consumers are taking only enough for immediate requirements, and as makers are not anxious to increase the stocks at present, knowing that a good supply in hand would tell against their interests when trade improves, several West Coast furnaces have been blown out. Cleveland pig-iron is in a better state, exports are not so heavy as they were, but to counterbalance the deficit in this direction a demand has sprung up at home, and makers are still finding it impossible to keep production up to requirements. Consequently, the stocks in Connal's stores are steadily lessening. The steel and the finished iron trades are fairly active in some directions, but in others deadly dull, particularly in those materials that belong to the shipbuilding trade, and manufacturers are having to contend against new competition from abroad.

Tea.—Home consumption for the first nine months of the year has materially increased, say Messrs. Gow, Wilson and Stanton, Limited, in their circular. As regards re-exports, on the other hand, there is a slight set-back, but this is not surprising when we consider that last year's increase was so great and also that low-grade teas are much dearer. Indian teas this week had a smaller auction of 38,509 packages, and bidding was very keen, with prices rather dearer in all grades, medium kinds ¼d. to ½d. up, common ¼d., hardly any teas now to be had under 6¾d. 36,840 packages were sold, averaging 8.41d., against 45,171 packages, averaging 8.26d. in 1906. Competition for Ceylon was also good, and prices generally higher, even medium now attracting more attention and becoming a little dearer, and, as in Indians, nothing in whole leaf is now obtainable under 6¾d. 19,040 packages were brought forward, and the average obtained was 8.30d. against 8.35d. in 1906. Java auctions only amounted to 1,170 packages, but these were strongly competed for at prices generally about ¼d. higher than last week.

Sugar.—The weather and conflicting crop reports have affected the market this week, and statistics also, says Mr. Czarnikow's circular, were not encouraging, for though consumption in the kingdom shows an increase, imports of cane were more than were expected in some quarters. But prices have not varied very much, having moved only from 9s. 11½d. to 10s. 0½d. to 9s. 11¼d., and we are still warned, continues the circular, against estimates based on better quality. The roots are evidently smaller in most districts, and no polarisations were published last year in October, when the fine weather then prevailing must have improved yields more than it is likely to do this year. The present superiority may not be quite maintained to the end, though the inferiority in weight may diminish. Reports from Bohemia, Silesia, and even Saxony are, so far, good; some factories probably have more than last year, but elsewhere the roots, though richer at present, are smaller, and October alone cannot change this altogether. With higher polarisation the cost of production diminishes, and this, of course, may influence the sowings, but in reply to criticisms, we wish to point out that for the coming sowings we spoke of the competition of grain as influencing the cost of roots, and the higher prices of coal and labour, as offsetting any slight improvements in the working of average factories, our figure being based on average yields and dearer roots, not on exceptional quality. No doubt more than half the crop could be grown at 8s. to 9s. if there is nothing better to grow, but if 100 or 110 per cent. is to be grown next spring, more must be paid for roots. The Indian crop has lately been affected by drought as well as those of Cuba, Demerara and Mauritius, and though the effect on returns cannot yet be estimated, the crop will need heavy rains to come up to the average. American market quotations remain unchanged, dealers not caring to do much more than wait for accurate figures of the European beet crops and of their own supplies. Landings for the week were 44,000 tons, meltings 41,000 tons, leaving stocks at 236,000 tons.

NEXT WEEK'S MEETINGS.

Monday, October 14.

Associated Tea Estates of Ceylon.—4, Lloyd's Avenue, E.C., 2.30 p.m.
Caucasus Copper.—Cannon Street Hotel, noon.
Ceylon Company of Pearl Fishers.—Salisbury House, noon.
Enfield Cycle.—Redditch, 1.15 p.m.
Rosario Drainage.—52, Moorgate Street, E.C., noon.

Tuesday, October 15.

Central Uruguay Eastern Extension Railway.—River Plate House, 12.45 p.m.
Central Uruguay Northern Extension Railway.—River Plate House, 12.30 p.m.
Central Uruguay Railway of Monte Video.—River Plate House, noon.
Dunderland Iron Ore.—Cannon Street Hotel, noon.
Liberian Rubber.—Salisbury House, noon.
Mexico Mines of El Oro.—Winchester House, noon.
North Cerro Muriano Copper Mines.—6, Queen Street Place, E.C., 12.30 p.m.
Plant, Green and Manton.—Birmingham, noon.
Plate Steamship.—Dock House, E.C., 3 p.m.
Standard Bank of South Africa.—Cannon Street Hotel, 1 p.m.
Sunbeam Motor Car.—Wolverhampton, 3 p.m.

Wednesday, October 16.

Alby United Carbide Factories.—Winchester House, noon.
Anglo-South American Bank.—Winchester House, 2 p.m.
Avondale Hotel and Restaurant and Hatchett's Restaurant.—Winchester House, noon.
Buenos Ayres Western Railway.—River Plate House, noon.
Henry Berry and Co.—Hunslet, noon.
Lake View Consols.—Salisbury House, noon.
Matabele Reefs and Estates.—Salisbury House, 12.30 p.m.
Salinas of Mexico.—Winchester House, noon.

Thursday, October 17.

Crisp and Co.—Seven Sisters Road, N., noon.
Edison and Swan United Electric Light.—Winchester House, noon.
Frank Smith Diamond Estates and Exploration.—Cannon Street Hotel, noon.
Peruvian Corporation.—Winchester House, 12.30 p.m.
Royal Mail Steam Packet.—Cannon Street Hotel, noon.
United Railways of the Havana.—Winchester House, noon.
Western Railway of Havana.—River Plate House, 12.30 p.m.

Friday, October 18.

Western Canada Land.—Salisbury House, noon.

Book-keeping Down to Date. Andrew Munro, F C I S. (Effingham Wilson. 2s 6d. nett.) This useful handbook has reached its fourth edition, and well deserves its success. Written in a clear and lucid style, its explanations of the various systems of book-keeping should be useful to every business man. With the aid of the key (published separately) the student will find the copies of various examination papers, set by the Society of Arts and other examining bodies, of assistance in preparing for his own work. New chapters deal with the Income Tax Act of this year, with bankruptcy accounts, foreign exchanges, &c. Joint stock companies' accounts are explained, and, although we cannot altogether agree with the writer's views about reserve funds, his remarks on sinking funds are worth consideration. Altogether the little book can be commended as valuable and handy.

MINING RETURNS.

Abbontiakoon Block 1.—Treated 5,226 tons; 1,673 ozs. bullion from plates and 1,092 ozs. bullion from sands and slimes.

Abosso.—Return for September: Crushed 3,471 tons, 1,609 ozs.; treated 2,798 tons of tailings, 565 ozs.; 1,166 tons of old tailings, 199 ozs.; total, 2,373 ozs. gold.

African Gold Dredging and Mining Concessions.—Total Sept., 6,156 ozs.

Akrokerri.—Crushed 2,130 tons, 706 ozs.; 1,430 tons tailings, 139 ozs.; total, 845 ozs.

Angelo.—Milled 29,500 tons, 8,567 ozs.; sands 18,753 tons, 4,101 ozs.; slimes, 10,747 tons, 1,222 ozs.; total, 13,890 ozs.; profit, £31,564.

Ashanti Goldfields.—Obuasi.—Crushed 5,064 tons, yielding, by amalgamation, 1,765 ozs.; tailings, 299 ozs.; product from roasting plant, 1,861 ozs.; total, 3,916 ozs.

Ashanti Goldfields Auxiliary.—Recovered, 492 ozs.; value, £1,968.

Associated of W. Australia.—Treated 9,712 tons ore, £19,474.

Associated Northern Blocks.—Milled, 3,642 tons ore; treated, 1,350 tons slimes; yield, £14,143.

Ayrshire Gold.—Crushed 8,000 tons, 1,750 ozs.: cyanides, 6,120 tons, 1,094 ozs.; value, £10,170.

Bibiana Goldfields.—Crushed 3,229 tons, 1,311 ozs.; cyanide 2,560 tons, £1,615; total, 1691 ozs.

Briseis Tin.—Shipped, 20 tons of tin, including three tons on account of New Brothers Home No. 1 Company.

British Broken Hill.—2,450 tons crude ore produced 339 tons concentrates, containing 210 tons lead and 9,153 ozs. silver.

Broken Hill Proprietary Block 10.—Treated 1,958 tons crude ore, producing 1,616 tons concentrates, containing 953½ tons lead and 51,712 ozs. silver.

Broken Hill Proprietary Block 14.—6,412 tons crude ore, paoducing 825 tons concentrates, containing 497 tons lead and 24,005 ozs. silver; 1,849 tons lead carbonates despatched, containing 610 tons lead and 20,139 ozs. silver.

Broken Hill South Blocks.—Treated 7,890 tons ore, assaying 17¼ per cent. lead, 2¾ ozs. silver, 10¾ per cent. zinc per ton; producing 1,497 tons leady concentrates, assaying 61½ per cent. lead, 8¼ ozs. silver, 8½ per cent. zinc per ton; net value, £13,155.

Broomassie.—Crushed 1,082 tons, 1,657 ozs.; 16 tons concentrates of an assay value of £34 10s. per ton.

Boston.—Produced 745,000 lbs. copper, 1,466 ozs. gold, and 8,880 ozs. silver.

Burbank's Birthday.—Tailings 1,296 tons, value £830.

Burbank's Main Lode (1904).—Crushed 1,355 tons, 755 ozs.; cyanide, 1,050 tons, 163 ozs.

Burma Ruby.—178,000 loads washed, producing rubies valued at Rs.137,000; royalties, Rs.24,000.

Cason.—Milled 32,000 tons, 8,286 ozs.; sands, 21,520 tons, 5,148 ozs.; slimes, 10,480 tons, 1,633 ozs.; total, 15,067 ozs.; profit, £31,883.

Charlotte Plains.—Output 270 fathoms, 172 ozs. New Havillah —650 fathoms, 372 ozs.

Chillagoe.—Treated 1,768 tons copper ore and 2,477 tons lead ore, producing 326 tons copper matte and 280 tons lead bullion, containing 130 tons copper, 280 tons lead, and 33,846 ozs. silver.

Chinese Engineering.—Output of coal 19,500 tons; sales, 19,000 tons; consumption 1,500 tons.

City and Suburban.—Crushed 25,600 tons, 9,338 ozs.; profit, £12,177.

Cobalt Town Site Silver.—Shipped 20 tons.

Consolidated Main Reef.—Crushed 18,756 tons, 3 502 ozs.; sands and concentrates, 18,756 tons, 2,551 ozs.; total, 6,053 ozs.; profit, £6,894.

Crown Deep.—Crushed 36,220 tons, 10,091 ozs.; sands, 22,400 tons, 3,635 ozs.; slimes, 12,487 tons, 1,210 ozs.; total, 14,936 ozs.; profit, £31,500.

Crown Reef.—Crushed 22,694 tons, 6,824 ozs.; sands and concentrates, 15,234 tons, 2,165 ozs.; slimes, 9,797 tons, 1,014 ozs.; total, 10,003 ozs.; profit, £21,020.

Driefontein.—Milled 25,500 tons, 5,726 ozs.; sands, 18,610 tons, 3,009 ozs.; slimes, 6,890 tons, 570 ozs.; total, 9,305 ozs.; profit, £13,015.

Duff Development.—Prospecting dredge recovered during Sept. 422 ozs. of gold.

Durban Roodepoort.—Quartz milled 11,610 tons, 2,848 ozs.; tailings 8,080 tons, 993 ozs.; slimes, 3,785 tons, 218 ozs.; total, 4,059 ozs.

Durban Roodepoort Deep.—Crushed 11,540 tons, 3,322 ozs.; sands, 7,476 tons, 1,013 ozs.; slimes, 3,344 tons, 255 ozs,; total, 4,590 ozs.; profit, £4,200.

East Gwanda.—Crushed 8,315 tons, 3,049 ozs.; concentrates 171 tons, 443 ozs.; cyanide (on contract), 4,000 tons, 671 ozs.

Ferreira.—Crushed 21,700 tons, 8,719 ozs.; sands and concentrates, 14,000 tons, 2,837 ozs.; slimes, 8,214 tons, 1,170 ozs.; total, 12,726 ozs.; profit, £30,519.

Ferreira Deep.—Crushed 22,550 tons, 9,084 ozs.; sands, 15,985 tons, 3,663 ozs.; slimes, 6,602 tons, 644 ozs.; total, 13,391 ozs.; profit, £36,050.

Foldal Copper.—Ore produced 5,161 tons (including 175 tons under estimated for August), shipped 4,455 tons.

French Rand.—Crushed 18,000 tons, 3,263 ozs.; sands and concentrates, 13,600 tons, 1,913 ozs.; slimes, 6,262 tons, 435 ozs.; total, 5,611 ozs.; profit, £4,010.

Geldenhuis Deep.—Crushed 31,700 tons, 7,620 ozs.; sands, 21,330 tons, 2,943 ozs.; slimes, 10,830 tons; yield, 644 ozs.; total, 11,207 ozs.; profit, £15,500.

Geldenhuis Estate.—Crushed 18,150 toos, 3,903 ozs.; tailings by cyanide, 1,886 ozs.; slimes, 450 ozs.; total, 6,239 ozs.; profit, £12,554.

Giant of Rhodesia.—Treated 4 322 tons, 2,486 ozs.; profit, £5,446.

Glen Deep.—Crushed 15,555 tons, 4,164 ozs.; sands, 9,360 tons, 1,502 ozs.; slimes, 6,310 tons, 455 ozs.; total, 6,121 ozs.; profit, £5,300.

Globe and Phœnix.—Crushed 6,000 tons of ore, 2,653 ozs.; tailiugs, average assay value per ton, 3·12 dwt.; cyanide, 4,096 tons, 503 ozs.; slimes, 1,771 tons, 196 ozs.; total, 3,352 ozs.

Golden Horse Shoe.—Ore treated 22,234 tons, 12,247 ozs.

Great Boulder Perseverance.—Sulphide plant treated 17,417 tons for 6,980 ozs. gold and 693 ozs. silver.

Great Boulder Proprietary.—Sulphide mill treated 13,044 tons, 11,954 ozs.; tailings (old), 9,959 tons, 1,102 ozs.; total, 13,056 ozs.

Great Fingall.—Ore, 21,827 tons, 3,882 ozs.; tailings, 21,353 tons, 2,458 ozs.; concentrates, 474 tons, 1,929 ozs.; total, 8,269 ozs.

Gwalia Consolidated.—Crushed 2,763 tons ore, 143 ozs.; 1,175 tons sands, 385 ozs.; 1,482 tons slimes, 222 ozs.

Hainault.—Crushed 5,580 tons, 1,575 ozs.

Hannan's Reward and Mount Charlotte.—Tons crushed, 2,975 444 ozs.; royalties, £277.

Hutti (Nizam's).—Crushed 2,300 tons, 970 ozs.; tailings, 2,000 tons, 240 ozs.; total, 1,210 ozs.

Ida H.—Crushed 250 tons, 911 ozs.; profit, £725.

Ivanhoe.—19,040 tons ore, 3,183 ozs.; 8,730 tons sands, 1.449 ozs.; 8,530 tons slimes, 2,861 ozs.! 1.780 tons concentrates, 2,640 ozs.; total, 19,040 tons, 10,133 ozs.; profit, £21,100.

Jobannesburg Consolidated.—New Primrose: 7,395 ozs. from 18,433 tons treated; profit, £13,537. New Rietfontein: 8,902 ozs. from 16,613 tons treated; profit, £16,757. Witwatersrand: 10,069 ozs. from 33,200 tons treated; profit, £16,956. Glencairn Main Reef: 4,141 ozs. from 16,850 tons treated; profit, £4,872. Ginsberg Gold: 3,279 ozs. from 9,946 tons treated; profit, £3,670. Consolidated Langlaagte: 7,611 ozs. from 22,516 tons treated; profit, £10,150. New Unified Main Reef: 2,956 ozs. from 9,223 tons treated; profit, £2,314.

Jumpers.—Crushed 11,000 tons, from mill 3,613 ozs.; from tailings 1,219 ozs.; from current slimes, 211 ozs.; accumulated slimes, 105 ozs.; total, 5,148 ozs. fine gold; profit, £3,652.

Jumpers Deep.—Crushed 17,732 tons, 4,557 ozs.; sands, 12,650 tons, 1,614 ozs.; slimes, 5,901, 387 ozs.; total, 6,558 ozs.; profit, £5,050.

Kalgurli.—Treated 10,820 short tons for 7,258 ozs.

Killarney Hibernia.—Crushed 3,855 tons, 405 ozs.

Knight's Deep.—39,860 tons, 13,431 ozs.; profit, £22,603.

Lake View Consols.—11,023 tons ore treated, 3,104 ozs.

Lancaster Gold.—Crushed 15,900 tons, 2,149 ozs.; cyanide, 10,668 tons, 1,292 ozs.; total, 3,441 ozs.

Lancaster West.—Crushed 6,370 tons, 1,174 ozs.; cyanide, 5,180 tons, 853 ozs.; total, 2,027 ozs.; profit, £1,460.

Lancefield.—4,808 tons ore treated, 1,703 ozs.

Langlaagte Deep.—Crushed 29,444 tons, 6,587 ozs.; sands, 20,178 tons, 2,467 ozs.; slimes, 9,437 tons, 531 ozs.; total, 9,585 ozs.; profit, £9,300.

Langlaagte Estate.—Crushed 31,568 tons ore, 7,383 ozs.; concentrates 420 tons, 728 ozs.; tailings 20,520 tons, 2,512 ozs.; slimes 15,230 tons, 1,407 ozs.; total, 12,030 ozs.; profit, £23,750.

Le Roi.—Shipped 6,855 tons, containing 1,950 ozs. gold, 3,200 ozs. silver, and 160,000 lbs. copper.

Le Roi No. 2.—Shipped 120 tons concentrates; net receipts £1,911, being payment for 100 tons concentrates shipped.

Luipaard's Vlei.—Crushed 14,920 tons, 2,700 ozs.; tube mills 526 ozs.; cyanide 1,759 ozs.; slimes 245 ozs.; profit £8,463.

Matabele Reefs.—Blanket, crushed 2,009 tons, 644 ozs.

May Consolidated.—Crushed 14,880 tons, 3,301 ozs.; cyanide 10,815 tons, 2,039 ozs.; slimes 4,532 tons, 355 ozs.; total, 5,695 ozs.; profit, £11,939.

Merton's Reward.—Crushed 780 tons, 265 ozs.; sands 586 tons, 134 ozs.; slimes, 213 tons, 38 ozs.; total, 437 ozs.

Messina (Transvaal).—457 tons copper ore.

Meyer and Charlton.—Crushed 12,170 tons, 1,654 ozs.; cyanide, 3,094 ozs.; total, 4,748 ozs.; profit, £8,195.

Mills' Day Dawn United.—1,949 tons of quartz, value, including residues, £8.400.

Mount Boppy.—6,634 tons, 1,034 ozs.; cyanide 4,104 tons. 1,484 ozs.; slimes, 2,640 tons, 1,108 ozs.; concentrates 24 tons, 125 ozs.; total, 3,751 ozs.

Mount Morgan (Queensland).—Treated 19,760 tons ore, produced 8,000 ozs; copper 11,953 tons ore and metalliferous flux produced 405 tons blister copper, containing 401 tons copper and 4,253 ozs. fine gold.

Mount Zeehan.—Output 590 tons silver-lead ore, containing 253 tons of lead and 25,600 ozs. of silver.

Mysore West and Mysore Wynaad.—282 ozs. from 2,496 tons cyanided.

New Comet.—Milled 21,300 tons, 4,737 ozs.; sands 14,618 tons, 2 106 ozs.; slimes 6,682 tons, 679 ozs.; total, 7,522 ozs.; profit, £7,554.

New Goch.—3,660 ozs. from 19,087 tons crushed; 2,819 ozs. from cyanide; total, 6,479 ozs.; profit, £7,043.

New Heriot.—Crushed 9,100 tons, 4,493 ozs.; profit, £7,328.

New Hillgrove.—Crushed 118 tons, 581 ozs.; value, £2,062.

New Kleinfontein.—Milled 32,008 tons, 8,363 ozs.; sands 22,651 tons, 3,002 ozs.; slimes 9,997 tons, 762 ozs.; total, 12,127 ozs.; profit, £19,992.

New Modderfontein.—Crushed 23,105 tons, 5,935 ozs.; sands and concentrates 14,330 tons, 2,162 ozs.; slimes 11,153 tons, 1,042 ozs.; total, 9,139 ozs.; profit, £12,023.

New Zealand Crown.—Crushed 1,906 tons, value £4,842.

Newhouse.—920,000 lbs. copper produced.

Nigel Deep.—5,030 tons, 2,341 ozs.

Nigel Gold.—Crushed 9,500 tons, 4,473 ozs.; profit, £7,094.

North Broken Hill.—Treated 1,900 tons of crude ore, producing 330 tons concentrates, containing 229 tons 2 cwts. lead, and 7,128 ozs. silver.

North Randfontein.—Crushed 17,114 tons, 3,753 ozs.; tailings, 10,560 tons, 2,046 ozs.; slimes, 6,430 tons, 757 ozs.; total, 6,556 ozs.; profit, £10,200.

North White Feather.—Crushed 1,886 tons, 863 ozs.

Nourse.—Crushed 32,790 tons, 8,439 ozs.; sands 21,928 tons, 4,148 ozs.; slimes 10,125 tons, 672 ozs.; total, 13,259 ozs.; profit, £19,850.

Oroya Black Range.—Crushed 3,530 tons, 2,090 ozs.

Oroya Brownhill.—Crushed 10,961 tons, 7,082 ozs.; value £30,054.

Peña Copper.—Output 15,800 tons; shipments of ore 5,589 tons; 55 tons fine copper in precipitate.

Penhalonga Proprietary.—Crushed 7,900 tons, value £9,519.

Porges Randfontein.—Crushed 14,602 tons, 3,537 ozs.; concentrates 1,480 tons, 555 ozs.; tailings 9,324 tons, 1,541 ozs.; slimes 4,032 tons, 498 ozs.; total, 6,131 ozs.; profit, £9,700.

Prestea Block A.—Crushed 7,000 tons, 3,114 ozs.; cyanide 4,876 tons, 1,038 ozs.; total, 4,152 ozs., value of £15,300.

Princess Estate.—Crushed 8,442 tons, 2,796 ozs.; cyanide 5,421 tons, 1,110 ozs.; total, 3,906 ozs.; profit, £4,860.

Rezende.—Crushed 3,700 tons ore, 775 ozs.; sands, 3,225 tons, 364 ozs.; concentrates 10 tons, 75 ozs.; total, 1,214 ozs.; profit, £1,400.

Rhodesia.—Colleen Bawn—Crushed 790 tons, 315 ozs.; cyanide 500 tons, 697 ozs.; slimes 502 tons, 381 ozs.

Rhodesia Consolidated.—Nelly—Crushed 1,700 tons, 1,094 ozs.; cyanided 871 tons, 314 ozs.

Robinson Deep.—44,265 tons, 19,859 ozs.; profit, £39,520.

Robinson Gold.—Crushed 35,025 tons, 16,909 ozs.; sands and concentrates 22,715 tons, 6,645 ozs.; slimes 13,192 tons, 1,861 ozs.; total, 25,415 ozs.; profit, £77,891.

Robinson Randfontein.—Ore crushed 14,553 tons, 3,398 ozs.; concentrates 1,700 tons, 502 ozs.; tailings 8,325 tons, 1,387 ozs.; slimes 4,406 tons, 474 ozs.; total, 5,761 ozs.; profit, £6,100.

Roodepoort Central Deep.—Crushed 8,428 tons, 2,043 ozs.; cyanide 5,600 tons, 951 ozs.; total, 2,994 ozs.; profit, £1,393.

Roodepoort United.—4,074 ozs. from 15,020 tons crushed; from cyanide 2,390 ozs.; total, 6,464 ozs.; profit, £10,844.

Rose Deep.—Crushed 28,900 tons, 6,151 ozs.; sands 18,720 tons, 2,745 ozs.; slimes 9,527 tons, 579 ozs.; total, 9,475 ozs.; profit, £14,000.

Selukwe Gold.—Crushed 6,410 tons, 1,710 ozs. (equals 5·33 dwt. per ton). Tailings assay 2·34 dwt. per ton. Cyanide 4,272 tons, 512 ozs. Total, mill 1,710 ozs., cyanide 512 ozs.

Sheba.—6,500 tons treated, 1,740 ozs.

Simmer and Jack.—64,210 tons, 24,577 ozs.; profit, £48,242.

Simmer and Jack East.—33,630 tons, 10,176 ozs.; profit, £10,011.

Sons of Gwalia.—Ore crushed 12,905 tons, 3,234 ozs.; tailings 6,960 tons, 1,224 ozs.; concentrates 209 tons, 546 ozs.; slimes 3,439 tons, 180 ozs.; total, 5,184 ozs., value, £21,979.

South Kalgurli.—Crushed 8,568 tons, 2,936 ozs. gold.

South Randfontein.—Ore crushed 15,229 tons, 3,576 ozs.; concentrates 1,575 tons, 409 ozs.; tailings 9,200 tons, 1,395 ozs.; slimes 4,294 tons, 427 ozs.; total, 5,807 ozs.; profit, £6,500.

Surprise.—Crushed 2,926 tons, 844 ozs.; equivalent to 5·77 dwts. per ton; cyanide 433 ozs. from 3,450 tons.

Talisman.—Ore 3,875 tons; value, £14,930.

Taquah and Abosso.—Crushed 4,222 tons, 2,535 ozs.

Theta.—Crushed 1,430 tons, 342 ozs.; cyanide 745 tons, 138 ozs.

Tingha Consolidated.—Production tin 19 tons, 13 cwt.

Tomboy Gold.—Crushed 7,800 tons ore; value, $60,000; concentrates shipped 347 tons; value, $24,500; total value, $84,500.

Treasury Gold.—Crushed 8,610 tons, 1,645 ozs.; sands and concentrates 8,226 tons, 1,217 ozs.; total, 2,862 ozs.; profit, £1,212.

Vaal River (Droogveld).—32 carats, realising £148.

Van Ryn.—September results: Crushed 21,590 tons, 5,898 ozs.; sands 14,200 tons, 2,001 ozs.; slimes 7,193 tons, 622 ozs.; total 8,521 ozs.; profit, £14,514.

Village Deep.—Crushed 26,200 tons, 4,101 ozs.; sands and concentrates 18,791 tons, 3,471 ozs.; slimes 7,325 tons, 616 ozs.; total, 8,188 ozs.; profit, £7,000.

Village Main Reef.—Crushed 40,000 tons, 10,133 ozs.; sands, and concentrates 28,077 tons, 3,894 ozs.; slimes 13,279 tons, 925 ozs.; total, 14,952 ozs.; profit, £27,006.

Vivien.—Ore milled 2,866 tons, 596 ozs.; tailings 1,700 tons, 219 ozs.; concentrates 78 tons, 65 ozs.

Wanderer (Selukwe).—Cyanide 16,368 tons, 1,986 ozs.; profit, £7,777.

Wassau (Gold Coast).—Crushed 4,175 tons, 1,690 ozs.; cyanide, 2,950 tons, 477 ozs.; total, 2,167 ozs.

West Rand Central.—Crushed 2,550 tons for 480 ozs.; cyanide 2,050 tons, 392 ozs.; slimes 1,090 tons for 173 ozs.; total, 1,045 ozs.

Willoughby's Consolidated.—Crushed 1,389 tons, 703 ozs., equivalent to 10·12 dwt. per ton; cyanide 1,400 tons, 265 ozs.

Windsor.—Crushed 5,188 tons, 597 ozs.; cyanide 3,828 tons, 640 ozs.; total, 1,237 ozs.

Witwatersrand Deep.—Crushed 33,330 tons, 9,193 ozs.; sands and concentrates 33,493 tons, 5,010 ozs.; total, 14,203 ozs.; profit £27,427.

Wolhuter.—Crushed 19,560 mill tons; sands and slimes treated, 19,560 tons; from mill, 3,421 ozs.; from sands, 2,629 ozs.; total, 6,050 ozs.; profit, £6,015.

Worcester Exploration.—Crushed 4,500 tons, 1,204 ozs.

Zeehan-Montana.—435 tons silver-lead ore, containing 230 tons of lead and 26,100 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Delhi Umballa Kalka.—Final at the rate of 6 per cent. per annum and a bonus of 1 per cent., making 7 per cent. for year ended June 30.

Great Indian Peninsula.—28s. per cent. out of surplus profits for year ended June 30, to be paid to the proprietors of the 3 per cent. stock, in addition to the guaranteed interest, making a total of £2 18s. per cent. for half-year.

Salvador.—At the rate of 3 per cent. per annum (6s. per share) on the ordinary shares.

Rio Claro Sao Paulo.—Interim at the rate of 13⅞ per cent. per annum for six months ended the 30th ult.

MINES.

Broken Hill Proprietary Block 14.—1s. and a bonus of 1s. 6d. per share on the ordinary shares.

Globe and Phœnix Gold.—Second interim of 1s. per share in respect of 1907, payable Nov. 15.

Mount Boppy Gold.—Interim of 3s. per share, payable Nov. 5, making 30 per cent. for first eight months of the current year.

O. K. Copper Mines Development.—1s. per share, payable Oct. 31.

Zeehan-Montana.—Interim of 2s. per share.

MISCELLANEOUS.

Aerated Bread.—Balance for year ended Sept. 30 of 4s. 6d. per share.

Anglo-American Debenture.—Interim at the rate of 7 per cent. per annum for half-year ended Sept. 30.

Anglo-American Telegraph.—Interim for quarter ended Sept. 30 of 15 per cent. on the ordinary stock and £1 10s. per cent. on the preferred stock, payable Nov. 1.

Bankers' Investment Trust.—Interim at the rate of 4 per cent. per annum on the deferred stock for half-year ended Oct. 31.

Benger's Food.—Interim on the ordinary shares of 9d. per share for six months ended Sept. 30.

British and Australasian Trust and Loan.—Interim of 1s. 3d. per share, being at the rate of 5 per cent. per annum for half-year ended June 30.

Ceylon Tea Plantations.—Interim of 7 per cent. (14s. per share) on the ordinary shares.

Chappell and Co.—Further of 2½ per cent., making 5 per cent. for the year to June 30, placing £5,000 to reserve for general purposes, and carrying forward £4,639.

Commercial Union Assurance.—Interim of 6s. per share.

Consolidated Signal.—Final on the ordinary shares of 2s. per share, making 3s. per share for year.

Direct United States Cable.—Interim of 4s. per share, being at the rate of 4 per cent. per annum for quarter ended Sept. 30.

Hodgson's Kingston Brewery.—At the rate of 12 per cent. per annum, being 6s. per share, for six months ended Sept. 30, making 10 per cent. per annum.

Imperial Continental Gas.—4 per cent. for half-year ended June 30.

Industrial and General Trust.—Interim for half-year to Sept. 30 on the ordinary stock at the rate of 6 per cent. per annum.

National Bank of Australasia.—5 per cent. on the ordinary shares and 5 per cent. on the preference shares.

New Paccha and Jazpampa Nitrate.—Interim of 10 per cent. on the ordinary capital and interim of 24 per cent. on the preference capital on account of the current year.

Nuwara Eliya Tea Estates.—Interim of 6s. per share.

Pataling Rubber Estates.—Interim of 2s. per share, payable Oct. 21.

Primitiva Gas and Electric Lighting of Buenos Aires.—Interim of 2s. 6d. per share on the ordinary shares.

Savoy Hotel.—Interim of 2½ per cent. on account of 1907.

Schweppes.—Interim of 3¼ per cent. on account of 1907.

Shepherd and Blackburn.—Interim at the rate of 15 per cent. per annum.

Stones Mill Company.—For half-year ended Sept. 10. of 10 per cent.

Sunnygama (Ceylon) Tea Estates.—Interim of 3 per cent. on the preference shares and 5 per cent. on ordinary shares.

Yatiyantota, Ceylon Tea.—Interim of 4 per cent. (8s. per share) on the ordinary share capital, payable Oct. 23.

Books Received.

A Key to Cornish Mining. By E. W. Meyerstein. (London: *The Mining Journal*, 46, Queen Victoria Street, E.C.)

Reprint of 1895 Highest and Lowest Prices and Dates. (London: F. C. Mathieson and Sons, Copthall Avenue, E.C.) Price 2s. 6d.

London and South-Western Bank.—The statement for September shows current accounts and deposits of £13,985,178, other liabilities £522,254, and acceptances and endorsements £31,412, against assets consisting of cash in hand and at Bank of England £2,124,023, money at call and short notice £952,140, British Government and other securities £2,278,987, and bills discounted, loans, &c., £9,249,160.

The Finance Committee of the Metropolitan Water Board reports that it has received the formal consent of the Local Government Board to loans amounting to £144,358 for various works.

FIFTY-FIFTH REPORT

OF

Head Office: *YOKOHAMA.*

TO THE SHAREHOLDERS.

Gentlemen,—

The Directors submit to you the annexed Statement of the Liabilities and Assets of the Bank, and of the Profit and Loss Account for the Half-year ended 30th June, 1907.

The Gross Profits of the Bank for the past Half-year, including *yen* 901,147.24 brought forward from last Account, amount to *yen* 12,171,077.51, of which *yen* 9,266,018.79 have been deducted for Current Expenses, Interests, etc., leaving a balance of *yen* 2,905,058.72 for appropriation.

The Directors now propose that *yen* 500,000.00 be added to the Reserve Fund. From the remainder the Directors recommend a Dividend at the rate of Twelve per Cent. per Annum, which will absorb *yen* 720,000.00 on the Old shares and *yen* 630,000.00 on the New shares, making a total of *yen* 1,350,000.00.

The Balance, *yen* 1,055,058.72, will be carried forward to the credit of next Account.

Head Office, Yokohama, 10th September, 1907. KOREKIYO TAKAHASHI, Chairman.

BALANCE-SHEET, 30th June, 1907.

Liabilities.	Y.
Capital paid up	24,000,000.00
Reserve Funds	14,550,000.00
Reserve for Doubtful Debts	60,212.16
Notes in Circulation	6,070,619.58
Deposits (Current, Fixed, etc.)	150,601,165.84
Bills Payable, Bills Rediscounted, Acceptances, and other Sums due by the Bank	98,051,540.98
Dividends Unclaimed	5,123.27
Amount brought forward from last Account	901,147.24

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 511. New Series. SATURDAY, OCTOBER 19, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the ollowing terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Australian Commonwealth Finance.

We wish the budget of the Commonwealth were more encouraging, but facts have got to be accepted as they stand. The subjoined table indicates what the progress has been during the three years ended March 31 last, and estimates as to the future are by no means reassuring on some points. It was predicted, for example, that the Commonwealth would cost the community of Australia little more than £300,000 per annum by way of additional burden, and all sorts of benefits were predicted as being certain to accrue from it. In actual fact the burden has been at the lowest at least three times what was anticipated, and in the estimate for the current year, including defence, as it is called, the total expenditure on federal imperial purposes will amount to £2,362,000. In 1903-4 the total outlay on fighting apparatus was £855,764 or nearly £407,000 less than this year's estimates, and in the interval, therefore, it has risen by about £407,000. It is indeed appalling to observe the extent to which the people of Australia, whose total numbers are barely 4,000,000, find themselves loaded up with the cost of governments. They have, including Tasmania, six separate "parliaments" to uphold, whose "ministers" alone in displaying their talents cost the small nation about £38,000 per annum. If we add in the Commonwealth phalanx of statesmen, ministers altogether cost the people about £50,000 and members of Parliament over £138,000, or £188,140 paid out for parliamentary salaries alone. If the other expenditures, including the cost of working the Australian legislatures and the cost of governors, deputy-governors, executive councils and agents-general, are all added on, the people of Australia will be found to be paying about £942,000 per annum for the mere luxury of much-multiplied parliamentary government eloquence.

Accounts of the Commonwealth for the past three years ended June 30, 1907, stand thus:—

	1904-5.	1905-6.	1906-7.
INCOME.	£	£	£
Customs—			
Commonwealth tariff ..	6,850,043 ..	7,011,708 ..	7,644,198

Total expenditure..	4,318,435 ..	4,494,841 ..	4,987,301

By the law of incorporation, so to say, the various states composing this dog-in-the-mangerish imperial

state are entitled to receive back 75 per cent. of the nett customs and excise revenue, or a minimum amount of £7,039,199. In no year has the income returnable been so low as the minimum of the compact, and last year it was over £800,000 above. This is how the money went :—

	1904-5.	1905-6.	1906-7.
	£	£	£
Revenue	11,465,598	11,879,343	12,832,266
Expenditure	4,318,435	4,494,841	4,987,301
Returnable to the States	7,147,163	7,384,502	7,844,965
†Amounts actually returned—			
New South Wales	2,529,070	2,742,770	3,022,351
Victoria	2,017,377	2,097,119	2,192,340
Queensland	752,532	857,048	942,569
South Australia	555,692	559,411	645,121
Western Australia	1,027,898	872,992	780,166
Tasmania	259,099	256,391	262,293
Total	7,141,668	7,385,731	7,844,849

† The differences between the two totals are occasioned by slight balances.

As a matter of fact, last year's receipts were so good that the amount distributed among the states was £896,000 more than had been estimated for. And the states can do with all the money and more. Their wants expand with their dreams and aspirations, and in proportion as the population stagnates and swarms into fixed spots the ambition of the political leaders mounts higher and higher. It is, moreover, the attribute of governments, especially of popular governments, always to create new channels of expenditure. The business of parliaments, whether free, enlightened and unpaid like our own, or highly paid like those of the United States or as those of the Commonwealth of Australia are now going to be, since the members have just doubled their salaries, is to create work for themselves, or rather work for the ever-growing and always victorious armies of barnacles, executive officials, dependents of all kinds they have gathered around them. Hence, no sooner has this Commonwealth of Australia started upon its career than it develops the ambition to become a great Pacific imperial power, a "white man's country," at no matter what cost, and forthwith the Ministers set to work to spend money upon "defence." As the figures given by us show, this item cost £681,000 in 1904-5, and in the current year it is to cost upwards of £1,271,000, including £355,000 for guns, powder and shot, all essential to the business. It is the same policy that is exhibited in other directions, and the ordinary expenditure of the Federal Government is put for the current year at about £1,091,000 as against the £300,000 originally estimated for by the empire creators. Out of this £573,000 will go as "bounty" to the sugar growers in support of white against ousted Kanaka labour and £20,000 is to be spent in "advertising the resources of the Commonwealth," after the fashion set by Sir Thomas Lipton and such like. As years pass we may be certain that this "imperial" outlay in all forms will grow, and that opens up rather a dark prospect for the various individual states, also all of them clamouring for more money and much in need of it, with enormous debts to finance, renew and where possible increase, with lands to irrigate and improve. In proportion as the Federal Government augments its charges the amount of money left over to be handed back to the individual states will tend to diminish, and as it diminishes their difficulty in making ends meet will increase. No doubt it is the prospect of this critical juncture which has partly impelled the Federal Government towards extreme Protection, but from our point of view the arrival of that quack remedy will only aggravate the disease. It will tend to limit exports and make the collection of revenue more difficult. Thus the Federal Government of Australia alike with the governments of individual states, appears to us to have entered upon a vicious course that will end in trouble for all concerned.

In the past calendar year the trade of Australia was excellent, but we do not think it will continue to be so under the new *régime*. As the *Australian Insurance and Banking Record* remarks pertinently enough, a country like Australia whose well-being rests almost entirely on primary production must take goods in exchange for goods. That is true, but it is a truth ignored and forgotten by the gentlemen who have framed the new Australian tariff. As that tariff begins to act in keeping back imports it will also presently begin to tell on the power of the Australian people to find markets for their agricultural produce. They may depend upon it that the world's shipping will not make its way to the ports of Australia in ballast in order to pick up a return cargo. What will happen will be that a great stimulus will be applied to the exporting capacity of other parts of the world that trade with us and permit us to trade with them on a basis of greater equity and commonsense. Last year, however, the gross exports of Australia came to £69,738,000 and the gross imports to £44,730,000, so that there was an apparent excess of exports over imports amounting to upwards of £25,000,000. It is pointed out, however, by the same magazine that export valuations are only approximate and often much exaggerated, it being a habit of shippers to enter goods at the value they expect to receive on realisation in London instead of at the nett free-on-board cost without freight or insurance charges. This leaves the door open for any amount of mis-statement, and we may therefore be certain that the increase of nearly £13,000,000 shown in the excess of exports over imports in 1906 compared with 1905 is only partly real. Imports, however, which are not subjected to the same inflation in values, also went up, so that if bullion movements be excluded the balance is by no means so highly favourable to a debtor community as might have been expected. That is to say, the excess of exports of merchandise last year on the showing of the colonists themselves amounted to only £9,629,000. To be sure, that was more than double the excess of two years before, and it shows that plenty of rain and good crops and harvests can do marvellous things with the most debt-ridden of communities, but still it would not be enough to cover the debt charges and other obligations payable here were it not for the gold. Of that, however, there was an excess export amounting to £15,379,000, which we presume cannot be regarded as in any measure product of inflation. It is out of the gold, in other words, and not out of the merchandise that the Australian colonies appear to meet the charges of their debt due here, and as long as they have plenty of gold to spare they may not feel acutely the effects of the difficulties they have brought upon themselves by their extravagance. None the less is the exhibit made by the Commonwealth budget the reverse of pleasant.

London County Council Tramways.

No doubt the majority of the London County Council is delighted at the outcome of the Council's tramway enterprises. All the fears so peculiarly expressed during the fight of last year and all the shameless allegations about account cooking and jobbery have disappeared, and the accounts of the tramways just issued for the year ended March 31 last are of the most gratifying description. No hint is given in the report of the Highways Committee of anything wrong with the older accounts, and although here and there vague references are made to improvements in the arrangements of the figures, the broad result is a striking demonstration of the faithfulness and wisdom displayed by the Progressive council in the past. Not only is there no deficiency on the tramway system as a whole, but there was an actual surplus of £339,488 after writing off a deficiency of £11,352 upon the horse traction system. This handsome working profit covers the whole of the debt charges, Parliamentary expenses, income-tax, and other items, and still leaves a surplus of £9,674. This result has been attained in spite of the obstruction to traffic caused by the conversion now in progress of the northern system of tramways from horse traction to electric, in spite also

of the fact that a portion of the electric current is still bought from outside agencies. The committee candidly admits that were the whole of the County Council lines supplied from the Greenwich generating station, the cost would be sensibly reduced, probably brought within the sevenpence per mile originally estimated by the present Council's predecessors. From every point of view, indeed, the London tramway system is a success, and when it is entirely worked by electricity there cannot be a doubt that the citizens of London will possess in it a splendid asset, certain to yield an increasing profit to the ratepayers as time goes on.

During the year the company carried 314,227,000 passengers, of whom 183,062,000 went to the credit of the electric system which permeates South London. No wonder the committee ventures to express the opinion that the conversion from horse traction should be pushed on. The figures, the report says, appear to point to the desirability from a financial point of view of "the early reconstruction of the remaining horse lines for electric traction." We hope, therefore, that in spite of the adverse condition of the money market, no effort will be spared to accomplish this work soon. Also it is reasonable to expect that after this experience the present County Council will not lend itself to any scheme whereby an outside body may be able to obtain control over any portion of the electric enterprises of the metropolis. There should be an end now and for ever to any backing up of a London Electric Power Syndicate, whose efforts were so zealously directed and whose money was, we fear, so freely spent last year to secure the triumph of the present Council majority. Not only does the tramway system pay, but it is laying by money, and the renewals reserve fund was augmented during the year by £35,000 carried to it from the traffic receipts, and by £3,171 received as interest upon the money already invested, so that at the end of the year its total was £141,855, and not one penny was drawn from it during the year. The whole of it is invested except £20,000, which is to be put into National War Loan stock, the rest of it being lent to the County Council itself. Thus from whatever point we approach the accounts of the tramways, satisfactory evidence is afforded of the success of this great undertaking. The gross revenue came to £1,414,604, and before long, when the whole of this system north and south is worked by electricity, the product in gross receipts may reach and pass £2,000,000, for there can be no comparison between the electric car and the old horse car so far as the carrying capacity is concerned or the speed and smoothness of the working. As years pass, moreover, it may be possible to devise some method of generating electricity by means of which dependence upon coal would be reduced, and whether or not the utilisation of electric energy is bound to spread into all manner of channels as yet left out of account. There will be plenty of spare current when the County Council generating stations are fully equipped which may be utilised, not merely for lighting purposes, but for heat and power to an extent as yet hardly dreamt of. Thus London possesses an asset of incalculable potential, as well as actual, value in its electrical undertaking.

This very success, however, may almost be said to mean the death-knell of the Tubes, and we are sorry indeed that it should be so for many reasons. There is, however, no use blinking facts, and useful, valuable indeed as these tubes are, it is to be feared that they can never be worked so cheaply as the surface tramways, nor will it be possible to habituate the public to the use of these underground passenger ways when they have an above-ground service ramifying all over the metropolis, as it must do some day, ready to hand, inflicting no delays and unhampered by the cost of lifts. In speed doubtless the Tubes can beat the tramways, but that one advantage will not balance the disadvantages incident to plunging underground and emerging again or the higher fares which the Tubes prefer to go slower and keep above ground. But if the Tubes are bound to be hurt, and perhaps fatally, as dividend-giving enterprises, by the success of the County Council tramway system, what is to be the fate of the omnibuses, horse and motor? It will be worse so far as we can see. 'Buses will be driven off the main routes. Any hold they have upon these routes now is maintained principally because the tramway system of London is not linked up. Between north and south there are great gaps which time will obliterate without doubt. For example, a motor or horse 'bus starting from anywhere in South London can go straight away without a break to any point in North London determined upon, but there is no such connection between north and south for the tramways. They have, it is true, managed to get across two of the bridges, but they end either at Victoria or the Thames Embankment, and those who wish to go north from the Embankment will, when the final link of the Kingsway electric line is completed, have to change cars at Waterloo Bridge. Thus the horse or motor 'bus has a "pull" over the tramways, but we doubt whether this is sufficient to keep them long on the main routes. They will be driven more and more into byways, and already one meets 'buses on side streets in all parts of London where formerly no such vehicle was to be seen. There omnibuses may act as useful feeders to the tramcars, but their reign even on these side routes will probably be brief, and in the meantime their chances of profit steadily diminish. Fares must be kept down to something like the standard established by the County Council, and its average passenger fare was last year 1.05d., the highest charge being 4d. and the lowest ½d. Neither horse nor motor omnibuses can hope to make a profit by such a scale of fares, and from this point of view the success of the County Council tramway system, highly beneficial as it is to citizens, profitable as it must be to the ratepayer, is likely to cause widespread disappointment. Are we to blame the County Council for this result? By no means. It is really due to the neglect of London, to the fact that until quite lately its citizens had nothing in the shape of self-government. All was haphazard and unregulated private competition.

Economic and Financial Notes.

The "No" of Railway Directors.

It was to be expected. Men of the class from which railway boards are constituted cannot as a rule be considered progressive, and it is average human nature always to shy at unfamiliar things. At the same time the decision of the committee of boards to give an absolute negative to the request of the Union of Railway Servants headed by Mr. Bell, for a conference, appears to us to be playing into the hands of that astute leader and his association, whose membership is to-day about twice that of 1898, when, however, it fell off by about one-half. The men, it is said, are joining at the rate of 2,000 a week, and the more the directors play into the hands of Mr. Bell and his staff, the larger will this membership grow. It might even be possible for the boards to force a strike upon the association before it was ready if they had enough cold-bloodedness to adopt a policy calculated to bring that result about. Most probably, however, the various boards will simply keep quiet, refuse concessions, and hold rigidly to their attitude of hostility towards Mr. Bell's society. In that event a strike will most likely be averted, as it is by no means the consummation desired by the leaders. Their funds cannot be sufficient at the present time to maintain a strike for a fortnight, and unless they were strong enough and united enough to paralyse the whole railway system of the country for a longer period than that, it would be recklessness more than criminal on their part to bring about a conflict of this description.

railway boards and their servants will not from this time onward become, if not more acute, at any rate more harassing and troublesome. As we have said before, working men of all classes are now directly represented in Parliament, and it is only necessary for the Labour members to combine to bring plenty of trouble on railway boards. Probably enough it is in this direction that we must look for the immediate consequences of the directorial *non possumus*. And in the long run we may find boards driven to take the step they now scorn.

Should a strike follow as one of the more remote consequences of the decision come to by the Railway Directors' Committee, then not only will the traffic of the country be disorganised, and some deadly blows be administered to our foreign trade, but the minds of railway shareholders may be attuned to the reception of new ideas as to what qualifications are most required by a railway director. Since the iron roads came into existence down to the present hour, the territorial magnate and his sons, sons-in-law, cousins, and remote relations have formed the principal source of supply for English railway boards. A sprinkling of business men is to be found upon them, but they are as a rule in the minority, and although the managers who practically control the business are often able men, there can be no question that in matters of finance and public policy railway directors as a class have almost continuously inclined to follow the wrong lines. Consider to what extent the railways are burdened with debt and preference capital. The creation of these privileged charges of all degrees is quite in accordance with the feudal idea of property, and one fruit of the habit is a diminution in the dividends on the ordinary stocks, when there are any at all paid, and a narrowing of the margin enjoyable by the nominal proprietors, just as happens with the nominal owner of an overburdened landed estate. Had business men from the first controlled our railways, it is not unreasonable to maintain that the shaping of the capital accounts would have been far different to-day from what it is. There might even have been much less extravagance in the outlay of capital, although that is a doubtful point since the habit of leaning upon capital whenever an excuse can be found for doing so, and often when there is no valid excuse possible, permeates all classes of society. Therefore, it is just possible that only by some overwhelming convulsion, such as a universal railway strike would cause, will the minds of shareholders become imbued with fresh, more up-to-date, more enlightened ideas as to what sound railway management consists of. At present the railway shareholder is a feckless being, and seldom knows anything about the causes at work diminishing the yield of his property, or about the principles underlying the conduct of the business. His wits will be sharpened to a dangerous acuteness if the strife between Mr. Bell's association and the Association of Railroad Boards reaches the point of open rupture.

Rubber Companies.

Some interesting tables have been compiled recently by Messrs. Gow, Wilson and Stanton, Limited, relating to rubber-producing companies. In all 42 of these companies are included in one of their exhibits, and the principal fact demonstrated by them is their youth. Very few companies have any appreciable number of trees in bearing, but there are a few, and these pay, as a rule, such good dividends as to make it in no way surprising that speculative imaginations should fasten upon this particular class of share as something good to run after and acquire. The Anglo-Malay Rubber Company, for instance, paid a dividend of 18 per cent. for the past year on its small capital of £97,937, and the Bukit Rajah Company paid 30 per cent., while the Pataling and Selangor companies each gave their shareholders 40 per cent. on the small paid-up capital. But the best of all is the Vallambrosa, on whose capital of £50,000 a dividend of 55 per cent. was distributed. This company, however, appears to have the largest number of bearing trees amongst them all, since out of its total of 260,250 trees planted, 200,250 were six years old and upwards. It remains true, however, that the bulk of the companies are new, and some of them, we fear, are ambitiously over-capitalised, although the great majority are quite modest in this respect. It is just as well, however, that the capital should not be large, because it is to be feared that the usual consequences will follow what is called a boom in this direction, viz., over-production. When all these companies are tapping their plantations and bringing rubber to market, it may be counted sure that the price of the gum will decline. There will one day be more rubber in the market than the market wants, and therefore we should caution people against paying too high prices for these shares. What is the use of capitalising a company with £30,000 or £40,000 or even £100,000, when the operations of the market multiply this modest sum three, four, five or more times? The £1 shares of the Vallambrosa Company, for example, have recently been dealt in at 9⅜, and the £1 shares of the Pataling Company at 9¼. We leave out of account the Ceylon tea companies which have added rubber plantations as a second string to their bow, because the price of their shares is not determined by rubber alone, although it may be inflated because this kind of crop has been taken up. We do not say that all prices are too high now, but they tend that way, and the utmost care will be necessary if investors therein are to avoid ultimate loss and disappointment.

British Trade Apathy in Italy.

Major W. Percy Chapman, Consul-General at Florence, states that he wrote to some leading firms for advice to be given to British manufacturers anxious to increase their business in Italy. Only a few, however, gave any useful information, and the greater part of the remainder left his letters unanswered, apparently because they feared Major Chapman was attempting to extract trade secrets. The majority of those who did reply seemed to think that Germany was fast driving us out of the market for most commodities. That country, for instance, is ahead of us with cotton goods, other than cotton tissues and cotton tissues mixed with wool. At present we are first with wool, horsehair, and other hair goods, but a leading firm of dealers in carpets and rugs informed Major Chapman that the importation of British carpets has almost ceased to exist, owing to the greater cheapness of the German article, and to its being more in conformity with Italian requirements. German exporters study the taste of their customers in the matter of designs, but "British firms never change their patterns in carpets." Much the same complaint is made with regard to furniture, for which our manufacturers are urged to reduce their prices and make new designs. With regard to locomobiles and threshing machines, British makes are found unequalled as to workmanship and duration, and are also of better appearance than the German. In spite of this, they seem likely to be forced into second place because manufacturers do not study the special requirements of the country, especially in the matter of reducing the consumption of fuel. One importer told Major Chapman of an instance where he lost business through this very point. The customer was hesitating between an English and a German machine, but had almost decided on the former when he inquired into the consumption of coal. The British engine required 1.35 kilos per horse power per hour against 0.695 kilos for the German, and the difference caused the purchaser to take the latter. One more example may be given of the way in which our manufacturers handicap themselves in their competition for trade abroad. A firm of high standing is quoted as stating that much more business would be done in tiles, stoves, pottery, sanitary appliances, japanned ware, &c., if they would make the same con-

cessions as Americans and Germans. Instead of doing so they insist on terms which are no longer acceptable, such as payment on consignment on board steamer, and sometimes asking for prepayment of invoice before consignment even when dealing with well-known firms. Another point about which complaint is made is that British firms do not calculate the charges for insurance, transport, freight, customs, &c., but forward documents which are unintelligible to the receiver, and render it impossible to check expenses.

A Trust with Speculation in it.

Now that people are getting back from their holidays, and settling down to business, it seems about time to resume the occasional publication of suggestive groups of securities for their guidance in investment. We have not been altogether sorry to leave this section of The Investors' Review alone of late, for markets have been anything but inviting. They are not inviting now, for prices are not settled at their lowest by any means, and we cannot yet see any daylight on the horizon. For all that, there are many securities whose quality must give them a permanent value that will reassert itself by and by in the price. We therefore select here a rather heterogeneous looking group for the consideration of those who have money to invest, and, as usual, give the samples in small amounts.

The Eastern Telegraph Company has been, like other cable companies, under a cloud for a long time past by reason of wireless telegraphy, and the price of its ordinary stock has slipped back within ten years from almost 190 to something near 130 even now, and that is by no means the lowest. We cannot see any reason for this cruel shrinkage, and should have no particular fear of an investment in the company's ordinary stock at the present figure, in spite of wireless telegraphy, and every other adverse influence. Most people, however, are nervous at present about investments of this kind, and we have therefore selected the company's 3½ per cent. preference stock as a safe investment. It is true that the company's nett revenue, according to the last accounts published, fell off fully £72,000 in the six months, but that perhaps was still more a consequence of the reduction in the number and length of telegraphic messages caused by the cessation of the war between Russia and China than a permanent reduction in revenue due to the reduced rates charged. Probably enough rates may have to be further reduced ere long, but there is £4,000,000 of ordinary stock below this preference stock to bear the brunt, and the company's reserves aggregate upwards of £1,500,000, of which £935,000 is the cable reserve. It is therefore very wealthy, and still has a monopoly position, so that the investment seems to us first-class.

Another good security is the United River Plate Telephone debenture issue. Until July 1 last this company's debentures bore 5 per cent. interest, but they were then redeemed, and this new stock substituted. If it can be bought at par, or very little over par, it is an excellent investment, yielding practically 4½ per cent. The company no doubt is continually spending capital, but its business grows quite in proportion, and it easily pays an 8 per cent. dividend on its ordinary stock. It has also considerable accumulations, although in regard to these a weak spot may be discovered in the fact that about £126,000 of the gathered money has been invested in real estate in South Africa. This may be all right, and in the long run profitable, but it is not meanwhile a realisable security. The company, however, should be under no necessity to sell out, and the debenture stock in any case seems to us safe.

We next suggest that readers might consider an investment in the 5 per cent. debenture stock of the British Electric Traction Company, and many people who have read our criticisms of this company in past years may be surprised that we should include this stock in any sample list, but there is £2,947,380 of share capital below it, exclusive of £410,000 in 4½ per cent. second debenture stock, and even if we were to consider half the share capital as mere water, which it is not quite, although much extravagance has characterised the financial operations of the company, the debenture stock must be much more than covered by realisable assets, and there is a temptation attached to it in the stipulation that in the event of liquidation it cannot be redeemed at a less price than 130 per cent. We believe it to be sufficiently covered, and a moderate investment in it at or below par ought to do well.

Next we come to what may be called in one sense a purely speculative security, viz., the shares of the Eagle Insurance Company. At first sight it is by no means attractive since upon the £1 share, 10s. paid up, the liability is evident, and as a matter of yield the shares are not worth looking at, for, as our table shows, a purchase of 100 shares at 12s. each, which is a very full price, only returns the holder, on the basis of the last dividend, less than 5 per cent. per annum. The company's business, however, is a fine one, though small and unprogressive, and we believe its assets are considerably more than sufficient to meet its liabilities even in these depressed times. But that is not all, for the business, as we have often hinted, is more than likely to be absorbed by one or other of the larger insurance companies at no very distant date, and as the price given by the buyer will in all probability yield shareholders something more than the market price of their shares, a moderate purchase is on this speculative basis alone worth recommending.

Finally, we come to the Shawinigan Water Power Company, whose 5 per cent. debentures of $500 or $1,000 each can be picked up at par. This is a new company, which has as yet published no accounts, but we hear that it is promising well, and it seems bound to have a profitable business after a little time, since the utilisation of water power to generate electric energy will be both cheaply accomplished and profitable in the long run. The company, moreover, has a twenty-five years' contract to supply the Montreal Electric Light, Heat, and Power Company with current, and as the Shawinigan Falls on the St. Maurice River lie about half way between Montreal and Quebec, there ought to be an indefinitely large field for the company to operate in. These bonds are redeemable at 110 on three months' notice, but become repayable at par on January 1, 1934. On January 1, 1909, a sinking fund begins to be formed to be applied to their redemption. The company's issued share capital is about £1,300,000, and the borrowing powers are so far limited to £1,000,000. It is a speculative investment, no doubt, but one that appears to offer something like a good chance.

		Price	Cost.	Yield.
				£ s. d.
£300	Eastern Telegraph 3½ % preference stock	85	255	10 10 0
£200	United River Plate Telephone 4½ % deb. stock ..	100½	201	9 0 0
£200	B. E. T. 5 % deb. stock ..	97½	195	10 0 0
100	Eagle Insurance Co.'s £5 shares, 10s paid	12/6	62	3 6 8
$1,000	Shawinigan Water, &c., 5% deb. stock ..... (par equivalent in sterling, £205 9s. 8d.)	102½	205½	say 10 0 0
			918	42 16 8

Consolidated Mines Selection.

The board meeting at which the latest annual report of this mainly South African enterprise was drawn up and agreed to must have been a heartrending affair. We do not know whether the entire directorate was present, but no doubt all were there in spirit if not in person, and we think bucketsful of tears must have been shed over the "meddling and unsympathetic treatment" of the Government in connection with the labour question. It was such as would almost have ruined most industries, we are lightly told, and when you come to

think of it, it is very questionable if we had, or have, any right to interfere. To carry out the magnates' orders to "pacify" the Transvaal only cost 250 to 300 million pounds and 20,000 men—the Randlords' pension list of widows and orphans is a sight to behold—and what is the good of being a loyal patriot if you can't get a little job like that done. What else does England exist for? And Anton Dunkels, Max Kempner, Carl Parcus, Georg von Simson, Berthold Kitzinger, and Julius Sigismund Wetzlar, all on the company's directorate, are quite right to enter their protest. But we are straying, and shall be told that only the financial aspect of the case is any concern of ours. Very well, that side of the question shall have its innings. After expressing their great regret at results which fully reflect the extreme depression that has prevailed in the Transvaal during the period under review, the year to June 30, the directors go on to tell us that the company has cash and cash assets of £204,539 as against current liabilities of £95,292, including contingent liabilities of £19,654 made up of uncalled capital in several companies which will only be required gradually. That is good, and it is likewise pleasing to hear that the mining ventures with which the concern is more closely associated are provided with ample funds, so that it is a jolly sight more fortunate than a whole crowd of neighbours. But even this does not end the good things, because it should be borne in mind that many of the items appearing under "sundry properties and investments" could be readily realised. This item—viz., £1,309,803, shows a decrease of £33,684, due to realisation of certain shares, and, with the exception of £130,623, is composed of South African interests. "Ah, but at what price could the investments be readily realised?" Oh, never mind that, try to be happy for five minutes. We can talk about values presently.

The company is interested in a goodly number of mining and other enterprises. There is the Transvaal Coal Trust, a biggish affair, which appears to be doing well, and paid a 5 per cent. dividend for the last financial year, and should do something as well for the current period. This Trust retains an original holding of 260,000 shares in the Brakpan Mines, and we gather that the Consolidated Mines Selection is also directly interested in the latter company, which has lately attained some prominence. The other day the shares were pushed up to nearly par value on the announcement that the reef had been cut, but assay values were delayed a little, and in the meantime the shares fell away rather quickly. Then the values came to hand, and were found to be pretty poor, as we showed a week ago. Next in order is the Eastern Exploration Syndicate, which is not of immediate importance, then the Driefontein Deep, of fair promise apparently, the Klipriversberg Estate and Subsidiaries, the Booysens Estate, the Geduld Deep, and the New Era Consolidated. Sundry claims remain as before, and it is unnecessary to use this note to say anything about the Premier Diamond Company, in which the company has a substantial holding. The Voorspoed Diamond, Viloro Syndicate, sundry quicksilver mines, and a Colorado mining property follow in rapid succession, and a point worth noting in connection with some of the properties is that the directors, in a sense, complain that the shares have depreciated below the equivalent of the cash capital originally supplied (partly expended, partly in hand), while in some cases the shrinkage is actually below the value of the cash assets. This, to us, seems to point to a fear that the money will be spent without bringing the various properties to the producing or dividend-paying stage.

The profit and loss account and balance-sheet can be usefully examined at this point. Beginning with the first, there was a credit balance on account of securities realised of £37,121, interest and dividends produced £28,496, and transfer fees, &c., £67, while £14,675 was brought forward, in all £80,360. Administrative expenses of all kinds run away with £27,403, debenture interest takes the tidy sum of £20,000, and income-tax £1,478. So far there is a tolerable balance on the right side, but provision has to be made for sundry losses, investigations, &c., in London and Johannesburg, the nice little sum of £62,617, and the directors square this up by transferring the balance of share premium account, £61,049. This done, and the credit in hand—without making provision for depreciation—is £29,911. Now for the losses. The book value of the assets, as mentioned above, is £1,309,803, and the depreciation has got to be put down at the stupendous sum of £480,760—roughly, 36 per cent. So far none of this loss has been actually written and set down as a debit, as in the case of other companies whose reports have come out within the last few months, but the directors hasten to point out that unless general conditions in the Transvaal improve considerably a portion of this depreciation may finally have to be treated as a loss. What is now wanted, according to the directors, consists of a fair margin of profit for the shareholders, fresh capital for bringing new areas to the producing stage in order to replace gold producers whose claims are gradually being exhausted (no doubt the British Government is responsible for this last), reduction in working costs, and the efficient and industrious Chinkee instead of the irregular Kaffir, with whom the industry, it may have been forgotten, was conducted for about twenty years. This is a very modest programme, and all that is wanted in addition is a few dozen honest magnates.

Paraguay Central Railway.

At last the settlement appears to have been reached between this company and the Government of Paraguay, so that it should have a chance of becoming a paying property. It did not do so badly in its past year ended April 30 last, all things considered. Gross receipts showed an increase of £16,245 at £71,454, and although working expenses at £46,851 took away £14,212 of this increase, leaving only £2,033 as additional nett revenue, the aggregate of that revenue was none the less £24,603. Working expenses, however, were exceptionally heavy, being 6.40 per cent. up at 65.57 per cent. Adding in some small amounts received in London, the nett income expanded to £25,126, of which £22,385 remained after providing for loss on exchange and outstanding accounts called "deferred Government revolution accounts." Up to the end of the company's previous year the accumulated nett income was £75,721, and adding in the unexpended balance of the London administration fund, together with the profit of the past year, the entire accumulation at the date of the balance-sheet was £114,348, of which £103,797 has been spent by the company on betterments because it was wholly unable to raise more capital, so that only £10,551 remains unspent. Business, however, is improving, and now that a settlement has been reached with the Government it is likely enough that fresh capital will be found with which to extend the line. It will soon be linked up with the East and North-Eastern Argentine Railways, and when the Entre Rios Railways get into Buenos Ayres there will be a narrow gauge through route between Asuncion and that city.

Under the agreement finally concluded between the company and the Paraguayan Government that Government surrenders £210,000 in 6 per cent. preference shares held by it, and they are to be cancelled. The concession is granted for the building of feeder lines, and the company comes under the obligation to build the last link required to make the above-mentioned junction, the company further undertaking to surrender any claim it may have against the Government, all outstanding claims between the two being wiped out. The company is besides left free to fix its own tariff so long as not more than 6 per cent. per annum is paid on its shares. It likewise acquires freedom from taxation, municipal or other, for a period of twenty-five years, but it undertakes to extend the line to Encarnacion within six years, a distance of seventy miles, that being the point at which the line will join the Argentine North-Eastern Railway, which,

however, is at present still a good way south. In consequence of this agreement, it is now advisable, the directors say, to make arrangements with regard to the arrears of debenture interest, so as to clear the way for the raising of money required to properly equip the line with rolling stock, &c., so that it may be able to deal with the extra traffic offering. A scheme has accordingly been prepared for the rearrangement of the capital which instead of the existing 5 per cent. debenture stock, amounting to £1,014,000 will provide for a prior lien debenture stock of £600,000, a 5 per cent. debenture stock of £1,300,000, and an ordinary capital of £272,930, the preference shares, as already mentioned, held by the Paraguayan Government being entirely cancelled. It is estimated by the board that the nett earnings of the line for the current year, without the help of the new rolling stock, will be from £3,500 to £4,000 per month, and that this should be enough to pay 3 per cent. on the new 5 per cent. debenture stock. As to the new prior lien stock which is to be issued to provide fresh funds, it is not expected that the full interest thereon will become chargeable before 1912. It is a burden that will gradually increase as the money is spent. All this represents legitimate enterprise, which should succeed.

The Gramophone and Typewriter, Limited.

We are almost dazzled with the continued prosperity shown by this company, but are not sure that we quite understand it all. As much, however, can be discerned as permits us to say that the business of the past year must have been excellent, for the profit for the year ended June 30 last, including that received from foreign companies came to £263,950, to which £534,677 brought forward has to be added, thus giving a disposable balance of £798,627. This, however, must be regarded as the American manner of dealing with surpluses. They are rolled up and up in the American railway and industrial company accounts until they often assume staggering proportions, behind which, however, the substance is now and then undiscoverable. So the directors do not divide the whole of this imposing sum, but only £140,712 of it, of which the ordinary shareholders have received dividends aggregating 15 per cent. per annum, and the directors are to ask power to continue paying such dividends quarterly at this rate for the year ending June 30 next. But after meeting the dividends, including 10 per cent. paid on the ordinary shares for the year ended June 30, 1906, giving £2,500 to the directors, and paying income-tax, the balance still undistributed is £657,915, out of which a bonus dividend of 15 per cent., less income-tax, is to be bestowed upon the ordinary shares. This will give them 30 per cent. in all for the year and brings the balance to be carried forward down to £586,665, which is still £52,000 more than was brought forward. Surely this result must be considered splendid, and it is. We can only hope it may continue. The balance-sheet, too, shows that the financing of the company has been careful in many respects and the nett assets set forth in the report amount to £772,568 including only a small aggregate of little more than £100,000 for land and buildings, machinery, plant, furniture, fittings and fixtures. Stock-in-trade, however, comes to £235,457 and debtors owe the company £154,400, but it has cash to the amount of £165,220, and investments entered at £172,982, most of which consist of British and Colonial stocks. There is no debenture debt and no sign of embarrassment of any kind in the balance-sheet, but no profit and loss account is shown. How long will gramophone and typewriter prices be kept up? The fortunes of the company hinge on the answer.

Johannesburg Consolidated Investment Company.

Surely this company's financial position should now be down at bed-rock. In the year closed June 30 last the income from dividends alone was £217,548 and the entire income £401,948, exclusive of £38,780 brought forward, so that the shareholders might have expected something substantial at last, especially as the entire charges, including £7,270 appropriated to meet losses by bad and doubtful debts, together with sundry minor depreciation allowances costing £7,922, came to little more than £84,000. Unfortunately, many of the company's investments in shares and sundries have again depreciated, and the directors have decided to set aside £310,534 to write them down still further, and the consequence is that the free balance is only £45,939, which the directors have decided to carry forward. Nett profits on the basis of the actual working expenditure of £69,003 were really £71,313 up for the year at £332,885, and that is the final result. It is, however, the worst that can be said, and there are several consoling or mitigating circumstances to take into account. While on the one hand £278,587 has been written off the price of certain shares, other shares have appreciated to the extent of £405,283, and that rise, prudently enough, has not been taken into account. Furthermore, the town and suburban properties of the company stand in the books at £652,358, they have been valued by the Johannesburg municipality at £1,328,618. All this points to better times ahead if only the mines in which the company is interested continue to show general improvement. The active ones seem to have done so last year, and the Buffelsdoorn alone has failed so completely as to oblige the board to place it in liquidation. There is no more wailing about lost Chinese labour, and abuse of the Transvaal Government has given place to hope that it will succeed in placing the mining industry on "a thoroughly sound basis." It will, we feel sure, if the mine magnates only help. As for the balance-sheet, it is clear enough, but we wish the company had less than £610,239 out on loan in the London and Johannesburg Stock Exchanges. Its advances of £540,279 to mining companies are heavy, but part of its legitimate business, as are its investments of £2,988,298 in mining and other stocks and shares. The aggregates are heavy, that is all; and doubtless represent much wild business in the glorious days of devil-may-care waste and "boom" now for ever vanished. But in writing down out of profits the board is doing penance for its own sins and for those of the shareholders.

American Business Notes.

Why Wall Street should have been pleased with last week's Bank return we cannot guess. To be sure the banks have succeeded in raking in about £1,270,000 in specie, but they have lost about £1,400,000 in notes, and it was only because deposits had fallen off by £2,131,000 that the surplus reserve of 25 per cent. of the nett liability on deposits made a better appearance by £401,000. Its total, however, was only £931,000 against £2,605,000 a year ago, and the pressure upon the banks is almost unprecedented. They have brought down their assets in the form of loans and discounts by £1,133,000 during the week, and in doing so have increased the agony of the market. They must go on doing this, not only because the West is pulling away its resources continuously, but because all manner of liabilities are coming home to roost against their clients. Instead of being in a position to call for gold from abroad, New York is well-nigh in daily apprehension of seeing it swept away by Paris, and perhaps by other Continental centres. In other words, the whole of the benefit accruing from this time onward for the next three or four months through the marketing of the country's crops of grain and cotton has thus far been neutralised by the inpouring of American securities hitherto held abroad. Day by day the sales of these securities tend to the demoralisation of Wall Street, and make it increasingly difficult for bankers and financial magnates to create credit sufficient to enable them to support the stock markets and at the same time draw gold in. The agony for gold, indeed, looks like becoming increasingly acute in the course of the next few weeks.

Wall Street in these circumstances has most days been in a panicky condition. Prices have plunged up and down, but chiefly down, in an alarming fashion, and if occasionally a sort of diversion is brought about by an unscrupulous hunt like that of the Heinze band against "shorts" in United Copper shares, the broad aspect of the market suggests the approach of such another catastrophe as occurred in September, 1873. So utterly hopeless did the position then become that the Stock Exchange on Wall Street was closed altogether for the last ten days of September in order to give the public mind a chance to calm down, and also because it had become impossible to buy or sell securities on any terms. Such a deadlock may not overtake the Wall Street market before the present crisis is over, but no one need be surprised if something like it happens. The Heinze triumph, by the way, was short-lived. His "free company" drove the price of United Copper shares up to 60 on Monday and the "bears" were destroyed. Then there was no market, and the Heinze swarm found it had got much more than it could carry. Trying to sell it brought about utter demoralisation, and by Wednesday the price of the shares had been driven down to 10. One of the Heinze broker firms was compelled to stop payment. There are more to follow.

But this is only a side show. The real drama of the market is being played by and around the Standard Oil camp. As readers know, we have long had suspicions that all was not as it seemed in that quarter, doubted even the mighty "John D.'s" ability to make all the dazzling assignments of money he has so frequently startled his countrymen by. They were tricks played to prop his credit; and now it would seem as if the suspicions were about to be justified. Uncounted millions have stuck to or passed through the hands of Rockefeller and his associates, and if they had not possessed or handled this wealth the American money and stock markets would have gone to pieces long ago under the strain to which the last three years have subjected them. But it was wealth dishonestly come by, and brought ruin in its train, even for those by whom it was amassed. Impelled by it the Standard Oil credit potentates entered upon grandiose schemes of monopoly and robbery. They bought up and linked together railway systems, they dabbled in gas, they played at market cornering wherever chance gave opportunity, and for a time carried everything before them, but always with one result—their wealth became more and more completely tied up with each succeeding triumph, and they had to keep the "prosperity" show going at any cost, so as to prevent their heaven-defying structures from falling and crushing them. What are all the manœuvres of Harriman with the Union and Southern Pacific railroads, with the perished Northern Securities Company, with the Illinois Central and Chicago and Alton Railroads, and many another, but the effort of the Standard Oil swarm of locusts to eat up the country's wealth and put the population of the Union to ransom for its profit?

And the knaves, for they are nothing less, might have succeeded a little longer, but for copper. We said when they began the copper monopolising game that copper would kill them, and it will. The slaughter has been longer in coming to pass than we originally anticipated, but it is to be accomplished for all that. What do the plungings and writhings of the Wall Street Stock Exchange mean except that the end is approaching? The Rockefeller gang holds more copper than even it can carry, and its speculative commitments in copper shares probably exceed those of all the rest of the world put together. It had to buy, and buy so as to keep prices up against a cold and sceptical market, and now the band is left with the shares. It cannot sell because no one will buy, not even the "bears," for most of them have been killed, and it cannot go on carrying the load because its means and credit are over-committed already. All the structures Rockefeller and associates have reared must go under, and they will carry a few Standard Oil banks to perdition with them.

"There is no demand for the metal." Of course not. The would-be world-monopolisers were compelled to create the demand, or much of it, in the past, and now the enterprises they started, the companies they financed, and, as far as they could, plundered by, have become paralysed, could not buy copper if they would. So a syndicate is to be formed to take up and hold the stock of copper. Yes, and who is to hold the syndicate with money costing 7 to 10 per cent., and likely enough before long to cost 20 per cent.? It is the last frantic wail of despair this "syndicate"—a signal that the end is near. Already Rogers, the all-guiding, the scruple-bereft, is gone, and the whole band will have to go, ridding the world of one of the most blighting moral pestilences it has been cursed by in our day and generation. One sight of a surety we should no longer see, Standard Oil lobbyists busy among our M.P.'s endeavouring to draw them into its toils. A shameful sight is that, and we should like to know how these unclean reptiles ever got there.

Meanwhile, it is the second-rate freebooter copper group that has gone under. The Heinzes, it seems, thought they were cornering bears on Monday, and found United Copper shares in good supply. Being unable to pay, some of their agents "busted," and the Butte Savings Bank with £800,000 liability on deposits, a Heinze thing, stopped payment. Heinze's brother's firm has got into trouble too, and its representative on the Stock Exchange has been suspended for a year, while the captain of the band himself has resigned the presidency of the Mercantile National Bank of New York, a second-rank thing with a paid-up capital of £600,000 and liabilities of £2,540,000 on deposits.

Is Heinze to be followed by the Rockefeller gang? Not quite yet, we fear, though its day is coming. The fall of Heinze might even be one more Rockefeller "triumph," though the money to pay for the United Copper shares the Heinzes bought may not be all forthcoming. Otto Heinze and Co. are indeed said to have refused to fulfil their bargains. But the Standard Oil crowd cannot have made much by its manœuvres in Amalgamated Copper shares either. It hoisted the dividend to 8 per cent. and kept that up until three months ago, and the public sold the shares. Now the dividend is cut to 4 per cent., and the money may very likely have to be borrowed to pay that. Have patience!

Call money rates fluctuate from day to day, and sometimes look quite low, but time money is never cheap, and although it is not often quoted in the cablegrams, we believe a large proportion of the humble among borrowers have for some time been paying from 8 to 10 and 12 per cent. for accommodation. The lowest rate is 6 per cent., and there is very little credit to be had at that. While money is thus dear European exchanges are steadily against New York, and every other day almost they threaten gold exports. Could anything more eloquently display the ticklish position of the money market. When the final dissolution comes, though, everything may have to be sacrificed to draw gold from Europe.

On the surface the accounts of the Erie Railroad for 1905-6, its year ending June 30, appear to be fairly pleasant. There was a fine increase of $3,912,000 in the gross receipts, which came to $53,915,000, and as only $2,294,000 of this was absorbed in expenses, which aggregated $38,167,000, it follows that about $1,620,000 was added to the nett income. In other words, the ratio of expenses to earnings was only 70.79 per cent., as compared with 71.74 per cent. for the previous year and 72.48 per cent. for 1904-5. Are we then to infer that the Erie Railroad is becoming stronger, more capable of asserting itself amongst its greater neighbours? Perhaps, but we fear its strength is more apparent than real because its floating debt is considerable, and its equipment none too excellent. In spite, moreover, of the slight decline in the ratio of expenses to receipts for the past year, these ex-

penses are steadily eating into the gross earnings, and when business becomes bad the company is very likely to be almost immediately confronted by an inability to pay its preferred stock dividends. For the past three years it has been able to give 4 per cent. on both the first and second preferred stocks, but this we believe has been done, in part at least, by impoverishing the property. The outlay upon maintenance of way and equipment has seldom or never been adequate to requirements, and the amount assigned from revenue to additions and improvements has every year been comparatively insignificant. Last year it was, at $1,642,000, nearly $300,000 less than in the preceding year. We shall perhaps have a little more light on points of this kind when the detailed report reaches us.

The accounts of the Louisville and Nashville Railroad have also made their appearance, and show that the company apparently earned the 6 per cent. paid on its stock quite comfortably with $2,851,000 to spare, or rather more than in the previous year, although nearly $400,000 less than in 1904-5. The gross receipts of the year ended June 30 last came to $48,264,000, which showed an increase of $5,255,000. Little or no profit, however, was earned by this extra income for working expenses went up $4,848,000 to $35,781,000; that is to say, they jumped from 68.77 per cent. of the gross income in the previous year to 74.14 per cent., by much the highest figure of any recent year. And this percentage is arrived at without taking into account taxes, which last year swept away $1,209,000, or nearly $70,000 more than in 1905-6, and almost $300,000 more than in 1903-4. Were taxes, therefore, included in the current expenses as they ought to be, almost the whole of the increased gross earnings of the company's past fiscal year would have vanished. Nevertheless, the accumulated surplus is now made to figure at nearly $21,000,000, and the company does not seem to have an excessive amount of floating debt. Still $6,500,000 of three and five-year gold notes were emitted during the past year, and with this addition the company's bonded obligations have gone up by nearly $6,000,000 in all.

One noticeable improvement has taken place on the Chicago and Alton Railroad in that almost its entire main line has now been laid with 80-lb. rails. The rail equipment of its branches, however, continues far from satisfactory, for there is not a single rail laid down on any of them of a greater weight than 75 lbs. to the yard, and out of the whole 273 miles of these branches this weight of rail is to be found on only 54 miles. Even so the exhibit is better than many main line tracks can show, and if the company were not getting into debt pretty fast for new equipment and other improvements or extensions, there is no reason why it should not continue to do fairly well, though not as of old. Altogether the capital outlay in the past year came to $3,017,000, and it was too much. Gross receipts from the business were $12,809,000 or $1,223,000 more, while working expenses at $8,024,000 were only $205,000 up, so that the proportion of expenses to earnings was brought down to 62.64 per cent., against 67.48 per cent. in the previous year. Here again, however, taxes are not included, and these swept away $369,000, or about $15,000 more than in the previous year. After meeting the dividend on the prior lien and preferred stocks, together with interest charges, the balance at the credit of profit and loss was $1,010,000, so that there is something in hand for further writings down. The public here, however, has comparatively little interest in this property, and that is just as well, for it has been more than half ruined, so far as its ordinary stockholders are concerned, by the proceedings of Harriman and his associates.

It is perhaps hardly necessary to refer in this column to the New York, New Haven, and Hartford Railroad, but the time is certain to come when efforts will be made to market its securities on this side. As was said under "Business Notes," some time ago, President Mellen, of the New Haven road, has been carrying out a most ambitious scheme of absorptions and amalgamations, with the natural result that enormous amounts of new securities have been created to be exchanged for those of the roads purchased and absorbed, but for a good deal of which no adequate market is at present to be found within the Union. Contrast, for instance, the past year ended June 30 with the previous one. We find the company's share capital to be $97,080,000 against $83,357,000, while its debentures, including some covering part of those of merged roads assumed, have more than doubled, being now $140,965,000 against $70,310,000 a year back. In addition to this, the New Haven road has assumed responsibility for separate debentures of subsidiary companies acquired to the amount of over $36,000,000. Its total capitalisation, in fact, has gone up nearly $130,000,000 within twelve months, and although a fine surplus is brought out in the balance-sheet we should judge that the financial structure built up by Mr. Mellen's enterprise as a "mergist" is of a somewhat flimsy description. In course of years, perhaps, the new consolidated system of roads may work out all right, but meanwhile, we fear, trouble lies ahead.

Those who lately felt satisfaction that the Anaconda Copper Mining Company, which is a Standard Oil affair, a majority of its $6,000,000 of stock being owned by the Rockefeller-hatched Amalgamated Copper Company, had reduced its dividend only from 28 per cent. to 20 per cent. per annum, ought not to overlook the fact that in the three years 1902-4 only 4 per cent. was paid on the stock. It should also be remembered that although 1907 gave 26 per cent., the large return was a diseased product, and that the $1.25 paid for the September quarter came out of the inflated prices which had only begun to collapse when that quarter was pretty well spent. We accordingly look for a return to something worse than 4 per cent. at no distant date, for the copper market in the United States and here is not only in an utterly demoralised condition, but, as said above, it is going considerably worse before it begins to rally.

Passing Events.

In January, 1906, the Secretary of State agreed to purchase the Kalka-Simla line of the Delhi-Umballa Kalka Railway for £300,000 or three-fourths of the capital of the company, and the final proceedings in connection with that sale are now announced. The purchase price was paid over on December 22 last with interest at 3 per cent. per annum from January 1 to that date, making £308,333 in all, and as the sanction of the Court to the reduction of capital had to be obtained before this money could be distributed it was lent out at interest. This sanction was obtained in July, and 4s. 7d. per share having been cancelled, a return of 15s. 5d. per share was made, but the interest earned has still to be distributed. Including £18 from miscellaneous receipts and £804 from the Secretary of State in payment of a portion of the costs of the reduction and repayment of capital, the nett amount to be dealt with is £7,383, and out of this a dividend of 4.35d. per share is distributed, leaving £133, which has been taken by the Delhi-Umballa Company in payment of any further costs incurred in connection with the winding up.

What a pitiful spectacle the French Budget affords to the thoughtful observer. The French people are amongst the richest in the world and amongst the most thrifty, yet in spite of their thrift and wealth their Government is unable to make ends meet, and M. Caillaux, the present Finance Minister, told the Budget Commission on Monday that he looks for a deficiency of £1,120,000. This is obviously the minimum, because at yet only £100,000 of the Moroccan war expenses have come into the accounts, and that refers only to the army expenses, no return at all having been received as yet from the navy. The Moroccan trouble is not at an end, rather is it widening, and before 1907 finishes the naval and military incursions and excur-

sions of the French Republic may have laid more than £500,000 in additional charges upon the year's revenue. Meanwhile there is no money in hand with which to relieve the distress of the population in those regions of Southern France that have been devastated by floods. They will be relieved, the Finance Minister says, but the money must be borrowed. No wonder that the sentiment against military outlay grows stronger, not in France only, but in Germany, everywhere amongst enlightened classes. Rich, prosperous France is, as a State, as impecunious as the old monarchy often was.

So the turbine engine does not represent the ultimate triumph of marine engineering. Hardly has the *Lusitania* established her position as not only the largest, but the fastest, ship that ever crossed the ocean, when, as the *Manchester Guardian* points out, the inventor is at work to modify and improve. For the turbine engine as applied to marine propulsion is not perfect, it drives the propeller too fast. Beyond a certain point speed tends to diminish driving efficiency in the blades of the screw. But the turbine spins best when going at its fastest, and consequently there is, as it were, a conflict between the windmill of the turbine and the revolving screw on the other end of the shaft. How is this strife to be ended? By the help of electricity the engineers say. The turbine it is proposed should not be employed directly to drive the screw shaft, the energy developed by the steam mill or turbine should be utilised first to drive high-speed electrical generators. These in their turn would provide current to low-speed electrical motors, and these motors would drive the propeller. This opens up a wonderful vista of triumphs to come in marine engineering, and would, for one thing, do away at once with the duplication of engines now necessary, because the turbine cannot be reversed.

"Mr. Marconi expressed the utmost confidence in the ultimate result," such is the report sent by the *Daily Mail* correspondent from Sydney, Nova Scotia, and we are not much moved. It would no doubt be an excellent thing if people could talk with their friends or business correspondents 3,000 miles away at 5d. a word, and it might perhaps, though that is doubtful, ultimately benefit mankind if Press messages went to and fro at 2½d. a word, these being the scales that the Marconi Company is going to charge for its cross-Atlantic messages, but the word "ultimate" induces us to delay our congratulations, and we may know better three months, six months, a year hence, what long-distance wireless telegraph is capable of doing. Naturally, Mr. Marconi is anxious to secure everybody's goodwill beforehand. He has set up a wireless station in Canada as near Europe as he can get, and is going to send thrills of electricity across the Atlantic which will not only abolish distance, but wipe existing telegraph companies out. Well, we shall see. "There is no such thing as failure," he declared, "our system is perfect. Before the end of this week a new era will be marked in the history of the world as far as wireless telegraphy is concerned." It seems to us that we have heard that kind of language before, and nothing great has come of it. But the day may have dawned at last.

Things look rather blue for mere shareholders in the Dunderland Iron Ore Company, and we are not surprised that some of them ventured to grumble at Tuesday's meeting. Sir Joseph Lawrence, who presided, made a long, really able and most interesting, speech, but the point of it all was, "we want more money." Since the previous annual meeting £200,000 of first debenture stock had been allotted, and has got quotation on the Stock Exchange. It has also been spent, we judge, but there does not seem to be any revenue, out of which the interest on this or any other debt of the company can be paid. It is all in the future as yet, and although Mr. C. D. Rudd declared it to be his undying faith that "Dunderland would eventually become the De Beers of the iron mining industry," the fact remains that instead of an output of 2,500 tons of briquettes per diem, as originally promised in the prospectus, the directors seem now inclined to boast that in a few months' time, early next year, or some time not very far away, the production will reach 800 tons a day. "The Dunderland is going to produce briquettes at a profit," Mr. Bremmer, the general manager, said, and he has been in that post since December of last year. The mine's present capacity, he added, is 3,000 tons per day working in two ten-hour shifts, and all that is wanted is a little more money. So the borrowing powers are to be extended, so that an amount equal to half the nominal capital of the company for the time being, instead of one-fourth, as heretofore, may be borrowed. The directors are to be allowed to raise the additional money as and when they can. At present the paid-up capital is £2,000,000, and the 6 per cent. debenture stock outstanding £445,000, so the borrowing powers are distended by another £500,000. The new stock will bear 7 per cent. interest, and be called second debentures. How much of it is going to be issued right away?

An attractive-looking annuity scheme has been put forward by the Gresham Life Assurance Society. It is so attractive, indeed, that we confess inability to see how it can be done, but doubtless the actuary concerned knows very well what he is about. Hitherto, as everybody knows, the objection to sinking capital in an annuity has been that the capital was lost so far as the buyer was concerned. He enters into a speculation, as it were against death, and planks down his capital for good and all. Should he live long enough, he may get it all back again and more in the annuity acquired, but should he die soon the company or agency granting the annuity makes a profit. Now, the Gresham comes forward and says, "We will give you an annuity and also repay the capital under certain conditions." Not only so, but cash surrender values are to be provided, and the terms upon which all this is to be done look quite moderate. A man at 60, for example, can buy for £137 6s. 2d. an annuity of £10 per annum and still be able to regard his capital as in a manner intact. We cannot now enter into particulars of the scheme, but its ingenuity attracts our notice and it seems well worth looking into further.

The Treasurer of Western Australia, whose name is Wilson, did not have such a pleasant story to unfold as those of neighbouring colonies, for he is obliged to count upon a deficit of £77,000 in the current year. This, added to previous shortcomings, will bring the total deficiency up to £286,000, and that total for this year is arrived at after cutting £98,500 off the estimated outgoing. But then the railways gave £110,000 less last year. And although the colony is making some progress in agriculture, since it actually exported 8,000 tons of wheat in the last nine months, it still has to depend too much upon its gold mines. These have not been altogether a blessing to it, and yet in 1906 they yielded £7,623,000, bringing the aggregate gold produced since mining began there up to £74,354,000. Last year, however, only £1,994,000 was paid away in dividends, and altogether shareholders have had but £17,000,000 out of the total product. It is estimated that 2,000,000 bushels of wheat will be available for export this season, and the Treasurer, as in duty bound, declares the finances of the colony to be sound and healthy, and that Western Australia has "nothing to fear in the future." He forgot the London Money market.

French trade shows much the same expansive tendency as our own, and for the nine months of the current year the import values have reached a total of £178,194,000, while exports have aggregated £163,583,000. This is an increase of nearly £14,000,000 in the value of the imports and of almost £10,500,000 in that of the exports. But with imports so big, must not French manufacturers be on the road to ruin? And they are protected by a tariff too.

There is to be no shortage of rolling stock on the Western divisions of Canadian railways this winter.

That is the news sent over by the Canadian Railway Commissioner. So the supply of coal will be adequate in the prairie provinces, and we shall not hear again of people perishing of cold there or committing suicide because they could no longer endure their miseries. This is well, but we are not so sure of the attractiveness of the other piece of news communicated by Mr. Hays, the general manager of the Grand Trunk Railway Company. "You will see the Grand Trunk fleets both on the Pacific and on the Atlantic before long." We have never thought much of railways as owners and managers of steamship lines, and counsel Grand Trunk stockholders to keep an eye upon the energies of their executive lest they come in for an ugly loss.

A most melancholy account of the position of the Baku Russian Petroleum Company was given to the shareholders by Mr. Watson Rutherford, M.P., at a meeting held last week. "I blame the first directors," he said, in summing up, "for the appalling want of care and thought shown in their prospectus, for not taking precautions about the working capital, and for being all personally interested in the promotion." And he went on to blame the directors for neglecting the property for failing to provide sufficient working capital, for entering into stupid and ruinous contracts, and for not going to see the property for themselves. He further condemned the board for refusing an offer 18 months ago of £350,000 and one of £300,000 made six months ago. This would have been enough, he said, to put the concern on its legs. Whether all this is true or not we do not yet know, but that the company is in a bad way is unquestionable, and everybody will be delighted if the committee appointed at the meeting succeeds by the help of the new chairman in bringing the company into a state of prosperity. The property seems to be intrinsically excellent; it could be sold to-morrow, Mr. Rutherford said, for £600,000, and all that is wanted is capital to sink wells and bring the produce to market.

If all chairmen had as easy a job as Sir Robert Harvey at the meeting of the Anglo-South American Bank, formerly the Bank of Tarapacá and London, we should often not know how to fill the columns of The Investors' Review. As readers may recollect, the change of name was accompanied by an increase in the capital of the bank, and a considerable extension in the field of its operations. The result so far has been striking prosperity, much of it, we should judge, drawn from the Argentine branches. The news received from the Buenos Ayres manager of the bank came opportunely to still further increase the satisfaction of the shareholders. "Wool clip," he says, "expected to be about the average, wheat and linseed prospects never better, commercial situation in general good and prospects encouraging." Then, he added, "money is in demand; we do not look for easier rates for some time." Money is, indeed, going to be dear all the world over this coming six months, but with a fine harvest and high prices the Argentine *estanciers* should get through the rough time easier than most. But will prices keep up? Not if they are driven up now too fast and too far.

As mere matter of record, it is interesting to note that at the end of 1906 the nominal amount of domestic funds quoted on the Paris bourse was about £2,394,000,000, and that the actual market price footed up to rather more than £2,587,000,000. Even this majestic display, however, was surpassed by the value of the Foreign securities also quoted on the bourse. Nominally these amounted to £2,944,000,000, but unlike the Domestic group, their actual value showed a depreciation of about £233,000,000, it being only £2,711,000,000. For the first quarter of the current year these figures were added to through the admission to quotation of additional domestic securities to the amount of nearly £15,000,000, while the increase in the Foreign securities quoted on the bourse has, within the same period, been £15,428,000. But the output has slackened down since.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and October 12, 1907 —

Revenue and Other Receipts

—	Estimate for the year 1907-1908	Total Receipts into the Exchequer from April 1, 1907, to Oct. 12, 1907	Total Receipts into the Exchequer from April 1, 1906, to Oct. 13, 1906

The Investors' Review.

The Week's Money Market.

Bank Rate 4½ per cent. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

It is not surprising that bill brokers should be inclined to grumble at the Bank of England. They have been having a very comfortable time of it indeed, getting their money, as they have done until the other day, at 3 per cent. on seven-day notice, and at 2 to 3 per cent. on call, while discounting bills at 4 to 4¼ per cent. they have enjoyed an unusually fine margin of profit. Always, however, when short money rates drag in the fashion they have done almost throughout the current half-year, discount rates are also inclined to slip back. Cheap money pulls them down, and not so long ago three months' bank bills were melted under 4 per cent. Even under the alarm of gold exports, which gave the only supporting influence, the three months' rate was with difficulty held at 4¼ per cent. at the beginning of this week. Meantime gold is leaving us, the Bank having again lost £794,000 nett within its week, and the ineffectiveness of the 4½ per cent. Bank rate was beginning to put the market in danger. In these circumstances the proper course for the Bank of England, since it has no automatic power over the open market, was to mop up some of the floating balances. It accordingly quietly borrowed early in the week an amount estimated at from £1,000,000 to £1,500,000. Some of the brokers think that it has not borrowed so much, and attribute the decline of £2,352,000 in the Other Securities to the running off of market bills held by the Bank. No such sum, however, falls due in this form in a single week, and the probability is as we have stated. Even with £1,500,000 swept away by the Bank—a sum which just balances the borrowings of the Treasury "for deficiency" paid out in the Government stock dividends—the open market is still well supplied with funds, because business is quiet, and the use of credit more and more restricted, especially credit on the Stock Exchange. Hence money on seven-day loan can still be got at from 3 to 3¼ per cent., and the rate on call money is no better than 3 per cent. Discount, however, has been braced up a little, until the three months' bank bill cannot be sold at less than 4⅛ per cent.

A report spread this morning that the German Reichsbank had raised its rate. This was not true, but as it made lenders more conservative, money rates were somewhat harder, and call loans became 3 per cent. as a minimum. Some lenders talked of asking 3½ per cent. on seven-day money, but most of it was lent at 3¼ per cent. The India Council was a caller, but the money raised by the London County Council was let out. Discount rates responded, and 4⅜ per cent. became the minimum for bank bills of three, four, and six months' usance with a disposition to hold out for 4 7/16 and even 4½ per cent. on threes and fours. Banks bought 60-day paper from the brokers at 4 per cent., and are not keen on usances running into next year.

In all probability the Bank will have to go further before long, although it is much stronger than it was a year ago at this date, when, on a Friday, its rate was unexpectedly raised to 6 per cent. The reserve is £5,501,000 larger now than then, and the other deposits are slightly larger, in spite of the decrease of £2,414,000 in them within the Bank week. Domestically, too, the position of the money market is much better now than it was a year ago. Then it was loaded with American finance paper to a dangerous extent, whereas there is none of this paper to be seen at the present time. Not only so, but the supply of legitimate American produce bills is less, and in other directions the commitments of the market seem comparatively light. This allows the hope that a 5 per cent. Bank rate, when it comes, may carry us through the end of the year. That it will, however, come soon is more than probable because of complications abroad. The Bank of France is still hungering for gold; and no wonder, since its note circulation is distended by almost £10,000,000 compared with this time last year, while its stock of gold is about £2,000,000 less. In the matter of currency, therefore, the Bank is about £12,000,000 to the bad, and in the meantime the condition of the Paris Bourse gives much cause for anxiety. The losses of the French public in the Rio Tinto share gamble alone must run into many millions, and there are industrial troubles overhanging the French money market which might develop dangerously without warning. In Germany affairs are worse still, and in spite of the reluctance shown by the Reichsbank to put its rate up by ½ to 6 per cent., we fear this step cannot be much longer delayed. Germany, like France, is wrestling with a domestic crisis in some of her industries. Like France also her money market is weighed down by innumerable commitments abroad, many of which are, we fear, the reverse of profitable at the present time. Important failures have already taken place, one in Hamburg particularly, and there must be more to follow, because the speculation of the Germans in Yankee securities has been unbridled for a long time back. In this respect they are quite as badly placed as the Dutch, and in Holland also failures have begun, the firm of Otto de Kat and Zoon having stopped payment this week. Worst of all, we have still that labouring American market to reckon with, and although it does not seem probable that New York will be able to create credit or to sell securities in

sufficient amount to enable it to sweep gold out of the Bank of England, it is none the less true that no great cataclysm in credit could occur in the United States without reacting upon our market, and bringing dangerous complications upon us.

There remains Egypt, and in addition to the usual demand for gold from that quarter, which is sure to be heavy—although people are consoling themselves this week with the hope that the coupons on the Egyptian preference stock will be available for remittance instead of gold, and that the unified coupon is about due—it seems there is about to be added a new Egyptian loan secured upon the State domains. It is apparently being negotiated in Germany, and the first instalment of it may be £10,000,000. Should this operation be carried through soon it is bound to intensify the Egyptian demand for gold, and behind that lies the South American. Brazil has borrowed recently, and may take a million of the loan, it is said, in the yellow metal, while Argentine harvest prospects together with the high prices ruling for cereals warn us of probable severe demands from that quarter. Such being the position abroad it would be a dereliction of duty on the part of the Bank of England directors if they did not make a sustained and resolute effort to keep the market up. By borrowing this week they seem to us to have rather postponed than hastened an advance in their minimum discount rate to 5 per cent.

Next week about £486,000 in raw gold is due in from South Africa, and the total supply from all quarters is put at about £550,000. The open market price is nominally 77s. 10½d., and it is thought in the market that Paris is likely to be again a strong competitor. It seems to depend, however, upon what Italy may do.

Calls due next week amount to about £1,181,000, and of that £1,100,000 becomes payable next Monday and Tuesday, viz., on Monday £600,000 on South Manchurian 5 per cent. bonds and on Tuesday £500,000 on East Indian Railway 3½ per cent. debenture stock.

Silver.

The steadiness with which the market for bars closed in the end of last week was not of long duration. Selling from China was resumed on a large scale, and the liberal offerings frightened buyers out of the market, with the result that values gave way sharply. A drop of 5/16d. per oz. for both spot and future metal on Saturday was followed by declines of 1d. and 1 1/16d. per oz. respectively on Monday, bringing the cash price down to the lowest point touched since August 30, 1905. After a heavy fall of this kind a reaction naturally followed, and quotations rose to 28¼d. and 28½d. per oz., but another set-back to-day left them at 27 11/16d. and 27 15/16d. per oz. Tenders for the Rs. 30,00,000 Council drafts on India on Wednesday amounted to Rs. 1,99,90,000 in bills and Rs. 10,00,000 in telegraphic transfers. The whole amount was allotted in bills, applications for which at 1s. 3 31-32 per rupee received about 17 per cent. Next week another Rs. 30,00,000 will be offered.

The Stock Markets.

Before dwelling on the incidents of the week, which are by no means cheerful, it may be well to draw attention to some of the encouraging aspects of Stock Exchange affairs. It is dispirited enough, and with good reason, but there are, if not bright spots, at any rate spots less dark in the position and outlook. For one thing, the trouble from which it suffers lies outside it to a greater extent than probably was ever before the case. Its commitments are smaller than they have been for at least ten years back, perhaps for twice that time. We hear of credit houses whose commitments in the shape of loans to the Stock Exchange

are little more than one-tenth of what they were before the present slow wasting away of wealth began, and the trouble inside the market is not with accounts to carry but with clients who cannot pay up, of whom there are far too many. The market, indeed, may be compared to a sailing vessel in a storm, which has jettisoned most of its cargo and scuds along under bare poles. Unless it strikes some obstacle in its career, or is overwhelmed by some great wave, it is in little danger.

Not only is the market wonderfully little committed, and, therefore, sound at the core, but it is doing a fair amount of investment business; nothing, we admit, like what it used to do or what it will do again when the slow crisis in the middle of which it flounders and plunges has worked itself out, but still good business as far as it goes. The business going on is of the very best class, because it is in great measure reduced to a cash basis, and where it is not investment business it consists, to a much greater extent than the public might suspect, in what may be called "through traffic" business. Our market remains the one point towards which the business of the world, speculative and other, in paper securities converges. Just look how much of the German and Dutch clearing out has been done through our market, how much New York leans on us. We believe there are many stock operators in New York who are roused at five o'clock in the morning to receive cables of the opening prices in London. All this through business leaves a certain amount of profit here, and at the same time affords consoling evidence of the trust reposed in our Stock Exchange as well as of its power. There is also in many directions an account of some magnitude open for the fall. In American Railroad securities, for instance, the "bear" selling must recently have been considerable, not only by operators here but by Continental players. So much is this the case that for the last two days or three the flood of sales on Wall Street through London by the Continent has turned, and on balance London has been buying back. Now a "bear" account is always a support to a distressed market, and if we could only feel that the worst of the credit complications which have been developing for several years past had been reached on the Continent and in America, we might say that our market also had reached the worst, and that any change coming, however slow, would be for the better.

Unhappily this is just what we are still unable to do. It does not seem to us that the liquidation is nearly at an end either in Germany or France or Holland, let alone the States and Canada. This week, in fact, rather a heavy failure has occurred in Hamburg of a firm partly in the metal trade, with liabilities said to amount to £750,000, and there must be more to follow, for the copper smash alone is certain to involve many firms on the Continent in losses they may not be able to stand. This copper mischief, in fact, ramifies everywhere, and may bring unpleasant consequences even on some foreign Governments. Already Chili is suffering, as is proved by the depreciation in the sole, which is now about 35 per cent. below the par of 1s. 6d. and by the necessity for more Government paper money. As the *Morning Post* City editor pointed out the other day, the decline in the price of copper even on the now moderate production of Chili inflicts upon its producers there a loss of about £1,000,000 per annum. To be sure, copper is still much higher in price than it used to be when many Chilian mines were compelled to stop production, but for all that no one need be surprised if Chilian finance becomes to some extent embarrassed through this cause alone. It is unnecessary to go over again the involvements of Continental finance in unprofitable industrial undertakings of all descriptions, or in the financial distresses of Governments that have outrun the constable, but these sources of danger must not be left out of sight when we try to estimate the future course of our markets. It cannot be an upward course with any assurance or endowed with any staying power until the depths have been plumbed abroad.

Consols and Other Trustee Securities.

Coming now to markets, their course during the week now closing has been dreary enough, and comparing last night's prices with those of the same date a week ago, nearly everything is down. Yet there has been a certain firmness in the Consol market, and the decline on the week shown by that stock as well as by other Government issues and by some of the stocks of the County Council have been quite insignificant. The market was, indeed, firm until the fears of dearer money again laid hold of it, and a fair amount of buying has gone on both in British Government stocks and in Indian as well as in Water Board stocks and County Council 3 per cents. Some of our provincial Municipal issues have also been marked up, although very little has been done in them on the London Exchange. Colonial inscribed stocks, too, have kept their prices with scarcely an exception, and two or three of them are fractionally higher on the week.

Foreign Government Stocks.

Prices are down all through this list, and occasionally the relapses have been severe. Chinese Silver bonds, for instance, have lost 3½ on the week entirely because of the decline in the price of silver, but Argentine 4 per cents. have been driven down by the distress on German markets much more than by any selling here, and the apprehensions of the Paris Bourse on Amsterdam distress have found expression in a sharp relapse of some of the Russian issues, although the bulk of them remain undisturbed. It is the Railway bonds, indeed, that have given way, and their weakness is perhaps to be attributed to the report that the new Russian loan is to take the form of a sale of Russian Government Railways to moneylenders in the west. But a large loan on that basis is impracticable because the railways are all already mortgaged to the last trolly. Japanese bonds have also been flat, particularly the earlier 4½ per cents., and there has been nowhere any stability, although the relapse in Brazilian and in Chilian issues has been comparatively insignificant. In most of these securities, indeed, there has been no business at all. German 3 per cent. have declined as an advertisement of the distress still prevailing on German Bourses, and Prussian Consols have gone down with them. State of Para old bonds have also been put down by the doubts current regarding the fate of the coffee-cornering project.

Home Railway Stocks.

Mr. Bell and his Association of Railway Servants dominates the position in the Home Railway market, and the powerful assistance given to him by the obstinate refusal of directors to have anything to say to his Association has enabled the "bears" this week to knock 3½ off the prices of both Great Western and North-Western ordinary stocks. The whole list is down, and presents a most disagreeable appearance. Selling has converged, not only upon the stocks named but upon Midland, North-Eastern and most of the deferred stocks. Metropolitan stock, too, has been offered, but that is for other reasons, and the price is now well under 34, the loss on the week having been 3½. Scotch operators are said to have supported their stocks, and yet Caledonian ordinary is 2 lower on the week, while North British preferred and deferred stocks have both shrunk 1. Nor is the weakness confined to the ordinary stocks, for nervous people have again taken to selling the less well buttressed amongst the preferences, things like the lower Great Central and North British preferences, for instance, being quite £1 below the price of last week. Debenture and guaranteed stocks, however, have been firm for the most part, and some of them have advanced, a hesitating investment buying being discoverable in that quarter. In fact, the only weakness amongst the debentures of railways is in the 4 per cent. stock of the Charing Cross, Euston and

Hampstead Tube, which is 4½ down. Though less than last week, the traffic returns show an aggregate gain of £79,184, according to the *Railway News*, bringing the total increase for the half-year up to £1,097,497, but nobody pays the least regard to that. Fears of a strike overshadow everything, and are adroitly intensified by the revelations of official coercion and intimidation made by Mr. Bell. If it be true that members of the Amalgamated Society are enduring persecution at the hands of their superiors, the inference must be that the boards mean to goad their men to rush into a strike before their organisation is strong enough to make it effective for their purpose. That would be playing with fire in a manner most reckless, and would warrant the worst fears of the market. But there will be no strike.

Indian, Colonial and American Railroads.

Quite the firmest of any section of the Railway market is the Indian, and there have been improvements in a fair proportion of the list, notably in Bengal and North-Western ordinary, which has risen to 157 on steady buying. Canadian Railway stocks have been depressed, and not all the optimism of Sir Charles Rivers Wilson has availed to keep Grand Trunk ordinary and third preference stocks from dwindling. They have not gone back much, but business in them has been insignificant, and the tremors of coming financial trouble in Montreal have had an unfavourable effect. This, however, is much more noticeable in Canadian Pacific shares, business in which continues almost to rival that done in Union Pacific shares. They have dropped over 4 on the week, and no one need be surprised if they plunge down some distance yet. The bonds of the Chartered Company Railways have also lost ground because some people have been trying to sell and find difficulty in doing so.

A raging torrent of business has at times swept though the Stock Exchange in Yankee Railroad shares, and although now and again there has been a halt in the sweep of the current it has generally hurried prices lower and lower. Even stocks which ought to be safe like that of the "Soo" Railway have gone down $10, and the drop in Southern Pacific preferred has been $4, while Southern Pacific ordinary and Union Pacific have both lost $6½, Atchison ordinary $4½, Illinois Central $9½, Reading about $2, and so on. Towards the end of the week "bear" repurchasing caused Southern ordinary to brace up a little, but the market is completely demoralised, and the fresh business, as it may be called, conducted *viâ* London, centres, for the most part, in the stocks of the two most prominent Standard Oil grabs, Union Pacific and Southern Pacific. A fair amount of speculation or clearing out has also gone on in Atchison, Missouri, and Pennsylvania shares, all with unfavourable results on the week. So much is said elsewhere about the American market that further analysis is not required in this column, and it is only necessary to add that some of the bond issues of the Atchison and Erie companies have been conspicuously flat, losing $2 to $4, while the consolidated bonds of the Southern Railway have also gone down to a lesser extent; indeed, the changes among bonds are all adverse, and appear to point to a spread of the disease afflicting Wall Street to that hitherto fairly stable department.

Foreign Railways.

Changes here are also adverse with scarcely a single exception for the past week. We can find, indeed, but one improvement throughout the list, a rise of ½ in the preference shares of the Smyrna to Aidin Railway, but the ordinary shares have partly balanced this by dropping back ¼. Argentine Railway stocks have not rallied at all in response to the uniformly cheerful accounts of business actual and prospective in that Republic given by the railway chairmen at their various meetings. They all testified to great prosperity in the Republic, and declared that harvest prospects for all cereals, except perhaps maize, were never better. In spite of this Buenos Ayres Great Southern and Buenos Ayres and Rosario stocks are down 1 on the week, and Buenos Ayres and Pacific has lost 2, the greater decline in that instance being ascribable to the fresh issue. With all the weakness, however, there has been exceedingly little going on, and we do not gather that anywhere in the Foreign market is there much of a "bear" account open. It would be too dangerous. Yesterday afternoon Mexican Railway stocks went clattering down because the market was disappointed in the dividend declaration. The "bull" is always a sanguine creature, and he gets so absorbed in his prepossession that he seldom looks calmly at facts. The mere decline in the price of silver, which fell yesterday to little more than 2s. 4d. per oz., should have warned him that in spite of the artificial par of exchange maintained in Mexico the directors of the Mexican Railway could hardly be expected to divide up to the last shilling. As it is, the second preference stock is to get a distribution at the rate of 5¾ per cent. per annum instead of the expected full 6 per cent. rate, and such was the effect of this slight blight to hope that the ordinary stock was kicked back to 38½ after having been up at 43, and the second preference finished at 89 after having been 92¾ and 88½. Brazilian Railways suffered with the rest, and a disposition has been shown to discredit their future by reason of the attacks made upon Brazilian Government finance and the general outlook in that country which is supposed to be bad. The supposition is not fully justified, and a contrary view is taken in Paris, where the fine trade being done by the Republic is pointed to as proof of its stability. We shall not decide, but feel disposed to share the French view. The securities of Cuban Railways have not responded to the, on the whole, encouraging reports issued by the Cuban Central and United companies. United Railways of the Havana ordinary stock has lost 2 on the week, but there is no particular business going on, not even in Antofagasta (Chili) stocks, which continue to shrink when looked at.

Bank, Brewery, Electric and Industrial Securities.

Bank shares have been about the firmest market of all, although there is not much trade doing. The shares of the principal Home Banks are ½ to 1 up on the week, and there has been a fair demand for them founded upon the belief that the business of the current half-year is again bound to turn out profitably. Foreign banks have not been quite so well supported, but there has been no noticeable decline anywhere, and very little business. Brewery securities, as usual, crumbled with rare exceptions, Ind, Coope's debentures coming in this week for a prominent decline.

The Commercial and Industrial group is also far from pleasant to study, although by no means so gloomy looking as Home Railways, say, or the Foreign Bond market. There are improvements mingled here and there with the declines, although the broad tendency is downwards. Nothing has gone up much, but recoveries are to be found by searching. One weak group is Nitrate shares, and another the securities of motor manufacturing companies, all of which may be said to be on the dwindle. This is partly accounted for by the attitude of Paris. France led in this industry, and has established far more factories than there is now business for. A crisis is accordingly expected there in the automobile manufacturing business, and it cannot occur without bringing our companies in contact with affliction likewise. Amongst the shares that have mended a little are Hope Bros. ordinary, Fore Street Warehouse, Callard, Stewart and Watt's ordinary, Lipton's preference, and Rio Flour Mills, but a gain of ¼ is the best of it. United Lankat Plantations shares continue to be flung out from Amsterdam, and are again 7s. 6d. down on the week. From that to 5s. is also the loss upon the shares of several Nitrate companies, as our analysis of the week's movements will show. Waring and Gillow's debenture stock, too, has been offered and sold yesterday at 72.

Very few Electric securities have altered, and when they have done so they have fallen. More has hap-

pened in the Financial, Land, and Investment division, where prices have mostly gone down, Hudson's Bay shares dropping back to 75⅜ last night. Chartered debentures have also been pushed down 2, but whether on business or on sentiment we are not prepared to say. Buyers, we should judge, are not easy to be found. Against this New Zealand Loan and Mercantile Agency third debenture stock has been bought at 84½, and is 3 up on the week. The Financial Trust group is also comparatively steady, with improvements here and there, although some things, like Alliance deferred, have been flat, and others fractionally down. A very minute business was done. There still is more life in the Insurance market, where, however, prices have by no means kept abreast on the upward tack. Several prominent shares are lower, such as Guardian and Ocean Marine, but Alliance new are better, as well as British Law, Fire, and London Guarantee. The heaviest decline is in Northern shares.

All Iron, Coal, and Steel securities have gone back when they moved except Dunderland preference shares, and they closed 2s. 6d. better on the meeting, but the debenture stock is marked 5 down because more money has to be raised. Among the shares of Domestic companies the relapses have generally been from 7½d. to 2s. 6d., but now and then debenture issues are 1 to 2½ down, notably those of Cammell, Laird, and Co., and the second issue of the Vickers Company. Workington Iron ordinary shares are also noticeably flat, and, of course, United Collieries debentures are again much lower, the nominal price being 65-68. United States Steel shares have also given way, and selling of the clear-out sort has been continuous. Tea and Rubber company shares form another little section where prices have been maintained on the whole, and Shipping shares and debentures have also kept up, most of the infrequent changes being gains. It is otherwise in the Telegraph group, where a recrudescence of Marconi and his coming, always coming, wireless service has once more frightened holders a little, but the principal relapse has been in Anglo-American deferred, which yesterday touched 14¼. Apart from renewed weakness in London General Omnibus stock and shares there is nothing to delay us in the Tramways and Omnibus section.

Friday Evening's News.

Gilt-edged things rallied to-day and the Home Railway market firmed up a little. When investors come to buy Home Railway guaranteed and preference stocks they do not find the supply such as to permit them to buy near the lowest price. Even American shares rallied here and there, and some recovery took place in the lower ranking stocks of the Mexican Railway Company, but they did not leave off at the best. Rio Tinto shares were lifted during the morning to 65 and sunk to 63⅜, finally ending at 64½, a feverish market dependent on the Continent.

The new Capital and Counties Bank shares were quoted to-day at 1 to 1¼ premium. They were issued at 35, 25 in that price being premium. This year the existing shares have been as high as 41, and they have not gone much below 39, even on the new issue. Another fresh creation which is quoted to-night at 1½ premium is the bond issue of the City of Edmonton.

The Kaffir market has been quite idle. Anglo-American "A" stock was further depressed, and Marconi's shares were inquired for on the coming opening of the new Transatlantic service. The market throughout, however, was very quiet.

At a general court of proprietors of the Bank of England, held on Wednesday, Mr. Montagu Collet Norman, D.S.O., of the firm of Brown, Shipley and Co., of Founders' Court, merchants, was elected a director for the remainder of the year in the room of Mr. Reginald Eden Johnston, elected Deputy-Governor. Both Mr. Norman's grandfathers were directors of the Bank.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: 2½ p.c. Ann. 1905 and Ac. both ½, to 80⅞-81⅛, Irish Ltd. Stk. Ac. ½, to 84½-85, Transvaal Govt. Ac. ½, to 92⅝-93½, Bk. England 1, to 272-277, India 1917 Ac ½, to 85½-86.

CORPORATION AND COUNTY STOCKS.—Rise London 3 p.c. 1, to 85-87, do. 1923 1, to 90-92, Bristol 3½ p.c. 1, to 99-100, Nottingham Red. 1, to 86-88, Portsmouth 3 p.c. 1, to 85-89, Richmond 1, to 80-82, Southampton Harbr. 1, to 101-103, W. Bromwich 1, to 83-85, Wigan 1, to 83-85, Wolverhampton 3½ p.c. 1, to 97-99, Metro. Water "A" 1, to 86-89, Manchester 4 p.c. Cons. 1, to 115-119, Sheffield 1925-36 and 1914-16 both 1, to 97-100, Swansea Harbour 1, to 98-100. **Fall:** Metro. Water "B" Ac. ½, to 88-89.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES—Rise: Cape 3 p.c. ½, to 80½-81⅛, N. S. Wales 1923 ½, to 97½-98½, N. Zealand 3½ p.c. ½, to 99-100. **Fall:** S. Australian 1884 Ln. 1, to 103-105.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise. Alexandria 1, to 101-103, Copenhagen 4 p.c. 1, to 100-102. **Fall:** Cape T. Mun. Water 1, to 96-98, Rosario 1887, 1888 and 5 p.c. Stlg. all 2½, to 49-52, do. 1889 3, to 49-52, Toronto Gen. Cons. Db. 2, to 90-92, Valparaiso 1, to 101-103.

FOREIGN STOCKS.—Rise: Egyptian 1890 2, to 90-92, Italian Irrig. 6 p.c. 1, to 113-116, San Paulo 1888 1, to 92-95, do. Exchqr. Bds. ½, to 95½-96½. **Fall:** Argentine N. Cent. Rly. ½, to 98½-99½, do B.A. Water ½, to 100½-101½, do. 4 p.c. Bds. 1907 to 1909 and 1900 Laws all 1½, to 82⅝-83½, Brazilian 1889 ½, to 79½-80½, do Fndg. Bds ½, to 101½-102½, B. Aires (Prov.) 1½ to 57½-58½, Chilian 1887 1, to 88-90, do. 1895 1, to 86-88, do. 1906 Gd. Ln. 1, to 86-88, Chinese Silver Ln. 3½, to 100½-101½, do. Shanghai Lane ½, to 101-102, Colombian ½, to 39-40, Greek Mon. 1887 1, to 46½-47½, do. 1889 ½, to 35⅝-36⅝, do. 1902 Rly. Ln. ½, to 90-91, Guatemala 1, to 25-27, Honduras Govt. both ½, to 6½-7½, Japan 4 p.c. Stlg. 1, to 83½-84, do. 4½ p.c. Bds. 1½, to 91½-91⅞, do. 1907 Stlg. ½, to 90½-90¾, Para (State) Gd. Bds. 3, to 85-87, Russian Ser. II ½, to 71½-72, do. Ser. III. 2, to 70-74, do. 3½ p.c. Bds. 3, to 63-66, do. 1906 Ln. ½, to 87½-88, Siamese Scrip 1, to 91-93, Uruguay 3½ p.c. ½, to 67½-68, do. 1896 ½, to 91½-92½, Venezuela ½, to 43½-44½, Argentine Cedulas ½, to 44½-45½, German Ln. 1, to 82-83, Japan Cons. Ln. ½, to 45 45½, Prussian Cons. 1, to 92-94, do. 3 p.c. Ste. 1, to 82-84.

HOME RAILWAYS.—Rise: Cardiff 1, to 85-88, Vale of Glam. 2, to 96 101. **Fall:** Caledonian Pfd. 2, to 63½-64½, Cambrian No. 1 and Coast Cons. both ½, to 1½-2½, Centl. London Pfd. 1, to 87-89, Glasgow and S.-W. Pfd. ½, to 58-59, do. Dfd. 1, to 28-29, Gt. Nthrn. "A" 2, to 29-30, do. "B" 1, to 134-137, Barnsley ½, to 48½-49, Brighton Pfd. 1, to 124-126, Metrop. Surd. Lds. 1, to 62-64, N. Staffs. 2, to 90-92, Rhymney Ord. 3, to 182-187, do. Dfd. 1, to 87-92, S.-Estrn. Pfd. 1, to 103-105.

Leased.—Fall: Lon. and Blackwall Pfce. 1, to 118-121.

Debenture.—Rise: Brecon "B" 2, to 92-95, Gt. Nthrn. 1, to 86-88, Gt. Nthrn. Picc. ½, to 76-80, Gt. Wstrn. 4½ p.c. 1, to 127-130, Taff Vale ½, to 83-85. **Fall:** Cambrian "A" 1, to 99-102, do. "B" 1, to 93-96, do. "C" 1, to 85-88, Charing Cross Eus. and Hamps 4½, to 76-80, Highland 4 p.c. 1, to 108-110.

Guaranteed—Rise: Gt. Wstrn. Rt. Chge. ½, to 140-142, S. Wstrn. 1, 112-114.

Preference.—Fall: Caledonian 1906 1, to 103-106, Gt. Centl. 1879 1, to 110-113, do. 1889 1, to 80-83, do. 1891 1, to 53-58, do. 1894 1, to 41-45, Barnsley 1899 1, to 89-92, Chatham Arbtn. 1, to 69-71, do. 2nd 1, to 34-37, N. British 1897, 1901, and 1904 all 1, to 101-104.

INDIAN RAILWAYS.—Rise: Assam Bengal 1, to 81-84, Bengal N.-W. Ord. 6, to 154-157, do. Deb. 1, to 80-83, Bengal Dooars Ord. 2, to 89-92, do. Prefce. 1, to 96-100, Bengal Nagpur 1, to 103-106, Bombay Baroda 1, to 98-101, E. Bengal "B" ½, to 24-25, G. I. P. 3 p.c. Guar. Stk. 1, to 107-110, Madras 4½ p.c. 1, to 102-106, Rohilkund Ord. 2, to 144-147, S. Indian Guar. Perp. 4½ p.c. 1, to 121-125, do. Cap. Stk. 1, to 102-105, Nizams 3½ p.c. Bearer 1, to 86-89. **Fall:** E. Indian New Deb. 1, to 83-85.

COLONIAL RAILWAYS.—Rise: Canadian N. Ont. ½, to 90½-91½, Demerara 7 p.c. 1, to 102-105, Nakusp and Slocan 1, to 98-101. **Fall:** Beira 4½ p.c. 1, to 36-39, Mashonaland 1st Mt. 1, 67-71, do. Guar. 1, to 77-81, Rhodesia 5 p.c. 1, to 77-81, do. 4 p.c. 1, to 66-69, Grand Trunk Wtrn. 2nd Mt. 6, to 70-75.

AMERICAN RAILWAYS.—Fall: Alabama "A" ½, to 5½-6, Atchison Prefd. 3, to 87-89, Chicago G.W. Com. 1, to 7-8, do. Prefd. "B" 1½, to 11-14, do. "A" 10, to 35-40, Erie Com. ½, to 19½-19⅝, do. 1st Pref. 2, to 41-43, Mexican Cent. 1, to 15-17, Minneapolis 10, to 90-100, Missouri Prefd. 1, to 65-67, Nat. of Mexico 4 p.c. 1½, to 43-46, do. 5 p.c. 1, to 14-16, Rock Island Com. ½, to 15½-16½, Southern Pac. Prefd. 1½, to 110-114, Southern 5 p.c. ½, to 45-47, Wabash Prefd. 1, to 16-17.

Bonds (Currency).—Rise: Detroit, Grand H. and Mil. Mt. Bds. 1, to 108-112, do. Cons. Mt. 1, to 107-111.

Bonds (Gold).—Rise: Ter. of St. Louis 1st Mt. 3, to 105-109. **Fall:** Atchison 1995 4, to 87-89, do. 50 year 1955 2, to 92-94, Baltimore 1925 1, to 91-93, Erie 4 p.c. Bds. 1, to 95-97, do. Gold Bds. 4, to 76-80, Mexican Cent. 1939 1, to 15-17, Nat. of Mexico 1951 1, to 80-82, Northern Pac. 1997 1, to 100-102, Reading 1997 1, to 95-97, Southern 1½, to 100-105.

Bonds (Sterling).—Rise: Pennsylvania 1910 1, to 105-107.

FOREIGN RAILWAYS.—Rise: Ottoman (Aidin) Pref. ½, to 21½-22½, Porto Alegre and N.H. 6 p.c. 1, to 88-91. **Fall:** Antofagasta Def. Ord. 3, to 126-129, do. Prefce. 1, to 102-104, Argentine G.W. 1st Deb. 1, to 101-103, do. N.-E. Prefd. 1 to 37-38, Barranquilla 1, to 102-104, B.A. and Pacific Ord. ½, to 11-11½, do. New ½, to 10⅞-11½, do. 1st Prefce. 1, to 108-110, do. 2nd 1, to 100-102, do. 1st Deb. 1, to 100-102, B.A. and Rosario New ½, to 9⅞-10½, do. Cons. 7 p.c. 1, to 155-157, B.A.G.S. Exten. ⅛, to 10⅛-10⅜, do. 2nd issue, ⅛, to 10⅛-10⅜, B.A. Western 4½ p.c. Prefce. ½, to 7⅞-8⅛, do.

Deb. 1, to 101-103, Central Uru. Eastn. ¼, to 7-7¼, Central Uruguay 6 p.c. 1, to 102-104, Cordoba and Ros. 1st Deb. 1, to 86-88, Cordova and N.-W. 1, to 31-33, Costa Rica ½, to 25-26, E. Argentine Stk. 1, to 115-117, Entre Rios Deb. ⅛ to 87-89, Guayaquil and Quito Rly. Bds. 1½, to 35-36, Interoceanic of Mex. Prefd. ⅛, to 9⅝-10, do. Deb. 1, to 90-92, Manila Prefce. ¼, to 2½-3,

Critical Index to New Investments.

Neyland Steam Trawling and Fishing Co., Limited.

This company is formed with a share capital of £100,000 in £1 shares, to carry on the business of steam trawling and steam fishing in all its branches at Neyland, near Milford Haven. It is claimed that the fishing industry has been the means of raising the port of Milford Haven from a condition of comparative idleness to one of prosperity, and the directors hope that their efforts will benefit Neyland in a similar fashion. They are, however, unable to give details of the results obtained at Milford Haven, and have to fall back upon Scottish companies for their illustrations of the profitable nature of the industry. No estimates are given of probable earnings from the ten trawlers with which they propose to start business, but that omission has not prevented the scheme from obtaining support, and 21,000 of the 50,000 shares offered were privately subscribed before the issue of the prospectus.

Empire Guarantee and Insurance Corporation, Limited.

Established in 1900 with a capital of £100,000 in £5 shares, of which 8,355 were issued and fully paid, this company originally left life assurance out of the risks it proposed to undertake, but added that branch in 1901. Its life business has been on a modest scale, as may be judged from the fact that at the end of five years it had 516 policies in force for £25,185, and yielding £671 in premiums, but the accident department and general revenue have done rather better, and the proportion of expenses of management to revenue under these heads has been reduced from 58.6 per cent. in 1900 to 29.2 per cent. for the year ended June 30 last. This progress is considered satisfactory, but in order to strengthen the position the capital has been increased to £500,000 in £1 shares, and 158,225 of these were offered for subscription, on which 2s. 0d. per share was to be paid up. A prospectus of this description would not be complete without a reference to the achievements of older companies, and an imposing list of "a few of the better-known companies" is accordingly set forth, the said list including all the powerful organisations. The conclusion drawn is that there is no reason why the Empire's success should not equal that of any of the companies named, but it has a long way to go before that can happen, and the shares in the meantime seem a pure speculation, and not over-attractive at that.

The Week in Mines.

There has been plenty of excitement in the Mining markets this week. In some sections price movements have been exceptionally wild, but holders of Mining shares cannot meditate on the week's events with any particular satisfaction. The tendency on the whole is still towards lower levels, and the best that can be said is that the close is not at the worst. Curiously enough, Kaffirs have been one of the steadiest departments. Business of any kind was exceptionally small, and Mr. Robinson's chatter about the 1,000 million of ounces still to be taken from the Rand did not stimulate much enthusiasm. Holders of half worked out mines do not stand to benefit even if the gold is there. Poor Mr. Schumacher has been crying again at the Glen Deep meeting over the departure of his beloved Chinese. He declared that work had been disorganised by the small repatriations at present accomplished, and implied that the sudden drop in the profits of the mine last month was due to this cause. Working costs, he said, had been increased 5s. a ton, but, of course, no one is deceived by this talk. It is all done to create prejudice, but happily for us the Rand magnates no longer govern the Transvaal. That is where it hurts. In their ignorance they thought the Tories in this country would have lifelong power and that they would be allowed for ever to exercise their own sweet will in guiding the destinies of the Rand. The dream has been followed by a horrible awakening, and more Chinkees will soon be gone. Land and Finance things presented nothing of outstanding interest.

What Kaffirs lacked in the way of sensations was supplied by Rhodesians and Diamonds. Among the former Tanganyikas started the fun by rushing up from 2 3/8 to 2 7/8 on bear closing, and then back again to 2 1/2. After that they kept comparatively quiet, and their place was taken by Chartereds. The visit of the directors and Mr. Wilson Fox to Rhodesia has had rather unexpected results, as it has served to kindle into flame the long smouldering discontent of the settlers with Chartered mismanagement. There was a story around that Mr. Wilson Fox was coming back in a deuce of a hurry on urgent and important business—a new issue someone said—and shares were slung out to such purpose that the price got well below par. Glasgow was supposed to be selling, and a prominent operator was also said to be in difficulties. But need we look for special reasons in order to account for the fall? Even Chartereds must find their proper level sooner or later, and at par the company's deficit of goodness knows how many millions now is valued at six millions sterling, which is not so dusty. Intrinsically the shares may be worth a few pence each just on the bare chance that one day a "sympathetic" Home Government may come to the company's relief to save it from bankruptcy, but that is the only prospect. The Eldorado crushing came to hand last Saturday, and shows 1,331 ozs. from 2,584 tons, or just over 10 dwts. per ton, and was considered fairly favourable for a first return, although the average assay value had been 10 1/2 dwts. The price did not move much either way, and Bankets, Explorations, and other Rhodesians showed only narrow fluctuations, going down when Chartereds collapsed and recovering a fraction later on.

After a violent decline at the end of last week on rumours that the negotiations for pooling had been broken off, De Beers and Premiers steadied somewhat on the usual denials being forthcoming. Then came another reaction, followed by the rally, and prices seesawed for the rest of the week, just according to the nature of the latest story. Paris was inclined to sell. The latest is that, so far from negotiations having

broken down, they are well advanced, and any day may bring the announcement that everything has been fixed up. Other Diamond shares were not a very grand market.

A somewhat disconcerting slump took place in Broken Hill shares, but that was perhaps inevitable in view of the collapse in the price of silver and the set-back in lead, which has been unable to resist the weakness of other metals. It was noticed, however, that the colony did not sell, and towards the close prices rallied well. The drop was partly ascribed to the troubles of a New South Wales firm of stock-brokers, and no doubt a good deal of bear selling was in evidence. Good development news concerning the Ivanhoe and Great Fingall companies helped the West Australian section generally, but Deep Lead shares could still be had very cheaply. Of course, nobody wanted them. West Africans were somewhat off colour.

A statement that the Amalgamated Company might have to completely shut down its mines in order to get the copper market into a more or less wholesome state gave the copper share section another nasty jar, and as the metal continued weak prices were soon on the down grade once more. Later on a slight recovery in the metal steadied things a bit, but the market showed an absence of strong rallying power. Tin shares accompanied the metal downwards.

In the Miscellaneous group, El Oros did not derive benefit from a good annual report, partly because the September profit was lower, and Mexico El Oros, after improving on the meeting, slipped off again. New Zealand things were dullish, but Indians rallied strongly. The Nundydroog Company has just announced a dividend of 1s. 2d. per share making 2s. 4d. on account of the current financial year, the same as for the corresponding period. Siberians had the sense to keep quiet.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Frank Smith Diamond Estates and Exploration.—It is bad enough not to be able to sell your diamonds at a nice fat profit when you have got them, but when there are mighty few to be had the position is pretty disheartening. This company is in a very poor way. During the year ended December 31, 1906, it mined 1,487,128 loads of yellow and blue ground, of which 243,116 loads of mixed yellow ground and 164,744 loads of blue ground were sent to the machines for treatment, and 23,887 loads of blue were deposited on the floors. The remaining 64,381 loads were composed of floating reef and stone, and were sent to the dump. The product from the yellow stuff was 4,849 carats or 2.07 per 100 loads, and from the blue 7,956 carats or an average of 4.82, figures which do not include diamonds recovered from second sortings. Since the close of the year 22,277 loads of blue ground from the 113 ft. level which had been deposited on the floors have been washed, yielding 1,073 carats or 4.81 per 100 loads. Revenue from diamonds was £39,928 and from other sources £3,043 or £43,571 in all. On the other hand, the expenditure came to £55,405 including £5,074 allowed for depreciation, and the loss therefore comes out at £11,834. That kind of thing will not do, and while the mine manager reports that the present direct system does not allow the ground to be crushed to the necessary degree of fineness to give its full value, the directors have been seriously considering the best plan for the future working of the mine on an enlarged scale. They have apparently arrived at the conclusion that the only system by which the diamonds from such blueground as the company possesses can be profitably extracted is by the indirect system—that is, flooring the ground and allowing it to pulverise before sending it to the washing machines. The management at the mine has submitted an approximate estimate of the amount required for working the blue ground on the flooring system, and on the basis of the daily output of 3,000 loads. This indicates that the necessary plant, together with the preparation and equipment of the floors, new buildings and tramming facilities will require an outlay of approximately £50,000, in addition to which there will be the cost of putting a sufficiently large quantity of blue ground on the floors, which is put at 1s. 8d. per load. It is considered advisable to prepare floors for a million loads of blue ground, but it would not be necessary to wait until this quantity was deposited before washing could be started and the treatment of pulverised ground could be commenced in the first year. But how about the cash? The company has not got it, and thanks to the financial depression it has not yet been possible to hit upon a good plan for finding the additional working capital. Certain proposals for amalgamation or joint working with neighbouring interests have not at present had a definite result. Meanwhile the financial resources are very fair, the company possessing nett cash assets of just over £45,000.

El Oro Mining and Railway.—This company's report and balance-sheet for the year ended June 30 can hardly give cause of complaint. The period seems to have been a very satisfactory one, and the profit, including £58,130 brought forward is returned at £279,600. Out of this the company provides income-tax £8,897, the cost of all permanent improvements and railway extensions during the year £32,058, and two dividends of 1s. 6d. per share each, £162,000 leaving £76,651 to be carried forward. The total sum distributed in dividends to date amounts to £842,000, equal to 16s. 3d. per share, while since incorporation £367,500 has been expended upon permanent improvements, including the erection of No. 2 mill and railway extensions, of which £308,357 have been provided out of revenue. That is the kind of policy that should always be pursued by mining companies, but unfortunately it is more the exception than the rule. The operation of the two 100-stamp mills during the period under review has been satisfactory and efficient, the directors tell us, and in the period embraced by the accounts 263,149 dry tons of ore were treated, from which the bullion recovered was valued at $2,243,468 or an average of $8.53 per ton This represents an all-round saving of the gross gold and silver contents of the ore treated ($9.90) of 86.63 per cent., and compares with a recovery of 84.93 per cent. in 1906 and 73.80 per cent. in 1905. Not only that, but the total average working cost per ton for the year including every expenditure in Mexico was $5.01 against $5.73 in 1906 and $6.87 in 1905. Total expenses include 49 cents for development and 33 cents for State and Federal taxes. The development of the upper levels has been quite satisfactory and the unoxidised character of the vein revealed by the limited amount of work carried out on the 1,000 ft. level leads to the conclusion that the ore to be met with in the sulphide zone at a greater depth will show a material increase in value compared with the ore hitherto developed on the upper or oxidised portions of the mine. The general manager estimates the amount of ore blocked out and awaiting extraction on June 30 at 532,523 tons. In this estimate no account is taken of any ore below the 286 ft. level in the south end of the mine or below the 386 level in the middle and north sections or upon the 1,000 ft. level, the ore bodies outside these limits being as yet only partially developed. Reference is made to the flotation of the Somera Gold Mining Company, in which the company holds 234,000 shares, valued in the balance-sheet at £155,526, an equivalent sum being written off the property account. The company is also interested in the Mexico Mines of El Oro, whose 40-stamp mill commenced operations on October 1, and the Suchi Lumber Company. The business of the railway, after allowance for loss of freight on coal and wood due to the substitution of electric power for steam, shows considerable expansion, and the traffic to be obtained from the Suchi company should rapidly compensate for the loss referred to.

Somera Gold Mining.—This is the El Oro offshoot mentioned in the report of the company dealt with above. It submits accounts for the period from December 14, 1905, to June 30 last, setting forth the expenditure on the equipment and development of the property and for other purposes during that period. Authorised capital is £500,000 in £1 shares, of which 234,000 went to the El Oro in payment for the property and 216,000 working capital shares have been subscribed and allotted, upon which 5s. per share has been called up. It is proposed to make a further call of 5s. before the end of the year. So far £21,440 has been spent on development and shaft sinking and £9,403 on plant, machinery, and buildings, after allowing £108 for depreciation. General expenditure, which includes preliminary expenses of £1,593, is £3,375, but this has been almost entirely offset by interest received. It is too early yet to speak of the company's prospects, but developments, which will be actively prosecuted, seem to be very promising.

Brilliant Block Gold Mining Company.—The operations of this concern for the half-year ended July 15, such as they were, merely had the effect of increasing the debit balance from £481 to £1,318. One call of 3d. per share was made during the period of which £266 has been paid and £1,090 is still owing. The company's mill treated 277 parcels of stone, comprising 261 for the public, 1 for the company and 15 for the company's tributors, the total altogether being 9,928 tons. As compared with the previous half-year this shows an increase of 1,636 tons from the public, and a decrease of 3,203 tons from the company's mine, tributors included, making a total decrease of 1,566 tons. The directors affect to believe that this is satisfactory, in view of the reduced output from the mine and the keener competition for public crushing. The cost of running the mill works out at 7s. 11.3d. per ton. At the cyanide works the quantity of sands and slimes treated was 10,065 tons, including 8,694 tons purchased from the public, 622 tons of old slimes and 749 tons of old residues. The recovery was 4,886 ozs. of bullion, valued at £7,228.

Gold Fields of Mysore and General Exploration.—It is very sad, but this company must be again reconstructed. The directors have been "carefully reviewing the whole position," and that is the conclusion they have come to in order that some necessary cash shall be forthcoming. The assessment

this time is 5s. per share against 7s. 6d. on the last occasion in 1902, and do not forget that since then dividends equivalent to 12s. per share or 60 per cent. have been paid, but whether in cash or scrip more or less valuable we are not quite sure. Operations for the twelve months to March 31 resulted in an adverse balance of £5,446, after providing a loss on shares in the Nine Reefs Company (in liquidation) amounting to £5,627. Total deficiency is now £22,066. At March 31 last the cash resources were £6,412, and the share investments were of a value of £45,339, giving a total of £51,751, or after providing for the liability on partly-paid shares held (£9,725) £42,027. Since that date the said share interests have unfortunately suffered a further depreciation in market value, which has rendered it impossible for the directors to realise any of the share assets of the company at a profit, and in some instances has reduced the realisable value to a point at which a considerable sacrifice would be entailed were a sale to be effected at the present time. Hence the necessity for reconstruction.

Company Reports and Balance Sheets.

Cuban Central Railways.

"Political disturbances," otherwise attempts at revolution, allowed for, this system's traffic did not pan out so badly for its year ended June 30 last. Gross receipts rose by £22,961 or 5.05 per cent. to £429,310, but unfortunately the riots in August and September last year, the scarcity of labour, leading to higher wages, and other difficulties caused expenses to grow by £21,216 or 9.38 per cent. to a total of £247,616, so that the nett income was no better than £1,745 up at £181,694. The traffic was good and grows, but this was the result, and so out of £34,566 brought forward from the previous year £30,000 has been reserved to cover damage caused by the revolutionists. To the £4,566 then left receipts from interest and registration fees have to be added, and the nett income is thus brought up to £189,338, from which £16,510 is deducted for special renewals and £10,000 added to the general reserve, together with £5,760 required for taxes in Cuba, £6,465 set aside for interest and amortisation of rolling stock, the whole of the charges, exclusive of debenture stock interest, coming to £43,237. The charges imposed by the two debenture stocks take £66,000, and after meeting all these and paying the interim dividend on the preference shares £49,851 only is left, out of which the final dividend on the 5½ per cent. preference shares is to be paid, together with a dividend of 4s. per share or 2 per cent. on the ordinary. A year ago these shares got nothing, but the balance left over for the new year is now only £1,601. Assuming, however, that the anticipations of the board and of the general manager are fulfilled as they should be, the shareholders may look forward with some confidence to a more prosperous future. Business has grown, and with peace and good government must continue to grow. Decreases took place last year in the weight of timber and of machinery carried, and even tobacco yielded 427 tons less, but sugar cane rose by 296,473 tons, sugar by 20,650 tons, and molasses by 10,492 tons. Passengers and goods together gave the highest gross revenue the company ever collected. But we fear more capital will be wanted soon. Last year the amount spent under that head was £43,573, and various improvements and extensions are in contemplation. The company also wants more rolling stock. If the Government of the island pays the damage done last year that money might help the company along a little way, only the £30,000 now set aside would presumably be brought back to the credit of profit and loss. Altogether the company claims £39,419 from the Government.

Copiapo Railway Company.

The extensive damage to this company's system by the floods of the Copiapó River in the early part of 1906 adversely affected its operations throughout the whole year, and the position is truly described by the general manager as deplorable. A good deal of the line was completely destroyed, and some faint idea of the task of replacing or repairing it is conveyed by the information that 50,000 tons of slag, 30,000 tons of gravel, 2,000 tons of stone, 8,500 sleepers, 2,800 metres of new steel 60 lb. rails and 310 used rails were required, while up to 500 men were employed for a good part of the time. The interruption of the traffic and the high prices of provisions and produce of every description brought about the stoppage of many mining enterprises, in spite of the tempting high level of copper, so that the company was badly hit in every way. Receipts from all sources increased by $110,641 to $756,181, but expenses rose by $308,768 to $1,049,610, the ratio to earnings being 138.80 per cent. against 114.76 in 1905. Freight receipts were $115,601 up, the principal gain being in up freights, chiefly coal and coke and sundries, but passenger traffic and miscellaneous receipts both showed small decreases. The surcharge on gold rates for the year was $126,023 and represented a mean rate of 25.83 per cent. compared with $50,784 or 12.86 per cent. in 1905, and the manager points out that the increase in freights is reduced by 70 per cent. when the difference on the surcharge on gold is taken into consideration. General management expenses were $23,504 higher owing to the higher premium on gold in payment of salaries and the heavy payment of interest, and operating expenses, and maintenance and renewal charges were likewise adversely affected by the gold premium. Expenditure having exceeded receipts to such an extent, it has been necessary to appropriate the balance of $50,459 standing to the credit of the accident fund and to take $230,970 from working fund, and under these circumstances no dividend can be declared.

Lanarkshire and Dumbartonshire Railway Company.

This company's proportion of the traffic and other receipts under agreement with the Caledonian Railway for the six months to July 31 was £40,084 or £1,580 less than in the corresponding period. Other items produced £693, making £40,777 compared with £42,311. This decrease, however, was largely made good by a decline in outgo, so that the balance of revenue was only slightly less at £36,110. Fixed charges showed one or two changes, but after providing these the sum still left was precisely the same as last year, namely, £28,740, so that the regular distribution at 4 per cent. per annum on the share capital is provided. Capital expenditure was unimportant, and while there is a credit of £40,735, it has been necessary to raise a temporary loan of £61,987 owing to the existence of a land "suspense account" for £109,273 on the credit side of the account.

Richardsons, Westgarth and Co., Limited.

Again a decrease in nett profits is shown by the board for the company's year ended August 25. The total, after £20,334, or about the same as last year, has been deducted as the cost of maintaining buildings and plant in the condition of thorough repair, was only £66,375, which was £4,448 less than in the preceding year and £18,302 less than the profit of two years ago. Adding in the balance of £7,331 brought forward the free revenue was brought up to £73,706, which was £4,875 less than the year before. No wonder then that the directors at last reduce the dividend paid on the ordinary shares by 2 per cent. per annum to 4 per cent., or that the reserve of only £30,000 is again left without any addition. The directors, however, have set aside £12,500 for depreciation against only £10,000 a year back, and thus something is gained by the property as a whole through the reduction in dividends. What would the position have been if no more than 5 per cent. had ever been paid upon the ordinary shares? After paying the preference and ordinary dividends and making this depreciation assignment, £7,080 will remain to be carried forward. Once more the directors complain that although their works have been kept fairly well employed the prices of materials have remained abnormally high, while the competition between manufacturers has kept down the prices obtainable for finished articles. Strikes also delayed business in the shipyards, and the company would seem to have suffered like everyone else from the unreasonably high prices of copper and tin; but that at least is an evil which is passing away and will be long in coming back again. The turbine department has been fairly well supplied with orders, and at the date of the report, the 15th inst., the amount of orders in hand, in all departments, we judge, totals upwards of £520,000, and is considerably in excess of the amounts at the corresponding period of last year. Thus the picture is by no means all in shadow, and the company continues to be fairly well off so far as current resources are concerned. Its work in progress, stock-in-trade, loose tools, patterns, &c., a mixed item indeed, is valued at £209,348, and the debts due to the company are £115,787, while cash and bills come to £40,692. There is a contingent liability of £181,812 on customers' bills receivable discounted, but this item includes £83,571 representing the balance of the rolling mill contract payable by arrangement over a period, but guaranteed, otherwise the debts due by the company, including the accrued interest upon its £350,000 of 4½ per cent. debenture stock, come to only £88,056. It should be added that £15,063 was spent on capital account during the year, but up to date the provision made out of profits for depreciation has been £77,500 in all, of which £12,500 came from the past year's profits, so that the nett valuation of what may be called fixed assets, including patents and goodwill, is now £740,288—a tidy sum enough.

D. and W. Murray, Limited.

Another profitable year's business was done by this firm of Australian warehousemen in its year ended July 19 last. Profits came to £68,589 after meeting interest on debenture stock, directors' fees, and the dividend on the preference shares, and to this £7,439 brought forward is added, raising the free balance to £76,028. The directors are therefore easily able to pay a bonus of 2½ per cent. to the ordinary shareholders over and above the 10 per cent. dividend and to set aside £20,000 to special reserve, besides devoting £10,000 to mortgage redemption, and even then £8,528 will be left to carry forward. No general information is contained in the report, but at the shareholders' meeting the chairman, Mr. John Gordon, said that everything was as prosperous-looking as ever in Australia, "good rains," wool clip considerably larger than that of 1906, and so on. We hope business will continue good, for, necessarily perhaps, this company both gives and takes a powerful lot of credit. Putting aside the £100,000 in 4½ per cent. first mortgage debenture stock as fixed debt, the company owed cash creditors £181,283 at the date of the balance-sheet, besides £87,011 to trade creditors, £72,000 on mortgages, and £4,830 on bills payable. This makes £376,000, or with the debenture stock £440,000, against which stocks on hand and in transit put up at £330,000, debtors owe £206,741, besides £128,000 due on bills receivable, this last item at least being doubtless banking credit utilised. In other respects too we wish the display were stronger looking, for cash is only £20,706 and goodwill bulks

for £133,197 or almost 30 per cent. of the paid-up share capital of £650,000.

Crisp and Co., Limited.

The directors of this unfortunate Holloway drapery business manfully continue their uphill struggle and present accounts for the twelve months to August 31 which show a marked improvement in the trading. The figures are nothing to boast about yet, but the movement is in the right direction and the directors believe that the complete re-establishment of the public confidence will be accomplished in the near future. Everyone will hope that, the sufferings of the shareholders having been intense, and it is quite possible that later on some reward will come for the exercise of more than ordinary patience. The company's gross trading profit was £21,047, discounts and allowances gave £1,763 and transfer fees £10, making £22,820 in all. Working expenses came to £19,532 and £915 was allowed for expenditure written off, while the outlay of £1,107 on advertising calls for a little explanation. During the preceding twelve months the company spent £1,261 in this direction, of which £631 is now written off, and in the past year £1,430 of which £477 or one-third is now provided meaning that £1,107 is written off and £1,584 carried forward to be dealt with in the future. Net credit remaining is £1,265. But interest on debenture stock alone requires £2,266 and sundry other debits run up to £652, so that a debit of £1,652 has to be added to the deficiency brought forward of £1,265 bringing up the total loss to £2,918. It is not to be expected that the balance-sheet can be strong just yet and besides the debit to profit and loss and the advertising account, the discount on issue of debenture stock still to be made good is £3,346, last year's contribution having been £136. Trading accounts are rather considerably adverse and cash is small, but the stock-in-trade, properly certified, is valued at £24,361. Under some heads the depreciation appears sufficient, but the £401 written off leasehold property, fixtures and purchase of business seems on the small side.

Hope Brothers, Limited.

Apparently the year ended August 31, 1906, was really the turning-point in this company's career, and the improvement in earnings then recorded has been followed by a further substantial advance in the past twelve months. Nett profits after providing for depreciation and leasehold sinking fund were £7,343 up at £42,505, but on the other hand a small saving in managing directors' salaries has gone on to directors' and auditors' fees and the advertising bill was increased by £1,480 to £4,145. The result was that after writing another £500 off the special outlay at the Ludgate Hill premises the nett balance came to £34,007 compared with £28,184. Adding £2,136 from the previous account, the disposable total was £36,142 and the directors consider themselves justified in raising the dividend on the ordinary shares from 3 per cent. to 5 per cent., after which they transfer £3,000 or £2,000 more to reserve and carry forward the larger sum of £3,142. We are extremely doubtful as to the wisdom of the course adopted, as with the present addition the reserve, including the special fund of £11,798, amounts to no more than £30,798, while the goodwill remains at the decidedly heavy figure of £275,073 and the position otherwise is none too strong. A sum of £4,933 was written off property account, but something was spent on additions and alterations and the nett reduction is £3,135 at £186,182. Stock is less than £1,000 down at £169,273. It is, however, satisfactory to note that floating liabilities have been reduced by £7,601 to £19,048, while debtors are slightly up at £4,233 and cash risen by £3,780 to £37,242.

Alliston and Co., Limited.

Profits of this business of wholesale warehousemen and dealers in cotton dress goods for the year ended July 31 amounted to £11,610, of which £9,745 was retained as nett after providing for interest on deposits and administration charges. Adding £682 brought in, the disposable balance was £10,428, and after paying the preference dividend and transferring £1,000 to reserve, the ordinary shares receive 8 per cent. and £991 is carried forward. The position appears to be very comfortable as against £17,737 due to trade and other creditors and £10,524 held on deposit, sundry creditors come to £64,777, bills receivable to £5,095 and cash to £4,141. Stock is valued at £59,041, leasehold premises at £4,296 and fixtures, &c., at £2,147, while the company has £7,000 invested in shares of a French company. We should like, however, to see the reserve fund increased at a little more rapid rate, as this only amounts to £2,000, apart from a capital reserve of £3,860, and goodwill stands at its original figure of £20,000.

Anglo-British Columbia Packing Co., Limited.

The results for the year ended June 30 again illustrated the vagaries to which the salmon packing industry is subjected, but they had been foreseen and so far as was possible provided against. Only a moderate pack was secured and although prices were good the profits for the twelve months were substantially smaller at £14,706, but the balance brought in, after deducting the special grant of £1,000 to the directors made at the last meeting, was the substantial one of £27,502. In addition a windfall of £635 came in from a repayment of capital by the Automatic Can Company in liquidation making the disposable total £42,843 compared with £71,002. No arrears of preference dividend have to be cleared off on this occasion and as a specially large provision of £15,000 was made for depreciation a year ago the directors now content themselves with writing off no more than £2,000. Income-tax is paid out of the reserve previously set aside for that purpose and in these ways the surplus available is kept at a fairly good figure. The exceptional dividend and bonus of 24 per cent. on the ordinary shares cannot, of course, be repeated, but a satisfactory enough distribution of 10 per cent. is made and the balance carried out is raised by £3,341 to £31,843 in order to provide for the poor seasons expected during this and next year. Nothing was spent on capital account, which is consequently £2,000 down at £57,630. Stocks, however, have risen by £59,254 to £97,541 and this has necessitated a large increase in current liabilities, loans against securities being £26,478 up at £40,045, sundry creditors £7,473 higher at £20,883 and bills payable £11,736 higher at £14,567. Sundry debtors, on the other hand, have been reduced by £15,957 to £60,783 while cash is a few hundreds better at £2,832.

Alliance and Dublin Consumers' Gas Company.

Business fell off again in the half-year ended June 30, and receipts from sales of gas to private consumers were £2,444 down at £96,805, but this was more than made good by an increase of £4,162 in coin and other meter rents. Public lighting, too, yielded a few pounds more at £6,907, and residuals brought in an additional £1,487 at £15,975, so that with £369 or £10 extra from rents and transfer fees the gross revenue was £3,379 up at £146,979. Expenses, however, were very much heavier, and after writing £2,000 off the suspense account for the gasholder at Barrow Street, the nett profits showed a decrease of £4,613 at £39,119. Interest on loan capital having been provided, the surplus available, including £770 brought forward, was £33,351, and in order to pay the customary dividends of 10½ and 7½ per cent. on the respective shares £3,556 has to be taken from the reserve fund. Capital expenditure for the six months was £12,157 raising the debit balance to £48,586, against which there are reserves of various kinds amounting, after deducting the sum taken in aid of revenue, to £74,620, of which £43,076 is invested. Sundry creditors have been reduced by £9,665 to £56,493, and bills payable are £791 down at £5,798, but on the other hand while gas and meter accounts have risen by £2,616 to £39,987, other debtors have dropped by £12,807 to £12,376, and instead of having a cash balance of £30,424 as was the case a year ago the company is now indebted to its bankers for £6,844.

Associated Tea Estates of Ceylon, Limited.

During the year ended June 30 this company gathered a crop of 768,256 lbs. of tea or 67,525 lbs. less than in the previous season, in addition to which it made 811 lbs. from bought leaf. The cost per lb. sold in London was 0.60d. higher at 6.03d., but the price realised rose by 1d. to 7.45d., and gross profits were £941 up at £4,525. With £973 or £312 more brought forward and £55 from miscellaneous receipts, the amount available after meeting sundry charges was £1,384 up at £5,157, so the directors are able to pay the full dividend on the 6 per cent. preference shares compared with 3 per cent. a year ago, and to transfer another £1,000 to the reserve for rubber cultivation by reducing the sum carried to the new account to £557. The properties remain in the balance-sheet at £114,992, and, judged by results, are very much overvalued, as the yield per acre was only 457 lbs., giving a profit of 4s. 7d., but the directors give no particulars as to the area of the estates. Rubber cultivation is proceeding steadily, and there are now 308 acres under rubber alone, in addition to 957 acres planted through tea; but it will be a considerable time yet before any return can be looked for. Expenditure under this head stands at £3,193, and the special reserve, including the amount now added, comes to £2,528. Bills payable have been reduced by £1,650 to £8,000, but sundry creditors are a little up at £706, and there is still a loan of £2,000 outstanding, while, on the other hand, an increase of £1,016 to £6,939 in stocks is more than offset by decreases of £323 to £152 in sundry debtors and £820 to £394 in cash, so that the company has a struggle to make ends meet. Coast advances continue to creep up, and now amount to £1,877, but it has not been thought necessary to increase the reserve against this item beyond the £200 shown last year. The dividend now paid brings the arrears up to June 30, 1901, and still leaves 36 per cent. outstanding.

Wynaad Tea Co., Limited.

A reduction of 13,598 lbs. to 241,924 lbs. in the outturn of tea for the year ended March 31 was partly compensated by an improvement in price, and the nett proceeds were £1,654 better at £6,135. Unfortunately, however, the coffee crop was a failure, amounting to only 22 cwt. compared with 614 cwt. in the previous year, and as pepper was also a partial failure the amount realised from these two products fell from £2,094 to £228. The total income from all sources was £6,332, but expenses took £5,501 and debenture and other interest £1,031, so that the nett result was a loss of £202, bringing the debit balance up to £10,717. In addition to a debenture debt of £9,400, sundry creditors come to £11,057, and as against these there are only £708 due from sundry debtors and £37 in cash, it has been decided to wind up the company and to sell the estates for £29,000 in cash to a new company which intends to amalgamate several of the Wynaad tea estates into one undertaking.

Glenboig Union Fire-Clay Co., Limited.

In earning a profit of £29,327 in the year to August 31 (including £2,913 brought in), this company must be considered to have done well. After writing off £5,000 for depreciation the shareholders get a dividend and bonus of 12½ per cent., £3,000 is added to reserve, and £2,577 goes to the credit of the current year. Reserve fund is now £18,000, not a large sum to be sure,

but we rather like the look of the balance-sheet. Against a total capital expenditure of £207,633 the sum written off for depreciation to date is £96,164, and altogether the position looks clean and healthy.

Daveniere and Co., Limited.

This company took over a business of lace manufacturers in 1890 and has never since its conversion into a limited liability company done anything to justify the capital with which it was loaded. By 1898 matters had got so bad that £9 per share had to be written off the ordinary capital as lost, but even that drastic step did not help it much as except for one six months, to June 30, 1898, the company has never been able to meet the preference dividend in full, and, in fact, has only made two distributions of 2 per cent. each. Business seems to have been rather better last year and nett profits amounted to £10,141, but the directors "feel that the shareholders will agree that a prudent course is being adopted in refraining from declaring a dividend for the present, seeing that the increased returns, and the higher price of raw material, necessitates the use of a larger floating capital in carrying on the business." So they write off £3,000 for depreciation, and add the remaining profits to the balance brought forward, raising it to £12,477. Considerations of prudence apart, it is difficult to see how the directors could do anything else as to meet £25,739 owing to sundry creditors, the amount due from sundry debtors is only £13,738, while cash and bills come to another £3,815. Property account, after deducting the depreciation fund of £14,100, stands at £69,317, and stock-in-trade at cost or under is valued at £58,678, these two items going against the paid-up capital of £100,000 and a sum of £8,000 borrowed on mortgages of the freehold, land, buildings, &c.

Colonial Consignment and Distributing Co., Limited.

Trade was better for this company during the year ended June 30, owing on the one hand to the improved conditions of the pastoral industry in Australia and the prosperity in New Zealand and on the other to the conditions prevailing in the home markets. Earnings, after providing for London and colonial charges, &c., consequently improved by £3,514 to £28,670, and as the directors write off a trifle less at £7,753 for depreciation they are able to increase the dividend on the ordinary shares from 4 per cent. to 5 per cent. and to add £667 to the sum carried forward, raising it to £1,855. The reserve fund is again ignored, and remains at £17,055, against property valued at £220,485 and a goodwill account of £67,502. Liabilities on bills payable are £39,972 heavier at £147,485 and sundry creditors have risen by £1,184 to £6,368, while on the other hand advances against shipments show an increase of £59,639 at £179,558, but sundry debtors owe £4,887 less at £44,572, stocks are down £7,503 at £3,727 and cash is £8,301 lower at £21,039. Cash in the hands of debenture holders' trustees is £1,204 higher at £5,577, but investments are unchanged at £16,667.

Rosario Drainage Co., Limited.

During the year ended June 30 another 381 houses were connected with this company's system, but the company seems to have derived even more benefit from the revised register of rents issued in January. Gross receipts improved by £3,169 to £25,581, and as expenses were only £895 up at £9,366, the nett income was £2,274 better at £16,215. After providing £2,000 for the sinking fund for redemption of prior lien debenture stock and meeting interest on the prior lien and first debenture stocks and other charges there was a balance of £4,640, out of which a distribution of 2 per cent. is made on the 4 per cent. second debenture stock and £126 is carried forward to the credit of that stock. Although the record of the last few years is one of steady progress the company has been considerably hampered in the past by the action of the municipality, and on June 30, 1906, the accumulated loss on working amounted to no less than £51,457. The action for damages, however, brought against the municipality for failing to enforce connection of all properties within the radius of the sewers has been decided in the company's favour, and while settlement of the amount of the claim has not yet been made, it is reasonable to suppose that this will be large enough to wipe out the debit balance. Apart from that the current position is satisfactory, only £2,860 being due to sundry creditors against £1,097 to come in from sundry debtors, £5,907 held in bills receivable, and £3,826 in cash.

Montevideo Telephone Co., Limited.

The extension of this company's system continues on a very satisfactory scale and receipts from all sources for the year ended July 31 showed a further substantial improvement of £4,100 at £36,400, this increase coming on top of a gain of £3,681. Expenses at Montevideo rose by £1,127 to £14,740 and London office charges took a little more at £1,195, but there was a saving of £188 at £142 in interest, discount and income-tax and the nett profits were £3,080 larger at £20,384. With £2,383 or £330 more brought forward the disposable balance was £22,767 against £19,342 and the directors make a very prudent division of this additional amount, as they transfer £6,000 to general reserve and £5,000 to reserve for renewal of plant, or an extra £1,000 in each case, after which they raise the dividend by a further 1 per cent. to 6 per cent and carry forward £3,081 or £698 more. Outlay on capital account was £5,142 making a total of £201,442, but the general reserve stands at £52,500 and the renewal fund at £22,000 or together over 30½ per cent.—a comfortable enough position. Floating liabilities are comparatively trifling at £1,780, while sundry debtors have risen by £1,583 to £6,113, bills receivable are £1,598 up at £5,078 and cash amounts to £1,658. Investments have been increased by £3,073 and are now valued at £25,970, of which £13,360 is in real estate in Montevideo.

TRADE AND PRODUCE.

Wheat.—English wheat has advanced 2s. this week in the London market, 42s. being given for reds and 43s. for whites, and farmers' deliveries this week of 105,273 qrs. obtained an average of 38s. 3d. per quarter against 80,030 qrs. averaging 26s. 3d. in the same week of last year, and for the season up to date 32s. is the average against 25s. 10½d. last year. Nearly all the other markets followed the London increase, though not to the same extent. Manchester quoted an advance of 1s. 0d., and elsewhere it has varied from 1s. upwards. Foreign also has advanced about 6d., but the market for them has been dull, demand being small. From abroad we imported 531,930 qrs. this week against 182,023 in the same week of last year, and the quantities of wheat and flour on passage are again large, though showing a decrease on those of last. Dornbusch estimates that 2,225,000 qrs. are on the way to the United Kingdom, and 1,905,000 to the Continent.

The American market was fairly steady at the beginning of the week, active spot markets, heavy buying orders, and a decrease in the visible supply of over 3,200,000 bushels keeping them up, but they dropped again on favourable crop news and aggressive bear hammering.

Cotton (from our Manchester correspondent).—No particular fresh feature of moment has shown itself in our market during the week under review. Business has not been important in any section, and most sellers have met with a rather dragging demand. American cotton in Liverpool has fluctuated between wide limits and the uncertainty as to the course of prices and the probable supply rather interferes with business being arranged in both yarn and cloth. Killing frosts are said to have appeared in the American cotton belt, but no great change has occurred in prices, values being rather lower on the week, the rate for middling American touching the lowest point on Wednesday for several months past. The business offering in piece goods has been of unimportant dimensions. Few offers of a practical character have come through. Buyers, as a rule, have preferred to look on and await developments. Our markets abroad, on the whole, are generally healthy, but it can scarcely be said that they are hungry for fresh supplies. Reports from India with regard to the outlook there are rather conflicting. Private advices do not confirm the gloomy accounts given by the public Press agencies. There has not been much doing this week for our dependency, and the demand for Calcutta is quiet. Shirtings have been sold in fair lots for Madras. China business is difficult to arrange, the price of silver being against active operations in that part of the world. Sellers have not obtained much support from the smaller markets of the Continent, and although bids have come through from South America, the trading has not been at all important. Burnley manufacturers are receiving very little encouragement. Certain firms are in want of work to go on with, and arrangements are being made for short time. Prices available at the moment for printing cloths are unremunerative. In heavy goods, such as T-cloths and Mexicans, only a small business has come round, and makers press for fresh orders. In the home trade houses a generally healthy feeling prevails, and in flannelettes an encouraging turnover has transpired. In American yarns for home use a quiet, steady business has been done, without sales of any magnitude. There is quite a scarcity of the medium numbers in weft, and 42's are difficult to be obtained quickly. Coarse counts are not doing well, and, owing to the quiet demand for some time past, the margin is rather unsatisfactory. Shipping yarns are well held, and exporters press for deliveries. There is still business to be done for the Continent, but not much is being put through this week. Egyptian spinnings well maintain their strength, with a quiet, steady demand. Users have to pay full rates for anything wanted, and fine numbers in combed descriptions are decidedly strong.

Wool.—Cablegrams from Australia continue to report advancing prices in wool, and they are now from 7½ to 15 per cent. higher than they were at this time last year, the highest obtained since 1899. But consumers here are holding out against these high prices, and at Bradford and Leicester present rates are below both London and Australian values, though top-makers are doing their best to force them up. All English wools are firmly held, and spinners have in most cases advanced their quotations 1d. and 2d. per lb. since London sales, the "feelers" sent from the Continent to try and get lower offers accepted being quite ignored. In manufacturing branches merchants are rather reluctant to place new orders for fine goods for the spring, but medium and cheaper goods are in large demand, both here and on the Continent, and many of the mills are still working overtime.

Coal.—Steam and gas coals are still in active request, but prices are going more in favour of the buyer. In the North of England quotations for best steams are down to 15s. 6d. per ton f.o.b. and best gas 14s. 9d. Coking coal and coke are also easier, and as they are expected to be still cheaper still, consumers are not buying in a hurry. It is the same elsewhere. Business cannot be called slack, but it is not so brisk as it was, except that the slightly sharper weather has given

an impetus to house coals and that the Humber trade with the Baltic ports, in spite of the advanced season, is still very good. The week's returns to October 8 show an increase of 18,800 tons over the corresponding week of last year.

Iron and Steel.—The outlook for ordinary pig-iron is not very promising. This week has seen a further reduction in prices for all qualities, and though makers are still pretty well supplied with orders, new ones are not coming in very freely, consumers holding off as long as they can. The hematite branch is equally depressed, both West and East Coast makers reducing their output, and even at the lower prices consumers do not seem disposed to do much business. Trade with America is at a standstill for the present, and Continental orders are less, though all through a certain revival is expected in the near future. The Cleveland district still exports large quantities of pig iron from the contracts already in hand, and Connal's stores are still called upon to make up deficiencies in supplies, stocks being reduced to 126,327 tons or 23,636 down this month. Steel rails and plates have had a sudden spurt of activity in the Barrow district, but it is not regarded as permanent, and elsewhere not much of any kind is doing in the finished branches of the trades.

Copper.—The market has been entirely dominated by American influences, and as these generally exhibited a break in prices, quotations here have fallen steadily, except on Wednesday, when a large decrease in the visible supply, helped for the moment by bullish advices from America, gave them a sharp and short upward move. Yesterday cash metal dropped to £58 10s., and three months to £57 5s., and a further relapse took place to-day to £57 17s. 6d. and £56 7s. 6d. respectively. Messrs. H. R. Merton and Co. give the visible supply as 10,683 tons, against 12,138 tons at the end of September. Supplies for the first half of October are 13,791 tons, and deliveries 13,246 tons, making stocks in England and France 6,083 tons against 7,138 a fortnight ago. Chile charters are 850 tons.

Tin.—Aggressive selling in the East weakened prices considerably on Monday and Tuesday, and the market here, after fluctuating rather wildly, closed each day at a loss of from 25s. to 30s. At one time the price dropped to £134 for forward selling and cash to £135 1s., but advanced again sharply after this break in sympathy with the brief rise in copper. Active buying and restricted offerings brought about a further recovery, till yesterday's closing prices were up to £141 16s. cash and £140 10s. three months. The rally continued to-day until values touched £148 5s. and £145, but the market showed weakness at the close.

Tea.—Importers brought forward 47,826 packages of Indian, and for these the market showed a further improvement. Teas up to 8½d. advanced ¼d. to ½d. per lb., finest grades were very firm, and for the lowest common leaf as much as 7d. was given. A feature of the sale, quoted in Messrs. Thompson's circular, was the active tone in good liquoring Brokens and Fannings, which occasionally went 1d. per lb. higher than late rates. 43,501 packages were sold at an average of 8.64d. against 47,172 packages averaging 8.12d. in the same week of last year. Ceylon auctions reflected the improvement of the Indian. The quantity offered was small, only 16,159 packages, and of these the chief advance was in medium and common sorts, which were ½d. per lb. dearer in some instances. The best teas were competed for at prices which compare well on the whole with those obtained at the same time last year, but mediums from about 8d. to 10d. are still considerably lower than in 1906. For the week 8.57d. was the average obtained for the whole sale, against 8.21d. last year. Java sales of 1,799 made prices that were, if anything, better than last week's.

Sugar.—The late summer weather had an unexpectedly good effect upon crops, and it seems certain now that returns will again be above the average, says Mr. Czarnikow. We may have to wait, however, he declares, for Cuban estimates, to ascertain whether a return to a 10s. basis, 88 per cent., for summer delivery, with present prices of grain, is necessary to secure sufficient supplies. The fine quality and consequently lower cost of production will stimulate bids for roots by fabricants, while the lower weight harvested, the higher cost of labour, and competition for cereals will make growers more reserved.

The monthly statistics, as anticipated, are not favourable, because stocks in Europe decreased 70,000 tons less than last year, owing to 30,000 tons less consumption and 45,000 tons less exported to America and elsewhere, cane imports being 16,000 more and production 13,000 tons less. America melted 26,000 tons less, and comparisons there will show very badly in October, whilst in Europe the absence of beet exports and reduction elsewhere will be felt. But altogether we have consumed during the season as much as during the previous one, and notwithstanding a very large falling off (340,000 tons) in shipments elsewhere, we have 100,000 tons less in statistical Europe than last year. Besides, invisibles are in all probability considerably less than even last year. If we now produce less in the world, and find foreign trade reviving, it seems unnecessary to get unduly frightened at the present price of 9s. 4½d.

New York prices were influenced by reports from here, and quotations for '96 Centrifugals were reduced to 3.90 cents, and at the decline only small transactions took place in spot and near at hand sugar, while holders of more distant prefer to await developments. Landings for the week were only 16,000 tons, meltings were 46,000 tons, and stocks reduced to 212,000 tons.

Advices from cane-producing countries are without special importance, and show no change from last reports.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bengal and North Western.—For half-year of 3½ per cent.

Cuban Central.—4s. per share on the ordinary shares.

Mold and Denbigh Junction.—At the rate of £2 12s. 6d. per cent. per annum on account of interest due on debenture stock B.

Rohilkund and Kumaon.—For last half-year of 3 per cent., and in addition a bonus of 10s. per cent.

South Indian.—Out of surplus profits of 35s. per cent., making £3 5s. for half-year.

INSURANCE.

Northern.—Interim of £1 per share, being at the rate of 10 per cent. on account of 1907.

Royal Exchange.—Interim of 4 per cent. for half-year ended June 30, 1907.

MINES.

Associated Gold (W.A.).—1s. per share.

Broken Hill Proprietary.—For quarter ending Nov., 1907, of 1s. 6d. per share, and a bonus of 1s. 6d. per share, payable Nov. 20.

Great Boulder Perseverance.—Second interim for year 1907 of 6d. per share.

Mysore.—Interim of 4s. 6d. per share, payable Nov. 12, making 85 per cent. for first eight months of current year.

Nundydroog.—Interim of 1s. 2d. per share for four months ended Aug. 31, 1907.

Penn-Wyoming Copper.—At the rate of 8 per cent. per annum or last month of the quarter ended Sept. 30.

Premier (Transvaal) Diamond.—125 per cent. for half-year ending Oct. 31.

South Kalgurli.—6d. per share for the year ended Sept. 30, payable Nov. 11.

MISCELLANEOUS.

A. and F. Pears.—For half-year ended June 30 on the ordinary shares at the rate of 12 per cent. per annum, making 10 per cent. for the year; for year ended June 30 on the deferred shares at the rate of 10 per cent. for the year, carrying forward £6,415.

Alliance Investment.—Interim for six months ended Oct. 15 at the rate of 4½ per cent. per annum on the preferred stock.

Bank of British West Africa.—Interim at the rate of 8 per cent. or half-year ended Sept. 30.

Blackpool Tower.—6 per cent. and a bonus of 1 per cent. on the ordinary shares, carrying £1,076 forward.

Blenkhorn Richardson and Co.—10 per cent. on the ordinary shares.

Burroughes and Watts.—Final on the ordinary shares for half-year ended June 30, making 8 per cent. for the year.

City of Dublin Steam Packet.—At the rate of 2 per cent. per annum on the ordinary stock for half-year ended Aug. 31.

Clan Line Steamers.—Interim for half-year ended June 30 at the rate of 5 per cent. per annum.

Cuba Submarine Telegraph.—On the ordinary shares at the rate of 6 per cent. per annum for half-year to June 30.

D. and W. Murray.—10 per cent. and a bonus of 2½ per cent. on the ordinary shares for year ended July 19, carrying £8,527 forward.

Drybrough and Co.—15 per cent. for year to July 31, carrying forward £1,823.

Frederick Leney and Sons.—9 per cent. on the ordinary shares for year ended July 31, carrying £3,425 forward.

Highland Distilleries.—12½ per cent. per annum on the ordinary shares, carrying £2,000 forward.

Highlands and Lowlands Para Rubber.—Interim of 5 per cent.

Holbrooks.—Interim of 6 per cent.

Hope Brothers.—Final at the rate of 5 per cent. per annum on the ordinary shares for half-year ended Aug. 31, making 4½ per cent. for the year; placing £3,000 to reserve and carrying forward £3,142.

Hugh Baird and Sons.—Further of 3½ per cent., making 6 per cent. for the year, carrying forward £503.

Indo-European Telegraph.—Interim for half-year ended June 30 at the rate of 5 per cent. per annum.

J. B. Brooks and Co.—On the ordinary shares at the rate of 7 per cent. per annum for half-year ended Aug. 31, making 6 per cent. for the year.

John Henry Andrew and Co.—Further, making 8 per cent. for year ended June 30.

Joseph Lucas.—At the rate of 7½ per cent. per annum on the ordinary shares for year ended Aug. 31, placing £10,000 to reserve.

Lipton, Limited.—Interim on the ordinary shares for past half-year at the rate of 6 per cent. per annum.

Liverpool Exchange.—Interim of 8s. per share, being at the rate of 4 per cent. per annum for half-year ended June 30.

New Dimbula.—Final of 15 per cent. and 4 per cent. bonus, making 24 per cent. for year ended June 30.

Oriental Telephone and Electric.—3 per cent. on the ordinary shares.

Pacific Steam Navigation.—Interim on account of the present year of 10s. per share.

Realisation and Debenture of Scotland, Limited.—For year to Aug. 31, 1907, on the ordinary shares at the rate of 12 per cent. per annum, and 10s each on the founders' shares

Short's.—Second interim of 4s. per share on the deferred shares on account of year ending March 31, 1908.

Thompson and Shackell.—Final of 1½ per cent. on the ordinary shares, making 4 per cent. for past year, £77 to carry forward.

Western Telegraph.—Final of 3s. per share, making 6 per cent. for year ended June 30, 1907, and a bonus of 2s. per share.

Wilsons and Clyde Coal.—15s. per share for the year ended ended Aug. 31, carrying £28,000 forward.

MINING RETURNS.

Alaska Mexican.—Crushed 21,218 tons ore, value $35,810; saved 424 tons sulphurets, value $31,839.

Alaska Treadwell.—Crushed 76,552 tons ore, value $76,815; saved 1,454 tons sulphurets, value $63,028.

Alaska United.—Crushed 21,250 tons ore, value $21,135; saved 372 tons sulphurets, value $11,290.

Antenior (Matabele).—Crushed 504 tons, 278 ozs.; cyanide 400 tons, 61 ozs.

Brilliant and St. George United.—Crushed 1,285 tons, 1,020 ozs.; residues (tailings and concentrates) value £1,997.

Brilliant Extended.—Crushed 3,664 tons, £6,437.

British Broken Hill Proprietary.—2,563 tons crude ore produced 414 tons concentrates, containing 253 tons lead and 11,178 ozs. silver.

Cape Copper.—Ookiep.—1,010 net tons of 14 per cent., equal 141 tons fine copper. Nababeep.—4,594 net tons of 4 per cent., equals 183 tons fine copper.

Carrington's United.—Crushed 200 tons, £170.

Chinese Engineering.—Output, 22,500 tons; sales, 18,500 tons; consumption, 1,525 tons.

Clitters United.—Ore treated, 1,624 tons; mineral sold or on hand—tin and wolfram—value, £1,605; arsenic and copper-iron product, £813.

Consolidated Gold Fields of New Zealand.—Progress—Crushed 4,672 tons of ore, value £8,451. Golden Fleece—Crushed 1,012 tons of ore, value £1,685. Wealth of Nations.—Crushed 1,150 tons of ore, value £2,390.

De Lamar.—Crushed 2,650 dry tons, yielding $26,700; surplus, $1,850; ore shipped to smelters, $1,100; miscellaneous, $50; total, $29,700.

Durban Roodepoort.—Milled 11,610 tons, 2,848 ozs.; tailings 8,080 tons, 993 ozs.; slimes 3,785 tons, 218 ozs.; total, 4,059; profit, £5,550.

El Oro.—Crushed 21,638 tons ore, producing $189,028.

Eldorado Banket.—Mill crushed 2,584 tons, 1,331 ozs.

Forbes Rhodesia.—Veracity — Crushed 560 tons, 467 ozs.; cyanide 400 tons, 127 ozs. Dumbleton—Crushed 464 tons, 145 ozs. Electric—Crushed 275 tons, 57 ozs.

Gaika Gold.—801 ozs. from 2,353 tons ore crushed; 2,338 tons tailings, 203 ozs.

Jubilee.—1,278 ozs. from 4,606 tons crushed; cyanide 484 ozs. from 3,717 tons.

Jumbo.—Crushed 1,752 tons, 965 ozs.; concentrates 1,047 tons, 419 ozs.; slimes 750 tons, 150 ozs.; total, 1,534 ozs.

Komata Reefs.—Crushed 2,400 tons, £4,325.

Montana.—Drumlummon: Treated 5,000 tons tailings and fines, yielding gold 310 ozs., silver 3,200 ozs. Lucky Girl Group: Crushed 1,900 tons ore, yielding gold 790 ozs., and silver 960 ozs.

Mount Lyell.—Treated 30,632 tons of ore. In addition 1,752 tons of purchased ore and metal-bearing fluxes, converters produced 728 tons blister copper containing: Copper, 719 tons: silver, 56,835 ozs.; gold, 1,695 ozs.

Mount Cattlin Copper.—Ore sent to smelter 318 tons, containing 2,620 units copper, 94 ozs. gold.

New Rhodesia.—Ophir: Crushed 870 tons, 176 ozs.; cyanide 1,610 tons, 101 ozs.

North Broken Hill.—Treated 2,363 tons crude ore, producing 400 tons concentrates, containing 276 tons 12 cwt. lead, and 8,400 ozs. silver.

Raub Australian.—Crushed 5,379 tons, 1,048 ozs.

Salisbury.—Crushed 4,875 tons, 1,720 ozs.

Tanganyika Concessions.—Output from Ruwe 170 ozs.

Tasmanian.—Shipments of ore, 1,024 tons.

Tasmanian Copper.—Treated 3,794 tons ores, &c. (inclusive of purchased ores), producing 154 tons of matte and metallics, averaging 63 per cent. copper.

Tyee Copper.—453 tons Tye ore; value, after deducting refining, $3,740; 3,983 tons customs ore; 4,436 tons, producing 501 tons matte.

Victoria Proprietary.—Crushed 733 tons, 293 ozs.

Vogelstruis Estates.—Quartz milled, 8,100 tons, 2,165 ozs.; tailings, 5,990 tons, 577 ozs; total, 2,742 ozs.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

Nopir.—(1) It is very doubtful if the shares are worth the price named in view of the outlook in the copper market. (2) We are inclined to think this is a good speculative investment, and can find nothing in the report to change this opinion.

Timothy.—(1) It seems a pity to sell at present, and it might perhaps be as well to average to a moderate extent. (2) This also you should hold, but there is not the same temptation to average, as the price is not so low. (3) The stock was not quoted xd until October 11, and the buyer is, therefore, entitled to the dividend.

J. N.—The stock is, in our opinion, an excellent security.

J. A.—We are sorry we did not make ourselves clear, but the inference we intended to be drawn from our reply was that you should hold your stock. It is, however, impossible to say when any improvement is likely to take place.

Swiss.—The bank was established to centralise the note issue, and to regulate the money market and facilitate the transfer of money from one centre to another within the Republic. It was also to act as the Government bank. Primarily it is a bankers' bank, but it also enters to some extent into competition with other banks. (2) The notes are secured upon a combination of gold and Government guarantee.

Cropper.—We regret we could not answer your query last week. So far as is known the property will only return about the present price in dividends; there is, therefore, nothing to justify averaging. Further discoveries may be made, but there are no signs of any in the present developments. Should there be a sharp upward movement, you should sell. Meantime, the greater part of your dividends must be considered as return of capital.

J. D. I. (Charlottenburg).—(1) About the end of next year. (2) No one can say; not before another two years, we should judge, if then. (3) We certainly do not advise purchase, because all that region has proved to be so treacherous. If, however, the mine lasts, an investment at the current price should pay. (4) This company's prosperity is not over. It will probably do better again before long, and the market has been depressed by forced sales, banks compelling people to clear out. Thanks; we hold 16s. to your credit.

A. C.—(1) This is a good enough stock, but the amount outstanding is so small that it is doubtful whether you would be able to get any at the quoted price, and if you paid more there would be the loss on redemption to consider. (2) There is even less of this stock in existence, and the question of redemption is present in greater force.

W. P.—Better leave these alone just now, as we think that under present circumstances the price is likely to go lower.

C. H. B.—These might spurt up a little, but they are not worth even their present price, and it might be better to sell.

S. B.—The fall may be to some extent sympathetic, but we fear it is due more to the company's position, which is none too strong. Last year £2,500 had to be taken from reserve to maintain the dividend on the ordinary shares at the old rate, owing to the larger amounts ranking, and as extensions are still being made at a rate which does not seem justified by results, we are disposed to advise selling. Your two questions are both about the same security, and, therefore, count as one, so we hold 1s. to your credit.

NEXT WEEK'S MEETINGS.

Monday, October 21.

Arnold, J. Van den Bergh.—82, Fenchurch Street, E.C., noon.
Paterson, Laing and Bruce.—7, Australian Avenue, E.C., noon.
Sadler and Co.—Middlesbrough-on-Tees, 1 p.m.
Star of the East.—Salisbury House, 2.30 p.m.
United African Exploration.—Winchester House, 11.30 a.m.

Tuesday, October 22.

Barnum and Bailey.—Cannon Street Hotel, noon.
Bolivar Railway.—1, Broad Street Place, E.C., 2 p.m.
Consolidated Mines Selection.—Winchester House, noon.
Delhi, Umballa and Kalka Railway.—Winchester House, noon.
El Oro Mines of Mexico.—Winchester House, 2.30 p.m.
Hastings (British Columbia) Exploration.—Dashwood House, 2.30 p.m.
Indian Collieries.—20, St. Helen's Place, E.C., 11.30 a.m.
Monte Video Telephone.—Winchester House, noon.
Sheba Gold Mining.—Winchester House, noon.

Wednesday, October 23.

Buenos Ayres Great Southern Railway.—River Plate House, noon
Golden Links.—Winchester House, 11 a.m.
New Dimbula Co.—60, Gracechurch street, E.C., 4 p.m.
Somera Gold Mining.—Winchester House, noon.

Thursday, October 24

Avino Mines of Mexico.—Salisbury House, noon.
Central Egypt Exploration.—Winchester House, noon.
Cuban Central Railway.—River Plate House, 12.30 p.m.
Gramophone and Typewriter.—21, City Road, E.C., 2.30 p.m.
Hammond Bradford Brewery.—Bradford, 11.30 a.m.
Hodgson's Kingston Brewery.—Holborn Viaduct Hotel, noon.
Paraguay Central Railway.—New Broad Street House, 1 p.m.

Friday, October 25.

Demerara Railway.—Cannon Street Hotel, noon.
National Safe Deposit.—4, Queen Victoria Street, E.C., 4 p.m.
New Victorian Consolidated Goldfields.—Salisbury House, 11.30 a.m.

Plant, Green and Manton, Limited.

On a paid-up capital of £60,000 this building manufacturing business earned a nett profit for the year ended July 31 of £7,[illegible] after providing for all charges, depreciation and sinking fund for leasehold redemption. To this is added £2,[illegible] brought in, making a total of £10,[illegible], and after paying the preference and the ordinary shares receive a net cash and [illegible] per cent. to reserve, leaving £3,[illegible] to be carried forward. Trading profits were £10,[illegible] for working fund are valued at £5,[illegible], plant, machinery, &c., at £10,[illegible], stocks at £28,[illegible] and sundries, trade marks, &c., at £6,[illegible] against which the reserve fund accounts to £5,500, but is still in the business. Debentures £10,[illegible] and £10,521 owing to creditors by [illegible], each and bills [illegible] £1,410 and the position, therefore, seems satisfactory.

Mr. T. Bruce Marriott, Member of the Institute of Mining and Metallurgy, Fellow of the Institute of Chemistry, has entered into partnership with the firm of Nunn, Griffiths, and Co., mining, civil, and consulting engineers, of 62, London Wall, E.C. In future the name of the firm will be Nunn, Griffiths, Bruce, Marriott, and Company.

COMPANY MEETINGS.

CEYLON PEARL FISHERS.

The second annual ordinary general meeting of the Ceylon Company of Pearl Fishers, Limited, was held on Monday at Salisbury House, London Wall, E.C., the Right Hon. Sir J. West Ridgeway, P.C., G.C.M.G., G.C.B., K.C.S.I. (chairman), presiding.

The Secretary (Mr. T. Dundas Pillans) having read the notice convening the meeting and the auditors' report,

The Chairman said: The accounts which have been submitted to you lucidly explain the financial position, and I do not think they require much comment from me. We propose to pay dividends on the ordinary and preference shares on the same scale as last year—that is to say, 21 per cent. on the ordinary shares and 75 per cent. on the deferred shares. Ample provision has been made for writing down the preliminary expenses and the cost of buying vessels, &c., from the Ceylon Government, and the capital redemption fund stands at a satisfactory figure. Then it is worth noting that the interest we obtained on our floating balances, in addition to the balance which we propose to carry over, is sufficient to ensure the payment of the preferential dividend of 6 per cent. on the ordinary shares for the next two years. We started this business with a paid-up capital of £90,000; we have expended £141,000, of which nearly £51,000 was in the shape of dividends, and we have now in hand £113,000, of which £102,000 is in London, most of it on deposit against gilt-edged securities, and £10,367 is invested in Government securities in Ceylon according to the terms of the lease. The fishery of 1907 was quite a success, and it is especially interesting from the fact that it is the first fishery that has been managed by our own officers. It would have been unreasonable to expect that the phenomenal catches of 1905 and 1906 would be repeated in the third year. The catch of 1906 was 44 million oysters, and that of 1907 amounted to 14 million oysters. The earnings of 1906 were £92,000, and if our 14 million oysters had been sold at the same price as obtained in 1906 our earnings in 1907 would only have been £30,000, while, as a fact, they were £69,000, and for this very satisfactory result we are mainly indebted to the improved methods of conducting the fishery which have been introduced. Our relations with the Government have been most cordial. The fact is that the Government is our partner in this business. The Colonial Office has recently published a circular on the subject of ex-Governors taking directorships in companies operating in the colonies which they had once administered. That circular, I understand, does not absolutely debar ex-Governors from joining companies such as this, but it enjoins caution, and, so far, I am in complete accord with that circular. I think it would have been wise if ex-Governors, before joining companies which are to operate in the territories which they once administered, were to consult the Colonial Office. When I was approached by Colonel Foss, who initiated the idea of this lease, I agreed to join the syndicate under certain conditions, the principal of which was that the Colonial Office should have no objection. The Colonial Office had no objection, and in the course of negotiations with the Ceylon Government, from which I held myself severely aloof, that Government expressed a desire that I should be chairman of this company, because it was entirely in their interests that there should be on the board a man who knew the country, who was acquainted with the natives, and who sympathised with their prejudices. This lease of ours has been the subject of much abuse and exaggerated statements, but it has proved to be beneficial not only to ourselves, but to Ceylon. While we have been benefited by this fishery to the extent of £20,000, the Ceylon Government has benefited to the extent of £35,000 or £36,000. The great justification of this lease was the obligation to develop the fisheries. The Ceylon Government was not able to develop those fisheries itself; it had not the men or the money to devote to the purpose, which was more or less speculative, and therefore we undertook that work. We have expended some £7,000 or £8,000 this year. How has it been expended? Well, first of all as to transplantation. The banks have been inspected, and there happened to be no oysters suitable for transplantation this year; but every two years there is generally a fall of spat on the Periya bank, and therefore next year there will probably be large operations of this kind. Then we made experiments in suction dredging. The Madras Government were good enough to lend us a dredger, but the results were negative, as the vessel was altogether unsuitable. Then as regards cultching—that is, the deposit on the banks of brick tiles, &c., to which the young oysters can attach themselves—this has been done on an unprecedented scale. Then we have always realised that if we wished to make this lease a complete success we must call in science to our assistance, and we have established a biological laboratory at Colombo, which will be fully equipped. The principal methods which are engaging the attention of our officers are the problems of the study of the life cycle of the pearl-inducing larvæ and the best methods of stimulating the growth of the oyster and of the pearl which it produces. Then the drift currents are being studied, and that will enable us to ascertain whence come these immense spat falls which cover our banks. The charts of the banks are being completed and corrected, and when that is done there will be a physical survey of the sea bottom, and the result will be to show us the area occupied respectively by rock and sand, which will be very useful information. Now, what are the prospects of the fishery in 1908? We hope confidently that there will be a fishery, but we cannot speak with any certainty until we know the result of the inspection in November which will be made by Mr. Hornell. But we do base hopes of a fishery in 1908 on the fact that in 1904 Mr. Hornell discovered that the Cheval was covered with oysters 2½ to 3½ months old, which if matured will be fishable this year, and in November, 1906, he reported that these oysters were all intact and in excellent health; they are fat and well grown; they will shortly emit spat, and I hope for a good spat fall. With no untoward accident these oysters should give an excellent fishery in 1908. That is all the information we have on the question, and, as I say, we cannot speak with any certainty till a month or two later, when we receive Mr. Hornell's inspection report. But, as I said last year, we hope much from more frequent and more thorough inspections. I hope I have shown you that the position and the prospects of this company are satisfactory.

Mr. J. H. M. Shaw seconded the resolution, which was carried unanimously.

BUENOS AYRES WESTERN RAILWAY.

The 18th ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held on Wednesday at River Plate House, E.C., Mr. Henry Bell (the chairman) presiding.

The Chairman said it was not the record of a year of unusual prosperity, but of what might be taken as an average year—one of partly good and partly bad harvests, of a certain amount of locusts, and of a certain number of labour troubles, but ending with good results. The increase of £182,042 in the working expenses was principally owing to salaries and wages, £111,062, and coal had cost £67,902 more. As regarded salaries and wages, 67 per cent. of the advance was attributable to the expansion of the company's system, and from the additional volume of traffic handled, and the consequent increase in the number of employees, while the remaining 33 per cent. of the amount was due to the higher wages owing to the great demand for labour and the enhanced cost of living. Another cause for increased working expenses was not so apparent—namely, the great difficulty the company had with labour generally, and the prejudice and expense involved by the strikes which had occurred. Nevertheless, the year had been a favourable one in many ways. There had been a good wheat harvest, and the general manager wrote that there were still 100,000 tons of old wheat to be transported. The published weekly traffics had for the last two months shown decreases, which now amounted to £43,000 gross as compared with the figures of the corresponding period of last year. Mr. Lertora, the general manager, attributed this to two causes—that the maize, which had been picked in wet weather, was not yet dry or hard enough for shipment, and that the wheat was being held back for better prices. Of all the favourable things the year had brought the company he thought that the change in the attitude of Congress, the people and the Press towards foreign capital, especially that which was invested in railways, was the greatest. A Bill had passed the Chamber of Deputies and the Senate embodying exactly the principle for which the company had been contending—no Government intervention in their tariffs until their gross earnings on an average of three years exceeded 17 per cent. on the share and debenture capital. Coupled with this it was granted that working expenses were to be taken at 60 per cent. of the gross receipts, and if they could be shown to exceed this proportion on the three years' average, then the 17 per cent. was to be increased to preserve the same proportion between gross and nett. The Bill dealt principally with new concessions, but one clause of it gave the existing companies the option of coming under its provisions, for it provided that in exchange for 3 per cent. of their nett earnings, the companies accepting it should have for 40 years exemption from Customs duties, national, provincial and municipal taxation. The directors had cabled their desire that the company should come under the new law. The 3 per cent. of the nett earnings was to be spent in improving the roads in the neighbourhood of the line, and this outlay would indirectly be of much benefit to the company. The measure would greatly encourage railway enterprise in the Republic. A cable had just been received stating that the prospects of the undertaking were exceptionally bright, and if all went well the coming season would be a very busy one. He saw no prospect of relief as to working expenses; coal was dearer than ever and labour not less so, but on the other hand, if the promise of the present harvest was fulfilled, he saw before the company another year of great prosperity, quite counterbalancing these drawbacks. Mr. J. W. Todd seconded the motion, which was adopted. A further resolution was passed to convert into ordinary stock the 49,375 ordinary shares of £10 each, being the balance of the 100,000 like shares created by the resolution of October 19, 1904, and the 120,782 ordinary shares of £10 each, being part of the 200,000 shares of £10 each created by the resolution of October 18, 1905.

CENTRAL URUGUAY RAILWAY OF MONTE VIDEO.

The ordinary general meeting of the proprietors of the Central Uruguay Railway of Monte Video was held on Tuesday at River Plate House, Finsbury Circus, Mr. Henry Bell (chairman) presiding.

The Chairman, in moving the adoption of the report, said that during the year the company had made a record in both gross and nett earnings, and the allied companies had been equally successful. The line that most concerned the Central Uruguay Railway was the Western Extension, and, although this was not doing as well as they could wish, yet it was pleasing to note that the earnings during the last four years had consistently improved. The gross earnings for the year on the Central Uruguay Railway had been £493,681, or £51,599 more than last year's, and on the combined system £749,643, or an increase of £74,827. The improvement had been general and not confined to any one district. Owing to careful administration, the working expenses had only been 49.61 per cent. of the

gross receipts of the Central Uruguay Railway, being an increase of 1.55 per cent., and in the case of the combined systems the working expenses had been 51.85 per cent. of the gross receipts, or a rise of 2.53 per cent. These increases were attributable to the greater cost of coal and to the higher wages and salaries now commanded by labour in Monte Video. The Government were making efforts to attract immigration into the country, and thus obtain the labour which was badly wanted. He had been asked why Uruguay did not make the same rapid progress as Argentina. The conditions of the two countries were very different. Argentina was almost wholly an agricultural country, and when it was fortunate enough to have a series of good harvests, as it had had for the last five years, its prosperity was amazing. Uruguay was more of a grazing country. He feared that immigration into the country had been prevented by the unfortunate reputation which it possessed in the matter of revolutionary outbreaks and the unsettled condition of the political situation generally. There had been a certain amount of justification for this in the past, but during the last few years a more peaceful state of affairs altogether had prevailed, and a growing sense of security was being engendered. The board believed that it was the aim of President Williman and his Ministers to do everything they could which was likely to be conducive to the continuance of the present satisfactory state of affairs. The progress of the railway during the last ten years fully justified the additional capital powers for which the company were now asking. In order to cope with the increased traffic of the railway and branch lines it had been found absolutely necessary to provide additional rolling stock and other facilities for handling the material. This had involved an expenditure of no less than £139,634 during the year, and had resulted in an overexpenditure of £205,669 on capital account. The board, therefore, recommended that the capital should be increased by the creation of 50,000 shares of £10 each. It was proposed to make an issue of £400,000 forthwith in the form of preference shares carrying interest at 5½ per cent. per annum, and to offer the shares to the proprietors. The shares would be non-cumulative, but preferential as far as dividend and capital were concerned. A cable had just been received from Uruguay stating that the economical and political situation and general prospects were most satisfactory.

Mr. H. C. Allen seconded the motion, which was adopted; and a resolution was afterwards passed declaring a balance dividend of 2½ per cent., making 5 per cent. for the year, on the ordinary stock.

An extraordinary general meeting was subsequently held, at which a resolution was passed to increase the capital in accordance with the recommendation of the directors.

A further resolution was also carried confirming the borrowing powers granted to the board in 1891 and extending them to the proposed new issue of shares.

Meetings of the Central Uruguay Northern Extension Railway and Central Extension Railway Companies were afterwards held, at which Mr. Henry Bell again presided and gave some very encouraging statements as to the prospects before those companies.

Both the reports were adopted.

DUNDERLAND IRON ORE.

The ordinary general meeting of the Dunderland Iron Ore Co., Limited, was held on Tuesday at Cannon Street Hotel, E.C., Sir Joseph Lawrence (chairman) presiding.

The Secretary having read the usual notice and the report of the auditors,

The Chairman, in moving the adoption of the report, congratulated the shareholders upon two facts, (1) that they had begun a steady and substantial shipment of iron ore briquettes of high quality, and since the issue of the report had shipped a further 2,000 tons, and had two vessels now loading 5,000 tons for the Barrow Hematite Steel Company and the Consett Iron Company, their stock in hand on Monday being 6,000 tons; (2) that since the last meeting they had made a successful issue of debenture stock. He further stated that the directors had a large holding in the company, and said that when the further capital which they would be asked to sanction at that meeting was called for, the directors would take up their proportions as they had done in the past, and would be supported by some of the larger shareholders. He then gave particulars regarding the working of the plant in Norway, and said that "the commercial problem" which they set out to solve, and which they were surely solving by degrees, was to obtain a supply of high-class iron ore, because our native sources of supply were giving out and foreign supplies were becoming insufficient to meet the demands of the iron and steel industries of this country. They introduced a system of magnetic separation under the advice of Mr. Edison, and it might be said with truth that twelve out of the last fifteen months had been occupied in more or less experimental running. Many improvements had been, and were still being effected, and they had achieved good results in spite of every species of difficulty and discouragement. But for labour troubles, they would have shown a more satisfactory result. When they looked back to the hopes they expressed at the inception of the enterprise four cardinal satisfactory features stood out to-day in vindication of their forecasts, viz., (1) that they had the crude ore in abundance; (2) that when mined, crushed, ground and concentrated it proved that a concentrate rich in iron could be obtained from the Dunderland ore, the average percentage of iron in the cargoes already shipped being 63 per cent.; (3) that this concentrate in a briquetted form was suitable for the blast furnace; (4) and lastly, it had been readily sold at a higher price than was originally expected for it. Dealing with the provision for further capital, he said that £100,000 in cash would be about their requirements, and they hoped that the increased output in a year's time would render it unnecessary to make fresh demands for support on the shareholders. After alluding to certain attacks which had been made upon their report in the Press, he said that they welcomed criticism at all times so long as it was free from any taint or suspicion of interested motives.

A protracted discussion followed, in the course of which the directors and the management were severely criticised. Mr. Holloway said that he had to express great dissatisfaction at the result of the working disclosed in the report submitted. He complained bitterly of the heavy expenditure which had been incurred between the years 1905 and 1907, and that notwithstanding the fact that in the year 1905 they were told by the then chairman (Sir David Dale) that their plant was nearly finished.

The Chairman said that the purposes to which that money had been devoted were fully dealt with in the reports which had been sent to the shareholders.

The resolution for the adoption of the report was agreed to.

The Chairman then proposed a further resolution whereby power was given to the board to raise an additional sum by borrowings, such sum outstanding not to exceed an amount equal to one-half of the nominal capital of the company for the time being issued, instead of one-third as at present provided.

Mr. C. D. Rudd seconded the resolution, which was agreed to, and the proceedings then terminated.

WESTERN CANADA LAND COMPANY.

The first ordinary general meeting of the shareholders of the Western Canada Land Company, Limited, was held at Salisbury House, London Wall, E.C., yesterday, Major-General Sir R. B. Lane, C.B., K.C.V.O., chairman, presiding.

The Secretary (Mr. W. J. Challis, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said they had realised £87,200 by the sale of 40,000 acres. As this land cost them £53,000 they had to put that to the credit of capital account, and it left, after deducting agents' commission, &c., a nett profit of £28,500, which was equal to nearly 60 per cent. profit on the original purchase price of the land. Interest received and accrued on instalments on land sold amounted to £2,024 and transfer fees to £258, thus leaving a nett profit of £26,057. He thought they would agree with him that this profit was satisfactory. Although they had only sold 10 per cent. of their land, yet the profits, after putting on one side the original purchase price of the land, still amounted to a sum sufficient to pay 1s. per share on the whole of their capital. The company did not require the money, and they felt they were only acting in the interests of the shareholders in recommending a dividend of 1s., free of tax. This would leave them a credit balance sufficient for their needs. In the first instance the company raised money by shares, and by a loan from the bankers to pay for the property. They had sold sufficient of their property to repay the whole of the loan made on capital account and to give them a profit over and above their expenses of £20,000, but as the proceeds of land sales were payable partly in cash and partly in annual instalments, with interest at 6 per cent. per annum, they discounted the instalments to the extent of £35,000. It was really much the same as though they had received cash payments and bills, and had discounted the bills like any other trader. Having only discounted £35,000, there was outstanding a further £30,000 which bore interest at 6 per cent. After paying the dividend they would have 450,000 acres of land, £30,000 due on instalments bearing 6 per cent. interest and £62,800 standing to credit of reserve fund against an issued capital of £450,000. The agents were of opinion that the sales in the autumn would be good, especially as the crop in the Saskatchewan valley compared very favourably with those of other parts of Canada. Another satisfactory point was that although sales might be on a reduced scale owing to the American land agencies being kept out of the field temporarily by monetary conditions, prices were not only well maintained, but were actually higher than previously, so that he thought they could look forward with confidence to another satisfactory year.

Mr. A. M. Grenfell, in seconding the adoption of the report, congratulated the shareholders on being able to pay off the whole of the bank loan and also a dividend of 1s. per share, while also carrying forward a balance of £62,000. At the same time their property stood in their books at 50 per cent. of the valuation recently made by an independent expert in Canada. He had recently travelled through Canada, and had satisfied himself as to the value of their property. Some people thought that business in Canada was entirely dominated by the state of affairs in the United States, but this was a great mistake. Canada might be slower and more conservative, but business was not subject to the hysterical ups and downs of the United States. He did not believe, therefore, that there would be a material setback in Canada even if Canada had to mark time for a bit. Nor did he see signs of overtrading in Canada. At the same time Canada had had to strain every nerve to keep up with her present development. As the emigration of Europe was focussing its attention on the splendid virgin wheat lands in the West, business there must show progressive increase. It was difficult to gauge the possibilities of the company, but without relying on anything except the value of the land as agricultural land, they had an extremely valuable property, and one which offered both good security and the certainty of a very large profit.

The report was adopted unanimously, the retiring directors re-elected and the dividend of 1s. per share declared.

THE JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

REPORT OF DIRECTORS,

To be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 19th day of November, 1907, at 10 a.m.

Your Directors submit herewith the Balance-Sheet and Profit and Loss Account of the Company for the year ended 30th June, 1907, showing a balance of profit of £45,938 18s. 8d., which they recommend be carried forward to next account.

It will be seen from the Profit and Loss Account that, excluding the balance brought forward from last year, the total revenue amounts to £401,947 17s. 3d., and the total expenditure to £69,063 3s. 9d., leaving a net revenue for the year of £332,884 13s. 6d., which is an increase of £71,313 2s. 0d., as compared with the previous year.

Your Directors, however, regret that, owing to the general adverse conditions which have prevailed during the past year and the consequent shrinkage in market values, the necessity has again arisen to write down the value of the Company's shareholdings and other assets by the sum of £310,534 1s. 9d. Of this sum, £278,586 18s. 6d. has been written off shareholdings on account of depreciation estimated as at the 30th June last. But while the market value of certain of the Company's shareholdings has fallen, that of others shows an appreciation largely in excess of book figures, and this appreciation, amounting to £465,283 10s. 8d. on the 30th June last, has not been taken into account.

The amount written off for bad and doubtful debts is £7,269 17s. 7d.. of which some portion may ultimately be recovered.

With reference to your investments in Real Estate, your Johannesburg Town and Suburban Properties stand at £652,357 17s. 7d., but these properties were, in May last, valued by the Municipality at £1,328,618, or £676,260 2s. 5d. above the values in the Company's Books.

Regarding the Gold Mining Companies in which this Company is interested, their position generally shows improvement; working costs have come down, profits are higher, and satisfactory dividends have been paid by the New Rietfontein, New Primrose, Glencairn and Witwatersrand Companies; the New Spes Bona, New Heidelberg Roodepoort, and Consort Properties, which were for a long time lying fallow, are now let on tribute. The position of the Buffelsdoorn Company we would, however, mention does not show improvement, and, as its liabilities have been increasing, it has been deemed advisable by the Directors of that Company to take steps to place it in liquidation.

While the past year has been, as indicated, one of acute depression, the strong position of your Company has been well maintained, and only better times are awaited to bring it once more to the dividend-paying stage. That these times are not far distant your Directors are hopeful, as the mining industry is established on a thoroughly sound basis, and the Transvaal Government has repeatedly given its assurance that it intends to foster and further its progress in every possible way.

In terms of the Articles of Association, four of the Directors, viz., Sir John Purcell, K.C.B., Mr. H. S. Caldecott, Mr. Julius Friedlander, and Mr. Isaac Lewis, retire by rotation and offer themselves for re-election.

Mr. E. P. Solomon has retired from the Board, but it is not intended at the present time to fill the vacancy.

Messrs. J. P. O'Reilly and Henry Hains, the present Auditors of the Company in Johannesburg, and Messrs. Chatteris, Nichols and Co., the Auditors in London, retire from office, and offer themselves for re-election.

By order of the Board,

THOS. HONEY,
London Secretary.

London
17th October, 1907.

BALANCE-SHEET, as at 30th June, 1907.

CAPITAL AND LIABILITIES.

Authorised Capital (under Resolution of 23rd November, 1905)	£4,500,000 0 0		
of which £4,345,000 is Registered Capital.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 512. New Series. SATURDAY, OCTOBER 26, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the ollowing terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland,* and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Mr. Morley on India's Glories.

The present Secretary of State for India may always be trusted to make the best of a case, and his speeches to his constituents this week can be no disappointment to his friends. Never was the sacred duty of the conqueror more eloquently demonstrated than in Mr. Morley's speech at Arbroath—never were "reforms" that in all probability change nothing for the better in the lot of the Indian people more smugly outlined. But when all the glow of the eloquence has faded away the fact remains that our rule in India is and will continue to be pure despotism. And because it is despotic the breach between rulers and ruled is ever widening. It has now become "a great gulf fixed," and Mr. Morley will understand the Scriptural allusion. A well-intentioned despotism it may be; the feelings and actions of the rulers need never at all resemble those with which the Mahometan masters of the Peninsula, or most of it, regarded the unfortunate victims of their tyranny, and yet English and Indian must drift ever further apart until the hour for the final severance comes, as come it must. The hour may be long distant, but between now and then many perils must be encountered. Faithful Mr. Morley did not hide these perils, or such of them as he knows of, from his audience at Arbroath. He avoided militarism, except for some pretty rhetoric about telegraphing to Lord Kitchener to disband the native army. "You would not have me do that!" he exclaimed. Oh, dear, no; such a thing has never been thought of. We may have no use now for this army outside India, thanks to the accord with Russia and the brotherly compact with Japan; but the army, it seems, is essential to the maintenance of order and good government within India itself. And the consequences of this military necessity? Mr. Morley, without connecting the two, set them forth in the following passage, with which he ended his speech. It is so true and so eloquent that we cannot resist the temptation to quote it:—

At this moment the Government of India is a grim business. If there are no rains this month, the spectre of famine seems to be approaching, and nobody can blame us for that. Nobody expects the Viceroy and the Secretary of State to play the part of Elijah on Mount Carmel who prayed for rain, and saw a little cloud like a man's hand, until the heavens became black with winds and cloud and there was a great rain. That is beyond the reach of Governments. All we can say is that never before was the Government found more ready than it is now to do the very best to face the prospect. Large suspensions of revenue and rent will be granted, allowances will be made to distressed cultivators, and no stone will be left unturned. The plague figures are terrible. At this season plague mortality is generally quiescent; but this year, even if the last three months of it show no rise, the plague mortality will still be the worst that has ever been known, I think, in India's recorded annals. Pestilence during the last nine months has stalked through the land, wasting her cities and villages, slaying its millions, uncontrolled and uncontrollable, so far as we can tell, by human forethought or care. When I read some of these figures in the House of Commons, there were considerable loudish cries of "Shame." I felt that these cries came from the natural sympathy, horror, amazement, and commiseration with which we all listen to such ghastly stories. But of course no shame to the Government of India. If you see anything in your newspapers about these plague figures, remember that this is not like an epidemic here. In trying to remedy plague, you have to encounter tremendous habits and prejudices. Suppose you find plague is conveyed (some think it is) by a flea upon a rat, and suppose you are dealing with a population who object to the

taking away of life. You see at once the first thing that would occur to you is countered. The Government of India have applied themselves with great energy, with fresh activity, and they believe they have got the secret of this fell disaster. They have laid down a large policy of medical, sanitary, and financial aid. I am a tremendous niggard of public money. I watch the expenditure of Indian revenue as the ferocious dragon of the old mythology watched the golden apples. I do not forget that I come from a country which, so far as I have known it, is most generous, if it is also most prudent. Nevertheless, though I have—both of my own temperament and, I am sure, of the prejudices of my constituents—to be most thrifty, almost parsimonious, upon this matter the Council of India and myself will, I am sure, not stint or grudge.

A most vivid picture this of the effects of British rule in India—hunger, famine, plague. The Government of India is not to blame, Mr. Morley pleads. It cannot rule the clouds or invoke the magic of Elijah, and that is true, though the comparison does not seem a happy one. Elijah belonged to a primitive age, in which the resources of finance were unknown and "scientific husbandry" an unsuspected gift of the far distant future. Jerusalem had no money market either, and when the heavens failed, all failed. With Mr. Morley it is different, notwithstanding the untaught primitiveness of Indian husbandry. A famine comes, and he can promptly arrange to borrow as much money on the London market as may be necessary to pay for the grain hurried into the "stricken districts," so that the people, or some of them, may be kept alive. The City is his Mount Carmel, and 4 to 5 per cent. his magic. But surely it is remarkable that after 150 years of our rule the people of India should be as helpless before a drought, without the help of the usurer in London, as Israel was without its Elijah. Why is it that the state of the people under us in India is no better to-day than that of the autocrat-consumed Russian cultivator? Is it not because our principal business in India is to collect taxes levied with little or no knowledge of the underlying economic circumstances of the taxpayer? Plague, we can assure Mr. Morley, has not laid hold of the millions of India through the poison transmitted by "a flea on a rat"; it kills them because they are hungry. From one year's end to the other at least one fourth of the native inhabitants of India do not get enough to eat, even in the years of bounteous harvests. The proceeds of their labour, their crops, do not remain with them. Much more than they can spare is demanded by the tax-gatherers, because debt interest, pensions, and "home charges" have to be provided in London, because the cost of the alien administration, above all the cost of the army, has mounted and mounted until it has become deadly, a permanent menace to British rule.

Why does not Mr. Morley study this aspect of his problem? He is by his own description quite frenzied for economy, all for thrift, and yet he peacefully accepts the present budget of India as a thing inevitable, makes no demur over the demands of Lord Kitchener for more and ever more "efficiency," which means always more money. Nothing has thus far been done by him to curtail the outlay of money borrowed in London upon railway extensions and improvements, made wholly without regard to the country's economic weakness, and he has left untouched the currency sweating, whose ultimate product will be an act of bankruptcy on the part of the Simla Government that may change many things out there as well as here. What is the forced currency of India to-day but a sort of preliminary act of bankruptcy, out of which the Government at first has made great profits at the cost of an already much impoverished people, but whose wind-up must be a suspension of cash payments by the supreme Government? The whole course of history teaches us to look for this as the one possible end of all "currency experiments" of this description. At the last the robber is robbed, and worn, exhausted humanity escapes destruction, as it were, by the skin of its teeth. It is well, perhaps, that Mr. Morley should be eloquent, but his eloquence betrayed him when he fell to reciting the great and beneficent provisions the Simla Government is making to cope with a famine mainly of its own creating, and it is pitiful to behold a great official casting the blame on nature, as if India never had had famines before, as if the stores of grain formerly kept by the people for insurance against these calamities had not all vanished long ago to meet the tax-gatherer's demands. Famine in India! It is chronic; famine and plague are twin destroyers born of a fiscal stripping of the people more systematic, more decently conducted, but also more deadly than the Indian natives were ever subjected to by the worst of their early conquerors. So essentially bad is the economic condition of the Peninsula at the present time that we often fear its Government may be drawn before long into the whirlpool of liquidation by which all nations are now in process of being brought back from the mountain tops of their vanity to humble mother earth. But Mr. Morley will be prepared to give us a most graceful and aptly-phrased discourse on the pleasures and advantages of bankruptcy when it comes.

Economic and Financial Notes.

County Council Capital.

An alarming picture was drawn of the state of County Council finance by Lord Midleton at this week's meeting. His figures are doubtless true, but hostile to the old majority though he strove to be, he hardly conveyed the impression that the *Daily Mail* would stamp upon his speech, viz., that the Progressive Council had been guilty of "bad finance." What really happened was that the late Council pressed forward with its schemes for the improvement of London without regard to consequences produced in the money market by the financial demands of the South African war. Then on the top of its ordinary programme the late Government placed the charge of London education, and from one cause or another more or less beyond the control of the Council, its demands for borrowed money have grown until, as Lord Midleton said, in April last the commitments of the Council on capital expenditure came to about £17,000,000, with a probable addition of £4,000,000 or £5,000,000 under the Electric Lighting Bill and a possible addition of £3,000,000 for asylums. These are extreme figures, at any rate those relating to electricity and asylums, but there can be no doubt whatever that London, the great metropolis with its teeming population, could make a good use during the next five or six years of £25,000,000 or £30,000,000 of money raised on loan could it only get the market to lend as much on reasonable terms. Putting aside altogether the electric scheme brought forward to combat a monopolist raid made by the Anglo-Continental syndicate that helped the present majority of the Council into power, there is the work of improving the port as well as the requirements of the people in the matter of extensions in the tramway system, and education is continually demanding more money. Lord Midleton said that Mr. Hayes Fisher by his diligence discovered something that would seem to have looked to his lordship like something of the nature of a job, involving an outlay that might have reached £1,000,000 in connection with secondary schools, but probably enough much more money than that would be required to equip London with an efficient system of primary and secondary education.

There is no end, in short, to the requirements of the metropolis, but they will have to be moderated and kept down, simply because the money cannot be raised, except on terms far too onerous for the ratepayer. Beyond a certain moderate annual amount, indeed, it would be impossible to borrow money on any terms, because the market would break down. In view of this and of the fact that, as Lord Midleton put it, the expenditure in 1889 was £2,600,000 and to-day £9,200,000, that in 1889 the capital of the debt was £17,500,000 and now it is £48,000,000, with further commitments of over £20,000,000 in sight, it is doubtless most necessary that the utmost vigilance over

plans and estimates should be exercised. And if it be indeed true that the present majority of the Council has devised improvements by help of which the various spending committees of the Council will be kept in hand, and their tendency to launch into expenditure, without authority from the representative body as a whole, stopped, it will have done a memorable work, deserving the thanks of all citizens. Upon the utility of the projected changes we can offer no opinion, being ignorant of the business usages established by the Council, but there can be no doubt that economy must be exercised continuously, and even to an extent which may seem to deny citizens many of their legitimate demands. Whether they like it or not, County Council and borough councils, all authorities having liberty to borrow, will have to go slow for years to come. At the same time, the inevitableness of most of the expenditure now in progress or immediately projected ought not to be lost sight of. A body like the London County Council cannot stop midway. It must provide schools for the young, it must electrify the tramways which have become its property, it must extend these tramways, provide the additional sewerage works for the growing population, build bridges, drive tunnels, improve roadways, and in many other directions spend money which the ratepayer declines to furnish direct out of his pocket. Therefore while the municipal authority continues to perform its functions it must borrow. That is the law of its being, and it is wholly useless for a gentleman like Lord Midleton and his colleagues of the majority to hold up their hands in horror, and assume an attitude of blame towards those who have in this respect only done their duty.

The Manchester and Liverpool District Bank Absorption.

In buying the Lancaster Banking Company, the Manchester and Liverpool District Bank has taken a big step forward, and will now come into the first rank amongst the great banks of England. It seems to be giving very good terms to the Lancaster Bank, but then the business acquired is old, and, we are assured, a clean and solid one. Its liabilities on deposit and current accounts, &c., amounted to £5,232,000 on December 31 last, and this, added to the latest figures of the Manchester and Liverpool District Banking Company, will bring the total liabilities of the combined banks up almost to £21,000,000. The paid-up capital of the Lancaster Bank is small, only £302,500 in £35 shares, £5 10s. paid, the odd 10s. having been provided out of profits. There is also a reserve fund of £300,000, and the combined paid-up capital, with the 33,000 new shares of the District Bank to be created, to be given in exchange for the 55,000 shares of the Lancaster Bank, will therefore be £1,896,000, while the combined reserve will stand at £1,970,000, notwithstanding the fact that the District Bank transferred £185,000 from its reserve at the end of June last to write down the value of its investments. It is one of the few banks that hold their Consols at 82, and a good lump of that stock it possesses, for the balance-sheet value is £911,112, and the par value £1,111,113. The Lancaster Bank has an authorised note circulation of £64,311, and at the date of its last balance-sheet the actual circulation was £39,165. As the purchasing bank has a London office, this circulation will have to be surrendered, giving the Bank of England power to issue its own notes to an amount considerably in excess of the actual circulation of the Lancaster Bank. When carried through and on the basis of the figures given, the assets of the combined bank will show some imposing totals. Advances, for instance, will be raised to nearly £12,500,000 and cash to £2,819,000, while money out on short loan, of which the Lancaster Bank has very little, will amount to about £1,500,000, while the total of the investments will be raised to more than £4,590,000, those of the Lancaster Bank being £1,455,000. Its report does not say by how much the book value of these investments has been written down, but doubtless that has been attended to. The Lancaster Bank is not a large bill discounter, its total assets of that kind being little more than £359,000, but even so the combined total will be nearly £3,200,000. And the buildings acquired will bring the aggregate value of that item up to about £453,000, for the possessions of the Lancaster Bank in this form are valued at more than half the very conservative total set against bank property in the District Company's balance-sheet. The aggregate of the combined balance-sheet will be nearly £25,500,000, and doubtless future years will see further expansion.

What price is the District Bank going to give for the large business thus acquired? The question is somewhat difficult to answer, because the mode of payment is rather out of the usual. Shareholders in the Lancaster Banking Company are to receive three shares in the District Bank for every five of their own surrendered, plus a guinea per share in cash. At the current market price this would mean £144 exchanged for £147, but at the par figure shares worth £30, those of the Manchester company being £12 paid, will be given for shares and cash amounting to £32 15s. The shares of the District Bank are £60 nominal, £12 paid, of which £2 has been contributed out of accumulated profits, and those of the Lancaster Bank £35 nominal, with £5 10s. paid. In making the exchange, therefore, the Lancaster Bank shareholders assume a larger liability on the individual share, but their aggregate liability on the three shares of the District Bank as against the five of their own will be nearly identical, and in the matter of dividends we expect they will also be gainers, although it is a little difficult to work out what the results will actually be on the basis of recent payments. The dividends paid by the Lancaster Banking Company work out at 25 5-11 per cent. per annum, and the District Bank pays a regular dividend of 17½ per cent. per annum, with occasional bonuses, as when £2 extra per share was devoted to raising the amount paid up on its shares to £12. On the basis of the dividends alone the Lancaster Bank shareholders will be exchanging 126s. in dividends for 120s. surrendered, but no doubt the assets justify the price. The directors of the Lancaster Bank, it should be added, will become members of the District Bank board, and continue to supervise the business hitherto under their charge. The Lancaster Bank is taken over as from July 1 last, and the new District shares will rank for the full dividend at once. Meetings will be held in Manchester and Lancaster on Monday week to ratify the provisional agreement.

European Petroleum Company.

Rather a better exhibit is made by the board of this company for its year ended May 13 last (April 30 o.s.), but it does not avail the shareholders in the least, for the directors have set aside £70,000 to a depreciation and renewal reserve, so that the year ends with a debit balance of £37,747, making the entire debit against profit and loss £158,483, and there is no such development shown by the business as would sustain a hope that the current year is going to do better. There was only an increase of 71,531 poods in the output of crude oil, and the increased profit of £27,327 shown on the year's trading came entirely from the improved price obtained for the oil. It fluctuated between 22 and 30 copeks as compared with 17 and 28 copeks in the preceding year, and if the production had equalled that for the twelve months ended May 13, 1905, which was 10,243,000 poods, whereas last year's was only 5,412,000 poods, doubtless a handsome profit would have been shown, enough to leave something to the credit of profit and loss, to be utilised for writing down the debit balance thereon. Even then, however, no dividend would have been available for the shareholders, and the balance-sheet is of the most distressing description. The company owes the sundry creditors £103,956, and debtors owe it no more than £22,190, while its cash, including £410 in the hands of the trustees for the debenture-holders, comes to only

£6,272. In the balance-sheet, moreover, there is an entry of £165,220, representing a discount of 50 per cent. on an issue of £300,000 second debentures, together with the expenses of issue, so that, including the deficiency on profit and loss, the company is on these two items alone £320,000 to the bad, and the £70,000 now written off on account of depreciation and wells renewals, Leaseholds, &c., only brings the total depreciation allowance up to £390,374. The nett debt, moreover, in the form of first and second 6 per cent. debenture stock, amounts to £677,414. There seems to be no hope for this unhappy company except in reorganisation, and if that could be accompanied by a consolidation of several of the English petroleum companies into one concern it might be possible to look forward to better returns. The profit, it may be added, for the year, after providing for repairs to steamers and working charges, came to £75,439, and the general charges were somewhat higher than a year ago, although the directors waived £1,360 of the fees due to them, the total of which was £3,940. They took only £2,580, and repairs to steamers cost £3,761 less at £9,918, but the charge for debenture interest is heavy at £39,164, and in addition the revenue had to provide £4,021 for interest on floating loans, the total of which entered in the balance-sheet is only £12,000. Presumably, therefore, some portion of the £134,000 due to sundry creditors is borrowed money. Altogether the interest charges took £43,185, so that there was a surplus of £32,253, the whole of which and £37,747 more was required for depreciation. It is to be wished that a somewhat fuller statement of the actual position of the company had been given in the directors' report, but doubtless the absence of information will be supplemented at the forthcoming shareholders' meeting. The fact most prominent in the accounts is that capital and credit aggregating £1,888,622 gave the holders of £1,079,772 of it about £38,000, less than nothing.

Reforms in Rhodesia.

After dwelling among the earth gods of Olympia for so many years, and emitting from time to time real Imperial rescripts of the most dignified, not to say pompous, description, the directors of the Chartered Company some time ago seem to have come to the conclusion that they might as well learn a fact or two, and do something. A selection from their number has accordingly been out in the extensively imperial territory under the great company's sway, and met there Dr. Jameson, together with the local officials and representatives of the settlers, the imposing white population of—is it 10,000 or 15,000?—whites. As a result of all their colloguing and nosing around they have arrived at certain wise and most orthodox conclusions, and made certain discoveries of the nature of rudimentary lessons in live and let live, in consequence of which it has been decided to introduce sundry reforms. The nobleman, gentlemen, and lawyer found, for example, that the country was overstaffed—too many officials and too much money going in Government expenses—so reform is to be applied in that direction, and a few good fellows will be wanting berths. They have also discovered, wise men as they are, that the inhabitants do not relish the manner in which the Chartered Company has put itself in a position to get all the cream off everything done in the country, and left only the skim milk or whey to the people who did the work, and they seem to have arrived at a dim idea that all is not cent. per cent. with the railways. Having made these various discoveries, the delegates now proceed to outline reforms. The land titles henceforth to be granted by the company are to be simplified, and the royalties upon minerals will next year be reduced. Instead of grabbing a third of the vendor's share of any capital issued upon a "mine," or making all sorts of reservations in granting leases of land, so as to keep a hold over the "mineral resources" for the benefit of the long-suffering Chartered shareholders, the minerals are to be mined henceforth under a royalty ranging from 2½ to 7½ per cent. of the gross yield, and the leases granted to those who venture upon farming or stock raising as a means of livelihood within the territory are to be cleared as much as possible of any trouble likely to arise in the future through a discovery of minerals. The truth is that in drawing up the rules and regulations under which the Chartered Company originally projected great profits for itself, and its board and brotherhood made fortunes out of a lunatic public, everything was forgotten except gold, gold and precious stones. The growth of cereals, the rearing of cattle or sheep, the cultivation of forests, everything of that description was ignored, treated with the utmost contempt, and gold, gold was the one aim. Fabulous profits were to be made out of the innumerable companies started to hunt for this gold and mine it. On every hand success on their part was to bring the metal into the coffers of the over-riding Chartered Company, whose title to the territory was originally as much a piece of hocus-pocus as the political "rights" of conquerors usually are. Now the directors have become aware that this kind of dream must be abandoned, and they are slowly descending towards mother earth, adopting something like practical measures in the last despairing hope that population will be attracted to their territory, men, women and capital. We doubt it. After all a royalty of even 2½ per cent. upon the gross output of a low-grade mine might be a very obstructive burden on the mine shareholder, just make all the difference between some dividend and none, while a 7½ per cent. rent charge in prospect is enough to scare away all prospectors. It is, therefore, by no means surprising that Chartered shares should have been flat of late, for they are no more cheap to-day at threepence each than they were before the Marquis of Winchester and his colleagues went out. It will not be possible to raise more money on the strength of these projected "reforms," and the board will have to have another try or try on.

American Business Notes.

At the end of last week it seemed by no means improbable that a banking crisis would develop in the United States. The Heinze complications, together with those of the so-called Ice King, Morse, threatened more than one bank and probably more than one financial trust company. It would, however, have been most dangerous to allow any big bank, even the Mercantile National, the leading Heinze bank, to stop payment, for then the credit of all banks would have been called in question, and a run would probably have developed upon the Standard Oil group of banks headed by the City National. Doubtless the Clearing House Committee of the New York Associated Banks understood this better than anybody, and instead of compelling the Mercantile Bank to close its doors it turned out the board, put a new man in, and decided to honour the bank's engagements. This step calmed the public mind for the moment and brought about a recovery in prices, which gave a welcome relief, not only on Wall Street, but on every stock market in Europe. The relief, however, was but momentary, and could not be more in the present rotten or inflated state of credit throughout the United States. In New York particularly credit is a sort of mutual propping up of banks and trust companies whose solvency has not yet been called in question, and, naturally enough, Tuesday saw an outbreak in a new place.

The Knickerbocker Trust was compelled to stop payment on that day after a run lasting from the opening hour until half-past twelve. In the course of this run it is said to have paid out £1,400,000, and it must have borrowed some of that money because, although they are now compelled by the law of the State of New York to hold in cash 5 per cent. of their liabilities on deposits, that proportion would not have provided half the amount paid away by the Knickerbocker before the stoppage. It is the third largest amongst these New

York high-pressure credit generating companies, and its deposits amounted altogether to about £13,600,000. Why the Knickerbocker stopped payment we cannot as yet say, but the wonder to us has long been how these organisations did not more or less suspend payment at every crisis. They are in the main, and especially the newer ones, agencies for inflating the market, tools of the combiner, the man who "merges" this and that in order to steal wealth for himself by means of inflated capital issues and false sales. Of legitimate business there is not enough to-day and never has been enough in the United States to satisfy half the number of trust companies that have come into existence. This Knickerbocker Trust, deemed one of the safest and most respectable, appears to have got mixed up with the Morse chain of companies, and the calls made through the rent in that adventurer's web appear to have been so severe as to drive it into making heavy overdrafts upon its bank or principal bank, the National Bank of Commerce, and now the bank in turn is in difficulties with the Clearing House. It is said to have advanced £600,000 to the Knickerbocker, and to be £1,400,000 behindhand with the Clearing House, but it has not been allowed to close its doors yet. Only the petty banks are doing that.

Wednesday brought further complications of the most dangerous kind. The Trust Company of America was then attacked, and the run upon it was so severe that it is said to have paid out £800,000 before the close of business, and it seems to have got part of the money from the giant financiers. This probably means that the business will have to be wound up no matter how "solvent" it may be, and if this sort of thing goes on much longer, not only the finance trusts but the banks and the three big gambling insurance companies will be involved and their credit badly breached. The most desperate efforts were made by bankers during Wednesday and through the night to stave off the absolute suspension of all business. Twenty banks are said to have subscribed £100,000 each, or £2,000,000 in all, to lend to the Stock Exchange, and in order to counteract the tendency of rates for money to go up beyond reach an influential group of firms, including Kuhn, Loeb and Co., Speyer Bros. and Ladenburg, Thalmann and Co., arranged to lend their credit at 6 per cent. They could effect little, however, in this way, for money rose to 96 per cent. for the day, and seems to have ruled round about 60 per cent. most of the time, the last loan on Wednesday being done at 70 per cent., but a great many borrowers could not obtain accommodation at any figure, and the Bank of Montreal is said to have parted with £40,000 at 125 per cent. Yesterday John D. Rockefeller came on the scene and talked reassuringly for the benefit of "investors" and in defence of his own pocket, lending his money too, or saying he was doing it, and not improbably sniffing around to discover what he could wreck next.

Mr. Cortelyou, too, is in New York at the office of the Sub-Treasury of the United States, there handing out paper money to all and sundry. Some £2,000,000 in small notes are said to have been bundled off from Washington to be put into circulation in New York by him on Tuesday, and on Wednesday he provided the banks in that city with £5,000,000, but this cannot go on very long without draining the Treasury itself, whose surplus resources are not sufficient to permit it at one and the same time to prop credit *ad lib.*, fill the gaps caused by suspensions and meet the current outgoings of the Government, which are in all departments upon the most extravagant scale.

To add to Wednesday's complications, the news came from Pittsburg that the Westinghouse group of companies, or most of them, had been obliged to pull up. Mr. George Westinghouse himself had "filed their petitions," as we should say, honest man that he is. Inability to find £800,000 to meet short notes falling due is said to have been the immediate cause of this step, and accordingly the Westinghouse Electric and Manufacturing Company, whose dependents are the British, the Canadian and the French Westinghouse Companies, the Westinghouse Machine Company, and a finance department, or wilch cow, the Securities Investment Company, had all to stop, but Mr. Robert P. Porter—we presume it is he—the *Times* correspondent in the States and an old friend of the Westinghouse people, says that the Westinghouse Air Brake Company with a capital of £2,200,000, all in shares, is unaffected as well as other offshoots. As it is, the capital involved in the Electric and Machine companies alone amounts to nearly £11,000,000, including about £4,000,000 in debts of various shapes and sizes. So terrific was the shock given to Pittsburg by these stoppages, that the Stock Exchange there had to be closed and some people feared New York would have to follow suit. That is quite possible, not improbable indeed, because we are really only at the beginning of the liquidation, and the stoppage of these Westinghouse companies is a very significant reminder of the wealth consuming system upon which American industrial business has been developed and great manufacturing organisations built up. The Westinghouse companies, in other words, created customers by promoting companies all over the country and in Europe to give them orders, to buy their products or to work in unison with them, and in order that the securities of these companies taken in payment for work done might be converted into cash the Securities Investment Company was "organised." It is the finance company of the Westinghouse group, and naturally when the manufacturing companies could no longer go on it had to stop. Besides these, there are other concerns linked up with the Westinghouse business, such as the Nernst Lamp Company and the Union Switch and Signal Company. Whether these will stop or not and Mr. Robert P. Porter roundly states that they are not involved—the confusion and loss already produced by the failures are quite horrible, and extend to the shares of the General Electric Company, the great rival of the Westinghouse. Westinghouse Electric stock itself, of which about £4,200,000 nominal is outstanding, dropped on Wednesday from 79⅞, Tuesday's price, to 34½ with only 33,000 shares dealt in on Wall Street. How is any Treasury, no matter how rich, or any number of banks, separately or in combination, to cope with yawning deficiencies and irreparable losses such as these facts and episodes disclose. It is a mercy that only one important finance trust at a time has so far been run upon in New York, but at any moment the alarm may spread and the depositors of all the trusts come clamouring for their money in a body. Should that happen there will ensue a complete stoppage of business and the Wall Street market will have to close its doors. As showing what is thought of the ability of the Trust Company of North America to go on meeting its engagements, the New York City authorities have withdrawn the city funds both from the Trust and from the 14th Street National Bank, a small concern with a paid-up capital of £200,000, a reserve of £83,240 and a liability of £150,000 on deposits.

The committee of the New York Clearing Banks has an almost impossible task laid upon it, and how it is to prevent failures in all directions of all magnitudes is more than we can imagine. Now one bank has to be provided for, now another, trust follows trust into the vortex, and in spite of all the strong banks can do failures will continue to occur, failures of concerns all on their own showing perfectly solvent. The demoralisation, in short, is not nearly at an end, and it does not matter whether Mr. Cortelyou deposits £5,000,000 or £6,000,000, or twice as much with the banks in order to stem the torrent of liquidation, the Treasury money will only contribute to prolong the distress. So unexampled has been the inflation of the past eight years that no man can measure the depths to which prices may descend or the extent to which paper wealth bulking high as heaven in the eyes of astonished mankind will collapse and become like pulp under the feet of the people before all is ended. At a point, moreover, help must always be refused, because banks and governments, like individuals, cannot all

willingly bring themselves within the vortex of insolvency. The very fact that call money rose almost to 100 per cent. per annum on Wednesday, and became for a time unprocurable at that or any rate on Thursday, proves the banks to be near the end of their resources, and every fresh decline in prices adds to their embarrassment by diminishing their capacity to render help. The shrinkage is paralysing the credit magician, who has so long defied every consideration of prudence, of fair dealing, of common sense. So farspread is the rottenness, so deepseated, that the very firms whose ostentatious, or self-protecting, lendings at 6 per cent., when credit was worth 10 to 16 times as much, did nothing appreciable to abate the public agitation or to relieve the tension, will but too probably find themselves among the "suspects" before all is over.

Nevertheless, on Thursday J. P. Morgan got another £5,000,000 together, which he lent on behalf of his syndicate at 10 per cent., and again for a time that stayed the avalanche. Before this step was taken most people could not borrow at any price, and arbitrage dealing between London and New York was brought to a dead stop because the dealers on Wall Street could not pay for stock if they bought it. Prices rallied when the Morgan stimulant—"credit grog," we might call it—was administered to the market, but before the close fever had again come on, and the last overnight loan cost 20 per cent, and the "ruling rate" of the day was again 60 per cent., with 10 per cent. paid. This, in spite of the added philanthropy of "John D," and his National City Bank, which lent "heavily" at 6 per cent. But then the clamorous necessities of the "caught" are so boundless. The Treasury, too, kept helping with £1,000,000 sent to Pittsburg, and another £200,000 in small change doled out in New York. And all the money vanished like water through a sieve.

Three small banks suspended on Thursday in New York, all "solvent," and one a savings bank, which is only taking a thirty-day siesta as allowed by law. The names of the banks were the Hamilton, the Twelfth Ward, and the Empire City Savings, and their aggregate liability to depositors was only about £2,660,000, of which the Hamilton owes £1,400,000. Runs continued on other banks, and on the Trust Company of America, but no other New York credit shop shut its doors. Rockefeller is credited by the market gossips with having provided the Trust Company of America with £2,000,000 in cash to help it over the day, and we hope he is not charging more than 6 per cent. for the accommodation. Outside New York failures and runs occurred, but no particular damage seems to have been done yet, although the Nevada State bank stopped, as well as the Iron City Trust Company of Pittsburg, which seems to have been one link in the Westinghouse credit chain. The Southern Steel Company also pulled up, and as time passes there will be plenty more suspensions. Naturally the great men who have been showing the world for years how naturally water runs uphill drone "All's over, all's well" in chorus, and the *Times* correspondent assures us that the country was never more prosperous, farmers never more obsessed by their wealth. This is as we expect, but the cold eye of reason sees further, and discerns that the crisis now swirling along is the outcome of many years of demented defiance of every prudent rule of business and of a furious indulgence in every form of financial recklessness and immorality, and holds to the view that years must pass before the effects of this week's crashes, even should they represent the worst, can be obliterated by the industry of the people. "Manufacturers are full of orders," quoth Mr. R. P. Porter. Yes, orders to be paid for mostly *à la* Westinghouse, or by floating accommodation paper, short-term railroad notes, by credit in one form or another. The industrial collapse must follow the credit one, and nobody ought to buy any American stock below the best classes of bonds for months to come. Prices have been crashing down this week, until Wednesday saw Union Pacifics touch par, Northern Pacifics 100½, Readings 70½, Southern Pacifics 63¼, and Atchisons 72. From these prices there was a rebound when the Morgan Syndicate poured out its £5,000,000, and there will no doubt be many ups and downs, but the trend must be towards lower quotations for many a month to come, and not a few railroad receiverships lie in the not distant future.

Little or nothing of what was coming was reflected or foreshadowed in the return of the New York Associated Banks for the past week. Superficially, it looked a strongish return by comparison with the week immediately preceding. From one source or another specie had been raked in, so that the week's average holding shown on Saturday last was £1,360,000 better than that of the previous week. At the same time the average liability of the banks on deposit and current account was £67,400 less, so that although the greenbacks held fell off by over £70,000, the surplus reserve was actually £2,236,400 against £931,000 the previous week and £1,240,200 last year at the same date. Loans and discounts were only cut down by £1,310,000, and this slight reduction, coupled with the unexpected increase in the specie, made the "bears" of Wall Street suspicious that the return was cooked. But it is always cooked more or less, and the importance of the fact that the cash reserve has by one means or another been augmented would not have diminished the influence of changes on the whole so favourable had not the destroying angel been abroad in the credit market. The shadow of impending calamities lay heavy over Wall Street, and the crowd there was much more occupied with the too refractory exchanges and the news that £300,000 in gold had been engaged for export to Germany than with the mosaiced averages of the Associated Banks. Exchanges on Europe incline to be flat now, but that may merely transfer the gold fears to this side. Should the necessity arise, the Americans, by smashing their produce combines and pouring out their grain and cotton at distress prices, might soon get command of our gold market, and then it would be our turn to cry out. Happily, there is this good in Mr. Cortelyou—the longer he can shovel out the contents of the Treasury among the banks, the longer it may be before the agony point for gold is touched.

Railroad reports continue to pour out, and along with them we get an unbroken wail about the ill-treatment the companies are receiving at the hands of the citizens and State and Federal legislatures, especially State. Market men curse the President and blame Government for all the ills they are suffering from, just as the London Stock Exchange anathematises Sir Henry Campbell-Bannerman and his colleagues. This is a bad sign, indicating as it does both lack of courage and lack of knowledge. People who fall back upon abuse of the Government on every occasion when the market situation causes them anxiety or loss are people usually incapable of helping themselves or of learning wisdom by experience. It is no doubt true that the State legislatures are betraying a hostility towards the railroad monopoly which may bode it no good, but has public sentiment no cause to take up this attitude? Are not the railroad companies themselves very largely to blame for it, with their fraudulent capitalisations, their dealings in cash and other securities, their investments with an eye to monopoly, and their efforts to increase the charges levied by them on the many for the benefit of the "rebated" few?

Let us answer one or two questions of this kind by an examination of a few more of the annual reports now available. Among these the most important issued in the past week has been that of the Atchison, Topeka and Santa Fé Company. From many points of view nothing can exceed the splendid development of this company's business. Its gross receipts last year came to $93,683,406 or about three times as much as they were ten years ago, while in the same time the mileage has gone up by little more than one-third. All deductions allowed for, this is a fine display, and last year,

although working expenses did increase, the free revenue, after meeting all expenses, including interest charges and rents, was $21,168,723. As recently as 1897-8 the entire income was only $1,820,000, and so rich does the company appear to be that after paying a dividend of 5 per cent. on the preferred stock and 5½ per cent. on the common, it was able to add $9,000,000 to the fund for improvements and other capital expenditures, or $5,000,000 more than the amount so assigned in the previous year. What can the ordinary citizen infer from a statement of this kind if not that the railroad is charging too high a price for its services? If it is not doing that, whence comes this magnificent surplus to be applied to capital purposes? It is money taken from the company's customers for the benefit of the shareholders.

No doubt the Atchison needs all the money; its hunger for more and more money equals, if it does not exceed, that of any railroad in the Eastern States, with the single exception of the Pennsylvania. It is devouring money, and still wants more. The assignments from revenue, moreover, are little better than acknowledgments that in the past capital was wasted on lines badly constructed or was merely water. A continual process of reconstruction is going on and of line straightenings and re-gradings at the same time that, we presume, a heavier weight of rails is being laid down on the road bed; but over and above renovations of this description, partly charged against revenue, the company is swallowing up new capital at a terrific pace, and during 1906-7 the amount spent on capital account was nearly £5,000,000 or $24,240,000, of which $8,830,000 was spent on additional equipment. And this will go on indefinitely. President Ripley declares that it will be necessary to expend many hundred millions of dollars of additional capital. That is quite frank and true; therefore we say that, no matter what the present yield may be, the shares of companies of this description are not for British or European consumption. It is impossible to tell from one year to another when a yawning deficit will be disclosed and the whole of the company's ordinary capital put in peril. This Atchison Company has now an authorised capital in ordinary stock of £50,000,000, having added $98,000,000 to the total in the beginning of this year. All this is not yet issued, but it is bound to be before long, and, at the same time, the debts of the company are steadily increasing. During the current year, for instance, $26,056,000 of 5 per cent. convertible bonds sold in July last will become a charge upon the property, and its approximate interest requirements for the current year is put at $12,569,760, or about £295,000 per month. With trade settling down and legislatures hostile, the day may not be distant when a constantly augmenting burden of this kind will again sweep away the profits available for the ordinary shareholders. Yet there can be no question that the business of this company is extensive and growing at an unexampled rate. Equally true is it that working expenses, betterments paid for out of revenue, and debt interest will devour an increasing percentage of the gross income.

Southern railroads are in a much worse plight than the Atchison so far as actual earnings are concerned, and as they likewise are being attacked by public opinion and the State law-makers we should think it the most prudent thing for holders on this side to get quit of any unsecured stocks they may hold in lines like the Louisville or the Chesapeake. We gave the Louisville figures last week, and now have those of the Chesapeake and Ohio before us. They are decidedly worse, for against an increase of $1,194,000 in the gross revenue an increase of $1,781,000 in the expenses has to be placed, so that actually the bigger business done involved a loss of $587,000 in the nett income. The usual apologies for this kind of thing are put forth—bad weather last winter, augmented cost of materials, the rise in wages, interruptions of traffic in West Virginia and Kentucky through land slides and floods—but the fact is none the less sinister because business is falling back and the charges upon this company for debt interest are increasing. Last year the funded debt charge rose by upwards of $528,000, and taxes went up by about $107,000, or nearly 30 per cent. Then rental and equipment payments were also much higher, so that instead of a free income of $4,607,000, which was that of a year back, the amount is only $3,393,000 for the past year, and the ordinary shares got no more than 1 per cent. dividend. In the current year, moreover, the charges for interest are bound to be heavier, because four new equipment trusts for a total of $8,000,000 have been created during the past year, and the total unpaid capital due on these various trusts, in spite of the instalments paid off during the year on older trusts, was on June 30 last $16,430,000 compared with only $9,707,000 on June 30, 1906. The funded debt also went up $3,371,000 within the year, and another $5,000,000 of three-year 6 per cent. notes have been sold since the fiscal year closed. Chesapeake shareholders have thus a dreary enough outlook. Four years ago the charge for interest and repayment of principal on car trusts was barely $688,000; last year it was $1,888,000, and in the same time the bonded debt interest has risen from $3,675,000 to $4,235,000.

Quite the same story is told by the accounts of the Great Northern and Northern Pacific Companies. The Great Northern Company pays 7 per cent. upon its stock, and in order to do so required in the past year about $1,330,000 more than in the preceding year, and there was actually a decrease in its nett revenue, for although the gross income went up by $3,788,000 to $55,048,000, working expenses rose by $6,740,000 to $31,485,000, and the nett income was therefore nearly $3,000,000 down without counting in the miscellaneous income, which showed an increase of over $1,200,000. Even so the book-keeper's surplus, after paying the dividend, was only $2,156,000 as against $5,185,000 a year back.

As for the Northern Pacific Company, whose gross income for its fiscal year, closed on June 30 last, was $68,535,000, a figure showing an increase of $7,212,000, it did not make quite such a bad exhibit as its neighbour, but still working expenses rose by $5,955,000, including taxes, and the interest on the bonded debt was also a little more at $7,010,000, but the surplus was still $6,697,000, and doubtless that will attract the attention of those intent upon cutting down the profits of the railroads and curtailing their power to make excessive charges on the passengers and minor traders. This surplus besides was arrived at after deducting $5,927,000 charged against depreciation of equipment, which was nearly $4,000,000 more than in the previous year. How is it possible to avoid the conclusion that the company is exacting too high a price for its services?

Preliminary figures have also been issued for the Union Pacific Company, and are not particularly exhilarating, although gross receipts did go up from $67,282,000 in the previous year to $76,041,000. This was an increase of about $8,759,000, while working expenses rose by little more than $5,300,000, so that the nett revenue of $33,390,000 was fully $3,000,000 better and nearly $8,500,000 above that for 1903-4. Adding in the income from the Oregon Short Line and Oregon Railroad and Navigation Companies controlled by the Union Pacific, the entire amount available for charges and dividends rose by almost $4,350,000 to $44,995,000, while interest on bonds in the hands of the public was actually $220,000 down at $8,641,000. Thus the surplus revenue was $36,342,000, and after distributing 10 per cent. on the common stock, which swept away $19,548,000, as well as putting aside $1,959,000 for betterments, against $4,200,000 the previous year, the free balance was $10,853,000. Assuming that total to be genuine, is it any wonder that the public should say to a company of this description, "You are robbing us"?

Reverting to the accounts of the Erie Company, it is worth while putting on record the fact that its capital expenditures for the ten years ended June 30 last have averaged upwards of £1,000,000 per annum since the

latest reorganisation in 1896, and the property is still very far from being in a first-class physical condition. It is difficult indeed to see when American railroads are ever to reach that condition so long as their expenses are so much augmented by the effects of the high tariff. At the date of the last balance-sheet the outstanding amounts due by the company on equipment trusts were $13,699,460. In the course of the year $2,464,000 was charged to capital for expenditure on constructions, such as cold storage plant, development of coal property, elimination of level crossings, additional tracks, and so on, and during the year no less than $9,761,000 was disbursed for new equipment. Of this, however, $988,000 is to be charged to the funds for renewals of cars and locomotives, so that the amount debited to capital was little more than $8,773,000. Is it surprising that the company should be desperately hard up?

Passing Events.

Dr. Wekerle, the Premier and Finance Minister, has evidently placed an ingenious scheme of taxation before the Hungarian Chamber, but what interests us most in regard to it is the magnitude of the revenue looked for. It is estimated at £53,318,000, and on the basis of the ordinary expenditure that would yield a surplus of £1,723,000; but the extraordinary expenditure is expected to exceed the extraordinary (*i.e.*, borrowed) revenue set against it by nearly as much, so that the final surplus is only £920 on the entire budget, and the amount of money drawn out of the people is stupendous when their essential poverty is considered. No wonder, therefore, that Dr. Wekerle raised a warning voice against a constant increase in the public expenditure, an increase which outstripped the growth of the revenue; but he did more than this, for he laid before the Chamber a new scheme of taxation, one which involved the merging of several categories of existing taxes in an income-tax that is to begin with incomes above £25 per annum. On such small incomes a tax of one-fifth of 1 per cent. is to be levied, and the highest tax will be 5 per cent. or 1s. in the £, as it were, just like ours. This highest tax begins to apply on comparatively low incomes, and it will be curious to see how the people reconcile themselves to an impost thus graduated and thus severe. At first it is expected to yield only about £1,900,000, and when it yields more than £8,400,000 the minimum of taxable income is to be raised. But £53,000,000! It is staggering.

The French people seem to be accepting their responsibilities in Morocco with greater calmness than was to be expected. Slowly, but yet in a manner that will probably make it impossible to retreat or clear out, French forces are working their way into the country, and every now and again engaging in fights with the tribes, defeating the enemy, of course, and winning glory, as it is called. The bill for the killing has not come in yet, and therefore the overburdened taxpayer does not seem to bother himself much, but his mood may alter considerably when he finds what this enterprise is going to cost and what it involves. One never knows the moment when it may suit the high *weltpolitik* of the German Empire to take umbrage at the action of France, to raise difficulties, make carping criticisms, and otherwise bring Europe, and especially France, again into a state of tremor and dread lest another great war should be near. Already the German Press has begun to attack France. That by itself may not mean much, but those who watch events on the Continent seem to be anything but happy over the prospect of prolonged blood-shedding in Morocco, and we wish France well out of it.

The great railway crisis which has afforded such welcome material to the daily Press these last few weeks has not progressed any further since we last noticed it. It is true that all the associations of railway servants whose representatives met in Manchester are said to have agreed to unite to support the Amalgamated Society in the demand for recognition, but that does not, we believe, take us any nearer to a universal strike, and we think it might be prudent on the part of railway shareholders to cease vexing themselves more about the quarrel just now. Let Mr. Lloyd George try his deft hand at bringing the opposing parties together, and if he fails to effect any good by so doing, as we think he must fail, then let them wait until Parliament meets. It is there where the true strength, or power for mischief if you like to take it so, of the railway employee is to be found. The Labour members have only to unite in stopping all railway legislation to bring the boards of the directors to another frame of mind on some things. It might be good for shareholders' interests, too, if that were the product of all this stir, for the waste that now distinguishes the competitive management of our English railways must be equivalent, if abolished, to 1 per cent. all round on their common stocks.

We heard the other day of a brilliant stroke of directorial business aptitude on the Brighton railway. For many years back London business men have besought the directors to accord them a morning train early enough to allow them to reach business by, say, 9.30, instead of 10.30. At last the train has been put on, but it runs to Victoria instead of to London Bridge, so that most of its passengers have to change at Croydon and wait for a crowded suburban train to take them to London Bridge. The early express to London Bridge would be a great convenience. By running it to Victoria the Brighton directors contrive to make it a nuisance.

It is said that the American cable companies are watching the Marconi experiments with great intentness, but in perfect calmness of mind. This is just what we should expect them to do, and there is no call for haste. Some phases of this Marconi business cannot be altogether acceptable to that company's shareholders. Apart from the tremendous cost of sending wireless messages, as indicated by the strength of the electric current necessary, by the lightning flashes that play around the transmitting and receiving stations, there is the insurmountable obstacle to success in the slowness of transmission. "Yesterday" (*i.e.*, on Tuesday), the *Daily Mail* tells us, a message from Port Morien was received and deciphered in Clifden, and a reply written and transmitted to Canada in the space of "exactly two minutes." But what was the length of the messages? Such messages as are set forth in print do not, though brief enough, seem to have come with anything like this speed, for the Port Morien correspondent of the same paper sent a message which reached London "in little more than an hour after its despatch." It was to this effect:—"Grand success of test to-day. I sent a message to a correspondent at Clifden, and received a reply in five minutes. Mr. Marconi complains of trouble with the land wires. Everything working splendidly to-day." Then why has the transmission of commercial messages not yet begun? Congratulations and interchanges of prearranged compliments are palling upon the public appetite. Let Mr. Marconi send us over the final Wall Street prices and the movements in Union Pacifics in one day's business, just to demonstrate the reliability of his lightning.

If agitation would cure company ailments, turn losses into profits, and cause the most unheard of difficulties to vanish like the mists of an October morning, then the English-owned Russian oil companies would be among the richest enterprises in the world. We do not care to look back over the years that the affairs of the concerns mentioned have been in a state of continuous ferment, but if we had all the money that has been spent on circularising by the companies on the one side and multitudinous committees on the other we would go a big enough bear of Yankees to bring down half a dozen decent-sized trusts. It is not our intention to rake over ancient history—the times not being propitious for the issue of a treble number—but the latest flare up demands further brief notice, because the directors have issued a detailed and spirited reply to the charges and accusations made at the informal

meeting to which we referred last week. It is always well to hear both sides before jumping to conclusions, but the shareholder who can read the speech of Mr. Rutherford at the meeting mentioned and the board's rejoinder and then know where he is ought to be able to run the universe without much trouble. We never felt so helpless in our life. The agitators' case looked unanswerable, but the directors have managed to knock it about pretty badly, throwing back some of the charges with no small skill. Perhaps no harm can arise from waiting a little. Many loose statements have undoubtedly been made, but the accounts will be out next week, and the ordinary meeting will be held early in November, when the opponents can come to grips in earnest. Just note one point now. To an important extent the board is quite a new one, and two of the members were appointed, along with three others, as recently as last year, on the nomination of a committee of shareholders, of which Mr. Holzapfel, who may be considered the leader of the present agitation, was a prominent member and cordially supported the steps taken. One more remark. On their own confession, the agitators want to get on the board.

The Greatest Show on Earth has been sold. Shareholders have been called upon to make a considerable sacrifice, but we think they did the right thing in recognising that without the organising genius of Mr. James A. Bailey the chances of running the show with success were small. Even in Mr. Bailey's time the company's performances—financial, of course—were the reverse of brilliant, and some sacrifice in the matter of dividends was made by that gentleman in order to give the shareholders a chance. Since his death in April, 1906, things have evidently not gone too well, and despite every effort a worthy successor has not been found. It will be no surprise if last year's business turns out to have resulted in a loss, and by the time the coming winter is over it is by no means improbable that the present surplus of £50,000 will have been entirely eaten up, if not a good deal besides. These are the salient facts put before the shareholders at last Tuesday's meeting, and while we cannot altogether agree with the chairman's protest that it would have been unwise to let the projected sale become known, it looks as though the shareholders have acted sensibly in agreeing to the board's proposal. Some Yankee showmen—Ringling Bros.—have agreed to pay $400,000, or about £82,000, for the show, and this, with sundry resources already possessed, should give 8s. or 9s. a share, after providing liberally for liquidation and other expenses.

Prosperous as many of our iron and steel companies have been of late, there are none of them that can show results like those exhibited by the Phœnix Actien-Gesellschaft für Bergbau und Hüttenbetrieb, whose report for its working year closed June 30 last was lately issued. As a producer of pig-iron, this company is probably the largest in Europe, and it has recently acquired coal properties, so as to be independent of the German coal syndicate. Its profits for the year amounted to £1,375,231, including £54,732 brought forward, and of that profit quite £405,000 was written off the cost of property and plant, besides £50,000 off collieries, and £10,000 was credited to the insurance fund for workmen's families. From the balance a 17 per cent. dividend was paid on the £5,000,000 of capital, and the *Aufsichtsrat und Vorstand*, which may be translated committee of inspectors, auditors or supervisors, and directors, got £87,357 amongst them, not a bad bonus. Then another £10,000 was put aside for official pensions, and a balance of nearly £28,000 was left to carry forward. The company seems to be in a strong financial position.

Apparently M. André Mévil is seeking to excite the apprehension of his countrymen over supposed German designs against French industry as exhibited in the purchase of French iron mines by German monopolists. These people are monopolising the mineral resources of the eastern districts of France, this writer declares, and it is his opinion that if the Government does not come to the assistance of private initiative in its efforts to prevent this consummation, German syndicates will eventually secure possession of nine-tenths of the iron production of the Republic. This would indeed be a most serious consummation. But what if the Germans lose their money in this attempt at monopoly? Would not that afford a nice, comfortable feeling of pleasure to those who still keep up the display of hostility between the two neighbours? And presumably if the mines are bought the prices at which they are sold will be good and the profit to the vendors satisfactory. In that thought likewise there may be ground for consolation.

Critical Index to New Investments.

Spare Motor Wheel of America, Limited.

This company has been formed to acquire the American patents of the Stepney Spare Motor Wheel, together with patents for kerosene motors and for a novel speedometer. The Stepney Wheel patents are purchased for £22,000 in cash or shares and a motor works in St. Anne, Illinois, and the other patents for $45,000 in cash and £11,000 in cash or shares, £1,000 of the total being regarded as for goodwill. What the vendor paid for the first-named patent is by no means clear from the prospectus, as he purchased it and other patents for £23,000 in cash, but the other property cost Mr. Broyles, through whom the deal is carried out, no more than $30,000. Not content with that Mr. Broyles secures the post of managing director for five years at a salary of £600 per annum, and after 50 per cent. profit per annum has been earned a commission of 10 per cent. on the nett profits. It is calculated that the company will be able to produce the wheels at a cost of $5.71 each, including $2 royalty, and to sell 3,000 per month at $25, and if these estimates can be realised it should have a glorious time while it lasts. We fear, however, that it is too good to last long.

Lanadron Rubber Estates, Limited.

This is a much bigger company than the majority of those recently formed for the cultivation of rubber, as it has a capital of £320,000 in £1 shares. It, however, acquires three estates in the State of Jahore, Malay Peninsula, with an area of 10,781 acres, of which it is estimated that 3,357 acres will be planted with 503,550 trees by the end of December. For these properties the company pays £100,000, all in shares, together with £24,000 in shares for buildings, plant, and machinery, &c., while all harvested stocks remaining on the estates on December 31 next will be taken over at a valuation and paid for in shares. Nothing is charged for goodwill, and the whole thing is so straightforwardly put that the 70,000 shares offered for subscription, although necessarily speculative, seem very attractive, so much so that a substantial premium was promptly established on them by the market. The output of dry rubber for the current year is expected to reach 100,000 lbs., of which 55,828 lbs. had been harvested by the end of July. It is estimated that the nett revenue from the 3,357 acres, with rubber at 5s. per lb., will be £23,130 in 1908, and will increase to £142,454 in 1912. The directors propose to open up and plant the reserve land at the rate of about 700 acres per annum, and the returns from these clearings should from the sixth year onwards add considerably to the profits.

The White City, Limited.

This is a Manchester undertaking formed for the purpose of carrying on a pleasure-garden of the highest class on the site of the old Royal Botanical Gardens, Old Trafford, which was opened to the public on Whit Monday last. Originally the capital was £40,000, divided into 20,000 preferred ordinary shares, and a like number of deferred ordinary shares of £1 each; but the cost of establishing the garden was greater

than anticipated, and a further 40,000 preferred ordinary shares have been created. These shares are entitled to all the profits available for dividend until they have received 20s. per share, after which they will rank *pari passu* with the deferred shares which were issued to the originators of the scheme in payment for plans, drawings, and estimates, and certain information for the establishment and carrying on of the undertaking. It is stated that owing to the haste necessary in constructing the park to get it in order for Whit Monday the company has had to work under difficulties throughout the summer, and was, of course, further handicapped by the weather. Profits from the date of registration to August 10, nevertheless, were £3,429, before making any allowance for depreciation or preliminary expenses, and the managing director estimates that from August 10 to the end of the season a further profit of £4,100 should be earned. In addition a minimum profit of £2,500 is guaranteed from new shares for 1908, and on this basis a total of £10,028 for 1908 is looked for, a figure which the directors seem to think justifies their prediction of a 15 per cent. dividend. A distribution at this rate, however, would leave a surplus of no more than £1,028 to provide directors' fees and other charges, and as the directors' remuneration will take £650 as a minimum the margin for depreciation and contingencies looks inadequate.

Swansea 4 per Cent. Loan.

An issue of £600,000 in new 4 per cent. "A" stock of the Corporation of Swansea is offered for subscription by Messrs. Frederick J. Benson and Co. at the price of 97, that of the existing "A" stock being 98¾-99. The first half-year's interest is payable in full on July 1, 1908, although the final instalment on this issue becomes due only in the preceding May. Accordingly the issue price to those who pay up by instalments is really not the nett cost of the stock; they get a further discount of about ½ per cent. As the security is undoubted, owing to the progress of the port and the volume of the municipal revenue, it is only the present circumstances of the market that makes the issue price so low. Interest on the stock is a first charge on the revenue before the sinking fund. The coal trade of Swansea has risen by nearly 1,000,000 tons in two years, while its business in peat fuel, copper, lead and other metals as well as in finished articles of all kinds looks as if it were only at the beginning of its magnitude.

ISSUE BY TENDER.

Croydon Gas Company.—Tenders are invited for £15,000 "D" stock of this company. The stock is entitled to a fixed maximum dividend at the rate of 5 per cent. per annum, and up to that rate ranks *pari passu* with the £178,400 of the "B" stock. Dividends on the latter for the past 17 years have been at or over 11 per cent., the last distribution being at the rate of 11½ per cent., and in addition there are £51,600 "A" stock and £90,000 "C" stock on which 14½ and 11½ per cent. respectively have been paid.

Rosario Electric Company, Limited.

The number of 8 c.p. lamps connected with this company's system was increased during the year ended June 30 by 30,465 to 123,318, and the gross receipts consequently showed an advance of £15,606 at £64,313. Of this works, costs and repairs absorbed £24,194, administration expenses in the Argentine Republic £3,731, taxes, wayleaves, &c., £3,635, and bad debts £232, and with £293 from miscellaneous receipts the nett profits were £32,814. Adding £501 from discounts, transfer fees and interest on investments, the disposable balance was £33,315, of which London office charges took £1,478, and after providing £540 for amortisation of concessional rights and writing off £6,270 for depreciation and £4,722 for expenses of issuing the second preference shares £20,305 was left. This was increased to £23,072 by the balance brought forward, and preference dividends having been provided the ordinary shares receive 8 per cent. for the year, directors' additional remuneration takes £600 and £5,000 is added to reserve, leaving £4,601 to be carried to the new account. Purchase of undertaking, less the sum now written off, stands at £56,421, and expenditure on buildings, &c., at £135,108, the outlay for the year having been £34,446, making £191,529 in all, while stores are valued at £18,776. Reserve will now amount to £10,000, of which £5,000 is represented by investments taken at cost. Creditors are light at £4,146, against £11,271 to come in from debtors, £5,000 held in bills receivable and £25,999 in cash.

Letters to the Editor.

THE RAILWAY DIRECTORS' "NOES."

Sir,—I bow to your judgment on financial matters, agree with you on fiscal questions always and on politics sometimes, but am convinced that as regards trades unionism you have "the wrong end of the stick."

I have been in close contact with it for more than half a century, I have spent years at the bench and drawing board, am among workmen of various grades all day and every day, and have quite an extensive acquaintance with trades union secretaries, council men, and delegates. I have provided employment for thousands of men in my time, have held office in employers' associations, and sat at innumerable conferences with workmen's representatives, paid and unpaid, and now I have no manner of doubt, being a convinced Free Trader, that trades unions are wholly pernicious, a source of loss to all workmen but the incompetent, actuarially unsound, and for the most part fit only to be abolished.

They are only kept from being intolerable by strong combinations of employers, who are willing to abandon their natural attitude towards each other, and fall into line, for the purpose of resisting unreasonable encroachments by combinations of workmen, and, when driven to it, meet the "strike" with the "lock-out."

The *reductio ad absurdum* would be to have trades unionism in the army and navy, and yet it is admitted that grievances and hardships do exist among soldiers and sailors. In any service where rigid discipline is essential trades unionism is inadmissible, and a legislature worth its salt would see that it should be excluded from railway, postal, and police services as completely as from the naval and military services of the Crown.

Mr. Lloyd George's preposterous interference at the Shrewsbury accident inquiry fills one with misgivings as to what he may say or do at the coming conference with railway chairmen. I trust, however, that he will not find these so unfit for the positions they hold as your article would seem to imply, and that they will give him to understand that ex-railway porters, however glib of tongue they may be, are not to be "recognised" as plenipotentiaries with whom treaties must be negotiated before the work of inland transport can be carried on.

Yours respectfully,
H. K. W.

ACCELERATION OF EASTERN MAILS.

Sir,—On May 27 last the Postmaster-General announced in the House of Commons that he had decided to accept, provisionally, a tender by the Peninsular and Oriental Steam Navigation Company offering to make a contract for the conveyance of the mails to and from the East for a period of seven years from February 1, 1908. Details of the contract were published in a Parliamentary Paper No. 311 under date August 19 last. By the new contract, a saving of eight hours will be effected in the outward voyage between Brindisi and India, 34 hours between Brindisi and China and 36 between Brindisi and Australia. The time table of the new service has, I understand, not yet been settled, but in making the statement to the House Mr. Buxton indicated that it would be arranged to the best advantage which circumstances would permit.

My object in writing you now is to draw your attention to the advantages which would accrue to publications like yours were a few of the hours thus saved to be applied to postponing the departure of mails from Europe. Your paper, I understand, in common with other leading London weeklies, goes to press early on Saturday morning, just missing the Eastern mail of the week which closes in London on Friday night. The consequence of the arrangement is that the issue sent by each mail to your subscribers in the East is a week old by the time it leaves London, and thus comparatively stale before it sets out on its voyage. Under the present system this delay is unavoidable, but if the despatch of the mails from London were postponed to Saturday morning it would be possible for you to send by each mail your issue of the same week, thus allowing your Eastern subscribers to have the paper in their hands a week earlier than at present, and while its contents are still contemporary with the letters and daily papers of the same mail. As a former resident in India I can vouch for the satisfaction with which such an acceleration would be regarded by your subscribers there, for though the English weekly papers (published on Saturday) are always welcome, there is a feeling that they are a trifle belated in their

arrival, and I am sure the same feeling must exist to an even greater degree among your readers in China and Australia. I have no doubt the Postmaster-General will be pleased to consider any representations regarding the arrangement of the time-table which may be made to him by parties having an interest in the matter, and I therefore beg to suggest for your consideration that, along with the other London weeklies you should approach him with a view to obtaining a later despatch of the mails under the new contract if this has not already been done. The advantages of such an arrangement both to yourself and to your subscribers in the East are obvious, and to show that it would in no way conflict with commercial interests in India at any rate, I extract a few lines from the *Times of India*, the leading Bombay paper, which dealt with this subject in a leading article on July 6 last—see Annexure.

I may state that I am addressing a similar letter to the other weekly publications in London which have an Eastern circulation.

I am, Sir,
Your obedient servant,
J. D. Nimmo.

137, West George Street, Glasgow, October 23, 1907.

[An excellent suggestion.—Ed.]

[Annexure.]

THE EASTERN MAIL CONTRACT.

Extract from leading article in *Times of India*, dated Bombay, July 6, 1907:—

"The truth is that India has settled down to the Friday arrival and the Saturday departure. If the mail is brought in at daybreak on Friday it will meet all reasonable conditions. If it were landed at daybreak on Thursday, it would confer no advantages sufficient to compensate for the very heavy additional cost that would be involved, because few firms attempt to deal with more than the very urgent portion of the inward mail by return or would do so with a Thursday arrival."

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

D. R.—(1) The time has not yet come to average in these, and you had better wait. (2) As you already have these it might be as well to hold for a recovery, but do not buy more. (3) This company is nearly at an end, and, on the whole, we would rather recommend you to sell. (4) These are purely a speculation, and the company has not yet made sufficient progress to enable anyone to judge whether or not it will be a success. You can really judge of this as well as we can. (5) We do not care much for this company's methods, and as its property is a very uncertain proposition indeed, you might be as well to clear out. (6) Here there is nothing you can do but wait. It is possible the business may recover, and meantime it would be folly to throw the shares on the market. (7) The shares are subject to too much manipulation, and we think they should be left alone. (8) This company's position is a very strong one, and the shares seem a fair purchase. (9) The shares have been "tipped" persistently for some time past, and that alone makes us suspicious. At the same time, so long as the business is attended to it may be all right.

F. P. C.—(1) This is perhaps the stronger of the two. (2) This has always been a tender plant, but we do not think there is anything wrong with it. We doubt, though, whether the time has come to average in either.

A. W. R.—(1) It seems a pity to sell just now when there seems some prospect of a revival. The life is short, and you had better see it out. (2) These also you should keep. (3) We are inclined to say sell, because the guarantor is in no position to renew, and there is very little prospect of the company earning the revenue required to meet the charges.

A. A. M.—It is a very uncertain speculation, but no doubt coal has been found and there is just a chance. As you realise that it is a speculation you might as well hold your shares.

B. W. J.—Yes, not a bad idea, but give a limit of 60 to your broker, as a rise in the price is not in present circumstances imminent.

J. J. C.—We fear things will go from bad to worse with these companies, and think you would be wise to cut your loss.

A. G.—No chance of becoming the Government institution, but an excellent old company for all that, and we should think its shares a good investment.

Ernest.—There is a possibility that both of these will get work of the kind you mention, but it may be some considerable time before that happens, and in the meantime, we fear, prices will go lower.

J.—In our opinion the security is only second-rate, and the market in the shares is a very limited one.

State of San Paulo 5 per Cent. Exchequer Bonds.—Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising that they have further encashed £25,300 in respect of the surtax collected for the service of this loan, making a total of £259,200 encashed since August 1.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and October 19, 1907:—

Revenue and Other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Oct. 19, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Oct. 20, 1906.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,354,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,471,487
Revenue.			
Customs	34,023,000	17,363,000	18,[illegible]
Excise	35,915,000	18,[illegible]	18,[illegible]
Estate, &c., Duties	17,697,000	10,492,000	10,[illegible]
Stamps	8,000,000	4,[illegible]	4,[illegible]
Land Tax and House Duty	2,600,000	1,[illegible]	[illegible]
Property and Income Tax	30,500,000	6,448,000	6,[illegible]
Post Office	17,600,000	8,970,000	8,[illegible]
Telegraph Service	4,400,000	2,[illegible]	2,560,000
Crown Lands	560,000	230,000	270,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	688,500	681,683
Miscellaneous	1,550,000	1,136,754	919,505
*Revenue	152,835,000	71,911,254	71,869,847
Total, including balance		78,843,677	82,321,334
Other Receipts.			
Repayment of Advances for Bullion		950,000	550,000
For Treasury Bills (net amount)		5,[illegible]	—
Under Telegraph Acts, 1892 to 1904		170,000	303,000
Under Naval Works Acts, 1895 to 1905		—	1,242,000
Under Public Buildings Expenses Act, 1903		80,000	75,000
Under Public Offices Site (Dublin) Act, 1903		—	100,000
Temporary Advances, Deficiency		3,000,000	1,000,000
Temporary Advances, Ways and Means (Treasury Bills)		—	1,500,000
Total		88,043,677	87,551,334

Expenditure and Other Issues.

—	Estimate for the year 1907-1908 (including Supplementary Estimates).	Total Issues out of the Exchequer to meet payments from April 1, 1907, to Oct. 19, 1907.	Total Issues out of the Exchequer to meet payments from April 1, 1906, to Oct. 20, 1906.
Expenditure.	£	£	£
National Debt Services	29,500,000	15,270,962	16,559,153
Other Consolidated Fund Services	1,685,000	1,064,495	1,084,673
Payments to Local Taxation Accounts, &c.	11,205,000	4,477,941	5,655,242
Supply Services	110,678,000	55,717,456	54,411,344
Expenditure	153,068,000	76,530,354	77,713,892
Other Issues.			
For Advances for Bullion, &c.		1,000,000	600,504
or Advances for Interest on Exchequer Bonds issued under the Capital Expenditure (Money) Act, 1904		135,000	135,000
Under Telegraph Acts, 1892 to 1907		520,000	955,000
Under Naval Works Acts, 1895 to 1905		440,000	1,292,000
Under Military Works Acts 1897 to 1901		150,000	—
Under Public Buildings Expenses Act, 1903		175,000	75,000
Under Public Offices Site (Dublin) Act, 1903		—	100,000
Under Cunard Agreement (Money) Act, 1904		177,244	751,551
Surplus Revenue applied to reduce Debt		3,500,000	1,000,000
Deficiency Advances repaid		2,500,000	2,000,000
		85,127,598	86,562,247

The Investors' Review.

The Week's Money Market.

BANK RATE 4½ PER CENT. (Advanced from 4 per cent. on August 15.)

Norfolk House, Friday Evening.

Apart from a certain nervousness, product of New York complications, our money market has been in a comfortable enough position throughout the week. No gold went to Egypt last Saturday, and it is not anticipated that much will go this week, but the Bank did lose £242,000 in small shipments, principally to Paris, and French buyers took the whole supply in the open market. Altogether about £600,000 was available, of which £100,000 was absorbed by Indian and trade buyers, leaving £500,000 for Paris, which paid 77s. 10¼d. per oz. for it. The foreign exchanges still point to shipments of this kind, and no doubt the Egyptian demand will presently revive; but our market is able to stand a moderate amount of shipments abroad without getting into any flurry, but so long as the Paris cheque keeps at gold point against us or below it, and while New York ferments and plunges, dealers in credit here must keep up their rates. They have done so in a creditable fashion all week considering the ease of the short loan market. It has been possible to borrow at 3 per cent. both on call and seven-day notice almost all the week, although yesterday call money did rise to 3½ per cent., and although banks got a good deal of their floating balances disposed of for a week at 3½ per cent. In ordinary circumstances such rates for money would have dragged the discount rate below 4 per cent., but instead of this happening three months' bank bills have gradually cheapened to the buyers, until yesterday's discount quotation was 4½ per cent. as a minimum.

It is plain enough from the Bank return why short credits keep easy, and no doubt the unusual tenuity of the speculative account on the Stock Exchange has released a large amount of banking credit for the use of the discount market. At the same time the supply of bills, although usually good enough, has not been at any time inconveniently heavy, and there was no necessity to raise the Bank rate to 5 per cent. Some people imagined early in the week that this step would be taken, but it would have been a mistake. We quite think that a 5 per cent. rate is not far off, but it would have been unwise to hurry matters because in the present condition of the short loan market, and of business generally, a 5 per cent. rate would probably have had the effect of depressing open market rates instead of hardening them. The market is not poor enough to make this rate effective. Other Deposits have risen £1,015,000 on the week to £43,801,000, mainly because the Bank appears to have released the money it borrowed last week. This we take to be partly the meaning of the increase of £2,452,000 in the Other Securities, but the Bank has also been doing a fair discount business for its customers since the open market came up to its rate. By that release of loans and these discounts the total of Other Securities has been brought up to little more than £29,784,000, which is still fully £3,610,000 less than the total at the same date last year, and the reserve is at the present time £5,830,000 larger than it was then, while the total stock of coin and bullion is £6,344,000 larger. The Bank is thus in a much better position to cope with any foreign demand that may arise than it was a year ago, and the market at the same time is in a less dependent position, for it has stood a Treasury drain of £1,607,000, of £1,000,000 more, indeed, if the repayment of deficiency advances to that extent is reckoned in, and has enough money to go on with, in fact, and a little to spare without pressing hard on the Bank. All this is good and reassuring, so that if discount rates are kept up we may continue to face dangers abroad with a fair measure of equanimity.

Abroad improvement has also taken place. The Imperial Bank of Germany's note circulation is still £11,724,450 in excess of its legal maximum, but this represents a reduction of about £8,042,000 upon the taxable excess of the previous week, and between the returns the Bank has gained £1,899,000 in cash, while its note circulation has subsided another £5,779,000. There is also a decrease of £4,352,000 in its other securities and a small decline in its advances on stocks. The position is still strained, but not so much so as it was. The Bank of France is also stronger, since its note circulation has dropped back £2,398,000, while its gold in hand is almost £600,000 up. A decline of £2,375,000 in its bills discounted is also to be noted, but these changes, although welcome improvements, do not indicate that all danger of stringency later in the year has passed away.

Including the business it did to-day, it is estimated that the Bank has altogether discounted about £1,500,000 in bills this week up to to-night. It did so much business to-day, in fact, that the outside market cannot have had a great deal of paper to handle. This probably arose from the effort of the brokers to secure 4⅝ per cent. on full three months' remitted bills, and the quotations for such were rather wide at 4½-¾ per cent., with the higher figure ruling in the afternoon. Even short bank bills were not readily melted under 4½ per cent., although one house still quoted 4⅝-½ per cent. The market, however, is going up, partly in preparation for the American mail, which is expected to bring much paper to be disposed of, and also because short loans are becoming dearer. Bankers have been able to get 3½ per cent. for seven-day advances this morning, and in some places the rate was 3¾ per cent. The India Council renewed a small amount to-day at 3½ per cent. for three weeks.

About £1,250,000 in gold will be in the open market on Monday, and it is thought by some that the Bank may get a portion of it. On the other hand, France wants it, and there is a possibility of New York buyers coming on the scene. The quoted price continues at 77s. 10¼d. per oz. There is talk in the market that £400,000 to £500,000 may go to Egypt to-morrow from the Bank, but that is not the general opinion, and possibly enough none may go.

About £1,050,000 in new calls becomes payable next week but only one item of magnitude is included in this total, viz., £757,576 due next Monday on Straits Settlements 4 per cent. stock. Then there is a pause until Thursday, when something like £290,000 becomes payable on various issues, the most important amongst which are City of Edmonton £69,700, British Cotton Growing shares £74,937, and Staveley Coal and Iron shares £97,950.

SILVER.

The market for bars rallied a little this week, owing to the receipt of buying orders from the bazaars, and prices gradually improved to 28½d. per oz. for cash and 28¾d. per oz. for delivery two months' forward. As, however, no appreciable reduction has yet taken

place in the large stocks of spot metal held here and in India, the market remains in a weak condition, and prices relapsed immediately the support afforded by these covering operations was withdrawn. The pressure to sell was not pronounced, but offerings were greater than brokers could find buyers for, and to-night's quotations are back to 28⅛d. and 28⅛d. per oz. respectively. Applications for the Rs. 30,00,000 India Council drafts on Wednesday amounted to Rs. 2,73,00,000, all in bills, and tenders at 1s. 4d. per rupee received about 26 per cent. The amount to be offered next Wednesday is again Rs. 30,00,000.

The Stock Markets.

All minds have been bent upon New York this week and the most conspicuous effect here of the credit storm raging there has been an almost complete cessation of business. Even investors have held their hands, and although many speculators itch to dash in and buy American Railroad shares at the lower prices, there has been no conspicuous flow of orders in that direction. This is well, for, as we say elsewhere, it will be many a long day before American securities of the speculative classes can again be attractive things to buy. Had it not been for the American trouble our market would have been strong, and the tendency of prices has been towards hardness, in spite of the nervousness excited by what is happening on Wall Street. Were the ferment there to calm down we should be almost certain to have a better business here so long as our own credit institutions remained uninjured. But will our banks, discount houses and money dealing companies or firms of all degrees continue unharmed by what is occurring elsewhere? As far as we can see in London they will, but we are not quite so sure of some of the provincial markets, such as Liverpool and Glasgow, where the affection for United States and Canadian speculative securities has lingered longer and taken a deeper hold than in London. Here we stand wonderfully free of dangerous commitments as far as can be discovered, and although it is no doubt true that individuals, and firms too, in considerable numbers are hit hard by the fall in American Railroad and copper speculative stocks there is nothing to show that credit dealing institutions have their means committed to a dangerous, or even a serious, extent in that direction. For all that, we cannot escape from the effects of the devastation taking place in America. And it must never be forgotten that we have plenty of over-capitalised businesses of our own as well as no small amount of deluding finance, to give it a mild description, to clear out of the way or adjust before we can feel that our feet are on solid ground. It is, in short, impossible to say where the trouble will cease, and therefore our banks are bound to be cautious in lending and vigilant to nip in the bud any tendency to develop inconsiderate speculation on our side.

Consols and Trustee Stocks.

The Consol market has been remarkably steady throughout the week, thanks perhaps to Government annuity replacement purchases, but also no doubt to the quietness and ease of the Money market. Com-

pared with a week ago, therefore, Consols are 10s. better, Local Loans stock and Transvaal Guaranteed 15s. better, while India 3 per cents. are up 25s. and a good many of our Home Municipal stocks £1 up. London County stocks, for instance, are nearly all 10s. to 20s. higher on the week and the accrued dividends at least have been added to a good many other Municipal stocks, while Manchester 4 per cent. stock is 30s. better. Improvements have also occurred in the Colonial list, and altogether these classes of stocks show that there is money seeking investment and bound to give business when the clouds have rolled away.

Foreign Government Stocks.

Here the story is not so cheerful, and although there have been no particular weaknesses in the general list Russian bonds alone amongst the great classes may be said to have advanced. German 3 per cents., on the other hand, are still weak, Japanese bonds have been heavy, and most South American stocks, where any change has taken place, have given way, Portuguese 3 per cents. dropping as much as 30s. This weakness is the product of distress on Continental bourses much more than of any selling in London, and we must never forget that some of the Continental markets are being struck much more severely by the American smash than we are. In Holland credit has been brought almost to a standstill, and stock-dealers calling themselves bankers have failed in considerable numbers. German markets are also involved, and even Paris does not escape, for it has been a large buyer of Yankee railroad securities, and a demented gambler in copper shares for a long time past.

Home Railways.

In a sense Home Railway stocks have benefited by the better feeling prevalent on the Stock Exchange, and it was only after Lord Claud Hamilton's philippic against trade unions, and the Amalgamated Society of Railway Servants in particular, and Mr. Bell's truculent reply had frightened the people that weakness developed. Even the extreme opponents of trades unionism in the market doubt the prudence of Lord Claud Hamilton's deliverance. He and those who think with him refuse to look at facts. The question in dispute is not, as a correspondent whose letter is printed on another page appears to think, whether trade unions are good in themselves or beneficial to workmen with or without being hurtful to employers, but whether combinations of this description are powerful enough and sufficiently backed up by outside opinion and by their Parliamentary representation to make them worth negotiating with. The absolute refusal of the railway directors to have anything to say to Mr. Bell and his association is, to our thinking, the greatest danger threatening the stability of railway property at the present time, and although no strike seems at hand the boards seem to be doing their level best to provoke one. On the week, however, prices have not gone down to any great extent, the largest fall, in fact, has only been 1¼ in North British preferred, while North-Eastern, Great Western, North-Western, "Leeds," and South-Western stocks all show some improvement. In most other instances the declines are mere fractions, and while Midland preferred has dropped £1, the deferred has risen the same amount. Last week's traffic receipts, however, are not quite so stimulating as they have been hitherto, for the *Railway News* brings out the week's increase at only £59,448. This brings the aggregate increase for the half-year up to about £1,157,000, but the week's figures appear to hint that the rest of the half-year may not look quite so flourishing, and by-and-by the business of the country will doubtless be adversely influenced through what is taking place in America. Few or no transactions have taken place amongst the privileged stocks.

United States, Colonial, and Foreign Railway Stocks.

It is unnecessary to say much about Yankee Railroad shares here, because the history of the crisis in America is given elsewhere. The market has been wild enough at times throughout the week, and a raging business has frequently gone on in Union Pacific, Atchison, and Southern Pacific common shares, as well as now and then in Missouris, but it has been arbitrage business to a large extent, and for the rest represents merely a tussle between "bulls and bears" on this side. The largest relapses shown on a comparison of the week's prices have been $15 in "Soo" stock, which has been depressed by the coming addition to its total, $6⅞ in Union Pacific, $4½ each in Baltimore, Norfolk, and Reading stocks, $4 in Milwaukee, and $2¾ in Atchison. Illinois Central stock is actually $2 up on the week, as a consequence probably of the interim victory of Mr. Fish in the fight with Harriman for control.

Canadian Railways have resisted the pressure of the Wall Street collapse, and both Grand Trunk speculative stocks and Canadian Pacific shares are higher on the week. Business in Canadian Pacific has been very large throughout, and Canada has not yet begun its financial bonfire. Mashonaland Railway bonds are down 9 on the week, and the two debenture issues of the Rhodesian Railways are 5 to 6½ lower, with business exceedingly difficult to transact. We fancy the wind-up is not very far off in that direction.

Nearly all Foreign Railway stocks have moved the wrong way when they budged, and the Argentine group is mostly lower, with, however, a few noticeably exceptions. Preferences and even debenture stocks have suffered more even than the ordinary, but Bahia Blanca guaranteed stock has lost 2, and so have the issues of the Cordoba Central Railway. San Paulo stocks are also down, and the Brazilian list is flat, but the depression comes more from want of business than from any active selling, and Buenos Ayres and Pacific ordinary stock is 2 up, while both Buenos Ayres Great Southern and Buenos Ayres Western ordinary have risen 1. Mexican Railway stocks were hustled up a little towards the end of the week, but the ordinary and second preference are still 2 to 2½ down on the week, and the market is a narrow one. Cuban Railways have not moved much, but the market for them is also flabby at the moment.

Banks, Breweries, and Commercial Securities.

The changes amongst Bank shares have been for the worse on the week, a large number of them showing declines of ¼ to ½, and some losing 1 or even more, but London Joint Stock Bank shares have gained 10s., and the market is weak merely for the reason given above. Everybody is uneasy. Brewery securities make the usual lifeless display, but some of the debenture issues have gained a little, and the market is only noticeable by the absence of any outside interest in it. Prices, indeed, are probably unreal to a larger extent here than in any other section of the Stock Exchange.

Slight indeed is the business going on amongst Commercial and Industrial securities, but it may be noted that Portland Cement shares have improved, and that slight gains have been secured during the week in some other things like Hotel Cecil shares, Lovell and Christmas ordinary, and Charles Baker and Company's "B" shares. The debentures of the Bon Marché are also up, and mortgages generally inclined to keep their prices, although a few like Wm. Waiteley's, United Alkali, and Russian Petroleum debenture issues are down. Underground Electric Railways' profit-sharing notes were sent out last night at 40-51, a most unreal price, indicating that business is impossible. Liverpool Nitrate shares have also been noticeably flat, and are 30s. down on the week, while naturally the relapse in British Westinghouse debenture stock has been severe. Nominally it is 6½ down, but the price in the official list is 50-60, so that any effort to sell would probably mean that the buyer would not give 50 for the stock. Motor shares are still depressed, at any rate Daimlers are, and the market for the others is limp, with a downward tendency.

The Rest of the List.

Electric securities were not much disturbed, but the home list was steady enough, and the only prominent weak spot was the Canadian one, both Canada General Electric shares and Mexican Light and Power shares being flat. These companies are overburdened, the market thinks. Hudson's Bay shares have been little disturbed in price, though popular, the market liking the prospect of high prices for grain. A large number of Financial Trust stocks are lower on the week, and the common and preferred shares of the Mackay Cables Trust are 10½ lower. Gas stocks have rarely moved, but Insurance shares have been an uncertain market, and improvements in Iron, Coal, and Steel things are scarce, most domestic stocks and shares being down. The fall is never serious, just a sweating away in the price, and Guest, Keen ordinary and Stewart's and Lloyd's ordinary have risen ½. Telegraph stocks and shares have again been flat, and Eastern ordinary has dropped 5 on the Marconi fright. People should not be so nervous. Anglo-American stocks were also flat. London General Omnibus stock was dealt in yesterday at 44½, and the company is doing worse by far than any other passenger-carrying company in London, worse even than the poor "Twopenny Tube."

Friday Evening's News.

Most people avoided business to-day on the Stock Exchange, but the market was by no means ruffled, and is much thankful at being able to stand calmly by while the mushroom millionaires of New York dance in the light of their own paper bonfires. Very little was done between New York and London to-day, because stocks cannot be sold by arbitragists here or in New York with any facility. It was announced that two more small trusts and three more banks of a minor class had stopped payment; otherwise there is a lull, only Mr. Morgan had to renew his loans to-day for the very good reason that he could do nothing else.

Consols, firm at first, became weak at the close, and the Home Railway market could have been harder without exciting complaint.

Copper shares rallied, particularly Rio Tinto, on some buying, mostly from Paris, which is believed to be "bear" closing. In the Mine share markets generally, however, things were dull, although the account carried over was light enough, and contangos also light. But a smart contango developed on De Beers.

The Stock Exchange in all probability will have to pay more for its loans to mid-November settlement by at least ½ per cent., that is to say, instead of getting what they want at 3½, they will probably have to pay 4½ per cent., and that is not to be wondered at in view of the firmness of the discount market.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Ann. 1905 and Ac. both ½, to 81¼-81½, Irish Ld. Stk. Ac. ½, to 85-85½, Transvaal Ac. ¾, to 93½-94, India 1931 Ac. ½, to 99¾-100½, do. 1943 Ac. 1½, to 86¾-87¼, do. 1926 Ac. ½, to 72½-73½. **Fall:** Bk. England 1½, to 271-275.

CORPORATION AND COUNTY STOCKS.—Rise: Metro. Water "B" Ac. ½, to 88½-89½, Metrop. Consold. Stk. ½, to 100½-101½, do. 3 p.c. 1, to 88½-89½, do 2½ p.c. 1, to 75-77, L.C.C. 2½ p.c. 1, to 73-75, do. 3 p.c. Ac. 1, to 88½-89½, do. 3½ p.c. and Ac. both ¾, to 100-101, Cheltenham 1, to 83-85, Grimsby 1, to 82-84, Huddersfield 1920 1, to 83-85, Lincoln 1, to 81-83, Middlesex 3 p.c. 1, to 87-89, do. 3½ p.c. 1, to 97-99, do. Scrip 1, to 77-79, Newcastle-under-Lyne 1, to 82-84, Newport (Mon.) 1, to 82-84, Penzance 1, to 82-84, Taunton 2, to 83-85, Tynemouth 1, to 89-91xd, W. Ham 3 p.c. 1, to 78-80, Manchester 4 p.c. 1½, to 117-120, Sheffield 3 p.c. 1, to 89-91.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: Ceylon 4½ p.c. Dbs. 2, to 102-104, Straits Settlemts. ½, to 87½-88½, St. Lucia 2, to 102-104, Cape Ins. 1883 ½, to 104-106, do. 3½ p.c. ½, to 94½-95½, do. 3 p.c. ½, to 81-82, Ceylon 4 p.c. 1, to 106-108, Natal 3½ p.c. Cons. ½, to 94½-95½, N. S. Wales 4 p.c. 1, to 106-108, do. 1924 1, to 98-100, do. 1918 ½, to 97½-98½, N. Zealand 1929 1½, to 105½-106½, do. 3½ p.c. ½, to 99-101, Queensland 1924 1, to 105-106, St. Lucia 1, to 101-103, Wstrn. Australia 1927 ½, to 96-97.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise: Amsterdam 2, to 91-95, Lyttelton (N.Z.) 1, to 116-119, Montreal 4 p.c. Stlg. 1, to 101-103xd, Rio de Jan. (City) 1, to 86-88, Yokohama Waterworks 1, to 102-106. **Fall:** Bloemfontein 1, to 90-92, Cape Town 3½ p.c. Dbs. 3, to 85-87, Montevideo 1, to 87-89.

FOREIGN STOCKS.—Rise: Argentine 5 p.c. 1884 1, to 100-102, do. Internal Gd. and Stlg. 1888 both 1, to 92-94, Brazilian 1889 ½, to 80-80½, Chinese Silver Ln. ½, to 101-102, Dutch Bds. 1896-1905 all ½, to 88-90, Russian Series II. ½, to 74¾-75½, do. Ser. III. 1, to 71-75, do. 1906 Ln. ½, to 88-88½, San Paulo 1888 2½, to 94-98. **Fall:** Argentine 1890 Rly. Bds. ½, to 98½-99½, do. 4 p.c. Bds. 1897 to 1900 and 1900 Laws all ½, to 82½-83, do. The Week in Mines.

The curious and almost comical attitude of a section of the Rand magnates towards the Chinese labour question has helped to make the Kaffir Circus a little bit interesting. It need hardly be said that when it was first announced that Chinkee would be returned to his native land all the Randlords worked themselves into a frenzy of excitement over the "unwarrantable action" of the British Government, which would absolutely ruin the industry as sure as anything in this world could be. But no one was disturbed, and when the repatriations actually commenced some of the more astute and, we are glad to say it, more reputable mine-owners were prepared to make the best of things that could not be altered, and set to work to replace the lost coolies by Kaffirs, a by no means difficult job. Schumacher crying stinking fish at the Glen Deep meeting, therefore, did not at all appeal to them, and the General Mining and Finance Corporation (the Albu group), which has really devoted its energies to legitimate mining and finance instead of market play, cabled inquiry as to the position of affair regarding native labour in view of Schumacher's fulminations. We give the reply in full because it is a useful thing to have on record. Here it is: "Referring to your cablegram of the 17th instant, there is no reason for uneasiness, as the supply of native labour is plentiful, and no need to fear any disorganisation. There may be a temporary slight increase in working expenses, which will return to normal level with increased efficiency from native labour. Van Ryn repatriated Chinese have been entirely replaced by natives." This is a commonsense attitude, and the Glen Deep management seems to have realised what a ridiculous figure Schumacher cut, because Reuter cables an official intimation that a material improvement in the October profits is expected, with a gradual increase thereafter. A return to the normal profits of £9,000 to £10,000 a month is said to depend on the ability to procure good long-service natives from the Portuguese East Coast provinces south of 22 degrees latitude. The Wernher Beit, Eckstein, and Rand Mines group do not expect a similar dislocation of work at the other mines under their control when the Chinese are repatriated, as these will leave in smaller batches and at intervals. Glen Deep was a unique case owing to the sudden change of almost the entire labour force. Such is the nature of the message, and the change in tone is undoubtedly welcome. In a quiet way it had a good effect upon quotations at first, but the Yankee smash was irresistible, and things became somewhat dull again. Taken on the whole, however, this section was as steady as any, and the declines on balance were small and unimportant.

The Land and Finance group did not keep up quite so well, and Rhodesians were quite flat, particularly Chartered. It is being asked where all the money is to come from to meet the railway guarantees for the current year, the sum involved being something like £560,000, and there is also talk of a failure of the process for dealing with the ores at Rhodesia Broken Hill. At any rate, the method of separating has yet to be discovered. Rhodesia Coppers are now about 3s. 6d. and Northerns 7s. 6d. By some means or other Tanganyikas were worked up to $2\frac{5}{8}$ at one time, but they soon came back, the bears spreading a report that Mr. Frecheville had arrived in this country with an unfavourable report in his pocket. Zambesias were easier as well and the Banket things looked a bit flabby.

The fun in the Diamond market has been fast and furious. First, the agreement between De Beers and Premier was signed, and then it wasn't. Later on negotiations were completely off, but that was merely to afford certain Bears an opportunity to get back because the circulation of the story was followed a few hours afterwards by an official announcement that everything had been fixed up. The intimation came in a rather curious way. It was not to the effect that De Beers and Premier had come to an agreement, but that the latter had made certain arrangements with the Diamond Syndicate. Here is the cable from the Premier head office in Johannesburg: "Premier (Transvaal) Diamond Mining Co., Limited, has finally arranged for sale of its output to the Diamond Syndicate on terms similar to those of the De Beers Consolidated Mines, Limited, and the same syndicate for the disposal of the latter company's production." Negotiations have been going on for ever so long, and we know that the agreement has not been reached without immense difficulty. It is certain that at times the parties were at breaking point. De Beers fought hard for supremacy, and it was a long time before they would consent to the appointment of a Premier representative on the Diamond Syndicate. They had to give way in the end, and it is said that the Premier Company has won all along the line. In the circumstances price fluctuations are somewhat interesting. The opening was steady to firm, De Beers being $19\frac{1}{2}$, and Premiers $10\frac{1}{2}$, and the next move was to $19\frac{3}{4}$ and $10\frac{3}{4}$ respectively. Later on shares were offered, De Beers receding to $19\frac{3}{8}$ and Premiers to $10\frac{11}{16}$, just a trifling loss for the last-named. Then followed a heavy collapse to $18\frac{1}{2}$ and $9\frac{1}{2}$ respectively, both Paris and London—Hatton Garden—being sellers, partly due perhaps to the New York smash, and partly to the breakdown of negotiation rumours. However, the Bears got back, and then came the anxiously awaited news regarding the arrangement, leading to a quick pick up to $19\frac{1}{16}$ for De Beers and $10\frac{1}{2}$ for Premiers. Other Diamond shares inclined to lower prices.

Egyptians and West Africans were terribly neglected, and aroused no interest throughout the week. At first Broken Hills tried to pick up, Colonial cables being better, besides which silver and zinc were somewhat harder. Unhappily the improvement had not proceeded far before it again gave place to a dull tone, and this was continued for the rest of the week, although the prices for metals were very well maintained. On the whole, West Australians were a better market, small Colonial buying being in evidence, in addition to which dealers' books are now pretty clear of shares. The South Kalgurli ore reserves at the end of September were estimated at 111,039 tons averaging $7\frac{1}{4}$ dwts., in addition to 73,527 tons of

"probable ore" worth 6⅝ dwts. Nothing happened to Deep Leads, and quotations for "leading" things are anything between sixpence and five shillings nominal, and very much sellers. New Zealand issues showed some irregularity.

Copper metal opened with a fairly steady tone, and managed to improve slightly at first, with the result that copper shares were put higher as well. Prices rallied rather well, but the metal soon began to move back again, despite some buying by consumers. What looked very like forced sales came on the market, and values broke £1, but apart from Tintos and Anacondas shares did not give ground. A good many showed further improvement, and Mount Lyalls in particular were quite buoyant. The Colonies bought, and there was talk of good development news shortly to come to hand. The forthcoming dividend is also being discussed, and disappointment will be expressed if it is not 3s. per share. Towards the end all prices weakened, thanks to the Yankee demoralisation and another fall in the metal. Tin relapsed badly, and shares went down as well, but the metal closed rather firmer.

In the Miscellaneous divisions San Francisco del Oros and El Oros improved, but Esperanzas and Camp Birds were on the dull side. Among Indians Ooregums, Balaghats, and Mysores all went the wrong way, but Nundydroogs put on 1s. on cable news that 30 dwts. and 2 ozs. ore had been struck at the 2,300 feet level, Kennedy's shaft. Siberians were steady as a rule, while a violent slump occurred in Cobalt Townsites, which almost halved their price. Casey Cobalts also fell away.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Indian Mine Crushings.—The following table gives the total monthly returns from the Mysore Field alone, for 1907 and the previous five years:—

	1902. ozs.	1903. ozs.	1904. ozs.	1905. ozs.	1906. ozs	1907. ozs
January ..	41,612	45,080	50,935	50,999	50,870	44,880
February ..	40,053	46,208	49,500	49,629	48,538	42,224
March ..	41,575	48,327	50,914	51,629	47,935	43,535
April	38,329	48,271	49,991	52,324	44,910	43,565
May	25,093	46,628	50,445	51,095	47,385	43,522
June	37,466	48,980	50,800	51,553	46,633	43,108

November ..	45,332	51,559	50,142	50,802	45,307	—
December ..	48,078	53,084	51,560	53,077	48,806	—
Total ..	514,291	597,786	606,233	615,561	563,478	393,192

The falling off in the yield for September is due to the same cause which swelled the August figures, viz., the abnormal return by the Mysore West and Wynaad for the latter period prior to shutting down. Other movements were not important. Mysore and Nundydroog each produced less, while the Ooregum showed improvement.

Rhodesian Mine Crushings.—The following table gives the total monthly returns for 1907 and the previous four years.

	1903. Ozs.	1904. Ozs	1905 Ozs	1906. Ozs	1907. Ozs
January	16,245	19,359	32,531	42,950	47,048
February	17,009	18,675	30,131	38,037	40,482

Total ..	231,872	267,715	407,048	551,875	454,226

Glynn's Lydenburg.—This mine is numbered among the smaller Rand companies, its battery being only 20 stamps, but it operated with very fair success during the year to July 31 last. In that time the ore crushed was 28,525 tons with gave 0.684 fine ozs. of gold, while a similar amount of sands and slimes treated by cyanide yielded 11,527 ozs., the total value being £75,930 or 53s. 2.91d. per ton milled. Working costs were £27,931 or 19s. 7d. per ton, leaving a profit of £48,005 or 33s. 7.91d., a really good result. After providing head office expenditure, &c., the net balance is £44,054 and £1,300 was received on account of claims and general reserve making £45,355. Depreciation and profit tax take £3,050, but £0,503 was brought forward, and once more shareholders get two dividends of 10 and 15 per cent. or 25 per cent. for the year, and bringing up the total distributions since milling commenced to 145 per cent. Labour was very short in the early half of the financial year, but afterwards there was some improvement, the failure of the native crops in the low country driving the "boys" back to the mines. When the manager's report was written they were beginning to leave again, but the most recent labour returns are evidence that there is not much cause for anxiety. Ore reserves increased by 300 tons, the total in sight at the end of June being 84,900 tons.

Globe and Phoenix Gold Mining.—This Rhodesian company's interim report for the half-year ended June 30 states that on the Phoenix Mine the 13th level has been partially opened up, and the crosscut to the reef at the 14th level has been started. The main shaft has been sunk to the depth of the 15th level, about 2,000 ft. On the 13th level values have been low, but in the north drive high-grade ore has recently been met, and the prospect on this level is encouraging. The 12th level has opened up well, and shows an improvement over the 11th level. After further exploration in the Globe mine the directors are advised that there is no prospect of discovering further ore bodies. A small quantity of quartz remains to be extracted from the "vertical" reef, but in the near future it will be economy to close down the Globe mine. On June 30 last the ore reserves stood at 109,706 tons at 11 dwts. against 98,733 tons at 11.7 dwts. at December 31, 1906, the value being £248,586 and £250,430 respectively. Aggregate working costs for mining, milling, and cyaniding have been practically the same as for the previous year, and the slimes plant has been in continuous work, showing a profit for the half-year of £2,314. The grade of ore milled has been further decreased, and difficulties which it is hoped to overcome have periodically been experienced with the extraction, owing to the presence of antimony. The labour position is described as still unsatisfactory. An abundant harvest has kept the experienced local natives "on the land," and the company has had to depend upon "raw" boys, but they are engaged for long service, and will probably become efficient in due course. In July an interim dividend of 1s. per share was declared, and another similar distribution is now proposed.

Main Reef West.—This Rand company made fairly good progress during the twelve months to June 30, the main shaft being sunk a further 625 ft., making the total depth on the vertical and the incline 1,070 ft., while the total development for the year was 3,378 ft. Capital expenditure in the period was £42,712 and general outlay £4,204, making £46,976 in all, against which the trifle of £148 came in on account of sundry revenue leaving the actual outgo at £46,828. To meet these expenses further calls amounting to 9s. per share have been made in respect of working capital, increasing the amount paid up to 29s. per share or £145,000 and leaving 11s. per share or 110,000 shares, say, £55,000. Up to date the sum spent on buildings, machinery and plant is £34,849, the shaft has cost £22,712 and mine development £11,684, while general outlay now brings up to £37,527 and the property account stands at £352,008. Values disclosed by the development work are regarded with satisfaction and the directors speak with gratification of the regular reef formation and the fact that the property, so far as shown by the work done, is remarkably free from faults, dykers or disturbances.

New Vaal River Diamond and Exploration.—The burden of the chairman's speech at the shareholders' meeting of this notorious enterprise, held in Sydney in September last, was that the company had not been given a fair chance. The methods of the diggers on the farm Droogveld, a portion of which had been thrown open, were described as unscientific, and it was generally hinted that a good proportion of the miners knew mighty little about alluvial diamond digging. Be this as it may, there is no doubt that in some cases the ground proved very poor, and a good slice of ground provided for the River Diamond Syndicate, which has apparently efficient, if small, machinery, does not seem to have produced very brilliant results. No adequate explanation was forthcoming of certain cables sent to this side pointing to more or less wonderful returns. The chairman just skimmed the surface of this subject, and had no word of sympathy for any poor misguided wretch who was tempted to come in at anything up to the £12 per share to which the price was at one time rigged. The quotation now is something over par, and only a bold speculator would buy at that. Number of diggers on the estate at the close of the financial year was 31 less than at the corresponding period, due to two rushes to other diggings, but the greater part of the men are now returning. Output of diamonds was 10,271 carats sold for £40,594, an average of 80s. 4d., against a return for the previous year of 12,170 carats valued at £50,737 or an average value of 94s. 9d. Since the month of April there has been a falling off in the price of diamonds, a fact which considerably affected the royalties. Company's gross revenue was £22,233, comparing with £8,091 for the previous financial year, most of it coming from royalty on diamonds and claim licences. Expenditure was £9,911 compared with £3,761, and the nett profit before allowing for depreciation is £12,322 or an improvement of more than £9,000. Sand depreciation ran away with £5,000, of which no less than £3,000 applied to the tobacco plantation plant, and after adding £3,100 from the previous account there is a credit to be carried forward of £9,822. The general manager speaks optimistically of the property, describing the Droogveld diggings as a "large and valuable asset," but the directors admit that the royalty imposed is too heavy a tax on the diggers, and it is the intention of the board to make a considerable reduction in both the royalty and claim licences.

The company's financial position is fairly good, and the liquid assets should be sufficient for some time.

South African Real Estate.—Although not a mining venture, this concern shared the depression—we are heartily sick of the word—which enveloped all South African business during the past year, and in the financial period ended June 30 the revenue from properties was only £11,150, interest giving another £411, and making £11,562 in all, or a falling off of £5,927 compared with the preceding twelve months. Expenditure was, of course, kept down as low as possible, and all items show decreases, with the exception of insurance account, which is owing to an increase in the rates, and electric light, heating, lifts, water, &c., owing to certain alterations and repairs required to be done, and for light derived from the municipality during installation of new system. Outgo under all heads was £7,980, leaving £3,581 nett, which is increased to £6,379 by the sum brought forward. Of that £3,928 is allowed for depreciation and £2,450 is carried forward. Property account was written down by £3,876, reducing its book value to £139,900, against the paid-up capital of £150,000. Except that the company possesses no reserve fund, the balance-sheet does not call for comment.

Avino Mines of Mexico.—When experts differ who shall decide? Before committing themselves to a reconstruction, the directors of this company agreed to have an independent report on the mine, which was entrusted to Mr. J. Gordon Hardy. This gentleman made a most discouraging report—practically to the effect that the mine was played out—and it was so completely in opposition to the conclusions of Mr. Ralph Nichols, the manager, that the board arranged with Mr. R. A. Varden to make a critical examination of the mine and arbitrate between the divergent views of Messrs. Hardy and Nichols. All of which reminds us very forcibly of the Etruscan business. The directors have no wish to influence the shareholders in their consideration of the various reports, but think it right to call attention to the fact that since Mr. Hardy's examination the mine has been self-supporting, principally from the sale of high-grade ores, the existence of which he doubted. Mr. Varden endorsed the statements made by Mr. Nichols as to the tonnage of ore, but places a lower estimate on the value of the metal contents, partly due to the lower prices of copper and silver in Mr. Varden's calculation. Moreover, Mr. Varden entirely agrees with Mr. Nichols' methods of taking samples to which Mr. Hardy objected, and in the case of Blocks "I" and "O," to which the last-named calls attention in his report, Mr. Varden shows that subsequent developments have proved Mr. Nichols to be correct in estimating these blocks to contain payable ore. The upshot of all the differences is that the Elmore process which was used for testing samples before Mr. Hardy's examination is to be given a trial on a working scale before the shareholders are asked to reconsider the scheme of reconstruction, especially as Mr. Nichols has undertaken to provide the necessary funds for financing the company in the meantime from the shipment of high-grade ores to the smelter. An order has, therefore, been placed for an Elmore plant capable of treating from 30 to 40 tons of ore per day, which will be shipped about the end of next month, and so soon as the results of the tests are known the information will be communicated to the shareholders. All else that need be said now is that the purchase price of the property was £844,753, and at one time the market trebled this value.

Hainault Gold Mine.—In this company's year ended May 31 last 61,414 tons of ore were raised and rough crushed, of which 5,833 tons were sorted out and 55,581 tons milled for a return of 18,718 ozs. of fine gold, value £79,510. Small debits and credits leave the actual revenue at £79,518, and after meeting expenditure of all kinds, including mine development and depreciations there is a profit of £8,470, a very small sum to save from the fairly considerable income. It is, however, necessary to point out that the entire reconstruction and enlargement of the plant on the mine has been in progress during the greater part of the financial year, and has much interfered with the returns from the mill, as well as development work. Delay in delivery of the new machinery occasioned by strikes at makers' works retarded the completion of the erection for about six months and added largely to the cost, the total outlay during the year on account of plant, buildings, and machinery being £31,334. But the general manager assures the directors that the company has a splendidly equipped mine, and may look forward to the future with confidence. Ore in sight is put at approximately 240,000 tons or nearly three years' supply for the enlarged mill of a recoverable value of 27s. per ton. This is a lower value than in previous years, but costs are also estimated on a reduced scale, say 17s. per ton, including development. Since the close of the financial year the values of the ore developed have improved, and now that the work of construction has been completed it is expected that further considerable ore reserves will be opened up during the current year. The main shaft has been sunk and completely timbered to a depth of 1,000 ft. To the nett balance on operations of £8,470 has to be added the credit brought forward of £14,502, making £22,972, and all but £2,071 which is carried into the current year has been distributed in the shape of three interim dividends of 1s. per share.

Chinese Engineering and Mining.—This company's report and accounts for the year ended February 28 reveal a position of striking prosperity. The output and sales of coal show a satisfactory increase, being the largest in the history of the company, and the figures for the first seven months of the current year show a further considerable improvement as shareholders will probably have gathered for themselves from the periodical returns. The erection of the electrical pumping and lighting plants at the Tongshan and Linsi mines has been retarded by various causes, but the installation is now complete, and is working well. The works at Ching Wan Tao are practically completed, the breakwater having been extended to a length of 2,300 ft. and the accommodation afforded being sufficient for present requirements, gross profits for the twelve months including interest and transfer fees were £247,356, a first-rate increase compared with the preceding year, and after meeting all charges which include debenture interest and £10,000 for redemption, 15 per cent. or 5 per cent. more is paid to the shareholders, £40,000 is added to the depreciation reserve and the balance forward is increased from £6,604 to £11,556. The balance-sheet contains some big items. Property account is in at £1,037,821 and capital expenditure, of which £161,353 was incurred during the past year is down at £444,124, apart from steamers' account £94,819. Depreciation reserve, however, now amounts to £150,000, and that for redemption of debentures £41,667. The company's cash position is a very strong one, and what is evidently now exchange reserve stands at £84,391.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

North of Scotland Bank.

In its year ended September 30 this Scotch bank, which is soon to absorb the Town and County Bank of Aberdeen, made a profit of £65,355, which was £1,373 more than in the previous year. Out of this £25,000 is devoted to the payment of a dividend of 11¼ per cent. on the paid-up capital of £400,000, half of which was distributed on May 3 last, the second half being due on November 1. Then £1,000 is written off bank premises or £100 less than a year ago, and £15,000 is set aside for amalgamation purposes, leaving £4,355 to carry forward against £2,982 brought in, so that the balance carried forward is increased by the additional profit earned. Some changes in the balance-sheet are interesting. The note circulation is down £7,994 at £408,925, and the amount due to depositors and other creditors is £408,110 higher at £4,478,703. There are also some changes in the balances due to banking correspondents which, at £39,123, show an increase of £32,217, but drafts issued payable on demand are £35,102 lower at £42,241. Including the paid-up capital and the reserve fund of £222,500, together with the above mentioned profit, the balance-sheet total is brought up to £5,694,406. It is in the assets, however, that the changes are most striking, gold and silver coin at head office and branches and cash at call with London bankers is a mixed item, showing an increase of £1,008 at £324,442, but gold and silver coin with other banking correspondents, exchangeable notes and cheques on other banks, show an increase of £16,860 at £169,979. In the report the directors say that they have made allowance for the depreciation on investments as well as for bad and doubtful debts, but no indication is given either there or in the balance-sheet as to the figures at which Consols and other securities of the British Government are taken into the account. In reality the figure against this entry is £4,860 up at £271,765. There is also an increase of nearly £27,000 in the debenture and preference stocks, other stocks and shares, &c., held, the total of which is now £555,622, and loans to London brokers on call and short notice are up £364,000 to £769,000, while temporary loans from marketable securities have fallen off by no more than £78,172 to £282,371. Colonial Government securities are also down by £16,284 at £289,300, but altogether there is a nett increase of £300,000 in these items, and upwards of £1,000,000 of the bankers' money is now out on loan in London exclusive of the cash at call with the London agents of the bank, the amount of which is not revealed in the balance-sheet. Possibly enough the directors have deemed it prudent to put more of the bank's resources into the form of floating loans, but at the same time they have obviously increased their fixed investments, and as bills discounted, advances on cash credit bonds, &c., show an increase of nearly £84,000 at £2,665,208, it hardly seems necessary that so much of the bank's resources should be in the London market. Are we to infer, however, that the bulk of it is in the discount market and not on the Stock Exchange?

Northern Banking Co., Limited.

An improvement of £3,995 to £62,711 was recorded in the nett profits of this Irish bank for the year ended August 31, but this was neutralised by the smaller balance of £21,882 brought forward, and the sum to be dealt with was £1,123 down at £84,593. In view of the general depreciation of Consols and other securities the directors have deemed it advisable to put £15,000 of this total to the investment suspense account, compared with £7,900 written off a year ago. Then the dividends of 11 per cent. and bonus of 2s. on the "A" shares and of half those amounts on the "B" shares are paid, and after writing £4,934 or £2,310 less off premises the balance forward is reduced by £5,914 to £15,968. Besides the sum now set aside against investments £30,000 has been transferred from the general reserve to a special fund for depreciation of the securities, and the directors consider that they have now made ample provision. As the balance-sheet now stands, the general reserve amounts to £270,000 against a paid-up capital of £500,000, but

there is in addition this special reserve of £30,000, while the directors also make use of the officers' provident and other funds totalling £53,230. Note circulation has increased by £24,682 to £572,790, and liabilities on deposits and credit accounts come to £204,488 more at £4,400,253. On the other hand, cash shows a decrease of £165,502 to £751,044, but bills discounted, loans, &c., are £275,361 higher at £3,444,230 and investments have been increased by £112,480 to £1,535,073. Bank premises stand at £111,000 or £3,000 more, but this is not out of the way considering that the head office and branches number nearly sixty.

English, Scottish and Australian Bank, Limited.

The year ended June 30 was a much more satisfactory one for this bank, and gross profits, after making the usual deductions for rebate, &c., showed an increase of no less than £21,067 at £270,110. Outgoings only rose by £4,782 to £102,162, and with £1,300 more at £17,912 brought forward the disposable total came to £185,860 or an improvement of £17,585. Interest charges were a trifle down at £89,758, and after transferring another £15,000 to reserve there was a surplus of £81,102 to be dealt with against £63,275 a year ago. Out of this a further 1½ per cent. interest is paid on the deferred inscribed deposit stock and the dividend on the share capital is again raised by ½ per cent. to 5 per cent., after which £8,991 or £899 more is set aside for the purchase of deferred deposit stock, an extra £1,000 at £2,000 is transferred to the officers' guarantee and provident fund and £6,000 goes as a bonus of 10 per cent. to the staff, leaving £25,274 or £7,362 more to be carried forward. The £8,092 set aside last year for cancellation of deferred deposit stock has been appropriated to the purchase of £8,750 of the stock and the perpetual stocks outstanding have been reduced by that amount to £2,663,984. Another substantial increase of £372,174 to £3,374,866 has taken place in current and deposit accounts, bills payable and other liabilities are £107,578 larger at £579,439 and the note circulation has risen by £17,857 to £58,805. On the other hand, cash and bullion show a small decrease of £15,817 at £830,283, but cash at bankers and at short notice is £206,638 up at £394,405, bills receivable come to £122,800 more at £822,272 and advances are £209,052 higher at £4,891,871. Investments in British Government securities remain at £100,000, but £6,412 has been added to the colonial stocks held as security for the note issue, raising them to £59,138. The amount of the deferred deposit stock cancelled has been written off premises account, as usual, but some small additions would appear to have been made to the property, as the item is only £7,400 down at £351,628.

H. H. The Nizam's Guar. State Railways Co., Limited.

Receipts from coaching traffic on this company's broad gauge system during the half-year ended June 30 showed a trifling increase of Rs. 3,011, but goods traffic produced Rs. 1,37,138 more, owing almost entirely to a gain in general merchandise, as the coal traffic yielded Rs. 76,242 less. Gross earnings were Rs. 1,66,454 up at Rs. 27,48,320, and as less was spent on maintenance of way, &c., working expenses were reduced by Rs. 23,005 to Rs. 9,44,862, the ratio being 3.11 per cent. smaller at 34.38 per cent. Nett revenue was consequently Rs. 1,89,459 better at Rs. 18,03,458, or, converted into sterling, £120,801, compared with £108,168, of which £6,632 or £408 less was payable to the Government of India on account of the Bezwada extension, leaving a balance of £114,169 to be dealt with against £101,128. The sum required to meet the guarantee on the 4 per cent. debentures and sinking fund, together with 5 per cent. per annum on the capital stock and the debentures on which the guarantee has expired, is £85,062, and of the surplus of £29,107 the company is entitled to half, which has been added to reserve in the usual way. On the metre gauge line the gross receipts were Rs. 2,40,084 larger at Rs. 20,52,625, of which Rs. 88,391 came from passengers and Rs. 1,53,068 from goods, principally coal, cotton, and cotton seed. Expenses rose by Rs. 51,644 to Rs. 9,26,261, but the proportion to earnings was 3.12 per cent. down at 45.13 per cent., and the nett revenue showed an improvement of Rs. 1,88,440 at Rs. 11,26,364. Converted into sterling, this gave £75,384 or £12,489 more, and the surplus to be dealt with at the end of the year was £34,884 compared with £22,395.

Midland Uruguay Railway Co., Limited.

An improvement in all classes of traffic on this line took place during the year ended June 30 and the gross revenue shows an increase of £15,355 at £75,888. Passenger traffic yielded an additional £3,504 at £19,030, an improvement which is all the more satisfactory because nothing appears to be included for movement of troops. Goods receipts were £8,105 up at £40,168 and animals gave £2,159 more at £8,837 and with smaller increases elsewhere the total gain was as stated above. On the other hand, charges for maintenance of way were £5,182 heavier, locomotive power cost £2,443 more and traffic expenses £2,122 more and the outgoings under all heads were £10,520 up at £60,833 leaving a nett revenue of £15,055, which was an improvement of £4,820 over the previous twelve months and the largest profit ever obtained in any one year. The sum brought forward, however, was only £5,241 against £10,509 and with £55,430 from the Government guarantee and £1,030 taken from special reserve the available surplus was £400 smaller at £77,374. Of this debenture interest took £55,042, or £7,804 more owing to an extra 1 per cent. having been paid for the second half of the year, £1,851 is written off for new works and £2,030 for abatement of war claims, &c., and £15,000 is transferred to rolling stock reserve compared with various appropriations amounting to £13,431 made a year ago leaving £3,451 or £1,790 less to be carried forward. The increased movement on the line has rendered the provision of further rolling stock imperative, and in order to provide for this and other capital outlays the directors have arranged with the debenture stockholders that the interest payable shall be at the rate of 3 per cent. per annum from November, 1906, to April, 1909, provided that no dividends be paid during that period and that all surplus income shall be devoted to capital expenditure or betterment works.

Bolivar Railway Co., Limited.

A considerable change took place in the nature of this company's goods traffic during the year ended June 30, as there were big reductions in the quantities of coffee and hides carried, while flour, coal and coke, oil and provisions and general merchandise increases, and shipments of copper ore ceased altogether. On the other hand, lard, papelon and salt all increased substantially, and the nett falling off in the total traffic was only 733,659 kilos or 734 tons. Gross earnings from the railway and steamer, however, dropped by £2,385 to £50,000, and as at the same time expenses rose by £4,867 to £35,051 nett profits were £6,482 down at £14,055. Receipts on account of the award of the Anglo-Venezuelan Claims Commission were £194 larger at £7,995 and interest on deposits, transfer fees, &c., gave £208 more at £758 making £22,808 compared with £28,890. After providing for debenture interest and £1,579 for loss on exchange, &c., the disposable surplus was £5,668 smaller at £6,228, so nothing can be put to depreciation reserve against £3,000 transferred a year ago and the dividend on the preference shares is reduced from 3 per cent. to 2, leaving £1,037 or £373 more to be carried forward. This result is far from encouraging and the immediate future does not seem to promise anything in the way of improvement—at least that is how we interpret the directors' silence on this point—while the outstanding balance on account of the award is now no more than £2,326.

Hotel Cecil, Limited.

The year to August 31 last did not witness the maintenance in full of the considerable increase in business secured during the preceding twelve months. The turnover was £225,170 against £229,030 in 1905-6, when the improvement was no less than £27,892. Taking into account the very bad summer, the shrinkage was not worse than might have been expected. Rents gave only a little more at £12,390, making £237,566 in all, a decline of £3,604. On the other hand, working expenses showed a reduction of £2,331 to £71,747, and the value of food and wines consumed was only £86,081, or a drop of almost £5,000. Rates, taxes, insurance and licences came down practically £1,000 to £8,852 and general repairs and renewals were a little smaller at £12,577, so that when it comes to nett profits there is the considerable gain of £5,229 at £58,308. Small additions have to be made on account of interest and transfer fees, and after meeting debenture interest, directors' fees, &c., £32,824 is left. With £9,249 brought forward the disposable sum is £42,073, which would enable the directors to catch up a small part of the preference dividend arrears, but they again recommend one year's dividend, leaving twelve months in arrear, and carry forward the much larger sum of £14,573. And none can dispute the wisdom of the policy when we remember that the property account stands at the enormous figure of £1,499,805, including £2,176 added during the year, and that the only reserve possessed is the depreciation account of £30,411. Trading accounts are heavily adverse, and while the cash balance is fairly generous at £66,793, stock of wines, spirits, &c., £31,432 does not seem very great for an hotel of such magnitude.

Carlton Hotel, Limited.

No light is thrown by the report of this company on the question of how far the Ritz Hotel or the Ritz-Carlton restaurants on the Hamburg-American line have contributed to the increase in profits earned during the year ended August 31. We should judge, however, that the yield has not been commensurate with the money sunk in them, although with regard to the first named the directors say that the business shows continuous progress, while the latter have been most successful and profitable. Nett profits from all sources, including interest on loans, &c., amounted to £76,833 or an increase of £18,000 and with £4,400 brought forward gave a total of £81,243 compared with £60,129. On the other hand, however, interest on the 4½ per cent. debenture stock, which a year ago was charged to the Ritz Hotel, appears at £12,357 and interest on the loan from bankers has risen by £6,307 to £19,132, and after providing £10,706 for interest on the 4 per cent. debenture stock, paying administration charges and income-tax, and interim dividends on the preference and ordinary shares, the surplus remaining was £4,021 smaller at £30,500. The final dividend on the preference shares having been met, the ordinary shares receive a distribution making the usual 10 per cent. for the year and £2,023 is transferred to reserve for amortisation of lease, but only £10,000 or £5,500 less is added to general reserve, leaving a slightly larger balance of £5,727 to be carried forward. In the balance-sheet the property account remains at £1,427,321 or the value put upon it in 1902, while the reserve and leasehold redemption fund together will now amount to £128,000, of which only the leases fund is represented by separate investments valued at £10,058 or £4,200 more than a year ago. The company's holding of shares in the Ritz Hotel is maintained at £151,000, but the loan indebtedness of that undertaking has been increased by £200,110 to £585,713 and the money required for making this advance has been raised by an issue of £275,000 4½ per cent. mortgage debentures. Another 50,000

ordinary shares have also been issued on which 5s. per share has been called up, and as matters now stand, the company with a paid-up capital, including £3,499 calls paid in advance, of £365,999 has no less than £845,702 outstanding on debentures and in addition owes £63,500 to its bankers. Liabilities to sundry creditors total £43,489, but sundry debtors and stocks come to £50,276 and cash has been increased by £7,532 to £19,757.

A. and F. Pears, Limited.

Although the scheme for the conversion of the 150,000 vendor held deferred shares of this first-rate concern into 60,000 ordinary shares was accepted by the proprietors at the end of last year, the Court did not sanction the proposal until August 3. Consequently the allocation of profits has to take place on the old basis, but for which "the directors would have had the gratification of paying a dividend of at least 12½ per cent. upon the ordinary shares." Let us hope that it is merely a pleasure deferred, and that results in the current year will at least be equal to those now being reviewed despite the fact that rivals will not again play into the company's hands by trying to form a soap trust. The directors have every reason to congratulate the shareholders on the results displayed, and it is good to learn that the increase in sales during the year to June 30 has been maintained up to the present time. Balance on trading account, after making provision for bad and doubtful debts, is returned at £169,659, an increase of a good £6,000 compared with the preceding year, and as interest on investments and deposits also showed a moderate gain at £5,009 the total gross income is £174,668 compared with £163,477. Charges were again slightly lower at £102,640, and after allowing £4,703 for depreciation and leasehold redemption the actual nett profit is £67,325 against £59,274. Sum brought forward was £2,090, making £69,415 from which debenture interest takes £10,000 and preference dividend £12,000. The ordinary shares next get their 10 per cent., and the distribution on the deferred will be the same amount or twice as much as last year, with a sharp improvement to £6,415 in the sum carried forward. No addition is made to reserve against £3,500 last time and £5,000 in the year before, and the chairman's remark at the last general meeting that the fund was large enough will doubtless be recalled. It must be admitted that the finances are exceedingly strong, general reserve being £58,500, depreciation and leasehold redemption fund £90,767, and special reserve £5,703, making up a total of £154,970 against the property and goodwill of £602,937. The company has invested £132,791 in gilt-edged securities and its own debenture stock, but these unhappily show considerable depreciation. Only £22,646 is owing to sundry creditors against debtors and bills £60,211, stock is £185,322, and cash £54,734, an excellent position.

Baldwins, Limited.

Evidently this Stourport company had an excellent year. Its accounts are made up to June 30, and show a manufacturing and trading profit of £148,726. Of this management expenses took £11,655, and £5,984 was spent on alterations and improvements, while £10,000 was set aside for depreciation. Then premiums on sinking funds for the redemption of leaseholds and debenture stock took £5,629, and the debenture interest required £11,250. After meeting these charges and providing £13,750 to meet the dividend on the 5½ per cent. cumulative preference shares, a balance of £90,458 is left exclusive of £12,498 brought forward. Thus altogether £102,956 was free revenue and the directors are therefore easily able to pay a dividend at the rate of 5 per cent. tax free on the ordinary shares against 2½ per cent. for the preceding year. They also add £50,000 to the reserve and still have £25,456 left to carry forward. We are very glad that the board did not attempt to pay a very high dividend, for the total amount credited to depreciation is still only £60,000, and goodwill, including trade marks, licences, &c., continues in the balance-sheet at £165,186. Moreover, £22,008 was spent on capital account last year, so that, in spite of the depreciation, freehold, leasehold and copyhold lands, buildings, plant and machinery, together with the Primitiva mine, still figure in the books for £658,012. Stocks are also fairly heavy at £270,143, and sundry trade debtors, after providing for discounts and doubtful debts owe the company £254,522. No wonder, therefore, that the business requires a large amount of borrowed capital, in spite of the fact that the paid-up share capital is £800,000. The 4½ per cent. first mortgage debenture stock amounts to £250,000, and the company owes £212,812 to sundry trade creditors, besides £50,000 to its bankers, altogether its debts being about £513,000. If, however, the business continues to prosper as it did in the past year, and if the directors maintain their resolution to keep the dividend down to 5 per cent., the balance-sheet will soon begin to wear a much better complexion.

Western Telegraph Co., Limited.

It was not to be expected that this company could go on extending its business at the rapid rate of the last few years, and all things considered the display made for the six months ended June 30 must be regarded as very satisfactory. Receipts from messages rose by £5,799 to £290,234, and although there was a trifling decrease in receipts from interest on deposits, rents and transfer fees at £3,137, interest on investments yielded £4,613 more at £17,043 and dividends on investments in other telegraph companies were £1,016 up at £15,273. The total improvement in revenue was therefore £11,132 at £325,687, but expenses increased by £6,950 to £82,941, cable maintenance took an extra £2,358 at £30,945, and both debenture interest and income-tax were heavier at £16,000 and £4,226 respectively, leaving a nett gain of no more than £697 at £191,575. Adding £8,461 or £3,192 more brought in, the amount available was £200,036 against £196,148 a year ago, out of which the usual dividends and bonus making 7 per cent. for the year are paid. An extra £10,000 at £85,000 is then transferred to general reserve, but this is offset by placing only £10,000 to marine insurance and land and buildings depreciation fund or £5,000 less in each case, and after putting the usual £5,000 to maintenance ships reserve the balance carried out is raised by £4,200 to £6,864. Charges to general reserve during the six months were trifling, and this fund now reaches £1,231,769, while the total accumulations are £160,759 up compared with a year ago at £1,377,369, of which no less than £1,193,497 or £168,315 more is separately invested. Expenditure on account of new offices, &c., was £6,901, and with £347,572 in shares of other telegraph companies, £37,500 in Electra House, Limited, and £86,657 in cable ships, the total capital outlay is £19,404 up at £2,904,277. The value of the spare cable held has been increased by £10,878 to £53,130 and these various additions have resulted in declines of £35,737 to £65,394 in cash and £13,639 to £44,762 in bills receivable. Sundry debtors, however, amount to £117,417 against floating liabilities of £62,761, while remittances in transit are £4,820 larger at £14,585.

Paterson, Laing and Bruce, Limited.

The marked prosperity enjoyed by the Australian Commonwealth helped this business during the year ended July 31 and trading profits showed a further improvement of £9,674 at £60,942. With £10,379 or £4,390 more brought forward, the total income was £14,064 up at £71,321, but the directors take an extra £550 at £1,950 for their fees, and after meeting debenture interest and other charges the disposable surplus was £62,439 against £48,879. Preference dividend having been paid an extra £5,000 at £10,000 is put to reserve and a further £2,500 contributed to the pension and bonus fund, after which the ordinary shares again get 4 per cent. and the balance carried out is increased to £18,939. This is not a brilliant display, but it is as good as can be expected from a company so overweighted with capital as this one is. Reserve even now stands at no more than £30,000, although the goodwill remains at the old figure of £161,192, and freehold land and buildings in Melbourne and Sydney are also unaltered at £187,546. Something, however, appears to have been written off fixtures, fittings, carts, horses, &c., as that item is £1,494 down at £22,587, but whether the allowance is sufficient or not we would not like to say. But the most important point is the steady growth in stocks, which have risen by £7,762 to the heavy total of £260,814, apart from the increase of £33,730 to £242,764 in new season's goods not yet taken into stock. Liabilities to creditors and on bills payable are £15,561 higher at £205,349 and exceed debtors by £85,949, while cash has only increased by a few hundreds to £12,700.

Australian Mortgage, Land and Finance Co., Limited.

Although the first half of the season was dry and the lambing in some districts suffered, the past year was on the whole a very favourable one for pastoralists, and the display made by this company for the twelve months ended June 30 is far and away the best in its history. Profits, after providing for bad and doubtful debts, putting aside a reserve of £10,000 on account of wool and produce department and writing £13,000 off premises amounted to £246,929 or an increase of £38,286. Current expenses only rose by £3,052 to £29,315, and after providing for debenture interest and income-tax the nett income, including £30,336 or £23,962 more brought forward was £164,826 compared with £106,730. Of this £25,000 is again put to reserve, but it is not considered necessary to repeat last year's provision for depreciation of the reserve fund investments, when £12,394 was written off, and the directors therefore are able not only to increase the dividend by 2½ per cent. to 10, but to add a bonus of 2½ per cent., and still leave £74,826 or £44,490 more to be carried to the new account. The reserve fund now stands at £300,000 against a paid-up capital of £520,000, and the investments representing it have been brought up to the same figure, and with an increase of £142,604 in other securities the total book value of the investments is now £630,999, but the market value at June 30 showed a heavy depreciation of £21,759. Loans on land, stations and stock and properties owned are £65,108 larger at £2,058,668, and advances on wool and other produce have risen by £67,872 to £104,249, with the result that cash has been reduced by £137,018 to £200,749 and current liabilities are £60,025 higher at £219,216. Sundry debtors come to £56,018 less at £65,745, and premises and plant are now valued at £130,916 or £47,930 more.

Rudge-Whitworth, Limited.

It would not have been ungracious on their part had the directors entered into some explanation of the decline in the profits for the year ended July 31 last, but they keep silence. Yet the decline is most serious—from £53,072 to £24,155, or a reduction of £28,917. Including the balance of £18,511 brought forward, the available balance is only £42,666, but that enables the board to pay the preference dividend and to again give the ordinary shares 10 per cent., the 5,000 additional shares issued in February last ranking for this dividend. Also £8,806 is added to the ordinary reserve making it £55,000, and rather more at £18,895 is carried forward. A year ago £1,000 was added to property reserve which this time gets nothing, and the amount

credited to ordinary reserve is £16,167 down compared with last year. Goodwill, however, has been written off that reserve and it still amounts to £46,194, while £5,737, representing adjustments on completion of contracts has been knocked off cost of properties. Additions to plant and machinery were made out of capital during the year to the amount of £21,824, bringing the total of that item up to £69,886, although £5,740 was deducted as depreciation. Creditors of the company have gone up £17,014, and it now owes them £153,170, but debtors to it are down £3,457 to £145,220. Cash and bills held are also slightly lower at £7,697, but stock-in-trade has risen no less than £45,995 to £150,978, an expansion which suggests congestion in the business. We do not quite like the exhibit and trade prospects, we fear, are not at the moment favourable.

Joseph Lucas, Limited.

This business of dealers in cycle accessories again had a prosperous time during the twelve months ended August 31, and increased its nett profits by £4,149 to £23,636. The sum brought forward, too, was £1,737 larger at £4,367, giving a total of £28,003 or £5,886 more to be dealt with, and after paying the preference dividend an extra £2,000 at £10,000 is put to reserve, and the dividend on the ordinary shares is raised by 2½ per cent. to 7½ per cent., leaving £5,753 to be carried forward. Freehold land and works are unaltered at £59,614, goodwill and patents also stand at the old figure of £55,573, and loose plant and tools are practically the same at £13,343; but fixed plant and machinery, after allowing for additional outlay, shows a reduction of £2,732 at £24,996. The current position is an excellent one, as against £7,820 or £1,216 more due to sundry creditors sundry debtors have risen by £4,051 to £24,830, and although stocks are £2,208 lower at £55,595 ,there is a big increase of £15,971 to £29,586 in cash.

Highland Distilleries Co., Limited.

This is quite a modest little company, and it appears to be in a sound financial position; at any rate its stocks of barley, whisky, &c., on hand stand at only £24,419. In the year ended August 31 last it made a gross profit of £15,807, after deducting all working expenses and interest paid and accrued on debenture bonds. From this £2,000 was written off for depreciation and out of the balance of £13,807 the directors pay dividends aggregating 12½ per cent. for the year, of which 5 per cent. was paid on May 1 last, leaving 7½ per cent. to be paid on November 1. These dividends absorb £11,156, and after providing £600 for directors' fees, £2,051 is left to carry forward. During the year some further money was raised on debentures and the total outstanding is now £27,600. The company also owes £21,063 to sundry creditors, but sundry debtors owe it £30,853, and it has cash and bills receivable to the amount of £16,391. The total now applied to depreciation out of revenue, including the £2,000 taken out of profits for the past year, is £60,000, which brings the balance-sheet value of the property down to £93,083.

Bath Brewery, Limited.

A slight improvement in the result of the trading is recorded by the directors in their report for the twelve months ended July 31, but we have never before been favoured with a copy of the accounts, and do not know just what that expression means. Gross profits on sales amounted to £23,552, and rents and transfer fees gave £3,639, making a total of £27,191, of which expenses, including £2,811 for depreciation, took £23,019. The surplus remaining was £4,172, but debenture interest accrued requires £4,618, and a deficit of £2,322 was brought forward, so that there is still a debit of £2,768 to be dealt with. During the year, however, 53 debentures were bought for cancellation at a price so much below their nominal value that the directors were able to show a profit of £1,227 on the transaction, and this they employ to write down the debit balance to £1,541. With a share capital of £33,307 the debentures outstanding now amount to £107,800, and in addition the company owes £71,725 on loans and mortgages, while on the other hand estates and goodwill are valued at £185,000, fixed plant and rolling-stock at £8,700, and stocks at £13,182. Liabilities to sundry creditors, including rents payable, come to £6,100, and book debts, rents and loans to £14,816, but against this asset there is a reserve for contingencies of £3,922, which looks as if a large proportion is regarded as doubtful.

Henry Berry and Co., Limited.

According to the directors' report this Leeds business of hydraulic machinery manufacturers again had a successful year, notwithstanding the higher cost of nearly all materials purchased and the rise in wages, taxes, &c. The accounts are not presented in a form to give much information, but profits for the twelve months to August 31 are given as £13,298 "after charging revenue with everything proper to be charged thereto." Adding £4,613 brought forward the available total was £17,911, of which preference dividend takes £3,300 and a dividend of 17½ per cent. on the ordinary shares £8,750, leaving £5,861 to be carried to the new account. Freehold land, buildings, &c., are valued at £44,989 and fixed and movable plant at £44,847, but whether anything has been written off these items for depreciation or not we cannot say. The only thing we are certain of is that for some years the reserve fund has been neglected and stands at £10,000, of which half is invested in unnamed securities. Taken altogether, however, the position of the company is satisfactory enough as against liabilities to creditors of £11,096 debtors owe £18,802 and cash and bills come to £10,193, while stores and work in progress are valued at £24,574.

New Dimbula Co., Limited.

Market conditions have not been altogether favourable for the class of tea produced by this company during the twelve months to June 30, and the average price obtained was nearly ¼d. less at 8 12d. per lb., but with a modest increase of 17,208 lbs. to 1,282,943 lbs. in the crop the cost worked out at a slightly lower figure. Proceeds of sales, however, were £1,913 down at £43,407, and although miscellaneous receipts rose by £246 to £1,935 the total income was £1,097 down at £45,342. Ordinary expenses took an additional £86 at £24,274, but an extra £70 at £632 written off was practically counterbalanced by a reduction in London office and other charges, and the balance, including £4,570 brought in, showed a decrease of £1,937 at £24,582. As usual the appropriation to reserve is the first to suffer, and only £1,000 is put to that fund against £3,000 in order to pay the usual dividend of 20 per cent. and a bonus of 4 per cent. Block account is still valued at £78,162, but the reserve now amounts to £14,500, of which £11,255 is invested outside the business. The sum due to sundry creditors is the same as a year ago at £10,451, and on the other hand stocks are only £75 up at £11,511, while cash has dropped by £782 to £19,122. Coast advances continue to grow and now amount to £912.

Hornsey Tea Estates Co., Limited.

Cold and wet weather during part of the season ended June 30 reduced the yield per acre from 461 lbs. to 448 lbs., and the total crop was therefore 19,434 lbs smaller at 180,000 lbs while the cost rose by ½d to 4 2d. per lb. Fortunately this was accompanied by an advance of 0.39d. to 8 30d in the gross price realised, but nett receipts nevertheless were £220 down at £1,998, and as rents gave no more than £16 the total revenue including £124 brought in was £282 less at £2,138. The directors, however, again pay 5 per cent. on the ordinary shares by writing off £200 against £400 for depreciation and cutting down the balance forward to £41. Beyond noting that the accounts with the agents show a balance in favour of the company of £373 compared with £163 a year ago there is little in the balance to comment upon. The estates, of course, stand at their original cost of £30,000, of which £10,000 was provided by debentures, and although these have been redeemable on six months' notice since January last it is unnecessary to say that there is no hint of any intention on the part of the directors to reduce the indebtedness. Factory and machinery accounts, less depreciation, amount to £2,384 and the only other asset is £187 for coast advances.

Burnley Paper Works Co., Limited.

With a paid-up capital of £40,267 this company earned a nett profit for the year ended August 31 of £4,096, out of which a dividend of 10 per cent. is paid and £119 is added to the balance brought forward raising it to £10,122. The accounts are not presented in a form to give very much information about the doings of the company, and we cannot be certain whether or not depreciation was allowed for before arriving at this profit. We imagine, however, that it must have been as the property has been written down from £82,915 to £31,405. A reserve of £4,800 has also been accumulated, and although it is small for a company which has been in existence since 1875, £4,000 of it is separately invested, and in other respects the position is decidedly good. Sundry creditors come to £9,735 against which stocks are valued at £11,668, debtors owe £14,294 and there is £2,485 in cash.

Stuttaford and Co., Limited.

It is not so very long since the directors of this undertaking were amongst the optimists who thought that prosperity could be restored to South Africa by the importation of the Chinese coolies, and they even went so far as to believe that the traders of the country would be saved from ruin by the same means. Their disillusionment a year ago was bitter, but they have now learned to be thankful for small mercies, and are pleased to report that profits showed no further shrinkage during the twelve months ended July 31. As a matter of fact trading profits were £1,087 up at £23,196, but the recovery did not help the company appreciably as the large balance of undivided profits hitherto available had been gradually used up until only £84 was left and the disposable total was therefore £4,415 less at £23,279. The general managers reduced their salaries and also saved the company's money by taking leave of absence without pay, while the directors gave up half their fees, with the result that there was a reduction of £1,850 in these items, but in spite of that only half of the preference dividend could be paid, and after transferring £550 to leasehold sinking fund £4,270 is carried out. Expenditure on the new building in Cape Town for the year was £10,350 raising the total capital outlay to £472,015, and fixtures, fittings, &c., after deducting £4,226 for depreciation, come to £2,114 more at £44,230. Goodwill, of course, is unaltered at £75,817, and on the other hand reserves, including £1,558 added to the sinking fund making it £5,354, are no more than £721 higher at £55,354. Liabilities to trade creditors are £8,826 up at £9,800 in spite of a further reduction of £5,232 to £100,268 in stock, but cash creditors come to £2,513 less at £26,190 and against these book debts are £725 higher at £19,677, but cash has dropped from £11,501 to £4,225.

Shawinigan Water and Power Company.—Earnings for September were $52,777, being at the rate of $633,324 per annum, compared with $30,050, or at the rate of $360,600 per annum a year ago.

TRADE AND PRODUCE.

Wheat.—Markets began the week strong and excited with prices fluctuating rather widely, and closing on Monday from 1d. to 2d. per cental over Saturday's quotations both for spot and futures. English wheat at Mark Lane was held 6d. dearer, and foreign went up 1s. 6d., but the excitement was only temporary. The unsettled state of financial things in America had a reactionary effect, quotations fell, and business became dull and depressed. Farmers' deliveries for the week were rather less than those of the week before, as they do not wish to increase supplies to the detriment of values, and have stopped threshing for the time being. 91,292 qrs. were delivered averaging 34s. 4d. per qr. against 71,352 qrs. averaging 26s. 6d. in the same week of last year. Imports came to 354,737 qrs. against 360,967 qrs. in 1906, and Dornbusch estimates the quantities of wheat and flour on passage as 1,980,000 qrs. to the United Kingdom and 2,005,000 to the Continent. American markets also opened bullish, and though they became depressed for a while they took an upward tendency in spite of Wall Street, and principally on large export acceptances rose 2. They broke later under forced liquidation and the continued financial upset. Visible supply was 900,000 qrs. up on the week.

Cotton (from our Manchester correspondent).—Our market this week has presented a rather unsettled appearance, and the outlook is uncertain. The considerable decline in the price of American cotton has rather disturbed business. The financial unrest in America is causing some anxiety to trade conditions throughout the world. Buyers of yarn and cloth have not been disposed to operate for more than present requirements. The prospects for the American crop continue generally healthy. No killing frosts have yet taken place, and although the forward movement is a little disappointing the outlook is not unhealthy. We are now on a much lower level of values than for several months past. Makers of piece goods have not met with much encouragement. Offers, as a rule, have not been workable. Our chief consuming outlets of the East have not been hungry for fresh supplies. Speculative business, at the moment, seems to be quite out of the question. News from India with regard to the crops is not very promising, and buyers on this side hesitate before committing themselves for many months ahead. China business has been difficult to arrange, and with the exchange value of silver being against operations very little has been put through. For the Levant a little more inquiry has been reported, and dealers in Egypt are more willing to take goods. South American markets have not provided more than a small turnover. In home trade cloths a miscellaneous business has been put through, but no free buying has occurred. In printing cloths the bids have not been of a practicable character, and Burnley manufacturers continue to complain of their unsatisfactory position. American yarns for home use have moved off slowly. Rates when tested have been rather irregular. Medium numbers in wefts are stiff in price for prompt delivery. Ring beams are rather more plentiful, and the margin is not so satisfactory as a few months back. Coarse counts in certain directions have improved a little, but the demand is not important. Export yarns meet with a fair inquiry for the Continent, but no weight of business has been put through. Most counts and qualities in this section are well held. Bolton spinnings have been firm, but users have not been stimulated to purchase large lines.

Sir Jacob Behrens and Sons in their market report state that "the position of American cotton has been adversely affected by the financial crisis in New York. It is thought that, unless confidence is speedily restored, holders of the raw material will be forced to sell, as the banks are withdrawing their support and huge sums are already locked up in cotton. The trade has adopted a waiting policy, and although farmers are in a strong position they cannot hold out for an unlimited period, and the present outlook is for lower prices. On Friday next we shall have another ginners' report. Egyptian cotton is quiet, but prices are rather dearer. Reports of the new crop are not so favourable as was the case a short time back."

Wool.—Bradford market shows no change since last week. Inquiry is larger, but not much business has resulted, and new contracts are few. Values keep firm, and both in merinos and crossbreds are going against the buyer, especially merinos for immediate delivery. Reports still come from Australia that the supplies will not show an increase, and correspondents keep sending over depressing accounts of the drought in New South Wales, but, according to the *Manchester Guardian*, these accounts can be modified by the increase in other wool-producing countries. The Argentine, where the clip is better than usual, will probably ship an increase of 30,000 bales over last year, and South African reports point to heavy increase also. "Taking an all-round view of the situation, we think it will be found that, notwithstanding the very large consumption at present going on, supplies will be ample for all needs." Home-grown wools show no new departure, and in manufactures things are if anything better than they were a year ago.

Coal.—Trade is still good; if it had not been for the "boom" it might even be considered very good, but in contrast it perhaps looks a little weak. Prices are certainly moving slowly down, and most coalowners are glad to accept lower rates than a few weeks back. House coals remain firm, and are likely to do so throughout the winter; but one hears less talk now of putting them up to exorbitant rates. There is still great activity in steamers in some quarters, efforts being made to get as much shipped to the Baltic ports before they close, and Welsh ports though by reason of the storms early in the week they have done less business this week, are taking on large contracts from abroad for early shipment and for 1908. Best Cardiff large steams are quoted at 17s. 6d. to 18s. 6d., and Swansea anthracite prices are reported firm with a good home demand coming in to strengthen the market

Iron and Steel.—The hematite iron trade grows more and more depressed, less business is done, and prices are steadily falling. West Coast makers' iron is this week quoted at 74s. per ton nett, f.o.b., and warrant iron at 71s. 9d., and though East Coast is still reported at 76s. consumers will not pay this price for forward business. Generally the outlook is not regarded as promising. More furnaces are being put out of blast each week, as it is not thought desirable to increase stocks at the present time. Cleveland iron is less affected by the slackening of trade than hematites. The number of furnaces in blast is not less than in September, and stocks continue to decrease fairly rapidly, heavy exports helping to keep up demand. These have been larger this October than ever before in this month, and the largest of the present year except those of April and June, and the most of it is to the Continent, as the United States are taking none at present. The steel trade also is in an unsatisfactory state, prices being considered too stiff, and buyers therefore holding off till they come down. In manufactured iron and steel also things are at a standstill because of the high quotations.

Copper.—The market, dominated by American influences, has been irregular, fluctuating considerably from time to time. Prices gave way under heavy sales on Tuesday—warrants dipped to £55 for three months, and a further drop took place later owing to the fall in American cable quotations. Yesterday's market was inclined to harden on repurchases, values advancing to £56 10s. cash and £56 5s. three months, and the rise was continued to-day, with the result that prices closed at £58 17s. 6d. and £58 12s. 6d.

Tin.—Business in the East was reported £143 c.i.f. on Monday, but the market here opened with a drop of £3 on aggressive sales. Further liquidations ensued, and at the close of the first day values showed a loss of £6 at £139 10s. cash and £137 10s. three months. Eastern quotations then dropped to £138 c.i.f., but after the opening a sharp selling followed here, and forward metal registered a gain of 45s. on the day, while cash rose £1. Business was reduced to small proportions, but final prices recovered a little from the worst, and closed steady.

Tea.—The total quantities of tea brought forward this week, 78,054 packages in all, were a heavy strain upon the market, and some irregularity has been noticeable. Were such large quantities brought forward during many weeks there is little doubt, state Messrs. Gow, Wilson and Stanton, Limited, that prices would be seriously affected. And to risk such overweighting is unnecessary with very little probability of heavy Indian and Ceylon supplies, and with consumption showing an increase. Indian offerings comprised 54,646 packages of the total, and of these common grades were in most demand, occasionally going slightly dearer, and little to be had under 7¼d. per lb. Mediums over 8d. were rather irregular, and sometimes sold at easier rates, the average for the whole sale of 50,929 packages on garden account coming to 8.62d. against 8.30d. a year ago and 8.64d. last week. Medium teas are still cheap compared with other grades, the average for Assam from the beginning of the season being lower than since 1904. Importers of Ceylon brought forward 21,927 packages, and there was a good demand in all descriptions, the improvement in quality also helping to keep prices up and bring the average for the sale to 8.69d. against 8.57d. last week and 8.20d. in 1906. A small sale of 1,481 packages of Javas showed prices had a hardening tendency. The following are two interesting items, also from Messrs. Gow, Wilson and Stanton's, Limited, circular:—

The Indian Tea Association and the Ceylon Association in London have forwarded a petition to the Secretary of State for Foreign Affairs praying for the removal of the differential duty imposed against Indian and Ceylon tea entering Russia.

In the report of Mr. Blechynden, the Commissioner for Indian tea in North America, there are some interesting figures, giving the imports of the different growths of tea into the United States and Canada. China and Japan have recently been declining, while India and Ceylon have about maintained their ground, the total of the two former being 74 million lbs. in 1907 against 93 millions in 1905, and the two latter 37½ millions in 1907 against 35½ in 1905.

Sugar.—There has been rather a dull tone in the market here, says Mr. Czarnikow's circular, owing to the abstention of the trade, though forward deliveries are only fractionally easier, but the premium for prompt granulated especially has almost disappeared, the price moving from 11s. 6d. to 11s. 0¾d., October from 11s. 4½d. to 11s., and some English refiners had to follow suit. With imports of 67,000 against 59,000 tons in three weeks, and general complaints by British refiners, it is doubtful whether last year's low deliveries (due to the higher prices caused by the Cuban disturbance) will be much exceeded. The trade is evidently badly stocked, but expects some pressure from actual sugars as the beet production proceeds, therefore provision is made against it. But what everybody provides against does not always come off, especially as regards later deliveries, which are at a very moderate premium. Unless crop results prove very different to present expectations, it seems that with an important deficit in Cuba the cost of future full requirements can hardly be covered at present prices.

It is generally thought that there will be a shortage of sugar per acre in France, Belgium, and Holland, and F. O. Licht's

figures, which are now published, are generally considered too high, especially for France, where he places them at 825 tons, while trade figures here estimate them at 780 tons. The financial crisis in New York has not influenced sugar there, except to curtail transactions, quotations remaining without change, and it now remains to be seen whether the weakness on this side will have any effect. Should any further pressure be experienced from speculators in Europe, continues the circular, it is just possible that American buyers might take advantage of it to fortify their position still further against a late Cuban crop. At the same time present appearances do not lead to the belief that fabricants here will realise at the present level of values any considerable quantities. In November there is generally some reduction of meltings by American refiners owing to the competition of domestic sugars, both cane and beet, but as yet the deliveries are good for normal times, and it is supposed that the distributors are working without stocks. The landings in the three ports during the week were 47,000 tons and meltings 41 tons, leaving stocks at 218,000 tons.

DIVIDENDS ANNOUNCED.

BANKS.

Anglo-Egyptian.—10s. per share for half-year ended Aug. 31, making 15 per cent. for the year, placing £40,000 to reserve, £10,000 to pension fund, and carrying forward £35,000.

Bank of Montreal.—Usual quarterly of 2½ per cent.

Canadian of Commerce.—At the rate of 8 per cent. per annum for three months to Nov. 30.

London of Central America.—6 per cent., carrying forward £1,175.

MINES.

Alaska Mexican.—50c. per share payable 28th inst.

Alaska Treadwell.—$1 per share payable 28th inst.

Kinta Tin.—Further of 6d. per share.

Tingha Consolidated Tin Mines.—Quarterly at the rate of 10 per cent. per annum (3d. per share) on the preference shares.

MISCELLANEOUS.

A. W. Gamage.—Interim of 2½ per cent. on account the year to Jan. 31.

Alianza Company.—Interim of 7 per cent.

Anglo-Chilian Nitrate and Railway.—Interim on the ordinary of 5s. per share.

Armitage Brothers.—Interim of 2 per cent.

Borax Consolidated.—Interim of 5s. per share for quarter-year ended June 30, being at the rate of 10 per cent. per annum, payable on the ordinary shares on Nov. 1.

Callender's Cable and Construction.—Interim of 5 per cent.

Debenture Securities Investment.—Interim of 3 per cent.

Dunville and Co.—11½ per cent. for year to Sept. 30.

E. Baily and Son.—Further of 6¼ per cent., making 10 per cent. for year ended Sept. 30, transferring £1,000 to the reserve fund.

Eastern Produce and Estates.—Interim of 3 per cent. on the ordinary shares, payable Nov. 5.

Investment Trust.—Interim for half-year ending Nov. 1 on the deferred stock at the rate of 9 per cent. per annum, and on the instalments to date of the £10 shares at the rate of 5 per cent. per annum.

J. B. Brooks.—A final of 3½ per cent. on the ordinary shares, making 6 per cent. for year ended Aug. 31.

James Harvey and Co.—6 per cent. on the ordinary shares, placing £1,000 to reserve for depreciation on investments.

James Hinks and Son.—Interim at the rate of 7½ per cent. per annum.

Joseph Lucas.—On the ordinary shares at the rate of 7½ per cent. per annum, placing £10,000 to reserve, and carrying forward £5,752.

Linoleum Manufacturing.—Interim of 2s. 6d. per share.

Montevideo Gas.—Interim of 6s. per share for half-year ended June 30.

Montreal Light, Heat, and Power.—1½ per cent. on the paid-up capital stock (being at the rate of 6 per cent. per annum), for quarter ending Oct. 31,

Moss Isaacs.—For year ended Sept. 8 at the rate of 10 per cent.

Nitrate Producers' Steamship.—Interim of 3¾ per cent.

Royal Mail Steam Packet.—Interim at the rate of £5 per cent. per annum on the preference stock.

Rudge-Whitworth.—10 per cent. on the ordinary shares, placing £8,800 to reserve, and carrying forward £18,894.

Santa Fé Land.—8 per cent. for year ended June 30, placing £12,000 to reserve, carrying forward £20,000.

Second Edinburgh Investment Trust.—At the rate of 7 per cent. for half-year ended Sept. 30 on the deferred stock, making 6 per cent. for the year.

Venezuelan Salt Monopoly.—Interim of 3 per cent.

Weaver and Co.—Further of 7½ per cent. and a bonus of 2 per cent., making 12 per cent. for the year, carrying £23,455 forward.

Wilson's Brewery.—Interim at the rate of 5 per cent. per annum on the ordinary shares.

Yorkshire Insurance.—Usual half-yearly at the rate of 4s. 6d. per share.

At a meeting of the Metropolitan Water Board this afternoon it was decided to issue Metropolitan Water Board money bills to the amount of £750,000 to replace those falling due for payment on November 6, 1906.

COMPANY MEETINGS.

GRAMOPHONE AND TYPEWRITER.

The eighth ordinary general meeting of the shareholders of the Gramophone and Typewriter, Limited, was held on Thursday at the offices of the company, 21, City-road, E.C., Mr. E. T. L. Williams (the chairman) presiding.

The Secretary (Mr. W. H. Cooper) having read the notice convening the meeting,

The Chairman said: This is the seventh annual report which your directors have had the pleasure of submitting to the shareholders. Seven is proverbially a lucky number, and appropriately enough this—our seventh—year shows a trading profit which constitutes a record in the history of the business. The amount is £263,950, which is £51,714 more than last year, and £11,665 in excess of our previous highest. (Hear, hear.) The aggregate for the seven years amounts to just under £1,300,000, which is considerably more than double your total capital. The average for the seven years, even with the comparatively small amount for the first year, works out at £185,000. Your directors recommend a bonus this year of 15 per cent. on the ordinary share capital, which, with 15 per cent. already paid in interim dividends, makes 30 per cent. for the year. This is 10 per cent. more than you had last year, and, of course, is the highest dividend that the company has paid during its history (Applause.) Last year I told you that the alteration from 10 per cent. to 15 per cent. in the quarterly interim dividends was intended to foreshadow a total distribution for the year of at least 25 per cent. Human nature is, happily, optimistic, and you apparently have all anticipated a dividend of at least 30 per cent. Well, you have got it. (Hear, hear, and laughter.) It is worthy of note here that the total dividends distributed during the seven years amount to as much as the whole of the ordinary capital, with a bonus of 20 per cent. in addition. We should have been very glad to have recommended a higher dividend, but even with the magnificent figures before you we have not thought it wise to do so. The business is increasing, and our expansion commitments, especially in the way of factories, are very large. Since we met in this room last year a record factory, sufficient for the needs of the Spanish trade, has been erected in Barcelona. Other factories somewhat larger—indeed, considerably larger—are in course of erection in Paris and in Calcutta. Then there is our large new factory at Hayes, now nearing completion. We have built up, and are building up, this business on what we consider sound commercial lines, and so far the results have abundantly justified our policy. To go back to the report, the carry-forward this year is £586,665, against £486,176 last year, an increase of £99,489. This is, of course, a large carry-over, but having regard to the very rapid growth of the business, which is still enlarging and expanding, it is really not too large There are two paragraphs in the report which refer to increases shown in the balance-sheet in regard to land, buildings, machinery, and plant. These increases are almost entirely due to payments made before June 30 last in respect of our new factory at Hayes. The freehold of the land at Hayes, about 11 acres in extent, was purchased by this company in December last. It is a site in every way most suitable for our purpose, and is only 10 miles from London. The first sod was turned by Mr. Edward Lloyd in February last, and the corner stone of the new building was laid by Madame Melba in June last. The building to-day is complete, and the installation is proceeding rapidly. It is hoped that the factory will be in full working order early in the new year. If the business goes on increasing as it is increasing to-day it is quite possible tha in a very few years the capacity of that building, large as it is, will be totally inadequate to the demands of our selling organisation. If so, we have room enough for extension. Our usual statement of net assets in the report, after deducting al liabilities, amounts to £772,567, which is £125,886 more than last year. This considerable increase is mainly due to the increase in the stock-in-trade. This increase is really automatic and due to the very much larger trade that we are doing. The debtors show a small decrease over last year, but still the figure is a high one—not too high, of course, when the great number of our agents and branches all over the world is considered, and owing to the way in which all doubtful debts are ruthlessly written off the item really may be considered as cash. The cash is £26,429 in excess of last year, which is, of course, very satisfactory. The investments remain the same as last year, but a reserve has been made to provide for depreciation amounting to £5,256

The sales for the first three months of our new financial year exceeded the sales of the corresponding months of last year by just under 20 per cent. (Applause.) Three months is a large slice out of a year, and, large as are the figures which we have to top, it looks very much as if we were out for a new record. The company has during the year sustained a loss which is of considerable importance. Mr. Edgar Storey, most unfortunately for us, has been obliged through ill-health to resign his position as a member of the board. The vacancy so created has been filled by the appointment of Mr. Walter Long. As to our prospects, you can see for yourselves from the figures which we have put before you the very splendid financial strength which this company has Last year was a splendid trading year—as good as any of us can want—and it really looks as if the current year were going to be better Competition exists, and always will exist, but how far it affects us you can yourselves judge from the figures we put before you. The growth of the business here in England is really phenomenal Such growth is principally due to the untiring zeal and enthusiasm of your London manager and his very splendid staff A pleasing aspect of the whole business is the continually increasing demand

for the higher-priced machines and the better class of records. In fact, our future—at any rate, the near future, and as far as we can see into it—is all *couleur de rose*. I now beg to move: "That the report and accounts, dated June 30, 1907, now presented, be received, approved, and adopted."

Mr. Theodore Birnbaum seconded the resolution, which was carried unanimously, and the other business referred to in the report was approved.

A resolution was also passed changing the name of the company to "The Gramophone Company, Limited," the chairman stating that the company made no typewriters, all their time and attention being required for the gramophone branch of the business.

A cordial vote of thanks to the chairman, directors, and staff brought the meeting to a close.

BALDWINS, LIMITED.

The annual general meeting was held at Birmingham on Thursday. In the absence of the chairman of the company, Mr. Alfred Baldwin, M.P., Colonel John Roper Wright presided.

The Deputy-Chairman said he must apologise in the first place for the chairman's absence. Mr. Alfred Baldwin had been called on very important business to London, and had deputed him (Colonel Wright) to act as his deputy at this meeting. The profits of the business for the year under review were £148,726 2s. 5d., which, he thought, the shareholders would consider substantial and satisfactory, (Hear, hear.) The management expenses, &c., were as usual. As to the expenditure of £5,983 17s. 1d. on alterations and improvements, he could assure the shareholders they had their value for that in the works themselves. The payment of premiums on sinking funds for the redemption of leaseholds and debenture stock had been made in the usual manner, and after deducting the payments on debentures and preference stock they had at their disposal £90,458 0s. 4d., which, with the £12,498 7s. 4d. brought forward, gave a total of £102,956 7s. 8d. As the report showed, the directors had appropriated £50,000 to reserve, leaving a balance of £52,956 7s. 8d. They recommended a dividend at the rate of 5 per cent., free of income-tax, on the ordinary shares, and they had a balance to carry forward of £25,456 7s. 8d., which was double the amount they carried forward 12 months ago. He thought the appropriation of the money at their disposal would meet with the approval of the shareholders. There was nothing to allude to with regard to the works. Everything was in a satisfactory condition, and he could assure them the works were of more value now than they were 12 months ago. He moved the adoption of the report and accounts.

Mr. Isaac Butler seconded the resolution.

Mr. Joseph Ash, speaking from the shareholders' side of the meeting, said it was with great gratification that he had read the report. The only regret he had was that their chairman was not able to be with them, but they knew what anxieties he had to face at the present moment, and he was sure they would all be very grateful to feel that if Mr. Alfred Baldwin was not present at that meeting he was working for them somewhere else.

The report and balance-sheet were unanimously adopted.

Mr. Ash then proposed a vote of thanks to Mr. Alfred Baldwin and his colleagues on the board. He said all the shareholders knew the company had a very strong board indeed, and they also had a fine staff and capable workmen. He was a customer at the works, and he knew the quality of the goods which the company were sending out. He was proud not only to be a shareholder in the concern but to be a large customer. Mr. Peter Harris seconded the proposal, which was unanimously agreed to.

Colonel Roper Wright said he would take care the chairman received the acknowledgment made of his services, and he assured the shareholders that the directors acquiesced in all that had been said regarding Mr. Alfred Baldwin. Colonel Roper Wright then proposed that a dividend be declared on the ordinary shares at the rate of 5 per cent., free of income-tax, as recommended in the report. Mr. Isaac Butler seconded the resolution, which was carried unanimously.

On the proposal of Colonel Roper Wright, seconded by Mr. Ash, the two retiring directors—Messrs. Alfred Baldwin and William Charles Wright—were re-elected. Messrs. Turquand, Youngs, and Co. were re-elected auditors at a fee of £400 on the motion of Mr. A. J. Ledwith, seconded by Mr. Ash.

BUENOS AYRES GREAT SOUTHERN RAILWAY.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Co., Limited, was held on Wednesday at River Plate House, E.C., Mr. Jason Rigby, M.Inst.C.E., presiding.

The Secretary (Mr. H. C. Allen) read the formal notice and the auditors' report.

The Chairman, in moving the adoption of the report, said that the results showed an important increase of £357,121 in the gross receipts, compared with those for the previous year, and although the working expenses had advanced by £209,943, they were able to show an improvement in nett receipts of £147,178. During the year the £3,000,000 of 4 per cent. extension shares, 1906, had been converted into ordinary stock, while the 4 per cent. extension shares, 1910, had to the extent of £108,722 for the first issue and £51,967 for the second issue come against nett revenue, and it would be found that they represented, roughly speaking, an additional charge of about £250,000 against nett revenue for the past year, with the result that the directors had not seen their way on that occasion, without unduly interfering with the balance carried forward, to recommend any special transfers from the surplus nett revenue to the renewal, pension, or other funds beyond the sum already included in the ordinary departmental expenditure, amounting for the year to £260,975, or over 6 per cent. of the gross receipts. If the business developed in the same ratio and the expenditure could be kept within reasonable limits there should be no reason to anticipate any diminution in the dividend-earning power of the company. In these circumstances they trusted that the proprietors would approve the appropriation of the nett revenue balance as was proposed in the report, more especially as after paying the dividend of 7 per cent. a free balance would be carried forward considerably in excess of any additional fixed charges which would come against revenue during the current year. The average number of miles of line worked during the year only showed the small increase of 23, as compared with that of the corresponding period; but of the extensions which the company had lately been constructing, the most important one, from Tres Arroyos to Loberia, 90 miles, was opened for public traffic on the 1st inst. Another of their extensions would also be coming into working during the current year—the line from General Guido to Juancho, of 55 miles—and this would be shortly followed by the line from Gardey to Deferrari, of 81 miles. The ratio of expenses and receipts had been practically the same as that of last year. The traffic, more especially under the heading of passengers, had very largely increased in numbers, though not to anything like the same proportion in earnings; and although the additional tonnage of goods carried had been 24 per cent., the receipts had been only 10 per cent. more. One of the principal factors which had militated against the prosperity of the country and had added to the difficulty of keeping expenses within reasonable limits during the past year had undoubtedly been the activity of the labour agitator. So far as the company were concerned, strikes during the year under review had been rather frequent, although of short duration. In addition to increased wages, coal cost them 3s. 2d. per ton more last year than in the previous year, and there had been a rise of 4s. 11d. per ton, or about 20 per cent., in the last two years in the price of their coal; this would be still further aggravated by the higher price they would have to pay for next year's supply. In face of this serious increase in the main factors of working cost, it would be necessary for the railways to study carefully the question of tariffs. The amount of capital expended during the year had been £4,725,166, while in addition they had spent out of revenue and charged against the renewal funds £259,934. They regretted that the petition to Congress in connection with the various extensions, as detailed in the report for the year ended June 30, 1906, was still in more or less the same position as it was when he addressed them last April. Meantime, it was satisfactory to note that the general feeling in Argentina towards the Anglo-Argentine railways was at the moment more conducive to the attraction of English capital for railway extension purposes. He believed that the recent traffic returns were no criterion by which to judge what the current year had in store for them, for the prospects for the coming crops were really much brighter than they were at that time last year. He concluded by moving the adoption of the report, which was seconded by Mr. John G. Griffiths, and carried unanimously.

HAINAULT GOLD MINE.

The annual meeting of the Hainault Gold Mine, Limited, was held in Glasgow on Friday, October 18, and was well attended. Mr. W. D. Gillies presided.

The Chairman, in moving the adoption of the report and balance-sheet, said: I propose to refer briefly to the work which has been accomplished during the past year, and to tell you what we consider are our prospects in the immediate future. The two items in the accounts which call for special attention are the expenditure on plant, buildings, and machinery and the amount recovered from bullion. With regard to the former it may be of interest if I give you the details of the machinery purchased and erected with the £31,334 expended. The winding engine and main shaft ore bins cost £3,183, the crushing and sorting plant £3,706, new boilers £4,619, change house £659, fitters' and blacksmith's shop £318, air compressor £3,546, mill engine £273, battery £4,273, grinding pans £1,345, Launders tailings pump and concentrating table £1,249, sand pump and cyanide vats £2,790, and sundry costs (including administration) £2,571. The erection of the new plant was not completed until the end of August, and our accounts for the current year will show a further capital outlay. The cost of the new plant has been very much beyond the general manager's estimate when we raised £28,000 by the issue of 20,000 new shares in August of last year. The reasons for this increase must be attributed largely to the delay in the erection, caused, as you are aware, by strikes at the makers' works retarding the delivery of the machinery. We have now, however, what we believe to be a splendidly equipped mine, and while the plant has cost a great deal more than we estimated we have the satisfaction of knowing that this money has been well spent, as our instructions were to purchase only the best material, with the object of effecting economies in working costs. I come now to the second item in the accounts, to which special reference seems necessary, namely, the gold recovered. You will see that although we crushed 55,581 tons as compared with 54,242 tons last year, we recovered only 18,718 ozs. as against 21,294 ozs. The tonnage treated is very good indeed, considering the difficulties under which it was accomplished. We have a mine situated alongside the richest mines in the world, and while the Hainault has, so far as development has

gone, been what is termed a low-grade mine, it must not be forgotten that we have only been working a small part of the property. While our main shaft has been sunk to a depth of over 1,000 ft., no more has been mined below the 750 ft. level, so that the reserves are calculated from above this level. Below that is all virgin ground, and considering that our neighbours are having excellent developments down to a depth of 2,300 ft., there is no reason why we should not be equally fortunate. Of course, we may be disappointed; 7,000 tons per month is a very conservative estimate of the capacity of the treatment plant Personally, as things progress I feel confident that the mill will be able to crush nearly 8,000 tons per month if the ore is available from the mine, and, basing the profits on the present value of the ore, we ought to make a surplus of £3,000 each month, more especially as we expect some good values in the stopes from the 300 ft. level upwards at the south end and also in the stope above the 300 ft. level east lode. As we have spent a good deal more money on capital account in the reconstruction of the works and plant than we raised by the last issue of shares we are now devoting our profits to paying for this extra outlay, and when this absolutely necessary duty is accomplished such profits as we make will naturally go to the paying of dividends. I should like to call your attention to the matter of costs, which is a most important one. The return for September showed the costs to be 15s. 10d. per ton, exclusive of development expenditure—and this, too, when we only treated 5,800 tons as against 8,000 tons with which the plant is expected to deal. The costs are most satisfactory.

Mr. C. B. Jessop (director) seconded the resolution, and after the chairman had replied to a few questions the proceedings terminated with the usual votes of thanks.

CONSOLIDATED MINES SELECTION.

The eleventh ordinary general meeting of the shareholders of the Consolidated Mines Selection Co., Limited, was held on Tuesday at Winchester House, E.C., Mr. Francis Muir (chairman) presiding.

The Secretary (Mr. Charles W. Moore) read the notice convening the meeting and the report of the auditors.

The Chairman regretted the absence of their German colleagues, and of Mr. Frecheville, who was returning from South Africa, whither he had been on an important mission on behalf of the company and some associates. The directors greatly regretted their inability to present the shareholders with a more favourable balance-sheet. In the most perplexing conditions the board had done their best to steer the ship a straight course, and it was no fault of theirs that smooth water had not yet been reached. The chief item on the credit side of the balance-sheet was "sundry properties and investments," £1,309,802, and a note showed that the depreciation thereon amounted to £480,759. He imagined that depreciation could be no cause of surprise at the present time to any investors in almost any class of securities, and certainly not to anyone who had at all followed the course of events in South Africa. The crucial question for them to-day as a company was—Would this depreciation disappear in the future wholly or partly? If it did, their way would lie straight before them; if it did not, clearly the question would come up for consideration and action, but, in the board's opinion, that time had not yet arrived. If one asked to what might the depreciation—he referred particularly to Transvaal securities—be chiefly attributed, he thought that one answer to the question was, to the extravagance of the past—extravagance in forecasts, in estimates, in capital expenditure, and in working costs. Where were they to look for an improvement in the existing state of the Transvaal mining industry? First of all, he would say it was a great thing that, politically, the country was settled—that it had its own Government, and was free from the grandmotherly interference, often one-sided, of Downing Street, and the meddlesomeness of interested home politicians hunting for notoriety and votes. The indications were that Boer and Briton were going to work cordially together for the welfare of the whole country and all its interests, and one might, therefore, feel justified in looking to the Transvaal Government to do everything possible to assist the mining industry. There seemed to be no doubt that working costs could, and would, be reduced, and 15s. or 16s. per ton was freely talked of, and had already on some mines been very nearly approached. This would bring 5 dwt. or 6 dwt. "propositions" within the sphere of practical business, and make payable vast deposits of banket hitherto left untouched. Much greater efficiency would be required from both white and coloured labour, and all establishment expenditure would be on a more moderate scale. The one feature in the situation which still gave rise to some apprehension was the labour question—especially, of course, the probability of a sufficient supply of Kaffirs being available when the Chinese had all gone. There was a distinct difference of opinion, so far, on this point, many mining representatives failing to see how the thing was to work out, while the Government—who, as natives of the country, probably understood the Kaffirs a great deal better than did the newer population—professed confidence that the question would settle itself satisfactorily. It must be a great trial to a mine manager to have his force of trained Chinese replaced by a lot of raw Kaffirs; hence, no doubt, the very doleful lament at the recent meeting of the Glen Deep; but, on the other hand, it was maintained by many who knew that, with improved organisation and chances for small promotion, a good deal more might be got out of the Kaffirs than had been the case in the past, while it was freely stated that the introduction of the new rock drill on a large scale would release many thousand Kaffir hammermen for work elsewhere. He concluded by moving the adoption of the report.

Mr. Acton Durkeis seconded the motion, which was at once unanimously adopted.

MINING RETURNS.

Brilliant Central.—Treated 1,150 tons quartz, value, including concentrates, &c., £3,100.

British Broken Hill Proprietary.—2,153 tons crude ore produced 342 tons concentrates, containing 209 tons lead and 9,253 ozs. silver; 103 tons carbonates.

Camp Bird. Crushed 6,344 tons ore, yielding 11,003 ozs. bullion and 588 tons concentrates.

Chinese Engineering.—Output, 25,000 tons; sales, 18,500 tons; consumption, 1,500 tons.

Day Dawn Block and Wyndham Gold. Treated 1,010 tons, value, including concentrates, &c., £3,400.

Great Cobar.—14,950 tons; output of matte, 887 tons; contents, 323 tons copper, 1,150 ozs. gold, 5,100 ozs. silver. Ingot copper made at Lithgow works, 336 tons; despatched, 249 tons.

Kluchi Gold.—Crushed 1,404 tons, 444 ozs. Tailings assay average 3½s. 6d. per ton.

Mills' Dawn United.—Crushed 1,993 tons quartz, value, including residues, £9,200.

New Queen Gold.—Crushed 84 tons, 95 ozs.; concentrates £40 10s.; leavings from other parts of mine—32 tons crushed—15 ozs.; concentrates £9 10s.

North Broken Hill.—Treated 2,360 tons crude ore, producing 395 tons concentrates, containing 274 tons 6 cwt. lead and 7,900 ozs. silver.

"O.K." Copper.—Treated 760 tons crude ore, for 70 tons fine copper.

Ouro Preto of Brazil.—5,030 tons ore, 1,736 ozs.

Palmarejo and Mexican Gold Fields.—Zapote—Crushed 3,506 tons; treated 2,500 tons, producing $12,950 gold, $41,620 silver.

Phillips River Gold.—Shipped 153 tons copper matte.

Spassky Copper.—Production bar copper 114 tons.

Troitzk.—1,530 ozs., value £5,132.

United Rhodesia. King's Daughter—1,500 tons, 842 ozs. Cambrian—440 tons, 144 ozs. Lion—450 tons, 128 ozs. British United—270 tons, 92 ozs. Bonanza—1,025 tons, 133 ozs. Jumbo—1,752 tons, 1,534 ozs. Inez—1,426 tons, 559 ozs.

Waihi.—Crushed 28,646 tons, and £66,500 gold and silver produced.

Weardale Lead.—Ore raised 363 tons; pig lead smelted 323 tons; average price obtained for pig lead sold, £19 2s. 6d. per ton nett.

NEXT WEEK'S MEETINGS.

Monday, October 28.

Chinese Engineering and Mining.—Winchester House, noon.

Tuesday, October 29.

Colonial Gas.—Suffolk House, E.C., 1 p.m.
European Petroleum.—Dixon House, Lloyds Avenue, E.C., 12.30 p.m.
H.H. The Nizam's Guaranteed State Railways.—Winchester House, 3 p.m.
Highland Distilleries.—Glasgow, noon.
Hope Bros.—Cannon Street Hotel, 11 a.m.
London Corn Exchange.—Mark Lane, 12.30 p.m.
Manaos Improvements.—Dashwood House, 3 p.m.
Missouri Land and Live Stock.—Edinburgh, 1 p.m.
Rosario Electric.—River Plate House, noon.
White Pass and Yukon Railway.—Winchester House, 2 p.m.

Wednesday, October 30.

A. and F. Pears.—Holborn Restaurant, 2 p.m.
Cape Breton Coal, Iron, and Railway.—Winchester House, 3 p.m.
Cuba Submarine Telegraph.—58, Old Broad Street, E.C., noon.
Doeuillet, Limited.—Winchester House, 2.30 p.m.
English, Scottish, and Australian Bank.—Winchester House, noon.
Goldfields of Mysore and General Exploration.—Cannon Street Hotel, 12.30 p.m.
Hyatts, Limited.—Winchester House, 12.30 p.m.
Malacca Rubber Plantations.—Winchester House, noon.
Mexican Land and Colonisation.—Winchester House, 2 p.m.
Northern Banking.—Belfast, noon.
Rudge-Whitworth.—Coventry, 11 a.m.
Western Telegraph.—Electra House, 2 p.m.

Thursday, October 31.

Australian Mortgage, Land, and Finance.—Cannon Street Hotel, noon.
Fortuna Company.—6, Queen Street Place, E.C., 12.30 p.m.
Linares Lead Mining.—6, Queen Street Place, E.C., 12.45 p.m.
North of Scotland Bank.—Aberdeen, noon.
Northern Banking.—Belfast, noon.
Otis Steel.—Winchester House, 2.15 p.m.
Richardsons, Westgarth, and Co.—Hartlepool, noon
Wareleigh (Rhodesia) Development.—Winchester House, 11 a.m.
Westralian Mount Morgans Gold Mines.—Winchester House noon.

Friday, November 1.

Central Tea of Ceylon—20, Eastcheap, E.C., 12.30 p.m.
Clerical, Medical, and General Life Assurance—15, St. James's Square, S.W., 1 p.m.
Midland Uruguay Railway.—71, Finsbury Pavement, E.C., 3 p.m.

NEW ISSUE.

A.D. 1794.

SWANSEA HARBOUR TRUST.

ISSUE OF £600,000 SWANSEA HARBOUR 4% ("A") STOCK.
PRICE OF ISSUE: £97%.

Messrs. Frederick J. Benson and Co. are authorised by the Swansea Harbour Trustees to offer the above £600,000 Four per Cent. ("A") Stock for Subscription, on the terms of the Prospectus dated Oct. 25th, 1907.

Copies of the Prospectus, with Application Forms, can be obtained from:—

The Capital and Counties Bank, Limited (Bankers to the Trustees), 39, Threadneedle Street, London, E.C., or any of its Branches; or

Metropolitan Bank (of England and Wales), Limited, 60, Gracechurch Street, London, E.C., or any of its branches; or

Martin's Bank, Limited, 68, Lombard Street, E.C., or any of its Branches; or

Fredk. J. Benson & Co., 11 and 12, Blomfield Street, London, E.C.; or

The Clerk, Harbour Offices, Swansea.

Prospectuses and application forms may also be obtained from the Brokers—

Laurence, Sons, and Gardner, 13, Copthall-court, London, E.C.

Joseph Sebag & Co., 13, Copthall Court, London, E.C.

Or on the receipt of a Telegram addressed to—

"Frebencate," London.

I desire to apply for.....("A") Stock. Please forward me Prospectus and Application Form.

Name.....

Address .....

Mr. R. B. Haldane and "Public Opinion."

The Right Hon. R. B. Haldane, M.P., Secretary for War, has addressed the following letter to the Editor of Public Opinion:—

War Office, 1st October, 1907.

Dear Mr. Parker,

I think that in the new form of "Public Opinion" under your editorship, you do well to make prominent what is concrete and living in the shape of the opinions maturely formed of men who are trying to do the work of the nation and of journalists the standard of whose criticism is high. What interests people is that which is expressed in a concrete form and has in it the touch of humanity. The views of strenuous spirits and the criticisms of really competent critics given in their own words comply with this condition. Your paper will succeed if it can only keep up to this standard, and I think you have brought it on to the right lines.

Yours faithfully,

R. B. HALDANE.

Percy L. Parker, Esq.,
Office of "Public Opinion,"
Temple House, Tallis Street, E.C.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 513. New Series. SATURDAY, NOVEMBER 2, 1907. (Registered as a newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first: its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Baku Russian Petroleum Company.

A most straightforward report is that issued by the new board of this company for the year ended December 31 last, or by old style, January 13. It can afford to be frank, because only two of the seven members comprising it were on the old board, all the others being new men who had no previous connection with the company, except as shareholders. But quite apart from this liberty, the board has obviously determined to take the shareholders frankly into its confidence, and the history it has to set forth, if unfavourable to its predecessor, is not only creditable to the business ability of the present directors, but encouraging as to the future. Out of the past comes no encouragement. All the losses were not due to the action of the old control, but a good many of them were since, under two large contracts for forward delivery made in August, 1904, the company lost heavily, so that the accumulated debit on profit and loss stood on December 31 of that year at £168,143. No wonder, when a portion at least of the sales of crude oil contracted for in August, 1904, was sold at 10 copecks per pood. The price of the sales effected during 1905 ranged from 17 to 18 copecks, and the average general market price at Baku for deliveries made during the first half of the present year, "as fixed by the special Government Committee," was 25·3 copecks per pood. In consequence of the change for the better, indicated by the 1905 prices for forward delivery, and of the greater prudence in restricting contracts for future delivery, the past year ended with a credit balance of £1,274, after charging depreciation, and in spite of the mistakes or misfortunes of the men who had control of the business practically up to the end of last year. The new board took possession in July, and the new managers in December, 1906. It was something for the old management to have attained even this small measure of success considering the disturbed state of the labour market. For two months of the company's past year a strike entirely stopped operations, and yet all expenses were met, with a few pounds over. In the current year the business has continued so satisfactory that the first half of it shows a gross profit of, approximately, £33,000.

Thanks to the resumption of work, no small progress has been made in providing for increased output. In January, 1906, only 36 wells were producing, while 11 wells were boring or being deepened or repaired. By January of this year the producing wells had increased to 41, and the boring, &c., wells to 27. The boring and repairing class was still at 27 in September, but the number of producing wells had risen by then to 45, or 9 more than at the beginning of 1906. Therefore, the production is steadily increasing, and as the company now limits its operations to the raising and selling of crude oil, the present year's business ought to yield a substantial amount to be devoted to writing off the debit balance. No dividends can be expected by shareholders for some time to come, but they may be thankful that the state of their accounts is not much worse than it is, and one good result seems to have come from the large forward contracts entered into in 1905. They were for delivery extending over 16 months at prices ranging between 17 and 17⅜ copecks per pood which would have yielded a large profit but for the disturbances, burnings,

strikes, and fires that followed. Thanks, however, to the advances or "hand-money" received on account of these sales, the board was put in possession of funds which enabled it to replace burnt derricks and machinery, and to restart the business when the riots were over. Every penny obtainable in this way had to be used, and one permanent consequence of the disturbances has been an increase in the scale of wages paid, a scale that can only be compensated for by increased production, larger sales and better prices. In favour of sustained prices the managers of the company, Messrs. Hahoulin and Tweed, point to the greatly reduced stocks of naptha and liquid fuel in Russia and in Baku on March 1 last, and an almost corresponding reduction has taken place in the stock of illuminating oils. As the consumption demand is as good as ever, it is reasonable to infer that steady work and expanding production will meet their reward in spite of the higher cost of material and higher wages. Assuming that the business does go on steadily it should not take the company very long to recover lost ground for its debts, apart from the debenture issue of £143,000 gross, do not amount to much more than £214,000, and although the company is short of cash that disease can be cured by larger receipts. Therefore, it is our opinion that shareholders ought to support their board, to back it up steadily and loyally, that being the best way to secure efficient service. It would be the height of folly, at any rate, to blame the present directors for past mistakes and losses. But we fear a little more money will have to be found, and perhaps some portion of the imposing share capital of £1,400,000 may have to be written off.

Wireless Romance and Reality.

If the Marconi Wireless Company is not yet supplying our newspapers with many columns of cheaply transmitted news from the other side of the Atlantic, it is at least contributing by occasional flashes to the amusement of onlookers. Occasionally also it provides an expectant world with a few lines of vague generalities which might be almost as well pieced together in the offices of the newspapers that publish them, as pulsed across the ocean by means of world-girdling electric currents. The other day we read that "over 10,000 words were received and sent the first day the new service was opened at the rate of about 20 words a minute without any repetitions being necessary," and as far as we can trace not one-twentieth of this magnificent electrical loquacity has appeared in print, nor have we ever seen any "wireless" information of the kind most interesting to people here at the present time, information, say, relating to the developments of the financial crisis on the other side of the Atlantic. A correspondent, however, has sent us one example of the kind of thing we may expect from the wireless "information bureau." It is a story quoted from the *St. Louis Post-Dispatch* of the 8th ult., and purports to give a Marconi message "which has come half round the world" all the way from Manila, to announce that the United States cruiser *Philadelphia* had arrived in that port with "all on board well." It was described as a message "breaking all records for aerograms," Manila being at least 10,000 miles west from Cape Breton. Unfortunately the United States navy does not possess at present a cruiser or any other fighting ship named the *Philadelphia* on the active list. There is a vessel of that name, but she is lying in the Bremerton navy yards, out of commission and now in use as a receiving ship. No wonder the newspaper headed the story "My! We Almost Lost a Used to be Battleship."

"Wireless" has also serious aspects, and a most useful article has recently been compiled and published describing what this style of telegraphy really is, what its limitations are and what it may be trusted to do. Contrast its capabilities with those of the cable which confines the electric force and sends it in a definite direction with little waste, so that a very small electric power has to be generated in order to transmit the vibrations, no matter what the length of the rope. Wireless telegraphy, on the other hand, requires extremely powerful generators capable of sending electric waves of enormous energy out into space. They radiate from the point of origin in all directions, it having been found impossible to confine the uncontrolled electric waves within a prearranged space. At the receiving point, which may be almost anywhere on land or sea in front of the generating machine, sensitive, catching ears, as it were, must be set up which collect the feeble because much dispersed vibrations from the air, and transmit them to instruments capable of recording their purport. But anybody may intercept the message in spite of the syntony or tuning, as it is called, applied to the spreading wave when sent off. Messages may also be interfered with by storms, changes in the atmosphere, cross currents and a mingling of other waves, so that nothing like certainty, regularity, or secrecy can be expected. This is not saying that the wireless system is without its uses. It has many uses, and may be of the utmost value between short distances in enabling ships to communicate with lighthouses and lighthouses with ships or in facilitating the transmission of messages between the contiguous islands of an archipelago, excellent and handy for any purpose, indeed, where the distance traversed is short, or comparatively short—at the utmost a few hundred miles—but it can never have the speed or the accuracy and absolute inviolability of communications transmitted by cable. Messages cannot be sent either, with assurance that they will be received, from both ends at the same time no matter how different the "tuning" of the two transmitters may be. All cables are worked on the duplex system, so that the current conveying messages can be transmitted both ways at the same time, but that is impossible in the case of the most powerful wireless apparatus, and without speed, swiftness, secrecy and freedom from all liability to interruption or delay effective competition with ocean cables is really an impossibility. That is the conclusion of the article before us, and it has always been ours. Mr. Marconi has done great things, and has worked with a zeal and perseverance, an inventive genius also, worthy of every honour, but even he cannot command the æther and with assurance bid the lightning obey.

Economic and Financial Notes.

Lord Cromer on Egyptian Progress and Gold-Greed.

Amid political opinions, with which we dare have no concern here, many interesting facts were embedded in the speech delivered by Lord Cromer at the Guildhall last Monday. He explained, for example, the causes of the drain of gold to Egypt every autumn and winter, and in doing so incidentally illustrated the enormous change which has taken place in the condition of the Egyptian people through the regulation of the Nile floods. In ancient times, he said, when the Nileometer recorded a low supply of water, "it was regarded by the people as an angel of death." When he went first to the country, in 1877, there was a very low Nile, and the consequence was that the inhabitants of many towns had to live on garbage, and thousands died of starvation or disease. This year's Nile flood was the lowest on record, and yet, thanks to the labours of Sir Colin Moncrieff, Sir William Garstin and other eminent hydraulic engineers, the low flood made no difference to the crops. It is probable, he said, that the cotton harvest will be extremely fruitful, and because of these steady yields of ever-increasing magnitude, high Nile or low, there is a growing demand for gold to move the cotton crop each harvest time. All the cotton is exported, and about £30,000,000 has now to be found every year to take it away. And most of this gold stays in Egypt; it

never comes away again. In the last four years the imports have exceeded the exports by upwards of £13,000,000. Where does all the coin go? Some £1,500,000 to £2,000,000, it is estimated, is absorbed annually in jewellery, and most of the remainder is hoarded. The practice of hoarding, Lord Cromer says, is indulged in to an almost incredible extent, and he gives an instance of an Egyptian gentleman who recently died and left £80,000 all in gold coin kept in his cellars. Also he heard of a village sheik who bought property for £25,000, and half-an-hour after the contract was signed appeared with a train of donkeys bearing the whole of the money, which had been buried in his garden. This hoarding is a mark of a primitive civilisation in one sense, but probably still more a relic of the time when no man's property was safe in Egypt; when to be wealthy meant liability to be robbed. As time goes on, and should English rule in Egypt be accepted heartily by the people, a proviso by no means assured, this gold that flows into the country every year will disappear less and less. The educated native will learn to take it to the banks and to use it in business. It may be a long time, however, before this change is brought about, and meanwhile we cannot imagine how the business of the world would have been carried on in recent years on the magnitude to which it has now attained, and at the same time the demands of Egypt for gold met had it not been for the enormous increase in the production of the metal.

Another point upon which Lord Cromer threw light was the recent furious speculation in Egyptian share markets, and he gave it as his opinion that the collapse or slump which has taken place in paper of some Egyptian undertakings is not to be regretted. There has been a mischievous activity in producing inflation, especially in the value of plots of land in or near towns. Agricultural land has also become dearer, partly by the security given to the tiller and the certainty of the harvest, but there has been no great speculation in that direction. The gamble has been chiefly in city lands, and his lordship gave an example of the effect of inflation. About 60 years ago, he said, the British Government bought a plot of land for its official representative and paid between £3,000 and £4,000 for it. At the prices ruling only a short time ago the value of that land was at least £250,000. Probably enough the real value has gone up, but scarcely to an extent like this, and undoubtedly the tendency to foment excessive prices has recently been most mischievous, leading to building speculations, the multiplication of hotels and other wealth-consuming or tying-up undertakings; but the failure of such does not imply that Egyptian trade or finance is going to suffer to any extent, nor does it mean any set-back worth speaking about in the country's general prosperity. Perhaps the hotel building or to be built on the piece of land on the river at Cairo lying alongside the grounds of the British residency may turn out a bad speculation, but Cairo itself appears to be bound to grow richer as well as larger, and the value of sites and buildings in it should, therefore, increase on the average of years.

Bravo! "Chartereds."

Mr. H. Wilson Fox, the renowned manager of the Chartered Company, is just back from Rhodesia, where he has been touring with a deputation from the board and looking into things, tasting the turnips, fixing a site for the turbines that are to generate electricity on the Rand or in Cairo, and inspecting mines and crops. As a result he assures us that "tobacco is doing well," and we are very glad to note the fact. What the settlers in Rhodesia would do without the solace of the weed we fear to suggest, or what the Chartered shareholder. All must smoke to sooth their fretted souls. Nor is it tobacco alone that flourishes. The mining industry is prosperous—paying no end of dividends, you see—and through its prosperity the farmers are growing rich. The farming industry, in fact, is "rapidly entering upon a new phase," in Mr. Fox's mature and sage opinion. The phase of dividends for Chartered shareholders, we suppose, since the mines are paying so handsomely. Mr. Fox is too circumspect to speak in this way, but he does predict an export trade in "mealies," a business in which rich and fat Natal has taken the lead hitherto. Let it tremble; Rhodesia is about to come along with its productions, and an early expansion in its export trade, "both in minerals and agricultural produce," is to be looked for. And markets should easily be found for everything the country can sell with both the gold and the bread hunger at such a pitch in sundry parts of the earth less gloriously privileged than Charterland, such as the United States and India. With traffic, too, and exports, and with farmers and miners, both exported and imported, with railways, and tourists, surely Rhodesia will be able to raise a little more money here. "At the present moment," remarks Mr. Fox, "my most pressing work is in London," and what was ever more pressing for the Chartered Company than the raising of money? The railways, when they have traffic to carry—ah, woeful when as the poet sings—will be all right and self-supporting, being both of great length and lightly bonded per mile; but until they attain to this dignity they remain "the only onerous obligation" of the Chartered Company in South Africa—not in London, you observe—and we fear the money for the coupons now due—a trifle of about £125,000—has had to be borrowed, as well, perhaps, as that needed to pay for lubricators and paint. Apart from these little inconveniences "the company's revenue and expenditure approximately balance." Was ever necessitousness approximating utter bankruptcy more daintily expressed? Mr. Fox has our utmost admiration, but that does not prevent us from hoping that he will fail in raising any more capital for the Chartered Company on any pretence until other people than the present directors have overhauled its affairs. It is not enough to have "provided central warehouses and experts" to deal with the tobacco, not enough even to have created the now liquidating Charter Trust and Agency or the Victoria Falls Power Company, nor yet to have formed an enthusiastic friendship for Mr. Moreton Mandeville and his London and Paris Exchange, because the days of sentiment, bombast and commissions on new issues are over. We want to get down to bed-rock in Chartered finance before trusting its magnificences with any more of our cash. And cash is scarce anyway. Have any members of the board ceased to be millionaires lately? You need not be surprised if they have, for "Society" is desperately hard up; as hard up as stock jobbers.

The Budget of New South Wales.

Never had a Treasurer such a glowing account of his stewardship to render as Mr. Waddell, the Finance Minister of New South Wales. In the year ended June 30 last the revenue was £13,406,000 and the expenditure £12,831,000, so that the current year should have begun with a balance of £1,471,000 to the good, which is £575,000 more than the balance brought in from the preceding year. Works costing £427,000, hitherto paid for from loans, were provided for from revenue last year, and another £278,000 was spent out of income in the purchase of large estates for closer settlement. At the same time the loan expenditure of £1,233,000 was "the lowest for ten years," and all the money was spent on "reproductive works." In the current year Mr. Waddell looks for a revenue of £12,799,000, after allowing £550,000 for remission of taxation, and the expenditure is put at no more than £11,949,000, so that he looks for another surplus of £850,000, and as the year seems to have opened with a nett credit balance of £1,012,000, it should close with one of £1,863,000. All this has been accomplished, or is looked for, notwithstanding very considerable reductions in railway fares and rates, and as a reward the income-tax payers are to have the exemption for "incomes earned by individual exertion" raised to £1,000, while the stamps on receipts, cheques, promissory notes, and bills of exchange are to be abolished. The invalid poor are also to be provided

with pensions at a cost of £40,000 per annum, and were this all the story there would be nothing to say, no criticism of any moment to offer.

Unfortunately, it is not quite all the story, and we are puzzled in looking at these figures to account for one at least of the statements. At the beginning of the year Mr. Waddell says the public debt, allowing for cash assets, was £83,306,000, which is almost £1,000,000 more, by the way, than the total 12 months earlier, but in the past year £722,000 of debt was paid off. Are we to infer from this that the redemption of debt exceeded the loan expenditure of the year by that amount, because, if so, no less than £1,955,000 out of revenue sinking funds must have been absorbed in this operation during the year? We hardly think that can be the case, and should like to see the accounts, especially as the projected loan expenditure for the current fiscal year on what are described as "highly reproductive works," chiefly railways, amounts to £2,237,000. The works must be urgently required, surely, to justify a resort to the borrower to this extent at a time like the present; but the Treasurer went on to assure the House that reproductive works, representing 90 per cent. of the debt, were paying handsomely, railways and tramways giving a nett return of 5 per cent. after allowing for interest and working expenses, harbour trust properties a return of 4¼ per cent., and Sydney Waterworks of 5½ per cent. We did not find these figures, so far as railways and tramways are concerned, borne out by the accounts recently published, but perhaps Mr. Waddell has been misreported. Be that as it may, he adds that £895,000 will be at the credit of sinking funds this year and available for liquidating debts. The nett amount borrowed, therefore, may not reach the sum just named, but is is plain from this recital, confused as the data appeared to be, that some of the colony's prosperity is still the product of borrowed money, and we regret that it should be so in view of the precariousness of Australian seasons, and of the coming fetters of Protection. This year's harvest, moreover, does not promise to be so good anywhere in Australia as those of the last two years have been, and already in South Australia drought is threatening the crops with destruction. If another lean period lasting for several years has to be encountered and surmounted, will the "prosperity" of New South Wales came out at the other end without suffering; will the reproductive works continue to pay as they are now alleged to do; and will New South Wales have no cause to regret the steady additions taking place in its public debt, notwithstanding sinking funds and redemptions from free revenue? After all, the gross debt of the colony is not much, if at all, short of £100,000,000. And it grows.

Daimler Motor Co. (1904), Limited.

A very good show is again made by the board of this company in their report for the year ended September 30 last, and if the previous year's display could be ignored we might declare the business to be magnificently prosperous. As it is, and notwithstanding the fact that the ordinary shares again get a dividend and a bonus together equal to 22½ per cent., the figures of income show a decided recoil compared with the previous year. Gross profit, for instance, was only £121,478 against £212,416, the entire income of the year being roughly £90,000 down at £129,613. In spite of some little saving in one or two directions the nett profit of £124,213 is accordingly £89,257 less. It follows that although the dividend is maintained and £20,000 again put to a special fund for the renewal of plant and machinery, &c., the amount transferred to general reserve is only £30,000 against £120,000 in the previous year, but the balance carried forward is £49,395 against £34,611 brought in. The balance-sheet is strong, too, in several directions, although we do not quite like to see stock-in-trade increased by £128,226 to £300,050, considering the way in which the prices for automobiles are falling, and the increase of £33,242 in the amount owing by sundry debtors, which is now £92,182, also looks unsatisfactory. Cash at bank and in hand, too, is now only £113,467, or £25,373 less than it was a year ago. The sum is great still, but items of this kind rather point to coming strain. Creditors on open account, bills payable, &c., are pretty high on the other side of the account at nearly £103,000, including accrued debenture stock interest. The company, however, possesses large reserves of one kind or another, the total being £210,030, and there are no heavy items in the way of property, goodwill, or plant to weigh it down when bad weather raises the waves of adversity. Its investments are comparatively insignificant, so that the general aspect of the balance-sheet is by no means unfavourable, only we fear it is the best likely to be seen for some time to come. A significant fact, for instance, is a decrease of more than one-half in the bonuses due to employees out of the profits of the year. Twelve months back that bonus was £27,684, and now it is only £13,805. More work, in other words, as the directors say in their report, has to be done for a smaller reward, and the recoil in the automobile industry is certain to diminish the profits still further in the current year.

Humber, Limited.

The display made by this prominent motor and cycle company for the year ended August 31 is every bit as good as the most sanguine could have anticipated. We rather regret the necessity of increasing the capital, and should like all extensions to have been met from profits, but if the increase must take place the directors have clearly chosen the soundest method. We are told that the erection of the new works at Coventry has been energetically proceeded with, a portion of the new buildings being occupied during the closing weeks of the year. In view of the great expansion of business it was decided to construct the works on a larger scale than was at first contemplated, and "after mature consideration" the directors have decided that instead of using reserves only to provide the necessary funds an increase of capital was desirable. This is to take the form of an issue of ordinary £1 shares to the amount of 100,000 which will be offered in the first instance to existing holders. It is certainly satisfactory that no attempt is made to burden the company with a debenture debt. If the new capital proves prolific, as we trust it will—though we have fears for the near future, at least—then the ordinary shareholders will get all the benefit, and inversely, if the contrary happens, they are the ones who should bear the brunt. At present all is bright and prosperous, the sales of the company's productions having shown a further large increase, and the outlook for next season's trading being described as satisfactory. But the tremendous drop in profits just announced by the Daimler Company sets us all thinking, and by their big allocation to reserve the directors of Humber, Limited, are clearly leaving little to chance. Last year money was spent with a very free hand, and the new capital will doubtless be put out the moment it is sanctioned. Additions to land and buildings were £82,556, more than doubling their total at £159,381, and the £25,137 laid out on plant, machinery, fixtures, &c., raises the total to £71,438, after allowing £6,749 for depreciation. The company is carrying stocks to the amount of £187,336, and £100,854 is owing to sundry creditors, but debtors, £59,573, are as much as they should be. Cash and bills at bank are remarkably small at £5,278 against an undivided profit of £163,866, and high-class investments standing at £50,414 show a depreciation of nearly £5,000. Goodwill, trade marks, &c., are a very prominent item at £271,300, but reserves now reach £125,000. Trading profit, excluding royalties and transfer fees, are returned at £165,705, or an advance of £56,237 compared with the preceding year. Other royalties produced £57 and transfer fees £892, making £166,655, from which have to be deducted sundry charges aggregating £12,220, leaving a nett balance of £154,435. Last year there were important preference dividend arrears to be caught up, but now there

is only one year's payment, absorbing £15,000, and the ordinary shares are to have 20 per cent., or 15 per cent. more. Addition to reserve is £85,000 compared with £40,000, and the balance forward is a trifle down at £8,800. We are pleased to see that the directors have carried £5,000 to a provident fund to include workmen's compensation, and it is proposed to formulate a scheme whereby provision may be made for the employee in case of old age or incapacity from sickness or any other cause. Excellent!

The Dunlop Rubber Co., Limited.

One might say that this company beats the Gramophone Company, about whose accounts, by the way, we made a criticism rather wide of the mark a fortnight ago, having overlooked the fact that it has now nothing to do with typewriters, as the chairman explained at the meeting last week. We are glad to make the amend, and, on the whole, congratulate the Gramophone Company on getting rid of typewriters. As for this Dunlop Rubber Company, its "profit" for the year ended August 31 last after providing for depreciation and interest on debentures, but subject to managing directors' commissions, came out at £490,528, and as the paid-up capital of the concern is only £220,000, and the total debenture stocks, first and second, amount to £163,055, this looks better than De Beers at its highest effulgence. As a balance of £180,572 was brought forward from the previous year, it follows that the company, after putting aside £15,000, half to 'bus tyres reserve and half to experimental and exploration reserve, was easily able to give the shareholders a final dividend at the rate of 100 per cent. per annum for the past half-year on old and new shares included, and it had paid an interim dividend at the rate of 50 per cent. on the shares issued at February 28 last. Even then £210,000 is added to the general reserve and £59,023, subject to managing directors' commission, including their commission on the issue of the new shares "if authorised," remains to be carried forward. Is this the whole story? Oh, dear no! Premiums on new share issues, less expenses, came to £190,470, and were included in the "profits" just gloated over, but that comfortable sum is wisely carried to a special reserve. In other words, the nett trading profit for the year was not the splendid aggregate mentioned above, but only £317,032—a handsome figure undoubtedly, but one that may not be repeated next year—and we must accordingly regard the true nett profit of the past year as just about £300,000, after providing debenture interest and about £16,000 for depreciation. The capital and other transactions of the year, however, have undoubtedly put the company in a very strong position, and if enough is being written off for depreciation in all directions the business should continue for some time to yield satisfactory results to the shareholders, although we by no means counsel them to expect 75 per cent. per annum continuously. There will be ups and downs in the rubber trade, and strong as the position of this Dunlop Company at present is, it will meet with increasing competition as time goes on. Depreciation is, therefore, the vital question, and we cannot really say that the light thrown upon it by the balance-sheet figures is altogether soothing. Still, almost as much was written off the plant, machinery and tools account last year as had been added during its currency for fresh plant; so that after £10,505 had been added to a total of £110,274 brought forward, this item comes into the new balance-sheet at only £110,315. But sundry debtors make a most formidable exhibit, and we are not surprised that the reserves have to be strengthened with such vigour, for these debtors owe £478,729, in addition to which stocks on hand stand at £162,655, while patents and investments, less depreciation, account for another £77,190. In these three entries alone nearly £720,000 is sunk out of a total of £1,029,138, which is the aggregate of the balance-sheet. Bills receivable amount to only £28,725, while cash in hand is £83,014, in spite of magnificent additions to the reserve and the refreshment provided by the new capital. Dunlop Rubber securities have an element of transitoriness in them which should prevent the public from buying them at the top.

British Minerals.

Last year, the figures for which have only just been published, the value of the minerals raised in the United Kingdom was £105,842,992, or rather more than £10,000,000 in excess of the output for 1905. Most of the increase came from coal, which was not only mined to a larger extent, but commanded a higher price. The total output of coal for the year was 251,067,628 tons, or an increase of nearly 15,000,000 tons on 1905. In money value the increase was almost £9,491,000 at a total of £91,529,200. Of the aggregate weight some 8,000,000 tons more went abroad, foreign countries having taken almost 55,600,000 tons, France drawing away nearly 9,500,000 tons, Germany and Italy each more than 7,500,000 tons, and Sweden more than 3,500,000 tons. Adding in the 2,598,194 tons sent out of the country in the form of coke and patent fuel, and the 18,590,213 tons of coal shipped abroad for the use of British and foreign steamers engaged in the oversea trade, the aggregate quantity of fuel, mostly coal, which left the country in 1906, was 76,788,178 tons, so that 174,279,450 tons were left for home consumption, and of this 20,094,041 tons were used up in the blast furnaces, 35,402,677 tons were employed in the manufacture of coke, and 1,399,542 tons in making briquettes. The average price of coal, it may be added, rose from 6s. 11.38d. per ton in 1905 to 7s. 3.49d. last year, and a still further advance has taken place in the current year, which is calculated to check consumption and bring about some diminution in the output. So much of the mineral production of the United Kingdom consists of coal that one turns with a certain amount of apprehension to the statistics relating to other minerals. Where does iron ore come in, for instance? It also showed an increase of 909,703 tons in the past year, the total mined within the country having been 15,500,406 tons, but the value of all this iron stone was comparatively insignificant, although £603,244 more than in the previous year, for it came only to £4,085,428. Out of this ore, however, 5,040,360 tons of pig-iron were manufactured, or nearly one-half the total quantity made in the country. In order to supplement the short domestic supply 7,823,084 tons of iron ore were imported during the year, upwards of 76 per cent. of it from Spain. Without Spain, indeed, this country would be hard put to it to maintain its position as, on the whole, the greatest manufacturer of high-class machinery in the world. The other metals taken together are comparatively of little account, but we still produce a considerable quantity of copper and lead, together with an increasing amount of tin, for the Cornish mining industry is unquestionably looking up.

American Business Notes.

The passing days have been making history rapidly in the United States since we last wrote. What the actual position is can hardly be grasped on this side, but it is impossible to see the improvement in affairs there which the *Times* correspondent, Mr. Robert P. Porter, most days assures us is taking place. Perhaps, however, the fact that the country is approaching the condition of a universal moratorium or suspension of payment is a good thing for debtors. The Governor of Oklahoma went as far as to declare a five days' holiday, so as to give depositors of banks in his State, all of which had closed, time to recover themselves and to decide whether they will continue to draw away and hoard their money or to let it lie. His example has been followed by the Governor of Washington State. Banks in Oregon, on the other hand, have reopened with the help of Clearing House certificates. When, however, a population becomes

possessed by terror, as that of the United States now is, violent suspensions of payment may be unavoidable, and at any rate they serve to reveal to onlookers the inextricable confusion into which the usual machinery of business has fallen. The United States is now giving the world an example of the danger which underlies the unbridled use of credit. Once more the people there are warning mankind that, however good a servant credit may be, it is the worst of all masters.

Last week's return of the New York Associated Banks is hardly worth lingering over, because it only adumbrates the changes that have been taking place. The loan and advance average has only risen by £2,173,000 and specie and greenbacks together have but diminished to the amount of £2,580,000, while the surplus reserve which the week before was £2,236,400, was turned into a deficiency of nearly £247,000. A year ago at the same date the surplus was £1,135,000. The significance of the return does not lie in these changes, but in the fact that they should have occurred in spite of the resolution passed by the Clearing House Committee to issue Clearing House certificates in token of inability to pay cash, in spite also of the large disbursements of the Treasury to help the banks. Mr. Cortelyou has, it is stated, handed out £10,000,000 to the National Banks, not all in New York, but throughout the country, during one week, and since he began lending in September he has deposited altogether £14,000,000 with the Bank, so that he now has less than £3,000,000 left, the smallest balance in modern days, and has put the Treasury in line with the other money-yielding organisations of the country, for it may have to share their losses, and certainly will share the delays sure to arise before credit and cash can anew play their part with smoothness in the conduct of the country's business. All these helps notwithstanding, money has been excessively hard to come by. Many banks still professing solvency have refused to honour cheques for more than $25 or $50, and the rates for call loans on Wall Street have ranged between 50 and 100 per cent., the bulk of the small business done early in the week being at 75 per cent. By Wednesday, however, the ruling rate for day loans had fallen to 50 per cent., the compulsory winding up of speculative accounts having contributed powerfully to reduce the demand for credit. Next day saw the general rate down to 15 per cent., with nothing higher than 25 per cent. paid. This must imply both a reduction in speculative commitments and a restriction of credit facilities to the few. But the necessities of banks, trusts, railroads, municipalities, and joint-stock enterprises of every kind remain imperious, and many more suspensions must occur. Here is J. P. Morgan Syndicate contracting to lend New York City £6,000,000 on 6 per cent. revenue bonds taken at par, with an option to advance £4,000,000 more on the same terms, and only a few weeks ago the city managed to dispose of bonds for £8,000,000 at 4½ per cent.

How many banks have failed throughout the country since the troubles began we do not know, but it is reasonable enough to look for the disappearance of hundreds amongst the smaller credit shops of this kind to be found within the Union, and in a sense all of them may be said to have partially broken faith. The consequences are bound to be far-reaching. When confidence is restored and business resumed, something will have to be done with a view to put banking business on a more solid foundation in the United States. It may be that the system of creating small individual banks, which in the best of times cannot possess free resources adequate to their necessities or to the dangers arising from their operations in credit, will have to give place to some arrangement producing institutions corresponding in magnitude to those of European countries. This might only be shifting the danger and an aggravation of it if the use of credit is to be abused in the future as it has been in the past by the American people. Most large banks, however, would, even in that event, certainly be in a better position than a multitude of small ones to encounter a credit-shattering tornado such as that which is now sweeping over America. Much praise is being bestowed on Mr. Cortelyou for his handling of the crisis, and already some people are beginning to talk of him as the coming man of the Republican faction, pension buttressed. He partly deserves the encomiums bestowed upon him, but not altogether, for one of his remedies for shortage of currency is to impel the banks to still further distend their rent and staggering credit by enlarging their note issues. He is willing to allow the banks to substitute for other approved securities the first-class bonds now held by the Treasury against its bank deposits, so that these may be used to distend the paper money. It is a desperate measure, and most dangerous, for it might end in forced paper money and infinite mischief. In a sense, perhaps, this would be a return to "the sturdy financial methods of our forefathers," extolled, the *Times* says, by Mr. Harriman, but we rather wish it were something else. Harriman's own methods, by the way, may be of the "sturdy" pirate class, but they do not seem to have made him altogether happy. His Union Pacific policy of absorption and stock gambling is not turning out well, and a "holding" company is, he hints, to be launched to take over the securities held by the Union Pacific on borrowed money, and played with for profit when markets were at the height of their insanity. It will be a long time before Harriman can play that game again, and we may see the Union Pacific system bankrupt before all is over. Harriman, at least, desires it to be.

What are Clearing House certificates? The New York Bankers' Clearing House has resorted to them, as well as the clearing houses in most of the great cities throughout the Union, including Chicago and San Francisco. The certificates are acknowledgments of universal inability to meet engagements, and an assumption of the liabilities of all the banks by the Clearing House. The banks that do not possess cash to meet cheques or other drafts upon them obtain certificates from the Clearing House Committee, and substitute these in payment. The certificates form a first charge upon the assets of the banks in whose favour they are emitted, and are handed from the one to the other in lieu of cash or marketable securities. Thus, if at the close of the day's business one bank owes another $500,000, which it cannot pay, the Clearing House, representing the whole body of bankers, assumes the debt, and issues its certificate to the creditor bank or banks for the amount, the bank short of money thus becoming debtor for $500,000 to all the other banks through the Clearing House. A free resort to this expedient might make the whole banking system of the country hopelessly insolvent if no remedy were found and applied. Severe measures, however, are always taken to bring in cash and restore confidence. At no matter what sacrifices, gold has to be procured in Europe, if nowhere else, and during this week no less than £2,182,000 has been withdrawn from the Bank of England alone for shipment to New York, while £1,000,000 was bought in the London market on Monday at 78s. per oz., plus commission, a rise of 1¾d., besides which £800,000 is said to have been procured in Buenos Ayres, with further unspecified sums from Australia. The effect of this sudden call for cash may be calming in the States, but it has had the immediate consequence of making money dearer on all European markets. They are being brought within the circle of disturbance, and even if New York does not continue to import gold because the people's minds have recovered their balance, and because runs on banks have ceased or been rendered impracticable, the prospect before all European markets is that of high rates for money throughout the rest of this year, and probably enough well into next. Gold to the amount of £3,000,000 is also to be coined by the United States Mint, and will afford welcome help. Coin is said to be at 2 per cent. premium in San Francisco.

The statement current some time ago—not in these columns—that the Pennsylvania Railroad Company was

bound to pay off on November 1 $10,000,000 of 3¾ per cent. notes sold by the company last year in Paris was not correct. What has to be paid is £2,000,000 of an issue of £10,000,000 in 4½ per cent. notes made some years ago, but sold in the States and not abroad. There is authority for saying that provision has been made for the disbursement of this money in due course. None the less is it the fact that the Pennsylvania Railroad Company has masses of floating obligations outstanding which may embarrass it not a little during the time when credit is uneasy or disturbed. All the railroads of the United States who could get credit, and most of them could until lately, are bound to suffer from the consequences of the calamitous liquidations now taking place, and we must keep before the minds of investors here this one consideration. People keep writing to us to ask whether the time has come to buy United States railroad shares. They have fallen enormously, correspondents point out, and that is true enough, but they have not yet touched bottom by any means. The consequences of such credit wrenches as the Republic is now passing through will not be obliterated in a month, or a year, or in three years, and we are not yet at the end of the liquidation. If by help of open suspensions of payment or postponement, such as the thirty days' notice expedient adopted by nearly all the savings banks, the local crisis is stayed and money rates permanently subside again from 50 and 70 per cent. per annum to 10 to 20 per cent., or to 5 per cent., the liquidation will none the less continue, and next year, when many millions of floating short-term obligations, gaily or desperately emitted by the railroad corporations, begin to fall due, the probability is that several proud companies, whose officials have lately been swaggering before the world as millionaires or great potentates in finance, will have to pass into the hands of a receiver. Keep away then from this market, and have nothing whatever to do with any United States railroad share until the dead sea period is reached, when shares that are still priced far above their intrinsic value can be picked up without danger of having to pay assessments in bankruptcy. What has been will be again, of that investors here may be sure.

One good piece of news can be given. The committee of directors which has been overhauling the Knickerbocker Trust announces that it will be able to pay its depositors every dollar due to them. Its assets of $56,000,000 are said to show a surplus of $7,613,000 over its liability to depositors. Good, but depositors must not press for their cash, lest the valuation on which the exhibit is based should disappear.

Of course, the United States Steel Corporation continues to do well, and there will be nothing in its accounts to indicate that it has taken payment for part of the great quantities of goods supplied by it in Clearing-house certificates. Money provided on short notes and on bond issues pledged or sold may still be partly in hand, and it may, therefore, be that the fine revenue shown by the Carnegie combine for the September quarter has really been received in negotiable instruments if not in currency. For all that, trouble lies ahead for this monster, and we shall be in no way surprised to hear one day in the not far distant future that it also has either broken to pieces or passed into the hands of the liquidator. For the quarter ended September 30, however, the nett profits are given out by the board at £8,761,000, or £1,138,000 more than the profits of the previous quarter, and for the nine months the profits have been £25,686,000 as against £22,975,000 in the corresponding period of 1906. Moreover, after making all appropriations, the nett free balance for the past quarter is put at £982,400 or £243,000 more. This is all very nice, and easily accounted for by the tremendous inflation of credit, whose consequences the people of the Republic are now just about to begin harvesting. And the orders in hand? Oh, they are large still—6,425,000 tons on September 30 against 7,604,000 tons on June 30 and 7,937,000 tons at the end of September last year. On the year's comparison there is a decrease of 1,512,000 tons to be sure, but what is that for a business so overwhelming? A year hence we may be able to answer this question.

For a long time back the economic theorists of perverted brain in the States have been bewailing the miserable smallness of the trade balance against their country. In former times these solemnities were delighted when the country managed to get back only 60 to 65 cents in the dollar in exchange for the goods exported, but owing no doubt to the universal expansion of commerce they have lately been getting 80 and sometimes nearly 100 cents for their dollar, and this apparently increased profitableness of the country's foreign business has beyond measure terrified these theorists and newspaper philosophers, causing the Protectionist organs metaphorically to weep and tear their hair as they predicted the country's ruin. According to them the less the country gets back for what it sells the more prosperous it is. They will have cause for satisfaction presently when the forestallers and regretters who have been restricting exports of cereals and cotton are compelled to disgorge. Already the slump in cereals has made considerable progress, and the forestallers of cotton are being compelled to sell as fast as they can find buyers, at any price the buyers like to give. A glorious opportunity for swelling out the volume of the exports is thus being given, and its effect was visible even in September, when the nett export balance, that is to say the surplus value of exports over imports for the month, was well nigh £6,000,000 as against a mere £300,000 in August and £746,000 in July. As the European merchant will not accept Clearing-house certificates for the goods he sells to the American customer, it is probable enough that this fine excess, the mark as we think of forced liquidation and the index perhaps of impoverishment for the American producer, is likely to reach greater proportions in the near future, and the happy theorisers of the American Press will be able to gloat over exports so much exceeding the value of the imports as to represent a return of only 50 cents in the dollar to the American trader. But some of the balances may be available to pay for gold imported and some of it to pay off debt. It is an ill-wind that blows nobody good.

Fine-looking exhibits continue to be made by the railway reports as issued, and amongst those reaching us this week the Baltimore and Ohio takes first place, not so much because of the company's magnitude as because it is an old property that British investors have been familiar with for more than a generation, and in which many of them have lost money. Others have made money, and it is likely enough that experiences of this kind will be repeated. Nothing, however, in the figures for the company's year closed June 30 last indicates a return to the days of liquidators and dangerous credit expedients, unless it be the capital expenditure and the accumulated surplus. During the past five years the company has spent £9,453,000, mostly on capital account; in fact, only £2,800,000 of that total has been drawn from current income, and in the year just closed £3,452,000 was obtained by the proceeds of sales of an issue of £5,500,000 of new stock made in the preceding year. All this money is not poured into the Baltimore and Ohio's own system, but goes partly into acquired roads or is advanced to subsidiary companies, and it is therefore possible to made the parent roads seem highly prosperous while it is loading itself up with outside commitments which may pull it down. And amid all this profusion in capital expenditure, the surplus continues to grow. Dividends are now paid with fine regularity, and a certain amount of money is devoted to improvements out of current revenue, and still there is a growing surplus, which we regard as ominous, remembering other times. Thanks to the additions made for the past year this surplus or credit balance in the profit and loss account now amounts to nearly £4,000,000, and if memory is not treacherous the surplus displayed by the old Baltimore and Ohio just before it went bank-

rupt exceeded £5,000,000. Last year's revenue, though, was good, amounting as it did to $82,244,000 or $4,852,000 more than in the preceding year. This is exhilarating until we look at the expenses, and these went up no less than $5,365,000 to $54,880,000, so that actually the nett revenue was $513,000 down and the proportion of expenses to receipts rose from 63.98 per cent. to 67.73 per cent. The usual excuses are offered for this unsatisfactory looking product of a year's industry and we need not repeat them, but it is matter for satisfaction that the increased capital sunk in the undertaking has been drawn from shares rather than from bonds. Last year indeed the funded debt of the parent line was only increased by £200,000, but the obligations of subsidiaries rose by more than £210,000. Much of the new money expended on the main undertaking went into lines open for traffic.

Another road whose accounts seem to us ominous of coming changes not quite all for the better is the Southern, and yet its income also went up in a handsome fashion for the year ended with June 30, the gross increase being nearly $3,017,000 at $56,658,000, but expenses rose by $4,926,000, so that the nett revenue was really almost $1,910,000 worse than that of the previous year. Some little offset was obtained through the increased income from investments, but for all that the final result was quite $1,669,000 to the bad, while fixed charges rose by $1,269,438, making the entire reduction in the free revenue after fixed charges had been met $2,939,000. No wonder then that the dividend on the preferred stock was reduced from 5 per cent. to 4 per cent. For the first half of the year the usual 2½ per cent. was paid, but for the second half only 1½ per cent., and even this 4 per cent. was not all earned in the past year. While this is the result of the business done, the company's engagements on capital account were swollen out by $32,052,000 during the year. That is the par value of the notes and bonds disposed of in that time and $15,000,000 of this aggregate consisted of three-year 5 per cent. notes, which is a way of postponing affliction popular of late in the American Republic. And still the Southern Pacific is a half-made road. Improvements many and continuous have been taking place, but there are only 200 miles of double line out of a total length of 7,554 miles, and the work of doubling will now have to be suspended because further capital is not to be had on any terms and will not be obtainable for many months to come, if not years. More attention is, we fear, devoted to rolling stock than to permanent way, at any rate since June 30, 1900, this company has bought $43,296,000 worth of new rolling stock, and it owes upwards of $20,577,000 on account of that stock at the present time. That more than half the expenditure should have been paid off is, however, highly creditable to the management, and, indeed, we have always admired the zeal and energy with which this system, formed as it was out of a number of more or less pitiful wrecks, has been gradually brought into a state of efficiency and improved in many directions. The south, moreover, is developing, and we are sure there will be a prosperous future for the Southern Railway some day. All we insist upon is that it has afflictions to encounter immediately ahead and that the management will have to go slow and perhaps suspend dividends altogether for some time to come.

A greater system than either of the two mentioned is embraced under the wings of the Rock Island Company. It is a covering or "merger" or "holding" company which owns the bulk of the stock of the Chicago, Rock Island and Pacific and the St. Louis and San Francisco Companies, the ownership being secured by the simple device of exchanging the purchasing company's stock, at a handsome paper profit to the intermediaries, for the stocks of the lines controlled, and as the Chicago and Rock Island Railroad together with the St. Louis and San Francisco road both control dependencies, it follows that the entire system governed by the Rock Island Company embraces some 14,000 miles. Both the Rock Island and the St. Louis and San Francisco lines did well in the past year, the Rock Island's gross revenue having gone up more than $9,000,000 to $60,238,000, of which about one-third or over $3,000,000 remained as additional nett income. Altogether allowing for the falling off in miscellaneous receipts the nett revenue was $2,753,000 up, but as rentals, taxes and interest took $788,000 more the amount available for dividend was somewhat less than this. Still the company had nearly twice as much free income as at the same date two years ago, and after paying 5½ per cent. to its shareholders as much was left over as would have paid another 6 per cent., so that the stockholders, that is to say, the Rock Island controlling company, might have had 11½ per cent., still with some left over, had it not been self-denying.

In like manner the St. Louis road gained $6,574,000 in gross and $2,247,000 in nett income, and compared with two years ago the expansion is something to marvel at with both companies. Hence the St. Louis line also might easily have paid 11 per cent. on its common stock after meeting all its charges in the past year, while two years ago it paid nothing at all upon $45,000,000 of second preferred stock and common stock taken together. In actual fact the St. Louis Company still refrained from distributing anything upon its common stock, and the Rock Island Company did well in forgoing this revenue—for it is all in its hands and very largely a matter of book-keeping. Had it swept away all the free revenue it would have had $7,387,500 to handle, or $3,183,433 more than it actually handled. With all this, however, capital continues to be dipped into, and the Rock Island and Pacific Railway added $15,880,000 to its funded debt during the year besides $3,000,000 in interim certificates, and utilised $4,634,000 of the year's surplus in current business. In the same period the St. Louis and San Francisco Railroad increased its funded debt by $10,080,000, while adding $4,372,000 to the nett amount of its equipment bonds and notes outstanding, and both roads want a great deal more money, but that is the characteristic of all these railroads, so much so as to cause us to suspect the genuineness of much of the traffic expansion. Since all are spending capital, which means purchasing heavy goods, each must be contributing heavily to the gross revenue of the others. A setback in the earnings of these railroads is consequently to be looked for.

Passing Events.

A correspondent is very wroth with us, as will be seen from a letter printed in another column, for our remarks about Atchison overcharges. It does not seem, however, that he has penetrated so deeply as he would have us believe into the financial affairs of that American railroad company, or remembers much of its story, and, any way, we think we can afford to wait for the justification of events. It may be true that the nett profits shown are comparatively small in relation to the entire capitalisation of the company, but it is none the less a fact that charges have been in various ways increased by this and other United States railways, and it is also true that the exhibit of surpluses made by most of them, and not least by the wonder-working Atchison, Topeka and Santa Fé, helps to inflame the legislative zeal displayed in forging the shackles to control their liberty. The comparison made by the writer of the letter has thus really little or no reference to the remarks made under "American Business Notes" last week. We do not believe fully in the Atchison show, but that also is another matter.

Some useful reminders have been given lately in the Paris Press that the French budget is rapidly attaining a magnitude which makes a satisfactory balancing of accounts almost impossible. The budget for 1908 will end in all probability with a deficit that may be increased by the effects of the financial disturbances

now making their progress throughout the world. And even apart from that anything like equilibrium between income and outgo is only attained by resorting to dangerous expedients. The date on which certain pensions amounting to £920,000 will fall due is pushed forward to 1909, thus relieving next year's budget. So also is the first instalment of increased merchant shipping subsidies, which amounts to £1,120,000. This added to the pension money represents upwards of £2,000,000 of postponed charges, while 1909 will be burdened by another £400,000 of shipping subsidies over and above the £1,120,000 postponed.

And all the while other charges press with increasing force upon the people's means of subsistence, until we often speculate when the bankruptcy of a consuming peace will be upon us. We are often told that a great war is coming in Europe, and our consolation lies in such budget facts as these. No European Power is in a position at the present time to go to war without becoming bankrupt within a very short time after the outbreak of hostilities. That is our position, the position of France, of Germany and of Austria-Hungary and Russia. Such is our view, and the answer to a soothing reflection of the kind always is, "Oh, bankruptcy never hindered nations from fighting. Impending bankruptcy did not prevent Russia from entering into a disastrous and prolonged conflict with Japan. On the contrary, financial embarrassment may impel nations to go to war. They will resort to this desperate remedy in order to bury the true state of their finances in the resulting confusion." We do not think this contention worth much weight at the present day, because sure that if a big war did break out much of what is called modern civilisation would disappear from the face of the earth. It is devouring itself now, and has maintained its vain show in the sight of men by that abuse of credit which means wealth devoured.

"Prices continue abnormally high," with a tendency to go up still further. That is the Secretary of State's message from the Governor-General of India. Rain has fallen in Madras, and some showers elsewhere, so that the harvest in Bengal and Bombay may, perhaps, be reaped without much injury, but over the rest of India the past week was practically rainless, and famine is at hand. The Governor-General assures Mr. Morley that no serious general distress has yet made its appearance, but adds, "Test works will probably have to be opened in at least one district within the next fortnight." Thus another depressing period of agony lies before a majority of the inhabitants of British India, and already the Amir of Afghanistan has given orders that no grain, ghee, or horses will be permitted to leave his country for our dominions.

Famine is also raging, or threatening to rage, over a large part of Russia, and the Moscow Relief Committee declares that the credit of 7,732,000 roubles included in the budget of the Ministry of the Interior to be devoted to helping the peasants during the coming winter and spring will far from suffice to meet the vital needs of the suffering population. It has been officially admitted that the peasants of 21 governments will require large grants of food, grain, and seed-corn. In the five governments of Podolia, Volhynia, Minsk, Chernigoff, and Kieff the minimum outlay of 5,000,000 roubles is required for the barest necessities of existence. The crops have failed in many districts, and great distress has already resulted from the consequent advance in prices. Absolutism is thus justifying its works in many places.

Well might Mr. John Coles say in his weighty speech to the shareholders of the Clerical, Medical and General Life Assurance Society that "it is difficult to say with any precision what is meant by depression or inflation." To fix a normal or average price for even a first-class security is impossible, as witness the example he gives. The company's North-Western Railway debenture stock, bought over 40 years ago, stands in its books at 75, it rose in 1896 to 124, and is now under 90. How is a true average price to be arrived at? It cannot be, and the only safe policy is to write down. Happily, the Clerical and Medical does not require to meet depreciation on any security held by it, for its investments were worth £108,000 more than cost at the date of the balance-sheet. Very few similar companies could tell a story like that. Mr. Coles' speech was packed with interesting matter, and we shall return to it, but this week again America overshadows everything.

Letters to the Editor.

A LECTURE ON ATCHISON.

SIR,—In the "American Business Notes" in your issue of October 26, you accused the Atchison, Topeka and Santa Fe Railroad Company of charging too high a price for its services, or, as you elsewhere less courteously express it, of robbing its customers for the benefit of its shareholders. The charge is a most daring and reckless one, for it is obviously made without any careful and exhaustive scrutiny of all the circumstances relevant to the financial position of this company. You observe that the company, after paying a 5½ per cent. dividend on its common stock, was able to add $9,600,000 to the fund for improvements out of nett profits, and upon this single fact, isolated from all other material data, you found the indictment preferred against the company. Had you taken the trouble to calculate what the total profits of the undertaking amounted to, when expressed in terms of the total capitalisation of the company, it would have at once become apparent to you that the charge you have made could not be supported. Permit me to do this, for the benefit of your readers. Adding the bond and debenture capital of the railroad to its share capital, we find that the total amount of capital invested in the undertaking is $523,185,320. The interest paid on the bond and debenture capital is $12,612,083, and if this be added to $11,880,116, the dividend paid on the preferred and common stock, it appears that the total profits distributed amount to $24,498,199. The total nett profits earned is this sum increased by $9,600,000, the sum added to the fund for improvements—that is $34,098,199. Hence for every $523 of its sunk capital the railroad earned during the past year $34 or 6½ per cent. and for every $523 of its capital it sets aside $9.6—that is a little over 1¾ per cent.—for improvements. Where is the robbery here? Are we to take it that the traders whose cause you espoused earned less than 6½ per cent. on the capital invested in their respective businesses? The public view is a superficial one. The trader sees that the company has earned 15 per cent. on its common stock, and from this circumstance draws the fallacious inference that it has earned 15 per cent. on its whole capital. If the whole $523,000,000 of capital had been issued as common stock and a dividend of 6½ per cent. paid thereon we should probably have heard nothing of robbery, but because the bondholders, for the sake of greater security, choose to surrender a large share of the profits to the holders of the common stock, who take the greater risk, the cry of spoliation goes up. The charge of robbery is most hollow and unreal, and is all the more so in the light of your own admission that, in the years to come, there may be *no* dividend at all for the holders of the common stock. Before the owners of a business can be charged with robbing the public their average profits spread over a term of years must be considered, but you neglect this principle of justice and base your strictures entirely on the figures of a single year.

I am, &c.,

T. KERR ANDERSON

32, Friars Stile Road, Richmond, Surrey, October 29, 1907.

The General Accident, Fire and Life Assurance Corporation, Limited, of Perth and London, has received notice that four holders of its policies under coupon insurances have been killed in the Shrewsbury railway accident. The "General" is the company that paid £8,300 in compensation to the killed and injured by the Elliot Junction accident in Scotland in January of this year, and £5,000 in connection with the Liverpool railway accident last year. We understand from the management, however, that these accidents are not more than they expect, as they have on their books the largest number of individual assurers for personal accidents of any company in Great Britain.

Sir Montagu Cornish Turner and Mr. Colin Algernon Campbell, of Messrs. Curtis Campbell and Co., have been appointed directors of the London and Westminster Bank, Limited, in succession to Mr. Bonamy Dobree, deceased, and Mr. William Milburn, who has resigned his seat at the board, his business engagements requiring his residence in the North.

State of San Paulo 5 per cent. Exchequer Bonds.—Messrs. J. Henry Schroder and Co. have received a cable from their Santos agents advising them that they have further encashed £30,500 in respect of the sur-tax collected weekly, for the service of this loan, making a total of £280,750 encashed since August 1.

The head offices of the Union Assurance Society, Limited, have been removed to 1 and 2, Royal Exchange Buildings, E.C.

Critical Index to New Investments.

Glasgow Corporation Stock.

In view of the maturity of £1,100,000 3½ per cent. stock on November 11 the Corporation recently offered the holders, in lieu of repayment, an equal amount of the 3½ per cent. stock, redeemable on May 15, 1914. Of the total amount about £700,000 was taken up, but the holders of the remaining £400,000 decided for repayment, and the £400,000 is therefore offered for public subscription at par. Glasgow is one of the most progressive Corporations in the Kingdom, having not only the tramways, but also the water, gas, and electricity supply under its own control. Its total assets, exclusive of the Common Good and Tramways, are valued at over £17,000,000, while the loan debt amounts to £12,444,446, and is not increased by this issue, and the stock affords an excellent opportunity for investment.

Royal Mail Steam Packet Company.

An issue of £700,000 4½ per cent. first debenture stock is offered by this company at the price of 98 to provide funds for the redemption of the existing debenture debt amounting to £500,000, which matures on January 1 next, and for general purposes. The stock is not redeemable for ten years, but after January 1, 1918, it may be repaid at par at any time on six months' notice. It is secured by a first floating charge upon the fleet and all other assets, and on December 31 last the book value of these, including payments up to that date on account of steamers then building, was £3,008,503. As the new issue will only add £11,750 to the interest charges, while the nett profits in 1906, before providing for depreciation and preference dividend, were well over £200,000, the stock seems well secured and fairly cheap.

Canadian General Electric Co., Limited.

This highly successful enterprise offered this week through Messrs. Sperling and Co. an issue of $2,000,000 7 per cent. cumulative preference stock in shares of $100 at par, or £20 11s. per share. Formed in 1891 to amalgamate the principal companies in Canada controlling the manufacture of electrical appliances, the company has since acquired the Canadian business of the Allgemeine Elektricitats-Gesellschaft and other companies, and its history shows a record of steady progress. For the year 1898 the dividend paid on the common stock was 8 per cent., but since then the regular annual distribution has been 10 per cent., and at the same time the company has built up a reserve of $1,800,320 and a contingent fund of $100,000. Two new large manufacturing buildings are in course of erection, one at Peterborough and the other at Davenport, and it is partly to pay for these and partly to redeem the $300,000 6 per cent. preferred stock and to reduce the overdraft at the bank that the new stock is issued. Messrs. Sperling and Co. have guaranteed a minimum subscription of $1,000,000, and as existing shareholders are to receive preferential consideration the new stock, which looks to be a good investment of its kind, will be readily enough taken up.

Cuban Central Railways.

As we foreshadowed in our issue of October 19, this company is in need of more capital, and the directors have offered for subscription £100,000 in 5½ per cent. cumulative preference shares of £10 each, being the balance of the authorised issue of £1,200,000. When fully paid the shares will be entitled to the full half-year's dividend payable next April, and will rank *pari passu* in all respects with the existing stock. The company's business is growing steadily, and the nett receipts which for the first year of the company's existence were £84,842, rose last year to £181,694, when it was found possible to pay a small dividend of 2 per cent. on the ordinary shares.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

M. D.—There is no immediate need to sell. The company's success is phenomenal, and seems likely to continue for some time yet.

H. C. M. C.—The security is only second rate; but it may recover, and you should not be in a hurry to sell. There will be no immediate rise though. This is only one question, so we hold 1s. to your credit.

Thrifty.—As far as we can judge sound enough, but its business must be costly to carry on, and its ideas do not always please us. The theory sounds attractive, but a good deal more is required if risks of loss are to be reduced. Better do your business through a well chosen member of a Stock Exchange.

Anxious.—This should be quite good to hold. As we read the conditions of issue the stock ranks immediately in front of the other you mention, and is therefore the better security.

Nopir.—(1) Better hold off a little yet. The company is not in the front rank, and is therefore sure to respond quickly to adverse conditions. (2) We do not know of any reason for the fall except that it is largely a reflection of the state of things in America, forced selling having been frequent. The stock is certainly as well worth buying as any in that section. (3) The company's prospects are none too good, and we do not think it would be advisable to increase your holding. (4) So far as we can see prices are bound to go lower yet, and you will get a better opportunity by waiting.

B. S. K.—To join the reconstruction seems to us like throwing good money after bad, and you will probably find it cheaper in the long run to abandon your shares.

G. R.—We should not be surprised if the price went down further during the universal liquidation, but the property itself is a good one, and it might therefore be advisable to hold on.

R. W.—(1) The security is one of the best of its class so far as known, but there is no prospect of much improvement in price in the near future. It is much more likely to recede a little although no legislation of the kind you fear is in sight. At the same time prices of other good securities are just as likely to go down. Still the proportion is so heavy that part should be sold as opportunity offers. (2) These should be all right although the general position out there is somewhat unsatisfactory. (3) As you hold No. 2 we should be disposed to sell these, but it is very hard to gauge markets because of the difficulty of learning what is under the surface of Continental Bourses. (4) We wired you on Wednesday to take your profit on this as the market is so uncertain. We cannot recommend investments in this column. Our fee for our investment list is one guinea for each five securities.

Paradox.—Second rate in present circumstances. Too much finance about the thing altogether. Yes; the slip was made in the title, but the stock should be first class.

J. F. K.—(1) Not much chance of a rise just now, we fear, but the market is not a good one to sell on. Better hold and hope. (2) Yes, we think the price may again reach your figure; it may even rally a little now, if no strike takes place. Apart from that, we fear it will fall further, and there is nothing to average on as yet. (3) Yes, we fear there is nothing for it but to wait; but the business is over capitalised, and the banker's advice was slip-shod.

D. G.—No, the exchange you suggest is not advisable. Both the stocks are likely to go further down, but especially the preferred.

B. W. J.—Begin to think about it when you see the shares at par.

Cardigan.—The security should be right enough in the long run, and we see nothing outside the state of the market in general that should make it flat now. For all that, we quite expect to see a further fall.

Nomen.—(1) Government work. The company is said to have missed some fat contracts, but we know of nothing wrong otherwise beyond its weight of capital.

J. W. M.—We have been unable to find out the reason for the offer made, but it will be prudent to refuse to grant the option.

J. T. W.—This is the order in which we think you should sell: No. 1 first, No. 5 second, No. 6 third, No. 3 fourth, No. 4 fifth, and No. 2 last.

R.—You need be in no hurry to average, as the price looks like going a good deal lower yet.

Arkwright.—(1) No; the company is overweighted with capital; and in addition to the general set-back in trade, it is said to have failed to secure some big contracts. (2) This question has come a little too late, as the price jumped far above your figure on the issue of the preliminary report. At their present level the shares seem quite high enough.

Alpha.—(1) The price may go lower before the market troubles are at an end, but the bonds should be a good enough purchase as a lock-up. (2) Not yet. Price is almost certain to go lower, and may even go to par under present conditions.

F. E. D.—(1) Good of the kind, and fairly cheap. (2) Rather middling; and likely, we fear, to see lower prices. (3) Not to be bought now. The "long view" is that they will go much lower. (4) Not much rise here, but a small investment purchase ought to work out all right. (5) Not to be bought yet; the stock is not all placed with the investing public. This leaves 1/- due to us.

The Week in Mines.

It is a very distressing story that we have to tell this week about the mining markets. They have shown weakness amounting almost to demoralisation at times, and it seems as though the agony of falling prices will never be alleviated. There were, of course, plenty of reasons for the slump. No doubt prices would have fared pretty badly in any case, because you cannot have financial chaos of the kind now prevailing in New York, heavy exports of gold, and a rise in the Bank rate without affecting all markets more or less. But the Kaffir Circus had its own special causes of weakness. On one day during the week the market was simply deluged with shares on French account, the leading counters being thrown out in their thousands. They all came from one source, but whether to cover up difficulties elsewhere or because the operator in question had got sick of the entire business none can say. Apart from these special realisations, the Continent was a more or less persistent seller all through, although Germany did pick up a few shares at the reduced levels ruling near the end. There was also some local selling, and while the majority of professional operators felt too sick to go a bear, a certain amount of short selling was undoubtedly in evidence. When everything goes down individual movements hardly call for mention, but Rand Mines, East Rands, Modders, and Ferreiras all suffered pretty severely. It was said that the principal selling took place in Gold Fields, but if so, they offered the stoutest resistance, because the decline is comparatively small. Talk of a dividend to be declared this month was a helpful influence, and possibly contango money has yielded some profit. Jumpers were prominently flat, and fell from 1⅜ to about ⅜. It appears that the meeting was held last week, and the chairman predicted a great reduction in profits. Some say it is doubtful whether the company will be a producer after next year. News regarding the labour situation is scanty. The mineowners continue to be hopelessly divided on the question of Chinese repatriation, although there is not the slightest difficulty in replacing the lost coolies. Central African natives, however, are reported to be a poor lot, and practically useless. Developments on the Cinderella Deep are said to be encouraging.

Land and Finance shares have not been quite so bad as Kaffirs, but the shrinkage in values was quite serious enough. Welgedachts have been noticeably flat, the annual report presented to the meeting in Johannesburg at the end of last month showing that at the end of June the company owed £14,576 to its bankers, since when the debt has been increased. Considerable difficulties have been encountered underground in connection with the colliery, and cost of development has been much increased. At the meeting of the Geduld Proprietary Company, called to sanction an increase in the capital to £750,000, the chairman stated that the development work had resulted in over 170,000 tons of payable ore being disclosed. Blocking out of ground for stoping has recently been started with favourable results, and the directors were preparing to order a mill cyanide works and other equipment. They would start with a nucleus of 50 stamps, which could be added to from time to time, and the profit-earning stage was expected to be reached before the end of 1908. No difficulty was anticipated in the change from Chinese to native labour. We come to Rhodesians next, and these, of course, include the luckless Chartereds. What is going to happen there? We must wait and see, but the market talks of bankruptcy before long, and went so far as to say that the interest due on November 1 on the various guaranteed railway debentures would not be paid. This was vehemently denied by the Chartered official, who said that the railways were earning a good proportion of their interest, and that the money for the current coupon was in the bank. This statement rallied prices of the debentures a pound or so, but Chartereds got down to 15s., and no amount of effort could get them up again. Charter Trusts touched 7s. 9d., and Lomagundas, Explorations, Bankets, Eldorados, "Tanks" and copper things were in a thoroughly miserable condition.

The flatness of Diamond shares was again very pronounced, and people are beginning to realise that while the recently concluded agreement is all very well in its way, most of the gilt is taken off by the severe shrinkage in the demand for stones and consequent fall in price. A little more information is now available concerning the agreement. The syndicate takes the entire Premier production from July 1 to December 31 of the present year at an agreed valuation, while from January 1 next the outputs of the two companies, the Premier and De Beers, which will be limited to certain proportions, will be pooled. The new compact will run for the same length of time as that between the De Beers and the syndicate, which has about 3½ years to go. De Beers started by going down to 18 sellers, shares coming on offer from Paris, and although they rallied again to 18½ a fresh relapse to 17⅝ was not long in coming. Premiers quickly fell from 10⅜ to 10 and subsequently to 9½, and Jagers also went down, but Roberts Victors showed improvement. One report is that two important Amsterdam jewellery works are going to shut up.

West Africans, for once in a way, were a little bit interesting. A vague cable came from the Broomassie to the effect that "there appear to be favourable indications that high-grade ore has been encountered in the drive at the 420-foot level," on the strength of which the price was advanced about 3s. 6d. On the other hand, Bibianis and Taquah and Abosso went down. There is nothing doing in Egyptians these days, and the reconstruction of the Egyptian Mines Exploration was without effect. Broken Hills struggled hard to "cut" themselves away from the all-round depression, and were helped, to some extent, by the announcement of a 3s. dividend by the South Company, rumours having been current that nothing further would be paid. These were palpably absurd, because the report, dealt with in our issue of October 12, showed the company to be in a very flourishing condition, and the statements seemed to be based on nothing better than the directors' observation that shareholders must not be too exacting in the matter of dividends in view of the erection of the new mill and the change over from the old to the new. The better tone was unfortunately not maintained, but the movements on balance are unimportant. In the West Australian section Kalgurlis had a good jump, but Fingalls were dull on a cable reporting some falling off in values in the bottom level, and the tendency of all things was the wrong way towards the close. East Fingalls were put down to sixpence on the proposal to reconstruct with an assessment of 1s. on each 5s. share. The Associated Northern Blocks estimates its ore reserves at 149,181 tons containing 91,804 ozs. of gold, against figures a year ago showing 101,769 tons and 100,901 ozs., so that the position is appreciably worse. The shares were not affected. Among the Deep Lead things Australian Commonwealth Trusts fell to 1s., and Consolidated Deep Leads to "nothing to sixpence" on the proposal to amalgamate on the basis of an assessment of 5s. in the £. Readers will observe that this week's notes refer to no less than three reconstructions.

Not before it was time the market for Copper shares showed a bolder front. When the price of the metal got well below £60 per ton consumers came forward to buy moderate quantities, and on the strength of this and reports about a French supporting syndicate the quotation was rushed up at a tremendous pace. Even the Yankee seemed inclined to have a flutter in the hope that it would do the railway share market some good, but the said syndicate supplied all the metal required, and a sharp relapse followed. The extreme prices touched by Tintos may be mentioned, namely, 68½ and 72, and all the other things after rallying smartly fell away again. Amalgamateds were a good deal influenced by the course of the Yankee market.

Smelting operations at the Mount Molloy are to be suspended until the railway is completed or metal prices have risen. Tins went down with the metal.

In the Miscellaneous section the American group of mines inclined to dulness, El Oros, Mexico El Oros, and Esperanzas all going down, but Camp Birds were rather better. New Zealand things picked up in a small way, but Siberians eased off here and there. Cobalt Townsites hardened at one time, but could not maintain the improvement. Indians were fairly steady with a small gain in Mysores.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Deep Lead Amalgamation.—Anyone who read our remarks on the annual reports of the two principal deep lead holding companies, the Australian Commonwealth Trust, and the Consolidated Deep Leads will not be in the least surprised that a reorganisation with the inevitable assessment is contemplated. The two concerns are already in pretty close relationship, possessing certain directors in common, and the same secretaries, officers, and managers in London and Melbourne, and holding shares in each other. It is therefore quite in the order of things that a fusion is recommended. We need not recite the reasons that have led to the present deplorable position of the deep lead companies, in which the "holding" companies are interested, and to put the matter in a nutshell the former must have more money, and the latter have not got it to give. Calls are due on the shares held, and in order to provide these and leave a bit in hand, shareholders are asked to pay up to the tune of 5s. in the £. Details of existing capital are not of much interest now, especially as our advice to shareholders is not to throw good money after bad, and all we need say is that the new undertaking, to be called the Australian Deep Leads Trust, will have a capital of £300,000 in place of the present aggregate nominal amount of £450,000. The new shares will be 4s. each, 3s. paid, and 459,000 will be offered to the shareholders of the Australian Commonwealth Trust for exchange at the rate of five shares for each £1 share now held, and 913,639 to the Consolidated Deep Lead proprietors share for share. If all are taken up £68,631 will be provided, but existing demands will be met by calls aggregating sixpence a share, and only that amount is immediately asked for. A pitiful ending to the puffery that put deep lead shares up to big prices.

Hannan's Reward and Mount Charlotte.—Neither of the two mines which go to make up this undertaking can be classed among the brilliant successes, and while a nice little sum of money is required to explore the property in depth the directors evidently think the times unpropitious for attempting to raise it on certain suggested terms. These were that the Australian shareholders would find £25,000 if the London proprietors would provide an equal amount. If circumstances become favourable for carrying out such a plan the directors will not hesitate to let the shareholders know, but meanwhile they have another scheme. The company as it happens is making a very modest profit, and the idea is that if the capital were severely cut down dividends might be paid on the reduced amount and the provision of fresh funds thus be facilitated without calling upon the shareholders. The existing capital is £139,794 in £1 shares and it is proposed to form a new undertaking, to be called Hannan's Reward, with a capital of £17,500 in 140,000 shares of 2s. 6d. each, which would be allotted fully paid share for share to existing holders. We do not know any good reason why the scheme should be declined because shareholders sacrifice nothing, and they might gain. During 1906—the accounts are a bit late—18,450 tons of oxidised ore and 11,000 tons of sands were treated for a yield of 5,255 ozs. Receipts under all heads were £19,503 and expenditure £18,034, leaving £1,468 nett. A sum of £1,065 was brought forward and after providing £998 for depreciation on plant and machinery there remains £1,536 to be carried forward. No estimate of ore reserves is attempted, but additional stamps are to be erected and provided the ore in sight maintains recent values, which are low, the manager states that the company has several years' work ahead of it.

Colonial Consolidated Finance.—As promised at the annual meeting, the directors of this company have issued an interim report to the shareholders with the object of showing the "progress" made by the companies in which interests are held. It is not a very inspiriting production. Information is afforded about seven separate investments, beginning with investment securities, in which about £50,000 is held, excluding mining and rubber shares. These naturally show a decent sized depreciation, and we can but share the hope that with a return to normal conditions a recovery in their prices will take place. But the Millennium looks like arriving first. Short loans on security are fortunately well secured, but in connection with the freehold land and house property the company appears to be largely living on hope. There is a good time coming, however, of that the company's Western Australian representative has very little doubt. The Cosmopolitan Proprietary was obliged to close down its mill at the beginning of the year owing to the depletion of the ore reserves, but since then development work has been proceeding vigorously with encouraging results, so we are told, and milling operations have been recently resumed with 30 stamps. This concern, in conjunction with the Hannan's Proprietary, has secured a tin mine in Cornwall known as the Phœnix United Mine—back to the old country to restore shattered fortunes—and it is proposed to develop the property with the utmost expedition. Next we come to the Bellevue Proprietary, which has been reconstructed to provide money for the purpose of exploiting the Bellevue mine at depth, and finally to the inevitable rubber company, without which no finance corporation would nowadays be complete. This one is known as the Kurunegala Rubber Company, and in it are held 12,000 £1 shares, 15s. paid, out of a total capital of £20,000. "For the information of our shareholders a copy of the annual report and accounts of the company and a report of the chairman's speech at the general meeting just held are enclosed. A perusal of these documents will show the present position of that company, and will give an idea of the magnitude of the profits which may be expected to be ultimately realised by the undertaking." Evidently the directors feared to make us envious, because we didn't get these valuable documents.

Mount Lyell Consols.—In submitting their second half-yearly report for the period to July 31, the directors of this company tell us that the time anticipated for the erection of the concentrating plant ready for milling operations has been somewhat exceeded owing to an insufficiency of skilled labour, adverse weather conditions, and "other unforeseen causes which seem to be inseparable from works of this nature." This was written towards the end of August for submission to the meeting of shareholders held in Melbourne on September 6, and it was then expected that milling would be commenced about the middle of September. It has been decided to temporarily suspend the sinking of the main shaft, and connection of same with the underground workings in favour of the open cut system, which will in the first instance be more advantageous and economical, and a large body of ore will be treated in this way. The further sinking of the main shaft will be taken in hand at the first favourable opportunity. Meantime, in order to augment the supply of ore from the open cut, provision is being made to haul the ore from the No. 3 tunnel direct to the mill by a haulage line thereby saving a second handling and other expenses incidental to running the shaft. It is not anticipated that any difficulty will be experienced in keeping the mill fully supplied with ore after the necessary adjustments are effected. An efficient auxiliary water supply has ben provided for by the establishment of an electrically-driven pumping plant on London Creek, which the directors are advised will ensure the carrying on of milling operations throughout the year. There is now a debit to profit and loss of £1,921, but this is not excessive in view of the fact that the producing stage has been reached.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Argentine North-Eastern.—£1 10s. per cent. for six months ended June 30 on the ordinary debenture stock, payable Nov. 21.

Cordoba and Rosario.—£4 per cent. on the 4 per cent. income debenture stock: to set aside for investment in trustee securities £4,805 as a special reserve fund, in accordance with the provisions of the scheme of arrangement of 1895; £3 5s. per cent. on the 6 per cent. first preference stock.

Taltal.—Further of 4s. per share, making 7s. per share for the year, carrying forward £4,988.

MINES.

Broken Hill South Silver.—3s per share, payable Nov. 28.

Jubilee Gold.—25 per cent. (5s. per share).

MISCELLANEOUS.

Acadia Sugar Refining.—3 per cent. on the ordinary shares in respect of the year to Sept. 30.

Borax Co.—3d. per share.

Brookfield Linen.—12s. 6d. per share and 10s. bonus.

Bukit Rajah Rubber.—Interim of 10 per cent. on the ordinary shares, payable Nov. 25.

Burmah Oil.—15 per cent. per annum.

City of Buenos Ayres Tramways.—1s. 3d. per share for three months ended Sept. 30.

Continental Union Gas.—3½ per cent. for half-year on the ordinary stock, making 6¼ per cent. for the year.

Debenture Securities Investment.—Interim at the rate of 4 per cent. per annum on the preferred stock, and 6 per cent. per annum on the ordinary stock.

Egyptian Salt and Soda.—Interim of 4 per cent. on the ordinary shares.

Gartsides (Brookside Brewery).—Interim of 6 per cent. on the ordinary shares for half-year ended Sept. 30.

Grand Hotel, Eastbourne.—Balance of 3 per cent. per annum and a bonus of 4 per cent. per annum on shares Nos. 1 to 21,831 inclusive, making 10 per cent. (10s. per share), for the year ended Sept. 30, and on the new shares, Nos. 21,832 to 26,208 inclusive, at the rate of 6 per cent. per annum and a bonus of 4 per cent. per annum for a period from April 15 (up to which date interest at 5 per annum was paid) to Sept. 30.

Henry Bucknall and Sons.—2 per cent. on the ordinary shares for half-year, making 4 per cent. for year ended Aug. 31, carrying forward £7,038.

India General Navigation and Railway.—Interim of 2½ per cent. on the ordinary shares.

J. and P. Coats.—Final of 1s per share, making 2o per cent. for the year and a bonus of 2s. per share, placing £500,000 to reserve, £50,000 to employees pension fund, £100,000 to marine and fire insurance fund, £25,000 to debenture redemption premium, and carrying forward £853,000.

John Watson.—Interim of 8s. 6d. per share, being at the rate of 10 per cent. per annum.

Lascelles, Tickner and Co.—Interim of 4 per cent. on account of year to March 31.

London Platino-Brazilian Telegraph.—Interim of 1¾ per cent. on account of the year to December 31.

Manaos Improvements.—At the rate of 7 per cent. per annum for period ended June 30 (calculated from the dates when various instalments upon the said shares were paid) on the preference shares.

New Darvel Bay (Borneo) Tobacco Plantations.—Interim of 1s. per share to June 30.

Parkgate Iron and Steel.—Interim of 1s. per share for half-year ended Sept. 30.

Royal Bank of Scotland.—Bonus of 1 per cent. on the capital stock, to be paid at Christmas, along with half-year's dividend at the rate of 9 per cent. per annum.

San Sebastian Nitrate.—Interim of 3s. per share, payable Nov. 8.

Dolores.—Fourth interim of 3 per cent., payable Nov. 25.

Sir Elkanah Armitage and Son.—Interim of 3 per cent.

Texas Land and Mortgage.—Interim for half-year to 30th ult. at the rate of 10 per cent. per annum.

Wall Paper Manufacturers.—Usual of 8 per cent. on the ordinary shares, placing £60,000 to reserve fund, and carrying forward £108,305.

West African Telegraph.—Interim at the rate of 4 per cent. per annum for six months ended June 30.

West India and Panama Telegraph.—6s. per share on the first preference shares for six months to June 30, and 20s. per share on the second preference shares (on account of dividends accrued to June 30).

MINING RETURNS.

Brilliant Gold.—Crushed 560 tons; value, £1,380.

Briseis Tin.—Shipped 22 tons tin, including 11 tons for New Brothers Home No. 1.

British Broken Hill Proprietary.—2,247 tons crude ore produced 382 tons concentrates, containing 233 tons lead and 9,032 ozs. silver.

Broken Hill South Silver.—17,582 tons crude ore produced 2,858 tons concentrates, containing 2,000 tons lead and 51,444 ozs. silver.

Cerro Muriano.—Sold 326 tons copper ore, £3,500.

Chinese Engineering.—Output of coal 27,000 tons; sales, 15,000 tons; consumption, 1,500 tons.

Duff Development.—Prospecting dredge, 25 ozs.; No. 1, 13 ozs.; No. 3. 86 ozs. gold; total, 124 ozs.

Eaglehawk.—Crushed 1,600 tons, 212 ozs.; 126 ozs. cyanide.

Esperanza.—Crushed 43,430 tons dry ore; value, $482,981; concentrates, $358,134.

Pfeiffer's Day Dawn.—Treated 1,880 tons; value, including residues, £8,348.

Hyderabad (Deccan).—Output of coal 31,405 tons.

Mount Molloy.—Smelted 131 tons own ore, and 106 tons purchased ore, producing 10 tons blister copper; also quantity of matte containing 8 tons copper.

North Broken Hill.—Treated 2,300 tons crude ore, producing 385 tons concentrates, containing 263 tons 18 cwt. lead and 7,700 ozs. silver.

O. K. Copper.—Treated 657 tons of crude ore for 64 tons fine copper.

Orsk Goldfields.—Output 479 ozs., value £2,000.

Stratton's Independence.—Shipping ore 182 tons, averaging 1 oz 10 to 1-3 dwts.

Sulphide.—Milled 14,006 tons ore, producing 2,326 tons leady concentrates; also 21,727 tons tailings treated, producing 7,155 tons zinc concentrates and 42 tons leady concentrates; 2,459 tons leady concentrates, 187 tons residues, and 3,677 tons purchased ores smelted, yielding 1,726 tons lead, containing 172,600 ozs. silver and 8,975 ozs. gold; also treated 136 tons zinc concentrates, producing 37 tons spelter.

Books Received.

Notes on the Companies Act. By L. Worthington Evans. (London: Ede, Allom, and Townsend, Limited, Southwark Bridge Buildings, S.E.). Price 0s.

World's Work for November. (London: W Heinemann, 21, Bedford-street, W.C.). Price 1s.

UNION OF LONDON AND SMITHS BANK.—Deposit and current accounts on October 23 came to £35,779,925 acceptances and liabilities by endorsement to £4,567,057 and other liabilities to £598,974, while assets consisted of cash in hand and at Bank of England £5,975,012 money at call and short notice £6,090,420, investments including reserve fund £6,092,968, and discounts, loans and other advances £21,448,468.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and payments out of the Exchequer between April 1, 1907, and October 26, 1907 :—

The Investors' Review.

The Week's Money Market.

Bank Rate 5½ per cent. (Advanced from 4½ per cent. on October 31.)

Norfolk House, Friday Evening.

It was certain that our Money market could not escape the contagion of America's wasting sickness in finance, and people have been relieved rather than otherwise by the advance in the Bank rate to 5½ per cent. A jump of 1 per cent. was not expected by everybody, and it would not have been taken had the situation been usual. We should have had first a move to 5 per cent. and then a move to 6 per cent., but it will come to the same thing in the end. Thursday's advance of 1 per cent. is sure to be immediately followed by a move to 6 per cent., at which figure the rate appears likely to stand for some months to come. The Bank of England, in fact, may be deemed master of the open market for the next five months, and can hold rates firm if necessary. Most of the increase of £5,056,000 shown in this week's total of other securities is credit obtained by the discount of November bills, and these bills are not likely to be redeemed at maturity out of the market's own resources. The money will have to be again borrowed, and the first quarter of the next year brings the tax-gatherers along to denude current account balances. We must count, therefore, on high rates for a long time to come and be prepared to cope with the inconvenience and loss they may cause to many credit users.

Beyond 6 per cent., it is not thought probable that the Bank rate will be advanced. Some even go so far as to assert that the Bank of France will intervene with its gold to prevent our Bank rate from rising above 6 per cent. It is not in the power of the Bank of France to do this, because its own position is not impregnable and were it to allow its gold to come here to large amounts beyond the £3,000,000 both French and English money dealers have taught themselves to regard as the regulation sum the Bank of France's own rate might be forced up. We believe, however, that all it will be willing to do is to repeat last year's discount operation, and advance gold to the amount of £3,000,000, or perhaps more, against sterling bills on London. It will take no direct hand in financing the New York money market, but if we like to do so, it will find the gold necessary, within limits well understood, against English bills lodged with it or discounted.

The Bank of France, however, is not in a position to go very far in the way of helping the Bank of England. Its return for the present week shows an increase of £9,008,000 in the note circulation, which now exceeds £202,000,000, be it noted, while no increase worth speaking of has occurred in the gold in hand, which now amounts to little more than 55 per cent. of the notes in the hands of the public. No doubt the total bullion held against the notes, silver included, amounts to 73.60 per cent. of the active note circulation against 77.14 per cent. the week before, but in gold, which alone counts, the position is as stated, so that should the Bank be unable to draw in its notes and at the same time be driven by stress of circumstances to try and prevent our Bank rate from going above 6 per cent., it will be in considerable danger of a depreciation in its paper money. For similar reasons the Imperial Bank of Germany is unable to come to our support by helping us to meet the American, Egyptian, Brazilian or other demands upon our stock of gold now active or impending without causing a dangerous crisis to threaten every credit institution in the German Empire. Berlin is said to have allowed a little gold to go to New York in the beginning of the week, but it cannot go on letting the metal be exported, and is much more likely to be driven to buy it at no matter what cost. Adverse exchanges and threatened or actual withdrawals of gold for export forced the Reichsbank to put up its rate, and it will have difficulty even now in preventing gold from going away. Already the consignments sent to Holland, France and Italy have amounted to some millions of marks, and exchanges have not responded to the higher Bank rate as they should have done, nor has the open market in Germany backed up the Bank with the requisite energy.

What then is our position in regard to gold? It is most uncertain, but also most threatening. The jerkiness of the New York exchange occasionally leads people to hope that the power of Wall Street to take our bullion will soon be exhausted, but the exchange may be almost disregarded when imperious necessity drives American credit institutions to import the metal at no matter what cost. The purchase of £1,000,000 in our open market on Monday was at the highest price touched for years, and a good deal of the gold taken from the Bank went regardless of the rates of exchange. But how are United States' banks and financiers able to buy gold at all? They do not seem to be putting an excessive amount of bills on our market, and could only discount genuine produce bills in any event. Mere "kites" or accommodation paper is impossible. We asked a banker who is in the thick of American business by what means the gold was procured, and he led us to infer that securities are being pledged in order to raise the necessary credit. The United States undoubtedly possesses hundreds of millions sterling of first-class bonds which can be made available in this way, and by depositing them with the agents of London banks in New York and advising the banks here of the fact, gold may be shipped before the security reaches this country.

The natural course of our Money market this week has been determined altogether by this American demand for gold. Up to Saturday last the Bank of England was discounting short paper freely for its customers and the market at its 4½ per cent. rate, but the rapid development of the American gold hunger caused the directors to put their working discount rate up to 5 per cent. on Monday morning and their rate for advances to 5½ per cent. The open market immediately responded, and instead of struggling to get 4⅝ per cent. or 4¾ per cent. on three months' bank bills which it was usually obliged to take at Bank rate or not at all, the bill brokers promptly put their quotation up to 5-5½ per cent., refusing to do business in many cases and driving the bills to the Bank. Immediately after the Bank rate was raised to 5½ per cent. discount houses put their working rate up to 5⅜-⅝ per cent., which meant that general business could not be done appreciably under Bank rate. Some houses quoted 5 1/16-½ per cent., and just before the Bank rate was

raised a good deal of paper is said to have changed hands at 5¼ per cent., but it is more than probable that the open market will soon again be above the Bank as even if the New York demand for gold pauses or stops Egypt is bound to take millions away from us in the course of the next few weeks, and formidable demands may arise in other quarters. Meanwhile another £658,000 left the Bank this afternoon for shipment to New York by the *Lusitania*. It was known this would happen, and the market was strained not so much by the actual withdrawal as by the report that £300,000 is to be taken for Egypt to-morrow, and by fears of Stock Exchange complications. Open market business in discounts has, therefore, been arrested more than transacted at high rates. Bills accordingly went to the Bank, which discounted up to about £1,000,000, taking 30-day bills for the most part, and also three months' bills for its customers at 5½ per cent. It also lent some £300,000 at 6 per cent. for a week, although some people claimed that balances were to be had outside at 3½ per cent. But the holders were not lending to anybody. The banks have been getting 5 9/16 and 5 5/8 per cent. to-day on bills bought from the market or the brokers, but the discount market has been afraid to work even at 5¾ per cent., such is its nervousness.

Short loan rates, however, have not been severe at any time throughout the week, and after the Bank rate was put up yesterday it was not at all difficult to procure seven-day loans at 4½ per cent. The call money rate has jumped about a good deal, rising to 5 per cent., but also occasionally dipping to 3½ per cent. The fact is such heavy amounts have been obtained at the Bank of England during the week that the market has not been impoverished to the extent it would otherwise have been by the exports of gold. The reserve is down £3,185,000 and now amounts to only £20,834,000, but even that is £2,676,000 more than the reserve of a year ago, while the other deposits are at £44,852,000, actually £4,758,000 higher than then, and on the week they have risen £1,052,000 simply because much more than the amount by which the reserve is denuded has been made good through borrowings at the Bank. There was a small increase, too, in the public deposits or Government balances, but these are even now £2,317,000 less than they were a year ago, and the Treasury is really behaving very well in keeping its balances down.

Less than £400,000 in raw gold will be in the open market next week. The price of bars is still 78s. per oz., and New York the probable buyer.

Calls on new issues due next week are unimportant apart from the £375,000 due on Kowloon bonds and the £750,000 on Water Board bonds next Wednesday.

SILVER.

Stocks of spot silver continue unusually large, and the market has therefore been all the more sensitive to the influences of dearer money. Business during the greater part of the week has consequently been all one way, and the pressure was strong enough to drive prices down to 27 7/16d. per oz. for cash and 27¾d. per oz. for delivery two months forward. At this level there was some buying back by the bears, and a reaction to 27 9/16d. and 27 7/8d. per oz. respectively followed. The market, however, did not hold long at those figures, and final quotations are 27½d. and 27¾d. per oz. Tenders for the Rs. 30,00,000 of Council drafts on India offered this week were again all in bills, and amounted to Rs. 1,70,65,000. Of these only Rs. 26,65,000 were allotted, applications at 1s. 4d. receiving in full. Next Wednesday another Rs. 30,00,000 will be offered.

BANK OF ENGLAND.

The Stock Markets.

Why should markets have hardened when the Bank of England put its rate up by 1 per cent., to 5½ per cent? The newspapers, with few exceptions, try to make out that things are going to be really better now because of his little spurt, and one organ is so prominently foolish

as to talk of a "boom" coming in Home Railway stocks. Nothing could be more misleading than language of this kind. Stocks hardened because a few bears "climbed in," as the market phrase is, on the event. What they had played for had come, and they immediately closed their speculations open for the fall. In buying back they naturally caused prices to harden a little, but the smaller "bear" account remaining open makes markets really weaker than they were. There is a narrower area to spread sales over. Home Railway stocks, however, rose for another reason. The story went round in the afternoon that an agreement had been reached at the Board of Trade conference between the railway directors and Mr. Lloyd George. Some said one thing, some another, but it appears to be by no means improbable that something like a compromise may have been arrived at whereby a semblance of concession will be made to the men led by Mr. Bell at the same time that the *amour propre* of the directors is saved. This at least is the most plausible story, and as the continual threats of a strike have brought into existence a rather extensive bear account in these stocks, the circulation of a rumour pointing to the removal of all fears of a general strike amongst railway servants naturally drove the "shorts" in with a rush. Hence the rise in prices, a rise that will not go far or continue long.

Are we, then, to expect a continuance of the present harassing and impoverishing decline in prices for all speculative and most investment stocks? Yes. The crisis upon which our market is now entering, for all its spasms of recent months or years have been merely preliminary warning, has its roots far back in the days before the Baring crisis of 1890. Throughout all the intervening years until the African War broke out inflation prevailed everywhere, and prices were screwed up to dizzy heights. All that has happened since 1900 represents nothing more than stages in an inevitable settling down to levels more in accordance with common sense and common sanity than existed before that date. Dear money will once more accelerate this liquidation, and there is no knowing what may happen before it is finished. So the only advice we can give continues to be embodied in the stale, old, often iterated warning to close speculative accounts for the rise carried on borrowed money. The man who, in the present state of the money markets throughout the world, buys stock and carries it from account to account on contangoes, or pawns it with any banker he can find willing to advance the necessary money, will not have to wait until he gets to the next world to become familiar with the pains of hell. Speculation on open account tends to the impoverishment, if not the ruin, of at least 999 people out of every 1,000 who take to that form of amusement, and the present is the worst time we have ever known in a long City experience for gambling of this description.

It does not, however, follow that investment should stop. Provided the buyer puts away only his own money in securities of a solid description there is no reason why he should not come into the market now, or no reason but one. It is perfectly vain for anybody to buy just now in the expectation of an immediate rise in prices. All markets are likely to go lower instead of higher, during the next few months at least, and the paralysing effects of such a credit *débâcle* as is now spreading devastation throughout the United States will be felt there and here for years to come. Those, therefore, who have money to invest must give their exclusive attention to the quality of the security and do their best to be certain that the interest or dividend yielded is safe under all foreseeable circumstances. To those who are willing to disregard market changes and depreciations that may go further before a genuine and durable recovery sets in the opportunities of picking up good stocks at prices yielding from ½ to 1 per cent., or more than could have been obtained on them some years ago, promise to be numerous this winter, and are not so absolutely rare even now. But nobody ought to enter into any Stock Exchange operation calculated to disturb the mind, because it is through the mass of embarrassing commitments that panics are generated. Well balanced minds, unhampered by fear, or by the contemplation of losses that may actually be, or that threaten to be, overwhelming, do not readily become the prey of every rumour, but when dread of loss permeates the community the public mind tends to become charged with apprehension to such a degree that a slight incident, or an incident that seems trivial, may precipitate a wild outburst of insanity. Everything and everybody become objects of suspicion, and a lightly-spoken lie about a bank's credit may bring on a panic. Happily, we do not think that there is a danger of this kind overhanging the London market. As has often been said in these columns, a cutting down of commitments has been going on there for many months, indeed, for years past, and only the comparatively few are now in that condition of mind which forebodes an outburst of panic dementia. We therefore look to see our Stock Exchange facing the troubles lying immediately ahead with unusual equanimity, and the more calm everybody is the better able will not only the market but the whole country be to cope with the difficulties as they arise. We do not see anywhere cause for alarm in the state of credit here, in the condition of our banks, or in the speculative positions on the Stock Exchange. Most of our banks were never stronger in cash and other available resources than they are to-day, and poor though the Stock Exchange may be, harassed as many of its members are by the inability of their clients to pay up differences due, thin as the stream of business is, we do not anticipate anything worse than dropping failures such as occurred at the settlement just concluded.

CONTANGOS.

Money was naturally dearer at the carry over on Monday than at the beginning of the nineteen day account now closed. Bankers charged 4½ per cent. to most Stock Exchange borrowers, and some of them had to pay 5 per cent. A week ago we thought 4½ per cent. might be the minimum rate demanded, but the Bank of England had not then put up its working discount rate to 5 per cent., and its rate on loans to 5½, as it did on Monday without changing the published minimum. Actual contangos, however, were not proportionately raised, and on some Home Railway stocks they were less, a proof that the bear position had been considerably increased during the account. On Great Eastern, North-Eastern, and North British deferred, however, money was 1 per cent. dearer, never less that is than 5½ per cent., and occasionally 6½ per cent. On North-Western, South-Eastern deferred, Caledonian deferred, and perhaps others the contangos expressed in fractions were slightly less than in the middle of October, and Brighton deferred was, as usual, in short supply, while on Midland deferred the rate was the same as before, and that of itself indicated that there were more accounts open for the fall. In the Foreign market money was just as easy as usual and as little wanted. The most that could be got was 5 per cent., and on many stocks it was difficult to get 4 per cent. On American Railroad shares, however, money was 1 per cent. and sometimes 1½ per cent. dearer, touching 7 per cent. Usually, however, the quotation was 5 to 6 per cent., as against 4 to 4½ 19 days before, and that the rate jumped so little compared with the appalling quotations for day-to-day money on Wall Street shows that here also the bear had been active. Bears have also been busy with Mexican Railways, which cost less to carry over, and on Canadian Railway issues, on all of which the contango was light, somewhat less than last time. Hudson's Bay shares, too, were scarcer for delivery, and lenders on them could get no rate at all, bears, in fact, had often to pay 2s. a share to get the shares necessary for delivery.

TRUSTEE SECURITIES.

It must be confessed that cheerfulness of mind has been difficult to cultivate this week, for rarely has a nineteen-day account been completed under more distressing circumstances. It was dwindle, dwindle all the time, and although Consols now and then rose slightly, there was no force behind the market to sustain the advance. On the week, therefore, the stock is down 17s. 6d. for the December account, and the cash price is 15s. lower. We think the market would have been

weaker than it is but for sinking fund purposes and the small amount of routine investment business always going on. Other trustee securities were certainly more depressed, London County 3 per cents. having fallen 30s., and the various India stocks from £1 to 30s. Selling of India stocks is prompted by the prospect of famine in that unhappy dependency, as well as by political unrest. Home Municipal stocks have also suffered to some extent, and Brighton, Bournemouth, and Eastbourne stocks are all prominently flat. The securities of our watering places are the least to be trusted of all Home Municipal issues, and holders naturally fear that the poverty resulting from the crisis we are now labouring through will cripple many of them by reducing for a time the number of their devotees. Generally speaking, however, Domestic Municipal stocks have been left alone, and their prices are merely hollow. Colonial stocks have been the pleasant exception in this class, most of the changes in them being gains, but they also are without business for the most part, New Zealand 4 per cents. alone having attracted any appreciable amount of investment. We have nothing to say about Colonial and Foreign Corporation stocks beyond noting their comparative steadiness.

Foreign Government Bonds.

Distress sales on account of New York have slackened in Japanese bonds, and they steadied yesterday, but on the week the leading ones have lost 15s. to £1, and Foreign Government bonds of all descriptions have betrayed the uneasiness or distress prevalent on all bourses. Paris valiantly keeps up the prices of Russian bonds, but there is scarcely another security or group of securities in all this market that has shown resistance. German 3 per cents. have fallen 2 on the advance of the Reichsbank rate to 6½ per cent., and Argentine and Brazilian bonds are all down on the week, while the fall in Chilian stocks has been quite distressing, the 1892 and 1896 loans, as well as the latest 4½ per cent. issue closing 2½ lower than they were a week ago. All the others are 1 to 2 down. Very little selling has taken place, and that is well, because did holders rush to throw away their possessions the market would go to pieces. But there is no disguising the fact that Chili is suffering from many embarrassments, from the effects of the great earthquake, from the fall in the price of copper, and from excessive recourse to paper money. The country will pull through, we believe, helped by its nitrate and by its other mineral and agricultural resources, by the completion of the Transandine Railway also, but the times immediately ahead promise to bring many and serious afflictions.

Home Railway Stocks.

In spite of yesterday's jump in these stocks, prices for some of them are lower than they were a week ago. The rally, however, carried up North-Western, Midland Deferred, Brighton Deferred, Great Western and Great Northern deferred by from 1 to 2½. Caledonian and North British stocks also firmed up towards the end of the week, and closed either unchanged or at some improvement. The only prominently weak stocks, indeed, were Central London, City and South London, Great Northern preferred, and Furness, but it is a pleasant interlude to find any section of the market capable of showing strength. Preferences, however, were lower, and some of the debenture and guaranteed stocks lost ½ to 1, because selling continues, and now and then overcomes the investment buying. Among preferences the weakest group was again that of the Great Central, and its 1894 stock was dealt in yesterday at 39¼. Most of the later North British preferences are also 10s. down, and the arbitration and second preference stocks of the Chatham company fell 3 and 2 respectively. Great Eastern preference alone left off better.

Traffic receipts continue to show encouraging gains. For the past week, the seventeenth of the half-year, the *Railway News* computes the increase at £73,220, the week's gross income having been £2,111,955. This makes the aggregate to date £39,763,783, which is £1,230,165 more than in the same period last year. The length of line operated now has increased by only 42 miles.

Indian and Colonial Railways.

Little has happened amongst Indian railway stocks, which are mostly steady. In the Canadian railway market, however, the activity has been great, and the bears have been on the whole triumphant, in spite of the frequent rallies in the Canadian Pacific shares, and the strenuous efforts of banking interests in Canada to reassure the public mind. Trouble is coming in Canada in spite of these assurances, for the simple reason that an unbridled gamble in land has been going on for some years back, as well as in securities of various descriptions, representing the somewhat rickety industrial projects started within the Dominion under the shield of a drastic tariff. In spite of a spurt caused by bear profit-grabbing, Canadian Pacific shares were last night 6½ below the price of a week ago, and Grand Trunk ordinary and third preference stocks closed 2¾ and 3 down. Even the first and second preference stocks of this company finished 2½ to 3½ lower, and they ought to be avoided, every one of them, because it is simply impossible that Canada can escape the consequences of its imitation of Yankee recklessness or of the loss of the Yankee capital by help of which much of the dangerous land gambling out West has been sustained. The Trunk Company's monthly statement was bad enough to indicate what is coming. Naturally, the bonds of Rhodesian Railways guaranteed by the Chartered Company have continued to slump, for the City editor of the *Morning Post* has been plying that market with his sledge hammer, and working fearful havoc. Mashonaland debentures are, accordingly, 4 lower on the week, and those of the Rhodesian Railways 6 lower. Money has been scraped together to meet the coupons due to-day on the two Rhodesian Railway debenture issues, but we fear this will be the last coupon paid for a long time to come unless the guaranteeing parent company can raise more capital. It will not be able to do that in the present state of the money market, and, therefore, we fear that those who stick to these securities will not make money.

United States Railroads.

An astonishing business has sometimes been done here in leading Yankee railroad shares considering the paralysis of Wall Street, but probably enough many American operators have taken to play in London, and locally the bear has been most active as is proved not only by the comparative lightness of contango rates mentioned above, but also by the repurchases on London account that frequently take place on Wall Street. For all that the slump of the week has been severe, and our figures take no account of what occurred on Wall Street yesterday when the stocks of a firm that recently failed are said to have been thrown on the market at no matter what sacrifice. The result was that Pennsylvania shares closed on Wall Street last night $4⅝ below the previous day's price, while Milwaukee Preferred lost $4, Southern Preferred $3¾, Atchison Preferred $2½, Union Pacific Common $2, and Atchison New York Central and Northern Pacific $1½ each. On the week Union Pacific show a gain of $½ in our tables, but Pennsylvanias are down $1⅜, Milwaukee $5, New York Central $3, Illinois Central $7, and Reading $1. Norfolk Ordinary, however, stands out prominently with a recovery of $1½, and Ontario Ordinary also gained $1, the losses in other instances being generally insignificant. The bond market has also begun to suffer severely, and all the Erie issues below the prior lien are $2 to $5 down, while the losses in Atchison bonds range from $1½ to $2½. Northern Pacific and Great Northern joint bonds have also lost $1½, as well as Reading general bonds, and Southern Pacific Gold bonds are $5½ down. We quite expected the decay to extend in this direction, and as the distress spreads and permeates the community, the bond market promises to become more and more disturbed.

Foreign Railways.

The heaviest losses on the week amongst prominent Foreign Railway stocks have been in San Paulo and

United of Havana common. They have fallen respectively 3 and 3½. The lower bond issues of the United Railways of the Havana are also 2 to 3 down, more a reflection of American distress than the result of active selling here. All other Foreign Railways are in the same plight, and although the Argentine group has resisted with fair success, the uncovered stocks have none the less slipped back from 1 to 3 during the week. Great Southern and Pacific ordinary stocks are both 2 down and Rosario ordinary and deferred have lost 2½ and 2, Cordoba and Rosario first preference 2½ and Cordoba Central income debenture stock 4. Many bond issues are likewise 1 lower and sometimes more, but business has been of no magnitude except in Rosario ordinary stock, and to a less extent in Pacific and Great Southern stocks. Buenos Ayres Western stock has suffered heavily, closing 3 lower on no great volume of selling. Antofagasta stocks have dropped back, even the scrip of the new debenture stock falling to 104½. The deferred is down 5 and was dealt in yesterday at 117. Mexican Railway stocks have been hammered at by the bears, and are 1 to 2½ down on the week. Leopoldina stock has also suffered. Nothing can be said to have escaped the contagion, and even the shares and obligations of the Royal Sardinian Railway are 5s. lower on the week. Out of the entire list there are not half-a-dozen improvements, and they have occurred only in obscure securities like the second debenture stock of the Cuban Central Railway or the second debentures of the Costa Rica Railway and the permanent debentures of the Central Uruguay Company.

BANKS, BREWERIES AND COMMERCIAL SECURITIES.

Bank shares have not been such a favourable market this week as last, but some of them, especially the shares of the great London banks, have been steady and in a few instances have risen. Union of London shares, for instance, are up ½ and London and Provincial ¼, but others have lost the same fraction, and apart from Hongkong and Shanghai, Anglo-Egyptian, London and River Plate and Canadian Bank of Commerce shares, movements amongst Foreign Banks have been unfavourable. National of Egypt are ⅜ down on the week. The shares of discount companies have also been barely steady. Among Brewery securities the changes are more numerous and nearly all unfavourable, but there is still no business in that part of the market.

India Docks preferred and deferred stocks have given way on a sale or two now and then, and in the Commercial and Industrial group the only consoling advance has been in Coats ordinary shares. They have risen on the week ⅛, and the wonder is they have not gone up further, for the report just issued is the best the company has ever published. It shows a nett profit of £3,056,125 or £148,000 more than a year ago. The market expected a bonus of 1s. per share, and gets 2s., making 3s. in all for the past quarter, or 6s. for the year on the £1 share. In other directions this great market has shown fewer signs of depression than might have been expected. For all that, Motor company shares are weak and declines have occurred in the shares and debentures of not a few trading companies. The debenture stock of the British Westinghouse Company, however, has risen 5 and Price's Patent Candle shares are ½ better, while A. and F. Pears preference shares have risen ¼ and the shares of the United Alkali Company ⅛ to ¼. These are about all the favourable movements we can light upon throughout the list. The market for Nitrate shares is still depressed. Nobel's shares are ¼ down, Underground Electric Profit Sharing Notes have been put down 2 and Spiers and Pond's preference are ¾ lower. Linotype shares have also shed a few pence on the report just published, and there has been no activity at any spot. Small investment buying is said to be visible in places, but the markings in the official list rarely give indications of it. Waring and Gillow's debenture stock, it should perhaps be mentioned, has again been put down 1, and the quotation of 76-79 shows that business in it must be difficult. Eastman-Kodak shares are heavily down, the common losing $20 on the week, and so on the tale runs.

Few changes have occurred amongst Electric securities, and we need only note declines of 2 in Mexican Electric bonds and of 5 in Montreal Light, &c., certificates. Canadian Electric shares are also again lower. The changes amongst Financial, Land and Investment descriptions are adverse with rare exceptions, but not numerous, and they will all be found noted in the week's price movements. Business has been a little more active in Hudson's Bay shares, and they have resisted the pressure. Santa Fé Land shares, in which dealings have been fairly active, have risen a few shillings, and the decline elsewhere has not been severe, although Egyptian Delta shares have suffered: in fact, all the Egyptian things of this class. Movements amongst Financial Trusts have been in harmony with but few exceptions, and the rare changes in Gas stocks have been against the buyer. Insurance shares likewise show declines now and then, but they are never serious, and some, like Sun Life, Ocean Marine and General Accident, closed rather better.

IRON, COAL AND STEEL, SHIPPING, TEA AND TELEGRAPH STOCKS.

United Collieries debentures are again down 4, kicked by Glasgow, and all home securities in this class have suffered except those of the Cammell, Laird Company, in which there has been a brisk recovery, which has extended to the first debenture stock. The second debenture stock, however, is down on the week. What has caused the recovery we have not heard, but probably Government smiles in the shape of new contracts are at the bottom of it. Carnegie Combine shares have gained ¼, as measure of the confidence inspired by the quarter's show and dividends.

In Shipping nothing particular has happened, though prices are not vigorous, but a few small movements about equally divided between rises and falls have taken place in Tea company securities. Eastern Telegraph preference stock has dropped 3, and now looks cheap enough, but the ordinary has recovered 1, and Telegraph issues in general are steady enough. Anglo-deferred has risen ¼ and Marconi shares have lost ¼. B.E.T. shares have been rather depressed, but Havana Electric Tramway bonds have risen 3 and L.G.O. stock 1.

The Stock Exchange and Bourses in France, Belgium and elsewhere have been closed to-day.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: 2⅛ p.c. Ann., 1905 and Ac. both 1, to 80½-80⅞, Irish Ln. Stk. Ac. 1¼, to 83½-8⅛, Exchequer 2⅞ p.c, Bds ½, to 96-97. Transvaal Gov. Ac. ⅜, to 92¼-93¼, Bk of England 1½, to 269-274, India 1931 Ac. 1, to 98¼-99½, do. 1948 Ac. 1½, to 85-86, do. 1926 Ac. ½, to 71-73.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

MEXICAN RAILWAY CO., LIMITED.

Forecasts of this company's dividends for the first half of the current year were fairly unanimous in putting the distribution on the second preference stock at the full rate of 6 per cent. per annum and the gain in nett revenue would easily permit a payment at that rate. The directors, however, were anxious to make provision against the depreciation on securities held, in view of the approaching necessity of realising some of the investments, and decided to restrict the dividend to 5¾ per cent., although it would have taken less than £1,300 to pay the extra ¼ per cent. A very encouraging improvement of $475,667 to $3,972,325 is shown in the gross revenue for the six months, but working expenses rose by $358,103 to $2,231,137 and the gain in nett earnings was therefore only $117,564 at $1,741,188. The number of passengers carried was 80,847 larger and the receipts from passengers and luggage advanced by $98,654, while the express service proved very remunerative, and brought the total increase in passenger traffic up to $153,502. In goods traffic there were increases of 14,082 tons in National goods and 8,052 tons in foreign goods, making the total carried, apart from the company's own material, 410,426 tons. Foreign goods yielded $153,502 more and National goods and sundries rose by $142,555. The principal increases in the items were in wheat, flour, and other mill products, cotton, sugar, tobacco, groceries, and miscellaneous goods, while shipments of barley, coffee, and even pulque were all lower. Most of the increase of about £36,000 in working expenses is due to £30,000 having been carried to special renewal accounts for renewal of bridges, permanent way, and rolling-stock, compared with £20,000 a year ago, while there was also an advance of some £15,000 in the cost of fuel. Another £7,000 is due to the fact that the express service was working for six months against only two months in the corresponding half of 1906. The average rate of exchange during the six months was 24.624d. compared with 24.846d., and converted into sterling at that rate the nett income was £178,046 or £10,500 up. Profits on the Vera Cruz Pier and launch service rose by £1,539 to £14,870, and with £3,349 or £1,106 more from interest and fees received in London, the total surplus, after deducting £278 for loss on exchange, showed an improvement of £12,898 at £106,503. After paying debenture interest and writing an extra £500 at £2,000 off suspense account, the directors allow £3,500 or £2,500 more for depreciation of investments, which they say would leave a deficiency not exceeding £1,500 if the investments were realised at present prices. The balance then remaining is £131,603 or £10,898 more, out of which the first preference dividend is paid, and the second preference stock receives, as above-mentioned, 5¾ per cent. per annum, or 2 per cent. more than for the corresponding period of 1906, leaving £400 to be carried forward to the credit of the second preference stock.

San Paulo (Brazilian) Railway Co., Limited.

Owing to the big coffee crop the receipts of this company's main line for the six months ended June 30 improved by no less than 72·85 per cent. to a total of $12,863,855, and although the average rate of exchange was nearly 1d. lower at just over 15d., the sterling equivalent showed the very satisfactory advance of £320,702 at £833,188. The number of paying passengers carried increased by 47,300 in the first-class and 91,700 in the second-class, but this branch of traffic only yielded £4,316 more, while parcels gave an additional £1,636. Goods traffic, however, rose by £310,835 to £726,355 as the result of an increase of 380,000 metric tons, of which 340,000 tons were coffee and general goods and the remainder low-grade traffic, such as coal, bricks, and building materials. It is worth noting that the number of immigrants receiving free transport for themselves and their luggage, agricultural implements, &c., from the seaboard to the interior was only 9,759 compared with 36,035 in the corresponding half of 1906. The company is still following out its policy of spending freely on the upkeep of the line, and the outlay on maintenance of way and stations rose by £52,519, while carriage and wagon repairs cost £64,312 more. Cost of tractive power, too, was £13,373 heavier, traffic expenses were £8,416 up, and with large increases in general and law charges, taxes, &c., the total expenses in Brazil were £158,854 up at £505,601 or 60.28 per cent. of the income. Nett revenue was consequently £161,816 better at £324,972, which was reduced to £315,546 by the deduction of the expenditure in England on administration charges and interest on stores. Receipts of the Bragantine line improved by 55·07 per cent., but expenses were heavy at 83·45 per cent. of the income and the nett surplus was only £2,490. Interest on investments gave £12,043 making a total nett revenue of £330,070, and with £321,626 brought forward the disposable surplus was £651,705 against £318,811. Of this £100,000 is put to reserve and £26,125 is applied in writing down the holding of Consols to 82, and after paying debenture interest and preference dividend, the ordinary stock receives in addition to the usual dividend of 5 per cent. for the half-year a bonus of 2 per cent. or 1 per cent. more, and the sum carried out is reduced to £243,705. The directors explain that the extra bonus of 1 per cent. is to give effect to the chairman's remarks at the last meeting to the effect that an additional bonus of 1 per cent should be paid out of the earnings of the Bragantine section and the receipts from interest. These were not sufficient during the six months to meet the extra payment, but as the amount brought in includes revenue from these sources it has been drawn upon to provide the difference. The company would seem for the present to have reached its high water mark of prosperity during the past six months, and, so far as can be judged, the results of the current half-year will not be anything like so good. For one thing the coffee crop is considerably smaller, being estimated to yield about 6,500,000 bags or 390,000 tons, which is just about half the figure given a year ago, and these figures would seem to be borne out by results, seeing that the decrease in gross receipts for the 16 weeks to date already amounts to £336,341.

White Pass and Yukon Railway Co., Limited

Receipts from dividends and interest on shares and securities of the local companies through which this undertaking works amounted for the year ended June 30 to £149,767, and with small sums from interest on bank account, transfer fees, &c., the total income was £150,209. Of this debenture stock interest took £52,669 and administration and other charges £6,442, and £3,194, or one-fourth of the commission for extension of the 6 per cent. mortgage debentures was written off, leaving £87,904 as nett profits. Adding £14,765 brought forward, the total available was £102,669, out of which £16,586 is transferred to the sinking fund, and after paying dividends aggregating 5 per cent. for the year the sum carried out is increased to £17,333. The shares, mortgages, and debentures of the local railway and navigation companies stand in the balance-sheet at £2,374,011, and against these the sinking fund which constitutes the only reserve will now amount to £105,980. Of this £87,151 is invested in £94,431 of the company's own 5 per cent. first mortgage debenture stock and £2,244 is held in cash by the trustees. Sundry creditors are trifling, and although cash is small at £684 the balance due from local companies reaches £98,900.

Demerara Railway.

In the half year ended June 30 this company made a nett profit of £6,189 on the working from which debenture interest took away £1,400, leaving the free revenue at £4,789. To this the Government subsidy of £6,250 has to be added together with a balance of £1,693 brought forward, so that the entire disposable sum was £12,732, out of which both preference shares got their dividends and £1,500 is carried to the renewal fund. This leaves £957 to carry forward, the ordinary shareholders as usual getting nothing. Passenger business in the half-year was better on the main line and on the West Coast Railway, but showed a small decrease on the Berbice Railway. There was also a considerably larger goods business done upon the Demerara line and rather more upon the Berbice line, but the West Coast Railway showed a small decrease. It is mentioned that the boiler explosion in January, 1906, has cost the company £745 in damages to the employees, this sum including costs. It has been charged to the working expenses of the half-year. No fresh capital was spent during that time.

Carrizal and Cerro Blanco Railway.

The directors of this Chilian undertaking state that, instead of an improvement as was anticipated, there was a decrease in the carriage of ores during the six months ended June 30, owing to the scarcity of labour at the mines and elsewhere. Other business, however, seems to have been better, as, notwithstanding this decrease, receipts from freight traffic improved by $32,737 to $139,248. Passengers, luggage, water traffic, and sundries also showed gains, and with £2,809 received from loading and unloading ships against nothing from this source a year ago the total revenue was $42,712 larger at $162,110. Expenditure under all heads rose by £20,571, leaving nett earnings $22,141 up at $62,844, to which was added $6,200 from the previous account, making $69,044. After transferring $5,000 to the fund for repairs, writing $1,660 off the cost of extraordinary renewals, and providing for interest and property tax, a balance of $60,681 was left, out of which $545 is added to reserve and a dividend of 3½ per cent. is paid, leaving $7,637 to be carried forward. With a capital of $1,500,000 the company has accumulated a reserve of $12,558 and a repairs fund of $13,035, while the outlay on the line amounts to $1,182,528, on the rolling-stock to $226,731, and on the workshop and machinery to $31,928. Liabilities, including $1,306 on the Manganese Railway and $1,500 for loading and discharge of ships, are small at $12,209, against which sundry debtors owe $49,713; but the stores account is fairly large at $133,411, and the company has had to obtain an overdraft of $29,270 from the Bank of Chile and Germany.

Linotype and Machinery, Limited.

Again this company shows a slight increase in its profits—that is to say, the free balance brought out after providing debenture stock interest, sinking fund and other fixed charges was £75,145 or £2,467 more than the year before. Trading profits were only about £446 up at £156,868, but there was a reduction of £2,020 in the fixed charges, making the total decrease in two years £9,448, and some slight savings were effected in other directions. Administrative expenses, for instance, required £2,149 less. It only requires £57,000 to pay the dividend on the 6 per cent. cumulative preference shares, but they do not get that dividend. All the directors propose to do is to pay instalments on arrears of the dividend on the cumulative preference shares equal to 2 per cent., one-half of which will be distributed next March and one-half on September 29 next. The truth is the company has no fresh resources, and cannot part with its money. As the directors candidly enough explain, the accumulated profits amount with last year's balance to £244,287, and all this, less the small payment on account of preference dividend arrears, is to be carried forward because the money is absorbed in the business, and because capitalisation is still appallingly in excess of earning power. Patents and goodwill alone, for instance, of the Linotype Company and the Machinery Trust, now amalgamated and taken together, amount to £1,838,663, no less than £9,501 having been added to this formidable total during the past four years. The cash at banks and on hand amounts to no more than £45,631, and debtors on open account owe £535,094, after writing off £73,061 on various accounts. Then the shares and debentures held principally in associated companies together with £82,568 of the company's own debenture stock figure at the cost price of £415,986, while stock on hand amounts to £392,134, the balance-sheet altogether amounting still to £3,652,709. There are not anywhere amongst the assets realisable resources shown, and the directors are impelled to take the course they do, no matter how disappointing it may be to the shareholders. They have debenture stock of £1,336,234 to carry, and the current indebtedness was at the date of the balance-sheet £96,606, so the whole of the profits past and present have to be utilised in the business to help the management in making headway against competition. Will things ever be better with the company? Not much, it is to be feared. Continuous students of its balance-sheets can only feel thankful that it is no worse. Increased credit facilities were given last year to customers, and that and the increase in stock absorbed £46,989, or a large portion of the year's cash income locked up, but there is also an increase of £29,629 in the balance owing to the company from customers representing sale contracts, hire purchase agreements, &c., and cash, although small, as mentioned above, is still £12,210 better than it was twelve months back, so the business moves and gives room for hope.

Otis Steel Co., Limited.

Considering that this company's trading profits in the twelve months ended June 30, 1906, increased by no less than £70,736, the further improvement of £22,207 to £158,443 for the past year must be regarded as very satisfactory. The directors, however, are fully alive to the fact that the period of prosperity for the steel and allied trades in the United States has now practically come to an end, and are prudent enough to make provision against the inevitable relapse. Hitherto, they say, the usual practice of industrial companies has been followed in presenting the accounts, and credit has been taken in the profit and loss account for all profit earned during the year, including that which has not been actually realised in cash, but hereafter only profits actually realised will be shown. By way of making a beginning, £37,000, being the estimated amount of profits unrealised at the end of the year, is deducted from the above total and placed to a suspense account to be dealt with during the current year. This adjustment made the income, including £5,056 or £1,493 more from interest and transfer fees, is £13,300 down at £126,499, and after meeting administration charges, interest on prior lien debentures, and the special grant of £1,050 to the directors voted at the last general meeting, the surplus was £120,184 compared with £132,948. Under the agreement with the trustees for the "A"

and "B" debenture stockholders, £12,500 of this must be written off for depreciation and another £8,756 is absorbed by the payment of interest on the "A" debenture stock. Of the remainder, one-half or £52,390 is applied to redemption of debenture stocks, and another £25,000 is transferred to reserve, after which interest is paid on the "B" debenture stock, and the consolidated stock again receives a dividend of 5 per cent., leaving £4,391 or £1,463 less to be carried forward. A year ago £55,505 was set aside for the redemption of debentures, and this, with a balance of £40 in hand and £4,383 appropriated in anticipation from last year's profits, was employed in the purchase of £65,287 prior lien "A" and "B" debenture stock at a cost of £59,994. It is now announced that the whole of the outstanding prior lien debenture stock will be repaid out of the funds available. Additions to the property cost £28,929, but the above-mentioned £65,287 was written off, and after deducting the sum now provided for depreciation, this item will stand at £532,089. The reserve, however, amounts to no more than £44,850 or about 8¼ per cent., and we would have liked to see this fund considerably larger. Floating liabilities are comparatively light, the increase during the year being the trifling one of £1,720 at £57,471, while debtors and bills receivable have risen by £23,219 to £157,648, against which there is, of course, the suspense account of £37,000 as a kind of reserve against bad debts. Cash is £3,510 higher at £88,737 and stocks show an advance of £9,987 at £101,463.

Electrolytic Alkali Co., Limited.

The directors express regret that their hopes that further developments during the twelve months ended August 31 would show better results have not been realised, but claim that the failure was due to circumstances beyond their control. Market prices of the company's products were abnormally low compared with those of other heavy chemicals, and the improvement in values obtained in other branches did not extend to its commodities, while manufacturing costs were heavier. With such conditions prevailing, the directors have chosen to alter their method of presenting the accounts, and instead of setting out in detail the gross receipts and the expenditure, they merely give the balance on trading account, so that full comparison is rendered impossible. This balance amounted to £28,115, and with £187 from miscellaneous receipts and £6,900 for manufactured stock in progress at the end of the year gave a total of £35,202. Deducting £7,036 for manufactured stock at September 1, 1906, £4,444 for administration and other charges, £1,502 for debenture interest, £7,388 for repairs and renewals, and £1,095 written off preliminary and debenture issue expenses, the nett balance was £13,736. Of this £5,524 was allowed for depreciation, and with £2,127 brought in the available surplus came to £10,340 compared with £12,624. A year ago eighteen months' arrears of preference dividend were paid, leaving another eighteen months' outstanding, but this time the directors, "in view of the unsettled state in that portion of the chemical trade in which the company is engaged," have decided to pay only one half-year's dividend, and the arrears therefore now amount to two years' or £13,995, but the sum carried out is increased by £4,714 to £6,841. Expenditure on the additional plant mentioned a year ago amounted after deducting depreciation to £26,991, making the total outlay on freehold land, buildings, plant, &c., £221,925, while patents remain at £100,500, and it is, of course, unnecessary to point out that the company has nothing in the way of a reserve fund. Preliminary expenses still total £4,132, but the cost of the debenture issue has been written down to £225. Trading balances are adverse, £15,960 being owing by the company against £11,894 due to it, and cash is down by £3,937 to £7,451, but stores and manufactured stock are valued at £17,427.

Sweetmeat Automatic Delivery Co., Limited.

There is much less to be said about this undertaking than at one time unfortunately was the case. Profits last year to September 30 were not so good, thanks to the exceptionally high cost of raw materials, which affected the wholesale trade as well as the income from our pennies. Takings of the machines improved by £5,877, mainly due to a policy of expansion. A number of new contracts have been obtained, particularly on the tubes in London, and biscuit and fruit machines on certain other railways have been taken over. The directors believe that these, although not of a very profitable character, can be worked economically in conjunction with the existing sweetmeat and weighing machines. They do not think the existing range of prices for materials will be permanent and consider future prospects distinctly encouraging. Gross profit from the machines and nett profit from the wholesale factory came to £96,731 or quite £5,000 less, and with the addition of transfer fees £90 and interest £2,031 the total income was £90,452. Nett profit of £31,102 is £4,147 down, but the balance of £10,352 was so substantially greater than last year that the actual credit for disposal was £41,514 against £30,695. First the directors transfer £13,515 to reserve and then write off £6,012, cost of new machines and fittings during the year, this being the agreed policy, and £1,604 to bring the reserve fund investments to market value. Thus the nett addition to reserve is £5,000 making it £30,000. The proposed dividend of 5 per cent. is the same as last time and £8,745 is carried forward. By providing all additions to machines and fittings out of revenue the item of goodwill and patents, machines, &c., is kept down to £200,000, a heavy enough figure. The investment in Reeves, Limited, the wholesale business, is £135,000 and the general financial position is a good one.

Aerated Bread Co., Limited.

According to the report of this extensive business for the year ended September 30, the company's retail trade was slightly in excess of last twelve months, but the wholesale trade decreased. Profits were lower owing to the greatly increased cost of many of the commodities dealt in and used by the undertaking. This is really all the information conveyed concerning the actual business for the period under review, and it will need to be considerably amplified at the forthcoming meeting. In view of the fact that three new refreshment depots and four additional tobacco depôts were opened during the twelve months, the retail business should have shown more than a slight increase, and we are particularly anxious to know how the company is faring with its tobacco venture. The new departure must be considered very risky, and it is more than certain that the cost of the business contributes only slightly to the dividend, which will again be at the splendid rate of 37½ per cent. The falling off in profits was severe, no less than £12,570 at £72,0[illegible], but we may recall that last year an increase of £10,6[illegible] was shown, so that the position is still better than it was in 1904-5. With the addition of £17,735 brought forward, the sum for disposal is £90,639, and after providing the dividend mentioned, £5,[illegible] is again written off for depreciation, and £16,890 will be carried forward. Twelve months ago a sum of £10,000 was set aside for a new reserve for extending the business, but the fund is not increased on the present occasion. Capital outlays in the past year were pretty extensive at £17,892, bringing up the total property valuation to £161,702, after writing off for depreciation as stated. Stocks are a good deal higher, and are likely to go [illegible], sundry creditors show a small increase to £43,769 and the cash balance is very considerably lower. None of the company's investments have been sold, and they remain at £98,455, including £80,975 of Consols taken into the balance-sheet at £79,355.

Reeves Co. Limited.

There was no sensational movement in the profits of this cycle and motor business during the year to August 31, but modest improvement was shown. The directors say that the past season has been a satisfactory one, both as regards the sale of motor-cars and bicycles, and the prospects for next year's trade are encouraging. Trading profit including transfer fees comes to £25,024 and the nett balance to £16,870, all outgo provided, including depreciation £3,368, debenture interest £2,500, and cost of increase of capital £474. Sum brought in was £12,911, making £29,782, and after providing a dividend of 10 per cent. requiring only £9,728 there is the large sum of £20,054 to be carried forward. No addition is made to reserve and the whole of the present amount (£30,000) is transferred and written off goodwill, patents and registrations, leaving the item at only £15,000: a good move, but efforts must be made to build up the fund again. Another increase is proposed in the share capital, which the directors think should be raised by £50,000 to £200,000. We regret the necessity, but the money is quite essential. Like all the others the company is carrying very heavy stocks, no less than £110,243, and the large amount of £74,753 is owing to sundry creditors against debtors £22,882 and cash £12,282. The freehold and leasehold property is in at cost £43,379 and the plant, machinery, tools and furniture are valued at £78,881.

James Cycle Co., Limited.

This company has gone in largely for supplying cycles on the deferred payment system, but has found it a far from profitable business. Losses by bad debts have been heavy and with a reduction in the turnover the result for the twelve months ended August 31 was a deficit of £1,677 subject to depreciation and directors' fees. A credit balance of £4,115, however, was brought forward, so that there was still £2,438 in hand and the directors' fees of £200 are paid out of this. Any provision for depreciation is out of the question and all the directors can suggest is that the reserve and depreciation funds of £6,055 accumulated in former years will be available for the purpose. As matters stand fixed and loose plant, machinery, &c., are valued at £11,802, patents are taken into the books at their original cost of £3,212 and goodwill at £18,461. Finished and unfinished stocks come to £8,689 and sundry debtors less allowances for discounts and bad debts reach a total of £16,490 and the resources thus locked up have forced the company to borrow pretty freely. The debit balance on current accounts at the bankers after deducting £1,278 for bills and cash deposited is £4,742 and £4,450 is due to sundry creditors. Against these there are investments taken at £8,104, on which, however, the depreciation must be considerable. An outlay on new works of £3,063 has been met by an advance from the bank of that amount secured on an issue of £8,000 in debentures.

Lady's Pictorial and Sporting and Dramatic Publishing Co., Limited.

You remember how this company's directors chattered last year about the heavy special expenditure which had been incurred in improving the publications, outlay that could hardly be expected to immediately bear fruit, but which would simply knock the company's critics that in the future. Parenthetical people, ourselves included, thought it right to give the company a year or so for the justification of the optimistic programme and, trusting for the sake of the misguided but trusting shareholders that everything would turn out as expected. But the Fates look not kindly on the feminine and sporting press, and the sad news has to be related that the company has done worse than ever. Of course, you do not gather this from the report. Indeed, the directors have pleasure in presenting the balance-sheet and profit and loss account and congratulate the shareholders on the

result. Rather odd, eh? Oh, dear no! You see, we had a disgusting summer and the *Illustrated Sporting and Dramatic News* has been printed on art paper, which costs more money, and it is probable the proprietors had no right to look for much in the way of profit. Balance on publications account was £18,086 or £276 less than for the previous year, but interest on investments was a bit better at £1,073, and there seem to have been no less than 50 transfers of the company's shares during the year, because transfer fees gave £6 18s. All told the income was £19,165 against £19,265 last 12 months and £21,529 in the year before, not much to get hilarious about. Directors' fees are "only" £1,250 and £229 is deducted on account of income-tax, and after paying the preference dividend the ordinary shares get 5 per cent. as before. £1,000 goes to reserve and £3,095 to next account against £3,909 brought in. Reserve is now £22,000 and the business and copyrights are in at £329,487. The company has a few investments rather seriously depreciated and liquid assets are fair.

Clerical, Medical and General Life Assurance Society.

The 83rd annual report of this company covering the year ended June 30 last is an excellent one in all respects. A substantial increase took place in the business and gave £25,646 in new annual premiums. The total premium income was £14,367 up on the year at £346,185, and the interest income was £177,980, making £464,165 in all. Out of this claims took £238,091, the aggregate being again much within actuarial expectation, and expenses, &c., without counting the £18,605 paid for an annuity to a retired officer, came to £52,000 or 14.28 per cent., allowing for all other charges, surrenders, endowments paid, and annuities, together with bonuses to shareholders and to policy-holders, &c., there is but little left to add to the life fund, which is therefore only £3,767 higher at £4,529,555, after adding in the £33,166 received for annuities. But the special bonus payments made came to no less than £192,575, of which £40,243 went to the shareholders and £152,332 to the policyholders, so the progress was really remarkable, especially in view of the stringent lines upon which the 16th quinquennial valuation has been made. It was based on the most modern tables of mortality, and in that respect no doubt somewhat favoured the profit sharers, but the assumed rate of interest was 2½ per cent. and the divisible profit was larger than ever before earned. The participating policies now in force number 13,193, insuring £773,400, or £72,600 more than at any previous time. The company earned £3 18s. 4d. per cent. on its invested funds. We note that the former actuary of the society, Mr. W. J. H. Whittall, has been chosen to fill one of the vacancies on the board.

Metropolitan Industrial Dwellings Co., Limited.

Gross revenue for the year ended September 29 was £603 larger than for the previous twelve months at £32,660, but outgoings, including £2,340 for interest on mortgages and loans were increased by £869 to £21,968 and nett profits consequently showed a drop of £266 at £10,692. Balance brought forward was considerably smaller at £8,951, giving a total of £19,643 against £20,873, out of which the preference dividend is paid, and the ordinary shares receive their usual 5 per cent. The past year was the 21st of the company's existence, and the directors appear to have lost their heads a little over that fact, as they propose to signalise the event by giving the ordinary shareholders a bonus of 1s. per share out of the surplus leaving £10,143 or £1,192 more to be carried to the new account. In order to accomplish this they have to ignore the special repairs fund which a year ago got £3,372, and it would have been more to the purpose if a real attempt had been made to strengthen the company's position. A long leasehold property in Long Acre was purchased in August last, bringing the value of the property up to £322,251, yet all that can be shown in the way of reserves are the leasehold redemption fund of £4,592, the special repairs fund of £7,915 and the suspense account of £2,268, representing premiums on capital issued, a miserable record for a company which boasts an existence of 21 years. Floating liabilities have risen by £1,447 to £3,607, while another £5,225 has to be found for the final dividends and bonus just announced, and against these sundry debtors are £929 up at £1,326 and cash is £117 higher at £4,415. It is true that in addition the company owns 1,000 £5 shares, 25s. paid in the Vale Estate, Limited, and has lent that company £7,623, including accrued interest, but these are hardly assets which can be realised "on the nail," and the company will evidently have to borrow to carry out the generous intentions of the directors.

Hammond's Bradford Brewery Co., Limited.

Profits and rentals for the year ended September 30, after providing for bad and doubtful debts, repairs to plant and property, &c., amounted to £25,133, and with £4,686 brought forward gave a total of £29,819. Debenture interest and preference dividend having been paid, the ordinary shares receive 8 per cent. for the year, £500 is transferred to the special reserve in respect of liability under the Licensing Act, £2,520 to general reserve, and £1,000 to insurance fund, leaving £5,299 to be carried forward. Additions to real estate during the year amounted to £760, and £853 was written off, leaving this item at £417,122, plant is valued at £7,010 and stock-in-trade at £19,679. Against these the reserve, less £520 for estimated loss on licensed premises, stands at £31,480, and as the issued capital, including £250,000 in debentures is only £400,000 this fund is necessarily all in the business. Liabilities to sundry creditors at £10,614 exceed book debts by £2,709, while cash is trifling at £103, and although loans and rents come to £2,594 the balance dividend just declared requires £3,000, and it is evident that a pretty heavy sum will have to be borrowed to meet these obligations.

Hodgson's Kingston Brewery.

Gross profit, rents receivable and transfer fees made up a total of £59,946 in the year to September 30 and the nett balance was £39,692, raised to £45,200 by the sum brought forward and interest on loans. Debenture and other interest, compensation fund charge and £700 reserved for extension of the bottled beer trade are among the more important charges against this credit, the nett balance being £25,409. From it the shareholders receive dividends aggregating 10 per cent. with a trifling drop in the carry forward to £5,409. Unhappily the finances are not so good as the profits. The rebuilding of three licensed houses meant an addition of £3,587 to the property account, raising it to £617,184, and against that the only depreciation allowance is the £1,335 written off leaseholds, which is surely insufficient. General reserve remains at £65,000 and there is the trustee fund of £76,900 for the redemption of first mortgage debentures. A temporary loan of £84,900 is secured by the deposit of £92,900 permanent debenture stock, but the liquid assets are anything but lavish.

Hugh Baird and Sons, Limited.

After meeting all charges and making provision for depreciation the nett profits of this business of maltsters, barley and hop merchants for the year ended August 31 amounted to £8,568. To this is added £606 from the previous account, making £9,174 to be dealt with, and after providing for preference dividend the ordinary shares receive 6 per cent. and £500 is written off investments leaving £503 to be carried forward. During the year the old-established business of Messrs. Corder and Haycraft, London, was acquired, and the capital account, including goodwill, now amounts to £122,387, but against this there is a reserve of £16,000, of which £6,193 is separately invested. In connection with this purchase, the company has had to raise a loan of £18,000, but the open position otherwise is satisfactory enough, liabilities to sundry creditors and on bills payable amounting to £15,210 against £25,621 to come in from sundry debtors, and £8,680 in cash and bills, while stocks come to £41,046.

Cuba Submarine Telegraph Co., Limited.

Traffic receipts in the six months to June 30 were £23,107, interest on investments was £1,643, and transfer fees produced £6, a total of £24,756. Expenses were £6,572, leaving £18,184, while £6,791 was brought forward, giving a sum to be dealt with of £24,975. Of this £5,676 has been placed to the reserve against loss on investments, and £5,000 added to the reserve fund. Preference dividend requires the usual £3,000, and after paying 6 per cent. on the ordinary shares there remains £6,499 to be carried forward. The revenue showed a very large increase over the corresponding period, partly due to the exceptional press and other traffic arising from the earthquake in Jamaica. The company's reserve fund now amounts to £103,000 or almost 50 per cent. of the capital outlay.

Royal Mail Steam Packet Company.

In their interim report the directors state that, in addition to the new twin-screw mail steamer, the *Avon*, delivered by the builders in June last, a new and somewhat larger vessel was launched in September last, which is to be employed in the Australian mail service. Three cargo steamers of good carrying capacity have also been purchased, and these new vessels bring the total tonnage of the fleet as at October 29 up to 204,268 tons, exclusive of the 10 launches owned. Apart from the information that the new passenger service between Southampton and Havana and Mexican ports has been regularly maintained, the other items in the report are merely a repetition of what the company, with its usual care to keep shareholders fully informed of all important details, has already announced by special circulars. The usual interim dividend at the rate of 5 per cent. per annum is declared on the preference stock.

Liverpool and North Wales Steamship Co., Limited.

Considering the wretched summer we had, it is not surprising to find a sharp drop in this company's profits for the year to October 4. Income was £40,051 and expenditure £26,584, leaving £13,466 nett, which interest and transfer fees raised to £14,077. This is a decline of something near £5,000, but the allowance for depreciation is lowered a good deal to £5,216, and when all other charges are provided the balance over is £3,301 against £5,078. This means a drop in the dividend from 6 per cent. to 5, nothing for the reserve compared with £2,000, and a considerable shrinkage to £1,335 in the credit carried forward. Reserve remains at £7,000 and the steamers are valued at £80,050, one small boat, costing with improvements £2,745, having been added, while the allowance for depreciation is £5,195. In other ways the position looks healthy, and next year things may look up again, although the cost of coal which affected last year's profits will probably continue an adverse factor.

Consolidated Estates Co., Limited.

During the year ended June 30 this company gathered a crop of 1,963,402 lbs. of tea, which was 138,400 lbs. more than the estimate, and was the largest outturn in the company's history. On this the nett average price realised was 6.40d. compared with 5.62d., producing £52,238, in addition to which 16,441 lbs. of rubber were sold at an average of 4s. 4½d., yielding £3,596.

Pepper, cardamoms, and other produce gave £928, sales in Colombo £902, and interest £282, making a total revenue of £57,947, of which costs of cultivation, &c., took £39,847 and bonus to superintendents £837, leaving a balance of £17,263. Adding £1,171 brought in and £38 from miscellaneous sources, the amount available, after meeting administration charges and debenture interest for fifteen months, was £14,946. Preference dividend having been paid, the ordinary shares receive a dividend of 10 per cent. and a bonus of 4 per cent., and £4,223 is then set aside for the redemption of debentures at 103 in accordance with the articles of association, which provide that no dividend can be paid on the ordinary shares unless 5 per cent. of the debentures have been repaid in that year, and that after a non-cumulative dividend of 10 per cent. has been distributed not less than another 5 per cent. of the outstanding debentures must be redeemed. Of the surplus still remaining £1,900 is transferred to reserve, making it £5,000, and £1,143 is carried forward. A new estate for rubber cultivation was purchased during the year at a cost of £5,849, making the cost of the estates, less £23,400 for debentures redeemed, £124,449; but the factory and extensions account has been written down by the appropriation of £3,850 realised as premium on an issue of 1,100 ordinary shares of £10 each made in June, and now stands at the purely nominal figure of £542. Sundry creditors of £1,581 are balanced by an identical amount for sundry assets in Ceylon, while the balance in the hands of the general managers, Messrs. Arbuthnot, Latham and Co., is £12,677.

KINTYRE TEA ESTATES CO., LIMITED.

The crop of tea for the twelve months ended June 30 showed an increase of 33,132 lbs. at 539,485 lbs., and the nett proceeds, after providing for home charges and £268 for superindendents' commission, were £4,779. With £283 brought in the amount available was £5,062, of which £250 is written off for wear and tear of machinery and £200 is reserved against coast advances outstanding. Then the ordinary shares receive a dividend of 5 per cent. and £1,200 is added to rubber extension account, leaving £162 to be carried forward. Outlay on estates during the year amounted to £2,126, of which £1,383 was on rubber development and £744 on purchase of land, and the property now stands in the books at £66,770 or nearly £51 per acre. The capital is only £65,000, and as the company has no accumulations beyond the amount set aside for rubber cultivation it is having a hard struggle to make ends meet. Liabilities to sundry creditors are not very heavy at £1,358, but £2,250 has to be found for the dividend just declared, and to meet these there are £1,694 to come in from sundry debtors and £1,170 in cash. Coast advances were increased by £78 to £1,236, but these, although reported to be good by the agents and superintendents, cannot be considered an immediately realisable asset.

SADLER AND CO., LIMITED.

This is a company of manufacturing chemists and tar distillers, which owns, amongst other things, the patents for alizarine and other products used by dyers, but its prosperity is nothing to boast of. The several works are said to have been busily employed, and the accounts for the twelve months ended June 30 show an improvement compared with the previous year, yet all that can be squeezed out for the shareholders is a meagre 2½ per cent. Including £2,004 brought forward, the available balance was £21,150, of which interest on debentures and prepaid shares and income-tax took £5,088, and the above-mentioned dividend £4,226. Renewals and maintenance of works and properties then absorbed £4,112 and directors' and auditors' fees came to £850, after which £2,660 was written off for depreciation of plant and £1,200 off special expenditure account, leaving £3,014 to be carried forward. Outlay on capital account for the year was £4,470, but this was met by £1,810 received from sales of plant, &c., and the amount written off out of revenue, leaving the item at the old figure of £255,798. Patents are valued at no more than £596, but there is still £2,215 of the special expenditure to be written off, while anything in the nature of a reserve is conspicuous by its absence. Floating liabilities are heavy at £27,090 against £12,815 to come in from sundry debtors and stocks valued at £18,245, while cash in hand amounts to no more than £252.

WEAVER AND CO., LIMITED.

Profits of this Swansea business of corn, grain, and feed dealers for the year ended June 30 were £23,597, and after writing off £5,502 for depreciation the nett balance was £18,095. To this was added £19,760 brought forward giving a total of £37,855 to be dealt with, out of which the preference dividend is paid, and the ordinary shares receive a dividend of 10 per cent. and a bonus of 2 per cent., leaving £23,456 to be carried to the new account. Additions to capital account for the twelve months amounted to £14,971, so that this item is up by £9,470 on balance at £88,405. Stocks are valued at £88,667, and beyond £2,625 from premium on shares issued in December, 1897, no reserve has been accumulated. Current accounts, however, are very much in the company's favour, as against £42,292 due to sundry creditors there are £77,700 to come in from debtors and £3,950 in cash.

WILSONS AND CLYDE COAL CO., LIMITED.

The directors complain that the output of the collieries during the twelve months ended August 31 was very much retarded owing to irregular working of the miners and the unsatisfactory working of the mineral traffic by the railway companies. This was the more unfortunate owing to the increased demand and consequent advance in prices, but in spite of all the drawbacks there does not seem to have been much cause for grumbling. It is admitted that the company was enabled fully to take advantage of the market at most of the collieries and gross profits amounted to £99,662. Wagon hire account gave £8,447, workmen's house rents £4,111 and interest and transfer fees £1,368, and with £13,864 brought forward the total income was £126,852. After providing for administration charges and writing off £19,511 for depreciation the nett surplus came to £97,980, out of which the preference dividend is paid and the ordinary shares receive dividends aggregating 22s 6d per £3 share, leaving £28,103 or £14,239 more to be carried to the new account. The position of the company seems excellent, as against property valued at £206,562 there is a contingency account of £82,841. Liabilities, including £14,032 for royalties to landlords, come to £44,162, but debtors owe £55,142, stocks come to £10,313 and cash and investments total £143,271.

NATIONAL SAFE DEPOSIT CO., LIMITED.

Gross receipts from all sources for the year ended September 30 amounted to £17,566, and with £238 brought forward gave a total of £17,804 of which £5,759 was retained as nett profits. Preference dividend having been paid, £320 is transferred to leasehold sinking fund, and the ordinary shares receive 4 per cent. leaving £319 to be carried forward. The directors announce that a new lease has been obtained for the company's Mansion House premises for a period of 80 years from Christmas, 1906, at an increased rent of £250 per annum. These premises stand in the balance-sheet at £119,551 against which the sinking fund amounts to £3,750 and constitutes the only reserve the company has. Creditors at £4,916 exceed debtors by £1,940, but cash comes to £2,692 and there are also investments valued at £3,828.

TRADE AND PRODUCE.

WHEAT.—Markets have been quieter and business checked by one or two adverse influences, the American financial position for one, the rise in the Bank rate for another, and prices have shown some irregularity. Millers in general are holding good stocks and won't purchase at present, though sellers are offering small concessions for spot parcels. Prices range about 1d. per cental lower than a week ago for English wheat and American winters, while other foreign is being held at about 6d. advance. Farmers are bringing forward fair supplies, and still obtaining a high average for them, last week deliveries amounting to 77,173 qrs. averaging 35s. 9d., against 69,920 qrs. averaging 26s. 7d. in the same week of last year. Imports are high this week at 574,373 qrs. against 327,903 a year ago, and the quantities of wheat and flour on passage to the United Kingdom show very little decrease. 1,975,000 qrs. are said to be on their way to the United Kingdom against 1,980,000 last week, and 1,930,000 to the Continent against 2,005,000. American markets were considerably excited for a day or two, fluctuating wildly under the financial upset, but they calmed down again, though still subject to rapid fluctuations.

COTTON (from our Manchester correspondent).—The tone of our market during the past week has been rather irregular. Buyers of yarn and cloth have lacked confidence in the position of affairs, and business has been carried on on a generally small scale. The fluctuations in the price of American cotton have been considerable, and have disturbed business in most directions. There seems to be very little probability of free buying until more definite news comes to hand relating to the prospects of the American crop. No reliable estimate has yet been published. Killing frosts are said to have taken place in certain States, but advices generally point to good progress being made in most sections. The forward movement is rather unsatisfactory, but some authorities consider that owing to the financial difficulties in America planters will have to liquidate before long. Egyptian cotton has not shown very much change, and there is nothing particularly new so far as the outlook for the crop is concerned. In piece goods for export sellers have met with a rather discouraging demand. Owing to the uncertainty of the future course of values offers have been withdrawn, and shippers have preferred to look on and await future developments. Odd sales for Japan have been arranged in shirtings, and more business is offering. India bids, at the present time, are unsatisfactory, and China is generally quiet. Here and there occasional orders have been mentioned for Egypt, and goods which have been held back in Manchester are being exported more freely. South American markets have not been active, but fair offers have been mentioned now and again. Home trade goods have moved off quietly, buyers, for the most part, acting with caution. Flannelettes are healthy, with a good consumptive demand. Very little relief is in sight for producers of printing cloths, and certain Burnley manufacturers find their stocks accumulating at the sheds. Heavy goods, such as T-cloths and Mexicans, are generally slow, and where business is arranged makers have to be satisfied with a very narrow margin of profit. In American yarns for home use a quiet business has been put through, but the production of the spindles has scarcely been sold. Medium numbers are still fairly healthy, but here and there signs are beginning to show themselves of spinners being easier to deal with. There has not been much doing in shipping yarns for any market. India buyers appear to have orders to place when cotton settles down. Bolton spinnings remain firm and strong in the finer numbers. A quiet business has been put through, chiefly in small lots for distant months.

Sir Jacob Behrens and Sons give an abstract from the ginners' report, published last week, and state that the total number of bales of American cotton ginned up to October 18th were 4,407,000, as against 4,031,621 last year, and 4,000,506 the year previous. The report was without effect upon the market, as it is no indication of the size of the crop. Messrs. Neill Bros.

point out that whereas the amount of cotton ginned up to the same date in the two previous seasons was about equal, the ultimate commercial crops varied to the extent of two million bales. Financial troubles in America have been very acute during the past week, but the worst appears to be over, and a natural reaction has set in. Prices were at their lowest on Tuesday last, when October "futures" in Liverpool fell to 5.51. A substantial advance took place yesterday, and further progress appears to be imminent. As compared with the quotations ruling towards end of August, the fall in prices on Tuesday last amounts to about 1⅛d. per lb. Egyptian cotton keeps very steady, in spite of the poor demand.

Wool.—Values were nominally a little lower towards the end of the week, but in reality top makers declined to make any concessions except in one or two cases of a large order for coarse crossbreds, when a buyer might get them for about ¼d. less. Home wools have shaded off a little, but the slightly lower rate has not weakened the market which, if quiet, is steady. Spinners are busy, and the manufacturing trade is much more active than it was a short time ago, merchants' demands for the spring being for all classes of goods, and foreign and colonial markets continuing to send satisfactory orders. The prospect of the blanket trade also is brighter. Drapers' and merchants' stocks are lighter than for some years, owing to the chilly summer, and manufacturers are having difficulty in supplying winter demands.

Coal.—The outlook for the trade does not improve, and there are signs that quiet times are ahead. Requirements of some foreign markets are still heavy, and business in parts of the country is as brisk as ever for steams, the exports from Hull being exceptionally large. But they are mostly to the Baltic ports, and partly due to the rush that is being made to get cargoes through before navigation closes. Elsewhere demand has slackened, and prices are going downward. It is even reported that one or two merchants are trying to cancel contracts for forward delivery, and paying 1s. per ton to do so. Welsh steam prices, which a short time ago were from 22s. to 23s. for best, are now from 17s. 6d. to 18s., and an order of 30,000 tons best steams is rumoured to have been taken at a price under 17s. 6d. f.o.b.

Iron and Steel.—That looked for autumn revival in the pig-iron trade has not appeared, and markets this week are more pessimistic than ever. No confidence is expressed in the future, and buyers are only giving orders for early delivery. Some inquiry has been made as to Cleveland pig for 1908, but no actual transactions have occurred as makers will not lower their prices sufficiently to please buyers. Yet that quoted for Cleveland warrants on Wednesday was the lowest but one for the year. As to the hematite trade, it is even worse. Little or no business is being done in the Barrow market, particularly in forward deliveries, and in East Coast hematites it is not much better, the slack news in the shipbuilding industry being responsible for most of the depression. The finished trade in iron and steel is also dull, and not much is expected of it till prices are reduced.

Copper.—Markets rose rapidly on Monday, important business being done by consumers in refined copper, and at the response of American markets to the higher quotations they went higher still, reaching £67 for December dates on Tuesday. Next day prices were cheaper, and markets again unsettled by the financial position. Thursday saw renewed activity, cash metal again forced up to £67 owing to numerous buying orders to cover short sales, but after that ceased prices reacted from the highest, closing at £65 15s. for cash and £64 5s. for three months.

Tin.—The market at first was very active and strong, with widely fluctuating prices. Eastern prices on Tuesday were reported at £153 10s. c.i.f., and this market touched £151 10s. for January dates. Then it reacted to £145 in spite of the continued high Eastern advices, whereas on Thursday, when Eastern business was reported as low as £147 c.i.f., values here kept fairly steady, the favourable statistics issued in the afternoon having a rallying effect. But the close was flat, and prices only up to £146 for cash and £147 5s. for three months. English ingots, £149 to £150. Messrs. A. Strauss and Co. give the visible supply as 11,324 tons against 12,790 tons a month ago. The quantities on the spot and landings are given as 3,339 tons against 2,808 tons at the end of September. The October deliveries in London are 1,596 tons and in Holland 1,358 tons, making a total of 2,954 tons against 2,286 tons for September. The Straits shipments aggregate 4,105 tons, of which 3,010 tons are for London, 435 tons for the United States, and 660 tons for the Continent.

Tea.—From cables received by Messrs. W. J. and H. Thompson, it seems that the available supply for the United Kingdom is likely to be some ten millions less than in 1906-7, and this news has had the immediate effect of raising quotations for all teas up to about 8½d. per lb., though bidding for the better grades has been slacker. The reduced quantity of 43,190 packages brought forward in the Indian market also gave a firmer tone, and practically nothing was obtainable under 7½d. per lb. either in whole leaf or broken. 40,224 packages were sold averaging 8.93d. against 39,199 packages averaging 7.97d. in 1906, and it is remarkable, says Messrs Gow, Stanton, and Wilson, Limited's, circular, that in spite of the high price of commonest teas, the average from the commencement of the season is only .40d. per lb. above last season. There was a slightly dearer market also for Ceylon teas, grades up to 9d. being ¼d. per lb. dearer, and in commonest kinds nothing went under 7½d. The auction was small, only 15,902 packages, which helped to strengthen the tone, as did also the fact that quality was good, and export demand still brisk. 8.99d. was the average price for the week against 8.40d. in 1906. Since January 1 89,700 packages of Javas have been printed averaging 7.30d., against 105,917 packages averaging 5.85d. in the same period last year, and at this week's sale of 1,089 packages rates were fully maintained.

Sugar.—The market improved slightly last week, says Mr. Czarnikow, in anticipation of low factory figures, but when they proved to be as high as last October, buyers this week were less eager, May moving from 9s. 8½d. to 9s. 9½d. to 9s. 7¼d., and trade in refined, which had been much better for a few days, likewise fell off. The tendency did not even improve when a small transaction to an outside New York refiner was reported, as the other American refiners have and can get sufficient cane to fill their wants. Meantime we feel the absence of last season's shipments to America, as the exports from Germany in three weeks were only 19,293 against 36,778 tons, and the world's October figures are likely to be disappointing. The position will improve later on, when a Cuban deficiency becomes visible, but if we finally add the Russian excess of stocks, there may be as much sugar available as last season, provided Russia allows her stocks to be again reduced to last year's level, which is hardly likely. The great unknown factors, however, are consumption and shipments elsewhere.

Factory estimates issued last Sunday gave nearly the same total as in October last year, therefore the trade thinks we shall have a similar production, but the figures are not final, and will have to be revised later on. Most of them correspond to expectations. Only the Austrian figure is high, 1,394,000 tons, Bohemia showing per acre 12 per cent. more roots of 5 per cent. better quality, while in Hungary there are 10 per cent. less roots per acre of 18 per cent. better quality, the area being 10 per cent. less.

New York market remains unchanged at 3.90 cents for 96 per cent. Centrifugals, and transactions have been upon a most limited scale, the want of confidence caused by the financial crisis having naturally influenced the trade. Landings in the three ports for the week were 35,000 tons, meltings 41,000 tons, leaving stocks at 212,000 tons.

NEXT WEEK'S MEETINGS.

Monday, November 4.

Aerated Bread.—Cannon Street Hotel, Noon.
Australian Commonwealth Trust.—Salisbury House, 3 p.m.
Consolidated Deep Leads.—Salisbury House, noon.
Dunlop Rubber.—Hotel Cecil, noon.
Electrolytic Alkali.—Liverpool, 3 p.m.
"Irish Times."—Dublin, noon.
J. Hey and Co.—Bradford, 11 a.m.
Joseph Lucas.—Birmingham, noon.
Lancaster Banking.—Lancaster.
Manchester and Liverpool District Banking.—Manchester.
Matthew Brown and Co.—Preston, 11 a.m.
Rosario Drainage.—52, Moorgate Street, E.C., noon.
Triumph Cycle.—Coventry, 11.30 a.m.

Tuesday, November 5.

Alexander, Fergusson and Co.—Glasgow, 2.30 p.m.
Amelia Nitrate.—78, Cornhill, E.C., noon.
Carlton Hotel.—Carlton Hotel, 12.30 p.m.
Champion and Slee.—Cannon Street Hotel, 12.30 p.m.
Egyptian Mines Exploration.—Winchester House, 11.30 a.m.
Henry Bucknall and Sons.—Cannon Street Hotel, noon.
Imperial Continental Gas.—Cannon Street Hotel, 2.30 p.m.
Realisation and Debenture of Scotland.—Edinburgh, 1 p.m.
Rover Company.—Coventry, noon.
Wright and Greig.—Glasgow, noon.
Yenisee Copper.—Broad Street Place, E.C., 3 p.m.

Wednesday, November 6.

Alberta Railway and Irrigation.—Winchester House, noon.
Baku Russian Petroleum.—Winchester House, 2.30 p.m.
Charter Trust and Agency.—Winchester House, 1 p.m.
Cleopatra Copper.—Cannon Street Hotel, 5 p.m.
Humber.—Cannon Street Hotel, noon.
Inverell Diamond Fields.—Winchester House, 11 a.m.
Melbourne City Properties Trust.—Winchester House, noon.
Rochdale and Manor Brewery.—Winchester House, noon.
Salvador Railway.—Winchester House, 12.30 p.m.
San Paulo (Brazilian) Railway.—Cannon Street Hotel, 1 p.m.
Second Scottish Investment Trust.—Edinburgh, 4 p.m.
Solderless Tin.—Winchester House, 11 a.m.
Vallambrosa Rubber.—Edinburgh, 12.45 p.m.

Thursday, November 7.

Ansell's Brewery.—Birmingham.
Daimler Motor (1904).—Coventry, 11.30 a.m.
East Fingall Gold Mines.—Cannon Street Hotel, 12.30 p.m.
Mexican Railway.—River Plate House, 2.30 p.m.
Pusing Lama Tin Mines.—Salisbury House, 1 p.m.
Salvador Railway.—Winchester House, 2.30 p.m.

Friday, November 8.

Colorado Nitrate.—Liverpool, 3.30 p.m.
Henry Bull and Co.—Winchester House, 11 a.m.
Lady's Pictorial and Sporting and Dramatic Publishing.—172, Strand, W.C., 12.30 p.m.
Liverpool Nitrate.—Liverpool, 3 p.m.
Scottish Australian Mining.—Winchester House, noon.

COMPANY MEETINGS.

A. AND F. PEARS.

CONTINUED PROGRESS OF THE BUSINESS.—STRONG FINANCIAL POSITION REPORTED.

The fifteenth ordinary general meeting of the shareholders of A. and F. Pears, Limited, was held on Wednesday at the Holborn Restaurant, Mr. Andrew Pears presiding.

The secretary (Mr. Edward Praill, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman: Ladies and Gentlemen,—I am sorry to have to tell you that Mr. Barratt, who has presided over our meetings for so many years, is not able to be with us to-day. He has had rather a serious illness, and although he has turned the corner, his doctor would not let him come out to-day, so I am taking his place. With his indomitable energy, however, he has even on his sick-bed dictated and had stenographed the remarks he would have made, and I will now call upon the secretary to read them to you.

The Secretary then read Mr. Barratt's statement, as follows:—Ladies and Gentlemen,—This is the fifteenth year that we have had the pleasure of welcoming you here in order that we may render you an account of our stewardship, and as it has, in the past, always met with the expression of your complete satisfaction, we anticipate, with the fullest confidence, the renewal of your approval. At these meetings it has been our practice, first of all, to look into the trading account for the year, and then to our balance-sheet for our financial position, which, briefly, I proceed to do, as the accounts and report in your hands require but little comment. The year which has passed has been one of unexampled increase in the trade of this country with the world, its total value eclipsing that of any other two nations combined; and in this we have, fortunately, in some degree, participated, the result being an increase of profit, which this year amounts in the gross to £169,659, and which would have been considerably more if the cost of raw materials had ruled as in the early years of the company's existence. Against this the total expenses for the year as enumerated in the accounts amounted to £102,640, including a partly necessary £687 for leasehold redemption, but also a quite unnecessary £4,016 set aside for depreciation of plant, &c. We had then a balance left of £67,325 as a nett profit, and adding thereto the £2,090 brought forward from the preceding year, we had at the termination of the financial year £69,415 to deal with. After payment of the debenture interest for the year, £10,000, and the interim dividend on the preference shares £6,000, and upon the ordinary shares £10,400, we have an undivided balance left of £43,015, the disposal of which we recommend to you as follows:—In the payment of the balance of the dividend upon the preference shares, £6,000, and the payment of a final dividend upon the ordinary shares for the half-year ended June 30th last at the rate of 12 per cent., making 10 per cent. for the year, £15,600; and to the deferred shareholders 10 per cent. for the whole year on their 150,000 shares £15,000, making a total of £36,600, thus leaving a balance of £6,415, which we propose should be carried forward.

RESERVE AND DEPRECIATION.

It may be asked why, out of this sum, we have not placed the customary £5,000 to reserve? Well, with every regard for sound finance we were sorely tempted to distribute £5,000 more as increased dividend, divided equally between the ordinary and deferred shares. In view of the fact that at one fell swoop we have recently knocked off the sum of no less than £90,000 from the cost of our goodwill, and as we have continuously said with regard to depreciation (standing now at £90,767) that it is very largely unnecessary, and, indeed, is a sum which could not possibly be required for any such purpose, it consequently is really a reserve, and I am strongly of opinion that we should transfer at least £60,000 of it to our reserve account, making the general reserve account stand at £124,203. I may here remark that the fact of a depreciation account for plant being but little necessary in our case may be illustrated by the homely instance of a knife with the blade worn out and a new blade substituted, and the handle worn out, and a new handle substituted. No depreciation is required for the knife, and but a small depreciation indeed is necessary with our own plant, always being, as it is, kept up to date. In view, however, of the fact that we have a further depreciation upon our gilt-edged investments of £5,000 during the past year, which we hope is but temporary, we have resolved to carry forward the amount, and await the result of the current year's trading before deciding how it should be appropriated. We reported at our last year's meeting that trade had increased, and it will have gratified you to learn from our report ,that it has not only increased in the past financial year, but continues to do so to date. (Applause.) All these facts and figures are entirely satisfactory to your directors, and, as we have been so bold as to prophesy, they will be equally so to you. The decision of the Court with reference to the reorganisation of our capital, which had been determined upon at the meetings of June 26 and July 11 of this year, was not obtained until some time after the close of the financial year. The recapitalisation of the company commenced on July 1 last, from which date the ordinary shares stand at £320,000, and the deferred shares cease to exist. From the report you will have seen that, had the Court sanctioned the change during the financial year, the ordinary shareholders could have received a dividend of 12½ per cent. for the year.

THE FINANCIAL POSITION.

Our financial position I think we may regard as just about as sound as that of the Bank of England, which is saying a good deal, but not too much—(applause)—for as you will have seen, we owed only £22,646 to ordinary trade creditors, and £364 for unclaimed dividends, whereas against that, trade debtors owed us £45,805, we held bills receivable for another £14,405, together £60,210, all since paid. Further, we had at our bankers in London and New York a cash balance of £54,734, and investments in Consols, Metropolitan Consolidated Stock, and Pears Debentures, together worth at cost £132,767—say, in almost liquid assets very little short of a quarter of a million, less the depreciation of investments. We have already referred to the depreciation, by a further £5,000 of these investments, making a total depreciation of £18,938, which is covered by our reserves, and it is worth while to note that the most gilt-edged security we hold is our own debentures, for, whereas the Consols and Metropolitan Consolidated stock together have depreciated £20,338, our own debentures came to their relief to the extent of about £1,400, as a result of their appreciated value, so that they now take the place of Consols as "our premier security." (Applause.) This continued depreciation necessarily, of course, arises from the natural law of supply and demand, and we hope has touched bottom, and, when the reaction comes, as come it must both nationally and socially, we shall, with the abandonment of our present extravagant habits of living and a return to thrift, have more to invest with less occasion to seek for high rates of interest, which, as Palmerston said, meant bad security; but he, unlike us, had not the good fortune to be a Pears' shareholder. (Laughter.) It will interest you to refer to the prospectus by means of which we induced you to become shareholders in this company, wherein you will find that we said that we estimated a profit of £63,000 per annum, "after providing for directors' remuneration and management expenses," and you will find that we have much more than realised our anticipations. (Hear, hear.) With this short address I now leave to you, with fullest confidence, the expression of your opinion upon our labours for the past year, which you may be assured will never be relaxed whilst health and strength remain. I had hoped to be personally present at the meeting, but, being only newly convalescent from a serious illness, my physician does not permit me to come out to-day, hence I have asked our secretary to read my address to you. Mr Pears, our vice-chairman, and my friend and colleague of nearly fifty years' standing, will answer any questions consistent with the interests of the business which you may desire to put. (Applause.)

The Chairman: I now beg to move: "That the report of the directors, together with the annexed statement of the company's accounts to June 30, 1907, duly audited, be now received, approved, and adopted."

Mr. A. T. Hollingsworth seconded the motion.

The Chairman then invited questions or remarks from the shareholders.

A SHAREHOLDER'S CONGRATULATIONS.

Mr. H. W. Birks said he thought his fellow shareholders would agree with him in admiring the energy of their absent Chairman in preparing so admirable an address as that which had just been read by the secretary. He thought he would be expressing the general feeling of those present when he said they would like to have conveyed to Mr. Barratt an expression of their deep sympathy with him in his recent illness, and the delight with which they heard that he was now recovering from it. (Hear, hear.) The balance-sheet submitted was so eminently satisfactory that it positively disarmed criticism; but even at the expense of harping on one string he would once more like to put in a plea for the reserve fund. As the author of the scheme which culminated in the rearrangement of the capital, he thought they had reason to congratulate themselves upon the position which had resulted from it. Had it not been for the delay which was caused by legal technicalities the scheme would have been carried through earlier, and then at the date of the balance-sheet being made up the deferred shares would hav been out of existence, in which case, as the directors had told them, the ordinary shareholders would now have been enjoying a dividend of 12½ per cent. instead of 10 per cent. He was not complaining of the 10 per cent., because when a company had been paying a dividend of that amount for fifteen years the shareholders ought to be very well satisfied. (Hear, hear.) The plea he wanted to put forward was for the maintainence of the reserve fund. He knew the Chairman, and his colleagues had given the shareholders an assurance over and over again that not only had the provisions made been adequate, but that they had really been unnecessary, notably so in the case of the depreciation fund. He could readily believe that was the case, but notwithstanding that, he felt sure the shareholders as a body would appreciate the policy of adding to the reserve fund in the future. As to the idea which Mr. Barratt had foreshadowed in his address of diverting some £60,000 from the depreciation fund to the reserve fund, he (the speaker) did not think the shareholders were quite competent to express an opinion. He thought, however, they might say that, as they were so perfectly satisfied with the figures which the board put before them from year to year, they could be equally satisfied with regard to other matters. If, for instance, they were satisfied that the profit for the year was the figure which the directors assured them it was, they could equally be satisfied when the board told them that the policy in the past had been to accumulate an unnecessarily large sum for the depreciation fund, and that £60,000 of that was a real reserve and was entitled to be so regarded, and as shareholders there was no reason why they

should not readily acquiesce in the bookkeeping entry which transferred the amount from the one item to the other.

THE NEXT BALANCE-SHEET.

If that proposition were adopted, when they met again a year hence and had a balance-sheet put before them—if they were in a congratulatory mood on the present occasion he thought they would be rather more exulting then. They would find that the goodwill had been reduced by £90,000 by the operation of the extinction of the deferred shares, and they would find the reserve fund augmented to the extent of the £60,000 referred to, and he hoped they would also find the little quota to the reserve fund for which he was always pleading—namely, £5,000. Once more he would congratulate the directors and his fellow-shareholders, as well as all concerned in the management of the company, upon such a very good statement being presented. (Applause.)

The Chairman said that there was one point he might mention in connection with the parable of the old knife with the new blade and new handle. From his being in the position of superintendent of the works, he knew personally that that was the policy which had always been adopted. Even during the last twelve months they had thrown out one of their largest steam engines and had put in some 22 electric motors to drive the machinery, and this had all been charged to revenue, although depreciation had been written off by the accountants. This, in fact, was their usual practice.

The motion was then put and carried unanimously.

On the motion of the Chairman, seconded by Mr. E. H. Byas, Mr. Hollingsworth was re-elected a director.

Mr. Hollingsworth thanked the shareholders for this renewed mark of their confidence, and assured them that his best endeavours would always be devoted to the interests of the company.

THE DIVIDENDS.

The Chairman next moved, "That the following dividends be now declared out of the nett profits of the undertaking for the six months ended June 30, 1907, on 20,000 cumulative preference shares at the rate of 6 per cent. per annum, making with the interim dividend 6 per cent. for the year; for the six months ended June 30, 1907, on 260,000 ordinary shares and numbered 1 to 260,000 inclusive, a dividend at the rate of 12 per cent. per annum, making with the interim dividend 10 per cent. for the year; and for the year ended June 30, 1907, on the 150,000 deferred ordinary shares outstanding on June 30, 1907, at the rate of 10 per cent. for the year."

Mr. Byas, in seconding the motion, said this gave him the opportunity of expressing the opinion that they all ought to consider themselves very fortunate that the result of the year's working had turned out as it had done. (Applause.) There was one point to which the Chairman had referred and which he (the speaker) wished to emphasise—namely, that it was not necessary that they should have the large amount of depreciation at present shown in the accounts, because the works were always kept well up to the mark. Mr. Pears had already told the meeting that a considerable expenditure had been met out of the revenue of the year in improving and bringing up to date the works at Isleworth. It was certainly most satisfactory for every shareholder to know that those works were in a perfectly efficient condition, and that this had been done out of the revenue of the year, and not out of any reserve fund or anything of that sort. That was, to his mind, a very important point. (Hear, hear.) The past year had been a very successful one, and it was quite clear that Pears' soap still maintained a pre-eminent position among the soaps of the world. (Applause.) He thought the shareholders would all agree that Pears' soap was the best of all, and the proof of this was that the business continued to increase. He might add that from all the evidence they had had since the accounts were made up the state of things which existed last year was continuing in the present year. (Applause.)

The Chairman: To that we may add that we do not go into combines, but we manage our own business. (Applause.)

The motion was unanimously adopted, and on the proposition of Mr. Manfield, seconded by Mr. W. G. Smith, Messrs. Turquand, Youngs, and Co. were reappointed auditors.

Mr. J. French proposed a vote of thanks to the Chairman, and Mr. Cockett, in seconding this, said he was sure all present regretted extremely the fact that Mr. Barratt was not well enough to be present. (Hear, hear.)

The vote was accorded with acclamation, and the Chairman having intimated that the kindly sympathy expressed by the shareholders with Mr. Barratt would be conveyed to that gentleman without a moment's delay, the proceedings terminated.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE.

The eighty-third annual general meeting of the Clerical, Medical, and General Life Assurance Society was held on Friday, November 1, at the offices of the society, 15, St. James's Square, S.W., Mr. Jno. Coles (the Chairman) presiding.

The Actuary and Secretary (Mr. Arthur D. Besant) having read the notice calling the meeting, and the auditors' report,

The Chairman (Mr. John Coles) began by alluding feelingly to the loss of three directors through death, viz., the aged Prebendary Kempe, for nearly 50 years a member of the board, Lord Midleton, also an old and valued member, and Sir Wm. Broadbent. One member, Sir John Williams, no longer lives in London, and has resigned. "We have also lost our auditor, Mr. Alexander Ward," Mr. Coles added, "and Mr. Nugent was elected to fill that vacancy—he is extremely well known in the City, and will be a valuable addition to our auditors. Those who are studying the fluctuations in prices may like to know that our London and North-Western Railway debenture stock, bought over forty years ago, and since converted into a 3 per cent. stock, stands in our books at 75 per cent. This rose to 124 in 1896, and is now a little under 90, so it will be seen that the present fall in price—or depression—is much accentuated by the inflation prior to the war. It is difficult to say, with any precision, what is meant by depression or inflation, as the uncertain gold supplies and other varying conditions prevent our fixing a normal or average price, even for a permanent first-class security like this. I am delighted to say that this question of depreciation has not troubled this society, and our income from interest is not affected by any change in capital values. The question of writing down securities does not arise here, as our Stock Exchange investments were, at the time of closing our books on June 30 last, worth £108,000 over the cost price at which they stand in our balance-sheet. This means 7 per cent. on the total of £1,495,243 in fluctuating securities. I think that in showing a surplus like this in these times we stand almost alone, and this evidence of careful management will, I am certain, be received with great satisfaction by all our agents and the assured in this society, and it should prove attractive to those who are selecting an office for assurance. Our mortgages, all on property in Great Britain, and our other investments are well secured, and there is no interest overdue, which is very important. But there can be no doubt that the most notable feature in life assurance to-day is the recent rapid growth in endowment assurances, which twenty years ago stood at just under £26,000,000, and now stand at £217,000,000, or nearly half the 'whole life' policies recorded in the recent returns to the Board of Trade, so that at no distant date some life companies may have to provide as much in each year for endowments maturing as for claims by death. We are here to meet the wants of the public. This partial breaking away from the old life assurance road is significant in many ways, yet the 'whole life' plan has lost none of its attractive features, and the desire to gain the largest assurance for the smallest outlay is still fully recognised. Our endowment assurance tables are, however, becoming more and more popular with those who wish to provide for early death, or old age, and I may point out that this is one of the few forms of investment which should never show any shrinkage or loss consequent on financial depression. Therefore the remarkable stability of assurance contracts is now more than ever recognised, and endowment assurance is attracting cautious investors, who know that they may count upon payment in full at the time fixed, whatever the price of Consols, or the state of things in the City at the time. I need scarcely add that when an endowment matures it may be at once converted into a life annuity in this office, and thus the old-age pension problem is partially solved. There is one branch of our business to which I want especially to refer. I mean the insurance of invalid or under-average lives, which, by the help of our experienced medical directors and by the further help of our own records, extending over eighty years, we are able to accept on equitable terms. The subsequent bonus on these policies soon helps to neutralise the extra charge at the outset. We are always prepared to consider proposals from those who have been declined by other offices. The depression to which I have referred has not affected our new business, which last year, the first of a new quinquennium, was £680,000 in nett sums assured, and £25,600 in nett new premiums, whereas the average in the last five years was £630,000 and £21,000 respectively. I wish to draw special attention to the fact that our premium income last year showed the remarkable increase of £14,367. I need scarcely remind you that our lives are selected with great care—that ours is all home business, and most of it very near home—our continuous low rate of mortality will justify our proceeding on these lines in future. The general trade of the country continues good, and our last January bonus, so excellent in every way—when a surplus of £652,431 was declared—has given such widespread satisfaction that we shall continue to hold our own at least, notwithstanding the fierce competition now existing, but we want all the help you can give us, and we cannot leave any stone unturned. The recent alteration in the death duties has again directed attention to the help afforded by life assurance in making the necessary provision. Two paragraphs in the report refer first to our having a small balance left over in a year of exceptionally heavy bonus payments, but we must note the fact that we received £33,165 in the year for life annuities. We know that those who come to us for annuities may not prove very profitable, but it is a convenience to our agents to bring this, along with other business, to the office. Turning to the accounts, the claims by death, to which I have just referred, were £31,020 more than the previous year, but we keep well under the sum indicated by our tables. We also paid £152,331 in cash bonus. It will be observed that on June 30 we had a small loan from our bankers (£22,000), but this was paid off in July. I feel sure that all in this room will be of opinion that we should borrow from our bankers for a short time rather than miss a good mortgage or other tempting investment. It will be observed that the amount paid for surrenders is large, but this usually happens when the cash bonus comes to increase the value of the policies. In our list of investments I find that in the year we increased the amount lent on mortgage by £82,000; our holding in Consols by £21,000, and we added £40,000 to the Indian

Government securities; £102,000 more went into leasehold property and ground rents. In conclusion I wish to say that we are more than ever indebted to our actuary and staff, also to the branch managers and agents for the excellent report before you to-day, which may fairly be compared with any previous report in all that concerns the prosperity and progress of this society." The Chairman concluded by moving the adoption of the report and accounts.

Sir Richard Douglas Powell, Bart., M.D., D.Sc., K.C.V.O., the deputy-chairman, seconded the motion, and it was carried unanimously.

The usual formal business having been transacted, votes of thanks were passed to the chairman, directors, and staff.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK.

The fifteenth ordinary general meeting of the shareholders of this bank was held on Wednesday at Winchester House, Old Broad Street, E.C., Mr. C. J. Hegan (the chairman) presiding.

The Secretary (Mr. J. Paterson) having read the notice convening the meeting and the auditors' certificate,

The Chairman said: It is a great pleasure to us to be able to lay before you so satisfactory a statement of accounts. Ever since 1893 we have had, as it were, two landmarks before us which we have kept steadily in view. The first was the repayment of the last of our terminable deposits; the second was the payment of a 5 per cent. dividend to our shareholders. The former was accomplished in 1904, and the latter stage is reached to-day. (Applause.) Nor can anyone, I think, accuse us of being precipitate, or of straining our resources to attain the desired result. There may be some, indeed, who think that we might have treated our shareholders with greater liberality. Well, being large shareholders themselves, your directors are not likely to under-estimate the advantages of a good dividend; but we feel that in doing our best for the bank we are doing our best for the shareholders. We started with the avowed policy of making this a strong bank, and if you continue to give us a free hand in its management, I undertake to say that we shall do so. (Hear, hear.) We have only had two letters of criticism on our balance-sheet, and it is remarkable that both come from ladies. These ladies find fault with us for proposing to give a 10 per cent. bonus to the staff—one of them went so far as to say that our doing so was little short of a scandal! And the other complains of the gift of £2,000 to the Guarantee and Provident Fund. In the trying times which followed the crisis of 1893, when this bank, like so many others, had a very up-hill game to play, the staff was invited to assist by the surrender of 10 per cent. of their salaries until things improved. Happily it was found possible before very long to resume payment of the salaries at their full rate, but your directors have always felt that as soon as the bank experienced a really good year some recognition of their readiness to identify themselves with the institution they served ought to be made to them. Then there is the gift of £2,000 to the Guarantee and Provident Fund. That stands on a different footing altogether, for it is very much to the interest of the bank that this fund should be self-supporting, as it will eventually relieve us of all pensions and superannuation allowances, which at present constitute a serious charge on the year's profits. A few years must yet elapse before the fund can be declared open, but I consider that, especially in a good year, we should grudge nothing in reason which will help to bring about this very desirable event. (Applause.) The figures of the balance-sheet speak for themselves, and do not, I think, call for detailed explanation. It is possible that some may take exception to the amount carried forward, and may urge that the excess over what we carried forward a year ago would have sufficed to pay an extra 1 per cent. to the shareholders. But if you study the balance-sheets of our big banks, you will see that more and more it is coming to be recognised that the carrying forward of a substantial balance, so as to have something in hand wherewith to meet any emergency that may arise, is one of the first principles of sound banking. And, moreover, looking at it from the shareholders' point of view alone, I venture to say that it is far better for them to feel assured that the existing rate of dividend will be maintained, than to take all they can get in a good year, leaving the future to take care of itself. The outlook, on the whole, is distinctly favourable. The growth of Australian commerce during the last three years has been very marked. The excess of exports over imports, as shown by the recently published Commonwealth figures, is remarkable, amounting to 20 millions sterling in 1904, 18 millions in 1905, and 25 millions in 1906. It is unquestionable that the balance of trade during the last three years has been to a quite unprecedented extent in favour of Australia, and that the country is in a sounder and more prosperous condition than it has ever been before. Speaking generally, the individual States have not appeared in London as borrowers for a long time past, notwithstanding the large sums which they have had to provide for, as loans contracted in previous years came to maturity. The amount required to meet the unrenewable portion of these loans has been to a great extent obtained on the spot; and although this does not altogether suit the banks, it is an undeniable sign of the prosperity of the country, and of the substantial basis on which the financial situation rests. The markets for Australian produce are generally in favour of the producer. Copper certainly has fallen considerably in value, and frozen meat is not fetching the price it did; but, on the other hand, Australian butter is in demand, and, if present values are maintained, this season's shipments, both of wheat and of wool, will yield very satisfactory results. There is only one cloud on the horizon: some parts of New South Wales and Queensland are sadly in want of rain. It would, perhaps, be an exaggeration to say that a state of drought already exists, but if no rain falls between this and the end of the year the situation in some districts will be a serious one, and there can hardly fail to be heavy losses of stock. The latest advices, I am glad to say, are to the effect that light rains have fallen in the threatened districts, which have to some extent relieved the situation.

Mr. James Tulloch seconded the motion, which was carried unanimously.

The Chairman, in inviting the shareholders to elect auditors for the ensuing year, expressed the keen regret with which the directors, in common with many others, heard of the death, in August last, of Mr. Alexander Young. He had been the auditor of the company for many years, and in the anxious times of 1893 he rendered yeoman service to the bank. In elaborating their scheme of reconstruction—the boldness of which excited general attention at the time—he bore the chief part; and whatever success might attend the efforts of the directors, or of those who followed them, it ought never to be forgotten that this success had only been rendered possible by reason of the broad and sure foundation laid by Mr. Young, assisted by their solicitor, Mr. Slaughter, in 1893. (Applause.)

A vote of thanks to the chairman, the directors, and the staff terminated the proceedings.

WHITE PASS AND YUKON RAILWAY.

The tenth ordinary general meeting of the White Pass and Yukon Railway Company, Limited, was held, on Tuesday, at Winchester House, Old Broad Street, E.C., Mr. C. C. Macrae (Chairman) presiding.

The Secretary (Mr. W. H. P. Stevens) read the notice convening the meeting and the report of the auditors.

The Chairman: Last year I had to congratulate the shareholders on the most prosperous year in the history of this company since the early first years, when, as you know, owing to the exceptionally high rates of freight that it was then possible to charge, you reaped enormous nett earnings, with which it is not possible to compare times when you are running at normal rates. But last year on those normal rates was one of great prosperity, and I am happy to say that the year now under review—the year ended December 31, 1906—was equal to that, and the results have worked out financially almost identical. That is to say, as you will see by turning to the balance-sheet, the actual balance carried to profit and loss is within £1,800 of the amount of the previous year. Turning to the result for the year, I will merely observe that, after paying the whole of the sinking fund instalments and the interim dividend, and providing for all the interest on the debentures, you are left with £58,583 available for further distribution and carry forward, as against £56,015 for the year 1906. (Applause.) Deducting from these figures the amount that we propose to pay to make up the full dividend for the year to 5 per cent., you are enabled to carry forward £17,333, against £14,765 for the previous year. (Applause.) That is a most excellent result—(hear, hear)—and I only wish I could feel that it was one that could be steadily maintained for all time. Nothing can be more thoroughly sound than all that those figures represent. I will give you a few figures which are of very great importance to those interested in this railroad; they are the figures showing what was the actual business done during 1906—and how they compare with those of the previous year. In short, I may say that there is quite a substantial falling off in the amount of freight carried. That is accounted for by Mr. Graves in the following way: First of all we have to recollect that we are speaking of a period some time back—the year 1906. It was in the commencement of that year, and before business opened on your railroad, that the terrible catastrophe of the San Francisco earthquake occurred, which absolutely paralysed all business and trade from the Pacific coast. It directly stopped your receiving a large amount of freight which would otherwise have come from San Francisco. It further absolutely stopped for that season your receiving a known figure of 1,300 tons of freight from another source which had been actually ordered, but could not be forwarded because of the check so received. Those facts really account for a large portion of the loss of freight in that year. Roughly in the rail division of your system you carried in the year 1906 only 437 passengers less than in the previous year, when you carried 14,157 passengers. You carried 32,204 tons of freight, against 34,119. In the river division you carried 591 more passengers, and 1,735 less tons of freight. But in those divisions, notwithstanding the not great falling off in the services rendered, the operating expenses are very substantially less in both divisions. (Applause.) The operating expenses in the rail division were $33,000 less than in 1905, and as much as $53,000 less than in 1904, which shows that the service has been worked with greater economy. In the river division the operating expenses work out at $36,153 less than in the previous year. As a result finally, the gross earnings work out at $57,322 less than those for the previous year, but that difference was offset by the decrease in the operating expenses of no less than $80,107, leaving you on balance with $12,000 in favour of the year under review. Earlier in my observations I referred to the principal causes which made for the falling off of your traffic in certain directions, but over and above the special causes there is the change which is going on in the character of the work now being done in the Klondyke district—the change from placer mining, involving a great number of men, stampeders as they call them in that country, but which we know in this country by the name of prospectors. When they find payable mineral they can only scratch about on the surface. Well, that class of work has at the beginning of this year given place to work of an altogether different character; in other words, people are working deeper. No handiwork could efficiently do what can be done by hydraulic dredgers, which, as

you know, involve the employment of a large amount of capital. Well, we are happy to know that the examination of the country by the most competent people in that line of business has so far satisfied them that it is worth while investing that capital, and in putting up expensive mining machinery plants in the country. We have already carried several of these very large and expensive dredgers into that country, and we are glad to know that as that industry is built up we shall have no falling off in the amount of transport that we have to carry to the district. The freight will be of a very different character from what it has been in the past; but in the interim you must naturally expect that there will be a diminution both in the number of men carried and consequently in stores and other necessities.

Well, that being so, you will realise that if we are to maintain our dividends in order to live in this country we must extend our line to the freshly opened districts, which in their turn will become mining centres. Fortunately, examination has shown that for a very considerable distance along the district served by our railway there is so rich a mineral region that apparently we can see no reasonable prospect of its being exhausted within a period of time upon which anybody can count. Of course, although these mining areas are taken up, mining centres shift from time to time; not all over the place, but from one point to another; and at this particular moment there is one which has so far developed that we think it is absolutely essential in the interests of the company that we should extend our line. The large capitalists who are working there desire that our line should be extended to tap their properties. Now, that does not fall within the sphere of the period I am speaking about—that is in my survey of the work carried out during 1906—and, therefore, I will say no more on this matter at the moment. I have to congratulate you on the continued prosperity of the company—(applause)—but before I sit down I hope that you will allow me to convey to our staff in Alaska and British Columbia your apreciation of their loyalty and the energetic work which they have done during the year under review. I now beg to move, "That the report and accounts presented to the meeting he received and adopted."

The Hon. Sidney Carr Glyn seconded the motion, which was carried unanimously, and after the usual formal business had been transacted Mr. S. H. Graves (president of the local companies) addressed the meeting.

WESTERN TELEGRAPH.

The 68th ordinary general meeting of the Western Telegraph Company, Limited, was held on Wednesday at Electra House, Finsbury Pavement, E.C., Sir John Wolfe-Barry, K.C.B., presiding.

The Secretary (Mr. E. Steer Hodson) read the notice calling the meeting and the auditors' report.

The Chairman, after dealing with the accounts, said:—After the recent statements in the newspapers about the promised early opening for commercial business of a wireless system of telegraphy between Ireland and Canada, you may, perhaps, expect me to offer a few words on the subject. One ought not, we are told, to prophesy until one knows, and I am by no means anxious to obtrude my opinions. On the other hand, however, I have been asked for my views as your chairman by several respected shareholders, and I feel it to be somewhat of a duty not to refuse to say what I think on a subject which touches our interests, though I should have preferred to adopt the safer and more congenial policy of silence and the awaiting of the verdict of the logic of events. But as I have been invited to express my opinion, I feel bound to say at once that, as far as I can judge, I do not look upon any system of wireless telegraphy as a serious competitor with our cables. The fundamental difficulties and imperfections of wireless telegraphy remain, in the want of certainty of transmission, the want of secrecy, and in the confusion which must occur when numerous messages are not conveyed by a direct conductor, such as a telegraph cable or land-line, from point to point, but are thrown with great violence up into the ether, into which they radiate in all directions, to be disentangled and interpreted at the other side of the globe. I am well aware that by tuning or syntonising the receiving instruments to the wave length of the sending instruments some of these difficulties of publicity and confusion can be met, and to a limited extent this is the case. Secrecy, however, is only really attainable so long as third parties abstain from tuning their instruments to intercept the message—a process which, I am told, on the highest authority, presents no difficulty. It is also evident that confusion of simultaneous messages in the ether can be lessened by tuning, but here again we must remember that the number of graduations of tuning is limited to an extent which seems to me to be quite incompatible with the requirements of a large telegraphic business. I believe that some 25,000 paying words pass to and from this country by cables during a busy hour, and we know that New York expects to receive and answer Stock Exchange telegrams with London in four or five minutes. After making all allowances for possible tuning, I cannot but think that the confusion in the ether will be worse confounded if any considerable number of wireless messages are attempted. With regard to certainty of transmission, I believe that many disturbances of the ether by natural causes must always be encountered, and that the longer the distances attempted the more formidable will be the difficulties from atmospheric or magnetic causes. Then, again, I understand that a wireless sending station of high power cannot, as is the case with telegraphy by continuous cables and wires, be at the same time a receiving station, or, in other words, messages cannot be sent and received simultaneously, and, if this be so, I foresee the greatest difficulties in dealing with one of the matters which causes constant trouble with any system of telegraphy—namely, the elimination and correction of errors and the consequent demand for repetition of doubtful signals. For these and other reasons I do not look upon a wireless system as a serious competitor with cables. I am as much an admirer of the wonderful results obtained by wireless telegraphy as anyone, and appreciate most highly the efforts of those who have shown the way in this very interesting development of science. Wireless telegraphy will assuredly be of great value to the world in certain localities and for certain purposes, but I think that, instead of being harmful to cable enterprise, it may, on the contrary, be an assistance. I think that our company runs more risk from the competition of cables and of consequent depletion of revenue by activities of this sort than from the development of wireless telegraphy.

The Deputy-Chairman, Sir John Denison-Pender, seconded the resolution, which was carried unanimously.

HENRY BULL AND CO., LIMITED.

Like most Australian trading concerns this company has had a prosperous year and the nett profits for the twelve months to July 31 showed a further substantial increase of £8,259 at £28,963. With £10,928 or £1,316 more brought forward the amount available was £9,575 up at £39,891 and after transferring another £5,000 to reserve the directors not only raise the dividend from 8¾ per cent. to 10, but pay a bonus of 5 per cent. in addition and still have an extra £3,012 at £13,941 to carry to the new account. The freehold property and buildings have been reduced by £3,879 to £75,341 and fixtures, &c., are £584 down at £7,314, but goodwill remains at £40,000 against which the reserve now totals £50,000, all, however, employed in the business. An increase of £11,034 to £181,292 has taken place in the value of the stocks in hand and in transit and, on the other hand, creditors have risen by £3,347 to £58,258, but the company is now clear of the bank, having paid off the balance of £6,333 outstanding at the end of last year, and while sundry debtors are £9,917 lower at £44,514 cash comes to £9,612 or £7,397 more.

INSURANCE.

PRUDENTIAL

ASSURANCE COMPANY, LIMITED.

HOLBORN BARS, LONDON.

Invested Funds £65,000,000.

NOTICES.

GLASGOW CORPORATION STOCK.

Issue of £400,000 Additional Three-and-a-Half per Cent. Stock.

Redeemable at par 15th May, 1914. All Transfers free of Stamp Duty. Interest payable half-yearly.

The Corporation of Glasgow GIVE NOTICE that they are prepared to receive Applications for above issue in sums of £50 and upwards, and until further notice will, in order of application, allot same at par for settlement on 11th November. Prospectuses, with Forms of Application, can be procured at the Office of the Registrar, City Chambers (285, George Street), Glasgow.

FINANCIAL REVIEW OF REVIEWS.

Scientific Investment,
By Sir EDWARD LAW, K.C.M.G., K.C.S.I.

The Investor's Mind. By Henry Lowenfeld.

TOPICS OF THE MONTH. THE MONTH'S NEW ISSUES. DIGEST OF THE LATEST COMPANIES' REPORTS. Statistical Tables of 5000 Stock Exchange Securities.

PRICE ONE SHILLING.
To be obtained of all Booksellers, and from the Publishers, No. 2, WATERLOO PLACE, LONDON, S.W.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 514. SATURDAY, NOVEMBER 9, 1907. (Registered as a Newspaper.) **Price 6d.**

New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

The Editors desire it to be understood that a charge is made for the insertion of reports under the head ng of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

A Seven per Cent. Bank Rate.

The most remarkable thing about the advance in the Bank of England minimum rate of discount to 6 per cent. on Monday and to 7 per cent. on Thursday last was that anybody should have been surprised at either move. With gold being raked away by New York at the rate of several millions a week, respect for usages alone could have prevented the Bank from going to 6 per cent. on October 31, that and the fear lest a wrench thus sharp should have generated panic. As it is, the move of ½ per cent. on Monday sent a shiver through the Money market and caused prices to dip on the Stock Exchange. People began to predict a 7 per cent. rate and to see visions of the end of all things. A 7 per cent. Bank rate has come, and there is no knowing now what may happen. The last time the Bank raised its rate to that figure was in 1873. Money began to grow dear in the end of September of that year, under the influence of a financial crisis in the United States, the constant issue of Turkish and other loans and the after effects of the Franco-German War. Between the middle of September and the middle of November the Bank lost over £5,000,000 in gold, and its rate accordingly was put up from 4 per cent. to 5 in the beginning of October. A fortnight later it rose to 6 per cent., a 7 per cent. rate following on the succeeding week (October 22). The 7 per cent. rate lasted but a fortnight, and gave place in its turn to an 8 per cent. rate, which lasted only a week and was replaced by a 9 per cent. rate, the extreme limit reached. After a fortnight of 9 per cent. the rate fell back rapidly, first to 8 and then to 6, 5, and finally 4½ per cent. before the end of the year. Since then the Bank rate has never been higher than 6 per cent. until now, although short money has occasionally been 7 per cent. or more. The present 7 per cent. rate is therefore a most unusual event, and experience warns us to expect important consequences to follow. The facts just recorded show that when the danger to credit implied by a 7 per cent. Bank rate comes into view events are sure to develop with extreme rapidity until the culminating point is reached. We are not yet at that point either here, on the Continent or in North America, and this week's movements must be regarded as a warning. Gold may continue to leave the country in excess of receipts as long as banking credit in the United States remains paralysed unless the dearness of credit here stops it, and even dear money may do little unless helped by failures in America. Failures are to be looked for, we fear, not only among the small banks, many of which have already closed their doors—all of them "solvent, of course"—but among the big banks of New York, Chicago and other great business centres. The nervousness and worry will therefore continue to grow more intense here and will be expressed in dear and even dearer money until the diseased credit structures collapse.

Upon us falls the worst of the strain, because there is no other market in a position to give much assistance. The Bank of France has again come to the rescue on the lines detailed by us last week, and may go beyond the purchase of £3,000,000 worth of English bills with its gold. It, however, gets even

thus far at considerable risk to itself, because its note circulation is already distended beyond prudence. Were it, as some expect, to send us £8,000,000 gold in all, its notes would almost certainly go to a discount, which might be productive of domestic embarrassment. Already it has had to put its rate up to 4 per cent., a figure it has not been at since the beginning of 1900.

But if the Bank of France is unable to go far in helping us with its credit props, how much more perilous and impotent is the Bank of Germany, which was reported to be also sending gold to London—some say as much as £1,500,000—to help us to satisfy the American hunger, but the strain on credit is already great within the Empire, and internal demands for assistance are growing in urgency. The Reichsbank's 6½ per cent. rate has done nothing to strengthen its gold reserve, which is now so denuded that £14,491,500 of its active note circulation has to pay a tax of 5 per cent. to the Government, the amount having risen £8,156,000 in ten days. Neither bank can help us much therefore, and we may be sure that neither would part with an ounce of the metal did not instincts of self-preservation move them to do so. A 7½ per cent. discount Bank rate is the price Germany is now having to pay for the little it has done or promised to do.

All the world thus welters in the same whirlpool of contending interests, credit denuded, and each great market has so used up and pledged its resources that it has nothing free, and little that can be laid hands on at an emergency. They may be said all to live by taking in each other's mortgages, and the Bank of France sends us gold on the distinct understanding that when the bills it invests the metal in fall due the gold will be paid back again. We are not really strengthened by the help thus afforded, for we have merely assumed a fresh obligation, and assumed it towards a foreign creditor, and that might soon cause a renewal of acute symptoms of helplessness. A transient respite may be accorded, that is all, and the world is so distressed by its involvements, by the destruction of capital through the abuse of credit, as to make a return to health and easy circumstances a slow and difficult enterprise everywhere.

And the whole swirling, fermenting mass of credit pivots on London. Every market comes upon us when its own follies have landed it in difficulties. This fact might be flattering to our pride in ordinary circumstances; at present it is the cause of grave anxiety, and the question haunting the minds of all credit traders is "Can London stand the strain?" We hope it may, but can be by no means sure, because we also have indulged in many imprudences whereby our resources have been dissipated, locked up, or mortgaged to an extent that causes a 7 per cent. bank rate to signal exhaustion in numberless instances. Our market, the whole country, stood a long spell of 6 per cent. last winter in a marvellous way, but it by no means follows that we could last out a repetition of the experience without passing through a devastating cataclysm. Traders, speculators, dealers in credit, or leaners on credit of all degrees have been impoverished by the long period of dear money and wasting liquidation. Those who have not already gone under are now less able to endure a sharp increase in the strain.

But there is little prospect of cheaper money soon. It will probably be dearer first. The gold exports are the expression of over-stimulated regular trade demands, or a proof that credit abuses have created a gap between true and false values which can only be bridged by gold. The paper offered in payment of debts or in exchange for commodities bought is for the time being a discredited and inefficient medium of exchange; gold alone suffices. We see the demands produced by credit rottenness or collapse now bearing full upon us, and the usual autumn mercantile demand is also becoming active, while we have no more gold to spare. All the wealth of new gold thrown on the markets of the world during the past 15 years has been seized upon to enable fortune builders and the monopolists of finance to initiate new schemes designed to absorb the capital of nations, or to finance wars that destroy accumulated capital, or to concoct market inflations intended to make plundering facile. Consequently, we must now do our best to encounter a world crisis with a denuded gold reserve, because nearly all we have is pawned, is in the form of paper of some kind. The prospect is not reassuring, but even now rigid economy and the sacrifice of much of the husks of spent wealth, in order to preserve the genuine, undamaged remainder, may enable us to pull though without irremediable loss. If only the national expenditure were brought down to reasonable proportions we might have more hope, but that has not yet been done, and gives no promise of ever being done until an imperial bankruptcy restores the nation to its senses. In the meantime, all our endeavours must be concentrated on the effort to avert the worst now threatening us. At all costs, the financiers of the United States must be driven back on their own resources and prevented from draining away more of our always too minute stock of gold.

The Railway Dispute and its Settlement.

Mr. Lloyd George deserves congratulation upon the adroitness with which he has managed to evolve conciliation and arbitration boards out of the dispute between railway directors and Mr. Bell. After several meetings and prolonged discussion, the boards of all important railway companies in England and Scotland, with the exception of the North-Eastern and the North British, have agreed to terms of settlement, and the various societies amongst railway employees have accepted the compromise. It is a compromise which represents a distinct victory for the boards. They have conceded nothing that would interfere in the least degree with the individuality of the companies in their right to deal untrammelled with their own men. Each company will be left as before to deal with its staff, and Mr. Bell's Amalgamated Society is no nearer the power to dictate terms, or even to negotiate terms, with all the companies together than it was before. Some alarm was excited at the beginning of the week by the results of the society's ballot, an enormous majority in favour of a strike being thereby disclosed. In reality this apparent triumph was a revelation of weakness, because considerably less than 100,000 men backed up the strike policy. That was a revelation of the society's practical importance, and must have strengthened the resolution of directors to adhere to their repeatedly announced policy. In such a position great adroitness and skill must have been exercised by the President of the Board of Trade in evolving something like an agreement out of the apparently irreconcilable positions taken up by the two bodies in conflict. In a modified form he has fallen back upon the New Zealand system of arbitration boards, but here everything is to be voluntary, and the law is not to be invoked by either side as ultimate arbitrator. Conciliation boards are to be formed for each railway adhering to the scheme, and their members are to be elected on lines set forth in the agreement. The staffs will be divided into classes, and the area served by each company is to be divided, if necessary, into a number of suitable districts for purposes of election. When a sectional board fails to arrive at a settlement, the question is to be referred, on the motion on either side, to the Central Conciliation Board, consisting of representatives of the company and one or more representatives chosen from the employees' side from each sectional board. Should this court of appeal be unable to settle the dispute, a final reference will be made to a single arbitrator appointed by agreement between the two sides of the lower board, or, in default of agreement, by the Speaker of the House of Commons and the Master of the Rolls, or one or other of these two men. The decision of this final arbitrator is to be binding on all parties without further appeal. This scheme is to be in force until 12 months after notice has

been given by one side to the other to terminate it, but no such notice can be given within six years of the present date.

The agreement is thus for seven years, and its duration will give ample time for the organisation of a definite representative system by help of which all matters in dispute between railway boards and their servants can be formulated and settled. When disputes arise counsel are not to be employed by either side, and we are inclined to think this the greatest reform of all. It will save both shareholders and servants from much unnecessary expense, and appears to us likely to lead to the easy and rapid settlement of disagreements. Two examples of classification are given in the memorandum published which may serve as guide in the arrangement of the staff. Both imply a segregation or grouping of classes or grades of servants. Thus locomotive drivers, firemen, and cleaners are put in one class, signalmen and pointsmen in another, goods guards and shunters in a third, and the passenger group of servants in a fourth, or the whole of the men employed in conducting the traffic may be grouped in one body. By this arrangement the Amalgamated Society is altogether put out of court, and Mr. Bell's occupation may be considered gone. He cannot stand forth as the officially recognised representative of any body composed of members of the staffs of different companies, and that being so his ready acquiescence in the compact is much to his credit. The Associated Society of Locomotive Engineers and Firemen has also adhered, but its existence may be maintained for other reasons than that of mere protection of the interests of its members, and probably enough the most important result of the treaty now concluded between the opposing forces may be the splitting up of membership in societies hitherto common to all the servants of all companies into sectional societies limited to each. This is a matter of detail, the great fact being that all danger of a universal strike appears now to be at an end. It was never an acute danger, as we have insisted throughout. The Amalgamated Society had neither the membership nor the funds to enable it to declare such a strike with effect, and had its leader, Mr. Bell, been rash enough to give effect to the vote of his men, he would have incurred a danger for them and for himself that might have destroyed the society and blighted his career. As it is, much may remain for him to do in the way of ventilating the grievances of the men, and it may be open to him to appear as their counsel, so to say, when disputes have to be laid before the arbitrators; but the Amalgamated Society as a fighting organisation appears to us to have been killed. That also is something, perhaps, for which Mr. Lloyd George deserves commendation, although the probability is that unflinching adherence of the representatives of the railway boards to the principle of non-recognition is at the bottom of Mr. Bell's defeat. Anyway, the boards will now be left at peace to pursue the internal reforms demanded by shareholders and the public.

Economic and Financial Notes.

Our Foreign Trade in October.

We could say little about the trade returns for October this week if we would, since the financial crisis puts everything else in a corner. It is to be noted, however, that last month's figures give no indication of any check to the steady expansion of our foreign trade. Imports have risen by 5.5 per cent. or £3,025,054 and exports are £5,080,198 or 15.3 per cent. up, but the reshipments of foreign and colonial produce are 3.7 per cent. or £268,490 lower. Even with this deduction the export trade of the country continues to be of unexampled magnitude, and last month's totals have again had the effect of further narrowing the trade balance in favour of the country. It is still for the ten months £102,293,344, but two years ago it was nearly £129,000,000 for the same period. It may be that this *rapprochement* of the two sides of the account is favourable to us at present, because it should give us increased power to draw in money from abroad just when we most want it. At the same time our imports consist so much of increased food supplies as to suggest an approaching diminution in the manufacturing business of the country. We have, for instance, imported nearly 56½ per cent. more wheat last October than in the same month of 1906, and the increase in the imports of rice has been 101 per cent. Nothing in the way of grain except barley has

Excess value of imports over exports	128,610,517	114,017,212	102,293,344	— 11,723,868

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

come in in smaller bulk than in October last year, and prices are in every case higher. The fact that we are paying so much more for most of the food we buy, at the same time that larger quantities are bought, increases the difficulty in judging what the actual posi-

tion of our foreign business is, and the only point we can safely insist on is that the demand for our manufactured goods appears to be well sustained in nearly all instances; while our exports of coal continue not only larger in bulk but more satisfactory in price than they were last year, the quantity having gone up 16 per cent. and the value over 41 per cent. for the past month. There has been an increase also in our exports of cotton yarn and piece goods at augmented prices, and that is to be set against a decrease of nearly 7 per cent. in the quantity of raw cotton imported. The raw cotton has still cost us rather more money than it did a year ago, but the chaos in the United States is likely to improve our position in this respect before long. Other textile industries all continue to flourish, and the only remarkable decrease in the volume of exports is in refined sugar, which, however, is not an important branch of our trade. We have sent more ships abroad, and the increase in the value of machinery and millwork exported is over 25 per cent. A check to this remarkable flow of prosperity must be given by the crisis through which we are passing, but the effects of dear money may take some time to make themselves felt, and we must be thankful for things as they are. If our trade is on a firm foundation and not distended by excessive dependence on credit we shall pull through all right.

The Railways of New Zealand.

Much information is given, as usual, in the annual report upon the Government Railways of this colony, and no one can find fault with Mr. William Hall-Jones, the Minister of Railways, on the score of failure to set forth all the facts illustrative of the growth of traffic and of revenue and expenditure. Mr. Ronayne, the general manager, also supplies many interesting facts of a useful character, and yet there are points on which considerable further light is required before we can be satisfied that the existing properties really represent the very large amount of capital laid out upon them. As we stated some weeks ago, the total of such capital on lines open for traffic was on March 31 last £23,504,272, and the entire length of the line open is only 2,456 miles, the cost per mile therefore working out at nearly £9,700. It has been a very unequal outlay, some bits of line having cost a much larger amount per mile than others, but all over an outlay of this kind ought surely to have insured the colonists the possession of a first-class property throughout. We always like to test the condition of railways first of all by the weight of rails put in the line, and it is rather startling to find that in this instance only some 419 miles out of the total length of roads are laid with steel rails of 70 lb. weight, that being the heaviest used. Of the remaining mileage, about 310 are still laid with iron rails, of which barely 30 miles are laid with 70 lb. iron rails. No less than 1,008 miles are laid with 53 lb. steel rails and about 517 miles with 56 lb. steel rails, but there are 66 miles laid with 52 lb. iron rails and about 181 laid with 40 lb. iron rails, while there are actually 24 miles odd shod with iron rails of but 30 lbs. weight to the yard. How is it possible to look upon lines thus lightly provided with permanent way as being sufficiently equipped, or equipped in a way that represents just value for the money invested?

And the construction likewise would appear not only to be light, but flimsy in many places, although upon that point a far-away critic cannot speak with the assurance of those on the spot. What, however, is obvious from the facts as to the weight of rails on the lines is that over most of the railway system of the colony or dominion the traffic must be of an extremely light and casual description, otherwise there would be continual stoppages, interruptions, and breaks down. As things are, it is somewhat startling to find that these railways managed last year to kill 27 people, to seriously injure 8, and in a more slight manner 555. There ought not to be any remissness in working the traffic, since there is a continual increase in the number of men employed, but if the road-bed is bad and the rolling stock poor, accidents, as they are called, are bound to multiply. For the year ended March 31, 1906, the total number of the staff was 9,795, and on March 31 last this had risen to 10,858, or an increase of 1,063 during the year. This was more than 10 per cent., and as the gross traffic receipts had also increased by over 10 per cent. it may be contended that such a growth was natural and reasonable, but we have our doubts upon that point.

Into the sources of the revenue set forth by the Minister of Railways we cannot penetrate to any great depth, but we should like once more to ask whether it is good accounting to take into the gross receipts such an amount as the £127,041 received from other departments of the Government for State passengers and goods carried. Surely that ought not to be classed as a portion of the railway revenue. The Education Department, for instance, is debited with £13,409 for passengers carried on its behalf during the past year, and £5,100 is paid over by the Government for the carriage of the valiant defenders of the colonies, while no less than £35,514 is debited to the Public Works Department for the carriage of Government goods. As the Public Works Department as well as the Defence Department is provided with most of the money spent by it out of capital, we cannot help feeling that credits to gross revenue of this description are in no sense true railway income. They represent dips into the capital account of a most unjustifiable kind, and, as has often before been said, the capital account is in other ways openly drawn upon by these railways every year to an extent that is the reverse of satisfactory, especially when we get a glimpse of the results so far as the physical condition of the lines is revealed in their rails. Yet "betterments" are being pushed forward, Mr. Hall-Jones tells us, and in consequence "the expenditure has shown an upward tendency." It will continue to show an upward tendency as long as capital is utilised in relief of income.

The Queensland National Bank.

The 70th half-yearly report of this heavy-laden bank for the six months closed with June 30 last in the colony and March 31 in London, discloses a nett profit of £34,783, of which £18,783 has been carried to contingency account leaving £16,000 divisible in accordance with the bank's scheme of arrangement. Of that £12,000 goes to provide depositors' repayment fund making the total at the credit of that fund £34,121, and £4,000 is placed to reserve. Owing to the size of the depositors' fund a fifth distribution of 6d. in the £ on the amount written off the original deposit receipts has been distributed simultaneously with the half-year's interest. The balance-sheet does not cheer one up very much, and it is difficult to see how the bank is going to begin to pay off its old debt to the Queensland Government. Altogether £1,119,270 has to be given back to the Government in 13 promissory notes of rather more than £86,000 each, and the first of these falls due on June 30, 1909. Where is the money to come from? Without stifling the existing business it can only come out of the "advances to customers on current account, bills discounted and other debts due to the bank," the total of which is £5,331,000, most of which must represent locks up. But in addition to this debt the bank owes £587,000 to the Queensland and Commonwealth Governments, the Commonwealth portion being £204,744. Presumably these balances fluctuate up and down and are not likely to be called for in a hurry or in bulk. It is the old debts that are the trouble. However, the company has really a certain amount of liquid resources against its new liabilities on private deposit account amounting to £2,135,261. This money and the £565,932 due on bills payable and other liabilities form the source of the liquid assets, the aggregate of which is £2,306,515, made up principally by coin and bullion £735,715, bills remitted and in transit £517,588 and floating money in the London market

£710,000. The bank also holds £208,626 of Treasury notes, but against this there is a Treasury notes deposit of £322,000. Its cash balances stand at only £91,150, but it holds £43,435 of Government stock. Private ledger account debts to the amount of £414,322 are still under "suspense" pending the realisation of securities and bank premises, furniture, &c., appear for £278,817. What are they really worth?

International Financial Society.

The depreciation in this company's securities attained such serious proportions during the year ended September 30 last that the directors have felt it incumbent upon them to face the position and make provision for the loss. It is worth noting that Mr. J. W. Phillips, M.P., joined the board during the year, and it would not surprise us to know that this gentleman is responsible for the prudent course now adopted. We learn that the investments have for the most part been taken at values supplied by brokers, and the balance amounting to £27,523 has been valued by the directors. Twelve months ago there was an item on the credit side called "investment fluctuation account" standing at £27,886, representing, of course, the depreciation to date on the securities held. But this loss grew at a most alarming pace during the past year, and although everything available has been applied to meet it we cannot quite gather from the directors' language whether the deficiency has been entirely made good. What they say is that the investments show a material depreciation in value as compared with last year, and the reserve fund together with the balance of £11,964 brought forward from last year have been applied to meet the deficiency. The deficit naturally includes the investment fluctuation account already referred to, and the total sum set against it is £62,807. Sundry investments now stand at £364,996, and a list is open to the inspection of any shareholder at the office of the company during the ordinary hours, but has not the time arrived for publishing the particulars in the report? Revenue from dividends, interest, commission and profit on sales of securities fell off rather seriously from £28,428 to £22,694, and we must further take note that last year £3,771 came in as profit on the realisation of securities held on September 30, 1893, against nothing now, so that the total drop is £9,235. The free balance having been used up, there is nothing to be credited from last year and the total revenue is only £22,694 as stated compared with £44,043. Current expenses came to £4,058 and debenture interest to £6,753, enough then remaining to provide a dividend of 5 per cent. and to carry forward £2,356. For 1905-6 the dividend and bonus were 6 per cent. and the chairman will have an interesting story to tell at the forthcoming meeting.

Argentine Notes.

Should the future only meet the promises of the present, this ought to prove a magnificent season for the Argentine Republic, as both wool and wheat give every indication of good yields. The new clip of wool or, at any rate, such part of it that has already come forward, proves longer in staple and of higher quality than any for some years past, and these improvements are not confined to one class, but are found in crossbreds as well as in the finer grades. Therefore, unless something approaching a revolution in prices occurs on the European markets, estancieros should make handsome profits out of their wool. Of grain it is too early yet to speak definitely; indeed, it would be unwise to do so since there is no gamble equal to the weather. But, so far, everything has gone on perfect lines, rain coming just when most needed, with the result that the young wheat now coming up presents a strong and healthy appearance. In some parts farmers are grumbling that they have had too much rain and are already beginning to fear the wet may make the wheat run to straw, but the general opinion is in favour of a good crop. And let things go on as they are going, and let no late frosts come towards the end of November or in the early part of December, there is little doubt but that the harvest, if not a bumper, will prove above the average. Possibly it may be too good for the railways. The companies have certainly done a lot to fill the gaps in their rolling stock so noticeable in the season of 1905-6, and only concealed last summer by reason of the poor crop. Yet, much as they have done, the public has a suspicion, grounded on the bitter experiences of the past, that the companies, and the Southern in particular, will again be found wanting, even though the coming harvest should fail to reach more than average proportions.

If present expectations are anything like realised one thing is certain, the country will take a big jump forward. Of late business has languished, as everyone has been suffering more or less from the reaction that followed the speculation of two years ago, or rather, which came to an end two years ago. How severe this reaction has been is best shown by the position of the banks. Their balances on June 30 last showed that nearly all the credit institutions were hampered by loans made in the past, the principal of which they dare not attempt to call in, lest in doing so they made matters worse. And the borrower's position has been even more unhappy. During the palmy days that preceded the lean year of 1905 everyone, camp men, merchants, indeed all classes of business people, fancied they were in the fairway to moderate wealth, if not to great riches, and traded as though such a thing as a bad harvest or a series of them were unknown. To extend their operations, or to launch out in new directions they borrowed, and the banks lent freely for money was cheap at the time, the current rates being between 4 and 5 per cent. Then came the inevitable reaction, and rates naturally rose until loans and discounts couldonly be got at 7½ to 8 or even 9 per cent. This for the man who formerly borrowed under 5 per cent. meant a large slice out of profits, especially as those profits themselves had shrunk, and were far smaller than he anticipated when he first raised the money. It is, therefore, not surprising that the banks have been and still are, compelled to rest content with their interest without pressing for the principal. Yet let things only go well this season and a rapid change must take place, a change that will release, for a time at any rate, the funds the banks have now locked up, and give a fillip all round to trade. By law, it should be explained, the banks in the Argentine must hold cash, either in gold or paper, equivalent to 25 per cent. of their deposits, and it is necessary to remember this when drawing conclusions as to their position.

The New Furness, Withy Absorption.

We are in agreement with the *Financial Times* in thinking that Sir Christopher Furness would have done well to condescend upon more particulars with reference to his latest financial stroke. This is nothing less than the absorption of the British Maritime Trust and the Chesapeake and Ohio Shipping Company at a cost which apparently amounts to £1,150,000. At the present time, as the newspaper referred to points out, over 77 per cent. of the British Maritime Trust share capital is held by the Furness, Withy Co., or its directors, while over 90 per cent. of the Chesapeake and Ohio Steamship Company is in the same hands. Furness, Withy, and Co. may, therefore, be described as selling to Furness, Withy and Co. a business already its own. The table of shareholdings in the two dependents is so interesting that we give it here:—

	British Maritime Trust		Chesapeake and Ohio Steamship Company
	£		£
Total paid-up share capital....	500,000	....	[illegible]
Furness, Withy holding	[illegible]	....	[illegible]
Sir C. Furness's holding	[illegible]	....	[illegible]
Other directors' holdings	12,330	....	[illegible]
Total	[illegible]	....	[illegible]

At the beginning of July last year, the British Maritime Trust invited subscriptions for £250,000 4 per cent. 1st mortgage debentures, being the second half of the authorised amount. This was to pay for new steamers

building, and presumably the company has done fairly well. It certainly paid dividends in the past, and may be able to earn money so that the new company may pay them in the future. We fear, however, these debentures were coldly received by the public, and it may be that the directors of Furness, Withy, and Co. are unable to see any way of lightening the burden they carry as shareholders except through the proposed amalgamation by which Sir Christopher says in his circular £150,000 may be added to the Furness, Withy income, by which also the dead weight they now carry may be transferred to the public. If so much money is to be earned either the earnings of the ships owned and hired out by the Maritime Trust will have to be much increased, or the Chesapeake and Ohio Company will have to earn profits instead of piling up losses. It is as its name implies, a United States enterprise conducted with British capital, and like most ocean-going shipping adventures of the United States it has never been profitable. At the end of 1904, the *Financial Times* says, the accounts of the company showed a debit balance of nearly £89,000. Is this to be taken into the accounts of the combine as an asset and paid for out of the share capital to be issued? Really Sir Christopher Furness will have to tell us more of what is behind before he gets his new capital sold. This capital is proposed to be another £800,000 in £1 ordinary shares, and another £700,000 in £10 preference shares. but at present only half the contemplated creation of preference shares will be issued, the other half being reserved for future developments. Sir Christopher Furness has been a bold and successful adventurer in shipping and in iron and steel enterprises, but this latest example of his fervid ingenuity does not strike us as happy. The best that can be said about the Maritime Trust fleet is that it appears to be for the most part quite new. That, however, is not quite the case with the Chesapeake and Ohio fleet, and apart from any considerations of this kind, the prospects for ocean-going steamers, particularly tramp steamers, or those outside regular lines, are not very cheerful. Business is certain to be less than it has been for some years to come, and much shipping will assuredly be laid up, with the result that freights will dwindle. In the circumstances, therefore, we think the shareholders of Furness, Withy, and Co. should refuse to ratify the bargain.

American Business Notes.

For some weeks now the detailed accounts of the New York Associated Banks have been suppressed. It is therefore impossible to say how far they have all broken the law which orders them to hold cash to the amount of 25 per cent. of their deposits. Their gross averages, however, for the past week revealed something of the pressure they have had to meet, and also something of their practical insolvency. Loans and advances rose £12,150,000, and less than half of this or only £5,603,000 remained to the credit of deposit averages. The banks had to submit to a loss of £4,103,000 in specie and of £2,018,000 in greenbacks, so that the statutory reserve shows a deficiency of £7,768,000. A year ago there was a surplus of £600,000. How these banks are going to obey the law in the near future it is impossible to indicate. At great sacrifices gold is being purchased in London and hurried over to New York—some £8,000,000 of it is said to have been already "engaged"—but it cannot be all kept there or utilised merely to strengthen the Associated Banks. There is a hunger for it all over the Union, and at the end of last week currency of whatever sort commanded a premium of 2 to 3 per cent. There does not seem to be a Bankers' Clearing House throughout the Republic which is not now maintaining an appearance of solvency by means of Clearing House certificates, and these cannot all be paid off by the gold imported; only a reduction in the general business of the country and a gradual return of currency from the great wage payers as well as from the private hoarders will enable banks that are universally in a half suspension-of-payments condition to resume business on the old lines. But how absolutely primitive these lines must be when 150,000,000 bushels of wheat are tied up in Dakota and Minnesota, because the currency with which to pay the farmers for it cannot be had. Is there no bank whose credit can be relied on?

At the end of last week and beginning of this great financiers were congregated in "Mr. Morgan's private picture gallery," and they stayed there throughout the night on one occasion, surveying the morass and the way-out. We judge their spare resources were at an end, and beyond assisting, perhaps, to find the means to raise gold abroad, they could go no further in propping trusts or in helping banks to resume business. Currency is not what they possess, but securities, and very few of them hold these securities to any great extent entirely with their own means. They are all credit-inflated millionaires, or nearly so, and the principal result of their prolonged discussions seems to have been another "deal." The Tennessee Coal and Iron Company is to be sold to the monster Carnegie combine. The Steel Trusts will thus have taken one more step towards completing the mastery over the iron and steel industry of the United States. So much the worse for the people, and we go so far as to say so much the worse for the grabbers. The issued share capital of the Tennessee Coal, Iron, and Railroad Company is about £5,900,000, it having been increased by £1,400,000 at the beginning of last year, of which half was then issued. On February 1 last the remainder was offered at par, payable in four equal instalments, the last of which fell due on September 10. The company has also created bonds to the amount of £3,000,000, but £2,131,000 of these is retained against outstanding small mortgages, bearing 6 and 7 per cent. interest, liability for which the Carnegie Trust will have to assume. Payment for the "pool"-held, *i.e.*, Trust-pawned, Tennessee Company's shares, taken at par, is to be made in United States Steel Trust 5 per cent. bonds, taken at 84. A recent price for these bonds on the New York market was 108, and then dropped on Thursday to 82½ on pool realisations. Tennessee shares fell 28 right off, and closed 20 down at 102, outsiders being left to shift for themselves. But then the Trust Company of America's extremity should be somebody's opportunity, and by the change its liquidators may be endowed with a marketable instead of an unsaleable security. It seems to have held the pool.

Another trust, the Title Guarantee and Trust, has gone into the hands of a receiver. This brings trouble among the big insurance companies into view, and if the threatened industrial collapse goes far, as it must, a fresh crop of sensations will have to be gathered. The gambles in sites and buildings must also collapse.

To help the market the story was put about that a "pool of £20,000,000" had been formed by the master fianciers, but that would only be nonsense, because a fund of that description would not only be beyond their power to raise, but also quite useless unless in cash, which is just the thing these gentlemen have least of. Pooling liabilities they may be in the hope of mitigating the disorganisation of banking business. Instead of forming a pool to help their neighbours, the great men refused even to give further assistance in money to the Trust Company of America. It had already got £1,000,000, Wall Street gossips say, from the banks, and wanted more than twice as much, but it could not offer any adequate security for the first advance, if what we hear from the other side be true. At any rate, this trust and most of its neighbours, as has been drummed into people for years back in The Investors' Review, have been the most pernicious and active agents in producing that state of moral abandon in robbery by market tricks which preceded and brought about the present ruin. Their means must consequently have been advanced upon new securities, often of most questionable origin and doubtful character, at prices much above those now current. The promoting cause of the Tennessee coal deal was the desire to assist this very Trust of America, which had advanced heavily upon the company's securities, and

from the point of view thus suggested these various deals and dodges represent nothing but one more effort to shift the burden imposed by insolvency from the so-called capitalists to the public. Dodge after dodge is tried, now one combination, now another, and all the while the rottenness eats into the very heart of the nation. But all the trusts are nevertheless all right, solvent and the rest of it. Only they cannot pay cash. So "voting trustees" have taken over the Trust Company of America's assets, and will "co-operate with the directors" in the nursing business. To its credit, however, be it recorded that the Trust Company of America has paid away $34,000,000 (£6,800,000), and is still, according to its president, Mr. Oakleigh Thorne, "absolutely solvent." All the big ones may be if depositors cease asking for their money, and if the prices of the "collateral" held by them can be shored and kept up in price until "traded off." There is the difficulty.

It is unnecessary to mention all the rumours current, but it seems not improbable that some £4,000,000 of Panama bonds may be created by the Washington Government and given to the paralysed banks to enable them to inflate still further the poorly secured paper money with which the people of the Union are already cursed. That will be no remedy, any more than Clearing House certificates, for the prevailing distrust or the prevailing insolvency. Why cannot Mr. Roosevelt and his advisers "suspend the Bank Act" if they want currency to be let loose? Adopt the German method or the English. When our Bank Act is suspended the directors of the Bank are allowed to issue notes to any extent the public may demand without regard to the gold in hand, but they have to hand over to the Treasury the profit made by lending these notes. In Germany the Reichsbank is obliged to pay 5 per cent. interest upon notes issued in excess of the legal maximum. If the same plan were adopted in the United States and 8 or 10 per cent. charged upon the paper money issued in excess of the legal limits, currency of sorts might be abundant even now, and time would be given to permit confidence to grow again. The currency devices advocated by nostrum-mongers seem likely to aggravate the disease from which the country suffers. Perhaps, though, the people would not take the notes of discredited banks on any terms, and want hard cash. It is in cash, we note, that wages are being paid in some parts of the country.

A gentleman named Ridgley, who is now Controller of the Currency, has been complaining that, whereas the paid-up capital of the National Banks in the United States is now £180,000,000, their outstanding note circulation only amounts to £120,000,000. There is thus a margin of £60,000,000 paper, for which he thinks might be put into circulation and utilised for credit purposes by these banks. Certainly if the public of the United States will absorb an unlimited tonnage of rag money there might be a temporary relief obtained in this way, but the quality of the security behind the notes would have to be lowered, and the effect of issuing banking credit twice over, first to buy securities and then to make advances to the public at whatever rates of interest could be obtained, would be anything but beneficial to the real interests of the nation.

Meanwhile the numbers of unemployed are multiplying fast, and the coming winter promises to be a horrible one, for it is not merely credit players who suffer when their schemes break down and great rents appear in the fabric they have reared. They, by their abandon in scheming, have over-stimulated industries in all directions, creating work for people in such volume that immigrants have been attracted to the country in mobs, and now, when employment will have to be stopped all over the land and the industries of the country are forced to settle down to something like normal conditions, hundreds of thousands of these immigrants and of other workmen may this winter be without bread.

Never mind, Mr. Harriman is going to form a "holding company," to take over those securities he bought through the Union Pacific Railroad last year and has been unable to sell again. Altogether his "bull operation" thus engineered and paid for by stock issues or their proceeds cost the Union Pacific Company nearly £26,000,000, all borrowed, and we doubt very much if the securities could be realised to-day for £20,000,000. A "holding" company is therefore most urgently necessary if the Union Pacific and its Harriman are not to go bankrupt together. But for the havoc such a smash would cause we should be heartly glad if they did.

Rates for money have settled down somewhat during the last week, and may be said to fluctuate between 10 and 20 per cent. when there is any at all to be lent. Wednesday's range was from 10 to 25 per cent., with most of the business done at 15 per cent. Thirty-day loans cost 10 to 12 per cent. On Thursday the ruling quotation was 20 per cent. Business on the Stock Exchange, however, has dwindled to an insignificant volume, thanks in part to the fact that Tuesday was a holiday over most of the Union because of the November elections, thanks also to the "cash with order" terms on which the bulk of the business has to be done. Dealings in "margins" are at present quite out of favour. The advance in our Bank rate is certain to increase the demoralisation, because it means a step towards locking the door against further exports of gold.

Among minor items of news is the suspension of dividends by the Cotton Oil Company, and the fine of $330,000 inflicted in California on the Atchison Railroad for rebating.

No small interest attaches to the report of the Chicago, Burlington and Quincy Railroad for the past year. People in this country may have forgotten that the master players with railroad property, and too often with human life, in the United States contrived to buy this road up. The Great Northern and Northern Pacific Railroads acquired most of its stock by exchanging $200,000,000 in their jointly guaranteed 4 per cent. bonds for $100,000,000 in Quincy stock. Of late years the Quincy road has been paying 7 per cent. on its stock, so that the guaranteeing railroads made themselves responsible for 1 per cent. more on their joint bonds than they got back from the railroad stock bought therewith. That was all very well as long as credit was abundant and rates for money low, but it is not so pleasant now. Therefore, in spite of last year's traffic exhibit, the Chicago, Burlington and Quincy dividend has been raised to 8 per cent. for the past year. It is thus now equal to the amount payable upon the joint guaranteed bonds of the Great Northern and Northern Pacific companies, and they will no longer, or at any rate not for the next few months, be compelled to show a loss on this part of their accounts. Should the dividend have been raised in this manner? There is no indication in the accounts of the Quincy Company that there was warrant for it. Its gross earnings no doubt went up by $8,326,580 for the year ended June 30 last, but after paying the increased working expenses and the additional taxes, the gain in nett revenue was little more than $91,000. In the previous year there was actually a loss of $1,056,000 in the nett income, so that on the two years together the company is really considerably to the bad in spite of the increase of about $16,654,000 in its gross earnings. What interpretation is to be put upon this infertility of the property? We cannot fully indicate, but obviously it is not due merely to increased cost of material and increased wages, nor yet to augmented charges on the company's direct debts. Probably enough it has not been allowed to expend enough capital upon branch lines and subsidiaries or on improvements, and has not therefore got a chance of charging dependents handsomely for work down for them. We cannot say, but evidently the future is going to be troubled, and although nett earnings for the past year showed 12 per cent. for the stock as against 8 per cent. paid, we do

not set much store by that nor yet by the stupendous surplus and credits aggregating nearly $99,000,000 brought out in the accounts. It is too big a surplus to be genuine, and in spite of such stunning figures capital expenditure goes on, while the cash in hand has dropped within the twelve months by fully $8,000,000 to $6,316,000. This reduction has taken place in spite of the fact that a floating debt of bills payable amounting to $2,000,000 has made its appearance. That the business is a fine one and the company strong is true enough, and our doubts do not extend to its bond issues, which ought to be safe in all circumstances. But the stock is another matter.

One of the holders of the Burlington and Quincy stock is the Northern Pacific, and its figures for the past year ended June 30 last are also brilliant. In that time gross earnings went up $7,311,356, an increase which followed one of $10,500,590 in the previous year. Thus in the past two years gross earnings have gone up by almost $17,812,000, an increase of 35 per cent., and the aggregate is now $68,535,000, while previous to the reorganisation of the company in 1896 the gross earnings were only $19,863,000. In the interval mileage has gone up by about 25 per cent. to 5,448 miles, while the traffic has risen by nearly 250 per cent. This is a most comforting exhibit, and much of the development is unquestionably genuine. All these North-Western roads could not help growing owing to the prosperity brought to their territory by the inflow of population and capital, the average good harvests and the satisfactory prices obtained for the crops. Had financiers of the berserker class been kept out of the field there would have been little to complain of. But after all the Northern Pacific, like all these roads, is less than half made, and a continual outpouring of capital is necessary not merely to keep them in condition but to bring them up to modern requirements. There is not a line in all the United States that has any length of road laid with rails of 100 lbs. weight to the yard, and yet that is the rail adopted as standard for the heavy traffic portions of their systems by the English railways in Argentina. Most of the American railways, too, have still the majority of their bridges constructed of timber, which requires constant replacement and repair. This company, for instance, possesses only twelve miles of stone, iron, or steel permanent bridges as against 76 miles mostly of timber or of wood and iron combined. Hence capital is always being poured into the properties under one cause or another, and in the past twelve months this Northern Pacific Company spent nearly $22,000,000 on capital account, of which $11,178,000 was paid for new equipment alone. It is also laying out money on subsidiaries, helping them with advances and so on, and the consequence is that the Portland and Seattle, of the Big Fork and the Clear Water lines have obtained nearly $20,000,000 from the company. To be sure the money is obtained by share issues and its debt is rather less now than it was a year back, but even so an increase of $95,000,000 in the company's authorised stock, most of which has been issued, does not promise stability in dividends for the near future. Just now, however, the company is not hard up, and it will be protected against the financial complications by the fact that nearly $80,000,000 was still due on the new stock at the end of its fiscal year.

Passing Events.

From the preparations being made in India the public here may form some estimate of the magnitude and appalling character of the famine now beginning in Central and North-Western India. The latest telegram from the Governor-General received by Mr. Morley informs him that good rain has fallen in Madras and in Mysore and light rain on the Burmese coast, but that elsewhere throughout the past week has been practically rainless. Unirrigated autumn crops have almost entirely failed in the United Provinces, the Punjab, Gwalior, Gujarat and North Deccan. The situation is worst in the United Provinces, and relief works are to be opened in several districts forthwith. The meaning of all this is that a population numbering 50,000,000, perhaps more, will this winter have to contend with hunger. It means also that in spite of every effort made by the Government, enormous numbers will die of want; that disease, particularly plague, will lay deeper hold than ever upon the surviving masses, and that the natural growth of population will give place to an ominous diminution. And it is only seven years since India had its last devastating scourge. How is it possible to maintain equanimity of mind and confidence about the wisdom of our government of this great dependency when such calamities recur at intervals so brief?

The Straits Settlements are objecting strenuously to the increase of their military burdens. A three days' debate took place in the Legislative Council on the budget, and the vote to spend £205,000 as a military contribution in the current year was carried only by the casting vote of the Governor. All the unofficial members strongly condemned the vote, and pointed out that the charge had increased from £98,000 in 1898 to £246,655 in 1904, while it is still at the figure above named. No wonder there is a budget deficit of about £5,000. Unless this wasteful drain of the revenue is curtailed there will before long be good reason to doubt the capacity of the Straits Settlements to pay the full interest on their debt.

We are not quite sure that the Humber Company is wise in increasing its capital by £100,000, but it is at least prudent to get the money by the issue of 100,000 ordinary shares of £1 each. The business, as we pointed out in dealing with the report, has been first-rate for the company's year ended August 31 last, and sales were then five times as large as in 1900; but the unusually rapid increase in the business is itself a warning that its prosperity should not be regarded as durable. Bad times will come again, and we think it would have been better if more of the revenue had been devoted to capital purposes, to meet requirements for new machinery above all, and less paid away in dividends. Then the company could have looked forward to bad times without dread, whereas now by increasing the capital, a comparatively moderate recoil in business or diminution in profits might severely hit the shareholders. Last year's profits, we notice, were nearly £50,000 larger than those for the preceding year, and yet the company charges to capital £25,000 spent on new plant and machinery, perishable commodities that may demand renewal in a very short time.

We have never been able to understand why such a furious agitation has arisen against the new board of the Baku Russian Petroleum Company. It came into power in July, 1906, and up to the end of the past year could do little to change the policy of the preceding board. Common fairness should have given it a chance. It might have been criticised, and Mr. Rutherford, who has been out in Baku, had undoubtedly the right to point out the deficiencies which he considered himself to have discovered out there. He would also have been fully within his rights in suggesting remedies, but to go beyond this and howl down the board, cover it with ignominy, as far as words can do so, and strive to throw it out, seems to us to be conduct suggestive of motives that have never been revealed. The scene at Wednesday's meeting was most distressing from the point of view of serious investors, and we cannot see how anything is to be gained by the agitators. Grant that this and other Russian oil companies have been mismanaged in the past, that there may have been jobbery about the conduct of their affairs, that incompetence has been only too evident, it must not be forgotten that they have likewise suffered misfortunes, and surely to raise rows at meetings and pest the shareholders with circulars do not constitute tactics calculated to put heart into the boards or to inspire the management with zeal. Was Wednesday's outburst the outcome of a mere misunderstanding?

The Charter Trust and Agency, Limited, has got itself transformed, with the sanction of shareholders duly given at the meeting held on Wednesday, into twin trusts, the one dead the other alive. One is to be called the New Charter Trust and Agency Company, Limited, and the other the Trust and Agency Assets, Limited. This is a nice delicate way of letting down the unfortunate people who put their money in the original company believing that it was going to give them dividends. In the first year of its existence many people paid 5s. to 7s. 6d. premium for the shares, and they would recently have been glad to part with them at a few pence, but all is to be smoothed over, and the New Assets Company is to have a share capital of £500,000, in exchange for which the dead or dying assets of the old Trust will be taken in charge by it. At the meeting the chairman, Mr. S. H. Benson, said that the revenue yielded by these transferred securities was about £14,000—less than 3 per cent. on the capital—and he claimed that the assets retained by the New Trust and Agency Company, which is to have a capital of £750,000, were quite good. Among the things handed over to the Assets Company is £310,000 of loans and debentures in the various Rhodesian companies, and also some 38,000 shares unspecified. What the New Charter Trust Company is to get we do not know, but a list of the securities transferred to it should form an instructive study. The capital of the two new companies will be nominally identical with that of the one now consigned to the liquidator's lumber heap. The shareholders in the defunct company will get 12s. per share in the New Charter Company and 8s. in the proposed Assets Company in exchange for their £1 shares in the existing company. It is a nice devoutly smug sort of plan for carrying bankruptcy through without too much noise.

As not even the self-immolating enthusiasm of the *Haute Finance* will be equal to the heroic labour of providing Russia with a new loan now or in the near future, the confession of the Russian Ministry of Finance that a deficit of £19,000,000 has been budgeted for next year is disquieting. The totals fit together all pat, like the segment of a Chinese puzzle, but that is the result:—Ordinary revenue £231,800,000, ordinary expenditure £100,000 less; extraordinary revenue £700,000, extraordinary expenditure £19,800,000; product deficit as above to be covered by "credit operations." Just so, and how is the deficit for the current year being met? What is the aggregate shortage for the past four years? Who is financing the actual deficit? To these questions the Russian bureaucracy never affords any answer. Its budget methods are so illusive as to force us to disbelieve such figures that are given. It is, indeed, inconceivable that an impoverished population like that of Russia can furnish £232,000,000 for the State in a single year and live. And it is not living, it is dying of hunger in many provinces, and the £800,000 set down in the budget for "famine relief" has already been pronounced shamefully short of what is required. But dear money and bankruptcy may prepare the way for some durable remedies, even in Russia.

Shareholders of the Consolidated Gold Fields of South Africa did not receive the interim divided that Lord Harris almost promised them at the meeting a year ago, but they would not hear of another complete suspension, and their optimism was duly rewarded with half-a-crown per share or 12½ per cent. for the financial year which closed on June 30 last. The shares only fell 7½d. on the announcement, which shows that punters were quite satisfied, as the Bank rate went up on the same day and but for this the shares might easily have closed 6d. better. Although this dividend is paid we are quite sure the money ought to be kept in hand, because shrinkage in market values is making away with the company's huge surpluses at a terrifying rate, and presently there will be nothing left unless Kaffir prices buck up, and quickly. All outgo met, the profit for the past year is returned at £361,730 or only £38,490 more than last year, and this time a mere £607,928 is brought forward against £984,688, notwithstanding that no dividend was paid a year ago, but then the company wrote off £700,000 for depreciation. Balance available therefore comes to £909,659 compared with £1,307,929, and another £934,491 must now be applied on account of wasted values. The dividend of 12½ per cent. means £250,000 and £85,167 is carried forward. Thus in two years shareholders have had just 12½ per cent. in dividend and £900,000 of surplus has vanished. Truly a great achievement.

Letters to the Editor.

LINOTYPE AND MACHINERY.

SIR,—At the recent meeting of the shareholders of the above company Sir Joseph Lawrence stated that he bought 1,500 shares at £8 (£12,000) in the market, and held them still.

If he realised them at to-day's derisory price of fifteen pence apiece, it is clear it would mean almost a total loss. But may I respectfully ask through your columns if he will inform us how much in excess of a hundred thousand pounds he has made by the undertaking since his first connection with it? We, who paid as much as he did for our shares, have not the consolation of knowing that our loss is limited to an infinitesimal reduction of enormous profits made in the past.

There is a conspiracy of silence in the Press about this concern. Why? Perhaps on account of one great name, whom all would regret to see blurred, the glamour of whose achievements in another and worthier field than that of company-mongering protects the rest of a *personnel* by no means distinguished for altruism and philanthropy.

It is no exaggeration to declare that we should search the immense list of industrials in vain to find one to equal this in (*a*) its sinfully excessive capitalisation, and (*b*) the humiliating depths to which its shares have fallen. I have racked my memory, but cannot remember an undertaking, other than gold mining wild cats—and even in this sinister domain the instances are rare—of which the shares have fallen from £9 to fifteen pence! As a commercial scandal, there is nothing comparable to this ill-omened concern. The public have lost millions by it; into whose pockets have those millions passed?

The shareholders have been treated too long with the soothing syrup of the promised good time coming if they wait a little longer. As business men, they must see that no good time can possibly come unless and until the promoters make substantial restitution. At the meeting a shareholder stated that water to the extent of a million had already been squeezed out of it, but even now it is hopelessly water-logged. I advise that we present a petition to those responsible for the flotation, praying them with a good grace to make such solid concession and return as shall give the undertaking a chance of life.

SUFFERER.

PARR'S BANK.—Liabilities on current and deposit accounts, &c., on October 31 amounted to £29,364,623, and on drafts current, acceptances on behalf of customers, &c., to £2,883,498 against which cash in hand and at Bank of England stood at £4,918,062, money at call and short notice £7,615,677, Government and other first-class securities £3,416,119, bills of exchange £2,408,200, and loans and advances to customers £14,175,031.

CAPITAL AND COUNTIES BANK.—Liabilities on October 29 consisted of £34,585,210 on simple contracts and £396,404 on bills, and assets of £5,517,966 cash in hand and at Bank of England, £5,742,754 money at call and short notice, £4,752,410 Consols and other investments, and £19,949,270 bills of exchange, promissory notes and advances to customers.

LONDON AND WESTMINSTER BANK.—Liabilities on November 2, consisted of current accounts and deposits £25,162,704, acceptances and endorsements £1,742,021, and other liabilities £3,206,794 against which there were cash in hand and at Bank of England £3,049,607, money at call and short notice £4,256,042, Imperial Government securities £3,885,000, bills discounted, loans, &c., £19,950,563, and other securities £1,427,800.

Critical Index to New Investments.

Central Uruguay Company of Monte Video, Limited.

The shareholders having sanctioned the increase of this company's capital to £2,500,000 by the creation of 50,000 new £10 shares, the directors now invite subscriptions at par for 40,000 of these shares in the form of 5½ per cent. non-cumulative preference shares at par. Including the lines worked under agreements with the various extension companies the company controls 792 miles of line, and the new capital is required for recouping expenditure and for providing additional rolling stock and other facilities for dealing with the increasing traffic. The new shares rank in priority to all ordinary stock or shares, and will rank *pari passu* as regards dividends and capital with any further preference shares created, the total amount of which, however, is never to exceed 50 per cent. of the ordinary capital. Nett revenue for the past year, after providing for debenture interest and rent charges, amounted to £122,613, and as dividends on the present issue will require £22,000 there is ample margin behind them.

London Asiatic Rubber and Produce Company, Limited.

This company acquires from the Asiatic Rubber and Produce Company, Limited, of Ceylon, sundry estates in Malacca, Selangor, and Perak, in the Malay Peninsula, having a combined area of 6,673 acres, of which 4,190 acres have been planted with rubber. The vendor company has a nominal capital of Rs.1,500,000, and a paid-up capital of Rs.1,150,000, or £76,667, and in payment of the purchase price receives seven £1 shares for every fully paid Rs.100 share, or £80,500. In addition, the new company takes over liabilities of about £9,350, making the total price £89,850, which seems reasonable enough seeing that the properties are valued by independent experts at £101,000. The total capital of the present undertaking is £140,000, in £1 shares, of which only 107,000 are to be issued for the present, and all that the promoters get for their services is a call at par for three years on the remaining 33,000 shares. Nett profits of the vendor company for 1906, after writing off all preliminary expenses, were Rs.34,663, or £2,311; but there are 14,691 trees which will be tapable by next year, and with an increasing revenue from the cultivation of tapioca the directors anticipate that the nett profits for 1908 will be approximately £9,400, or sufficient to pay 7 per cent. on the paid-up capital. The company therefore starts with the advantage over many of its competitors of being almost immediately revenue-earning, and the shares look attractive, provided nothing happens to upset the rubber market.

Strand Hotel, Limited.

This company has been formed to acquire a long lease of the land formerly occupied by the buildings known as Exeter Hall and St. Michael's Church, and to erect thereon and carry on a popular-priced hotel. It is estimated that the building, which is to contain about 450 single and double bedded rooms, will cost, fully equipped and furnished, upwards of £200,000. The present ground rental value is considered by the surveyors to be worth £100,720, and from this is deducted the purchase money and expenses in connection with the acquisition of the leasehold interest of Exeter Hall, &c., amounting to £29,500. Messrs. Joseph Lyons, of J. Lyons and Co., Limited, and Montagu Gluckstein, of the same company, and of Salmon and Gluckstein, who are the originators of the plan, have already disbursed £34,134, which is to be repaid in cash without any addition for promoters' profits, and the fact that these two gentlemen are interested is perhaps a guarantee that no effort will be wanting to make the company a success. It is therefore all the more to be deplored that, with all their experience of company matters, they should have allowed themselves to be persuaded into saddling the enterprise for their own benefit with such objectionable things as deferred shares. The capital is £155,000, in £1 shares, of which 150,000 are 7 per cent. participating preferred ordinary shares entitled to half of any profits remaining after a like dividend has been paid on the deferred shares and provision made for reserve. Of these 100,000 preferred ordinary shares were offered for subscription, together with £125,000 4½ per cent. first mortgage debenture stock, and Messrs. Lyons and Gluckstein undertake to pay 5 per cent. interest to the shareholders on the calls paid up until the date of opening the hotel to the public. It is expected that the premises will be opened in the early part of 1909, and the directors believe that, after paying all charges, including a sinking fund to repay the whole cost of the building and equipments by the date of the expiration of the lease, the nett profits will not be less than £25,000. On this basis there would be a surplus of £5,375 to divide between the two classes of shares, and the total payments on the £5,000 of deferred shares would reach nearly £9,700.

Notes on Books.

A Key to Cornish Mining. By E. W. Meyerstein. (London: "The Mining Journal," 46, Queen Victoria-street, E.C.) Price 5s. nett.

Unusual skill has been displayed by the compiler of this little book, for Mr. Meyerstein has, without any great literary effort on his own part, so contrived the arrangement of his matter as to produce a cumulative effect upon the mind of the reader. His introductory essay is sensible, and to the point. He writes as a genuine believer in Cornish mining, and gives a succinct account of the variety of minerals that famous county can produce, as well as a summary of the present position of some of the mines. This done, Mr. Meyerstein fills up the book principally with extracts, and amongst these we find on page 22 and onwards some vivid and telling comparisons made by Mr. P. A. Le Feuvre, the Cornish correspondent of the *Mining Journal* between tin mines in Cornwall and gold mines in South Africa. The comparison is not by any means all to the advantage of South Africa, but this does not imply that it is an unfair comparison. On the contrary, Mr. Le Feuvre seems to have stretched a point now and then in order to give his South African samples a fair show. The rest of the book is made up with other extracts and tables of various descriptions, together with reports of what has been done by sundry reopened mines, the speeches of chairmen at shareholders' meetings, and so on. After going through the book we can confidently say that it is well worth studying. Many readers, we feel sure, will, after reading it, be inclined to rush away at once, and sell everything they have down to the limits imposed by considerations of decency in order to put as much money as they can lay hold of into Cornish mining. They need not do this, but that a great industry is being reawakened there with fine prospects of good, steady dividends, Mr. Meyerstein has, it seems to us, established beyond a doubt. In wolfram alone Cornwall has a marketable asset of incalculable value, and its tin is nothing like half exhausted.

Collectivism and Industrial Evolution. By Emile Vandervelde, translated by R. P. Farley. (London: Independent Labour Party.) Price 1s. 6d.

The translation of this book appears to have been very conscientiously done, and it is a good book. We say this in spite of our distrust of Socialism from many points of view. Mr. Vandervelde, however, assumes an intelligible standpoint in dealing with some of the problems which make his writing attractive even when the fallacy underlying much of it obtrudes itself upon the attention. What we can never fathom is how the Socialist ideal is to be in any measure made a reality. Where would these gentlemen begin? Are they to

work through the State or through co-operative associations, or through individualism? And if through the State, so called, how is the State to be kept honest? If mankind as a whole were struggling after a benevolent or a philanthropic ideal there might be some chance for Socialism, but there is hardly one human being in a million that troubles himself or herself with anything outside the range of the eyesight or the appetite. And upon material of this description it seems hopeless to build up any organisation which is to depend for its perfect working upon the intelligent assistance and co-operation, the self-sacrifice also, of every individual in a community according to his capacity. Our experience of Socialists is that they are usually among the most aggressively individualist and self-assertive of mankind, and we should like to see some of them at work "expropriating the expropriators," making an end of private property. We fear there would be a good deal of Ananias and Saphira business "in transferring to the State, which will have become an association of workers, the right of inheritance which to-day is limited to the domestic family." But it looks simple enough on paper when human nature is left out.

The Week in Mines.

This week we can speak a little more cheerfully about the Kaffir Circus. Business did not begin very brilliantly, but that could hardly be expected in view of the deplorable news from the States and the advance in the Bank rate to 7 per cent. There were evidences of forced selling, said to be on account of a large local operator out of his depth, and for a little while it seemed as though no check was to be administered to the recent prolonged fall. One or two shares were prominently weak, and Modders, such a great favourite at one time, and which have been as high as £15 or nearly for the £4 share, actually dropped below par, we believe for the first time in their history. But the sentiment underwent a fairly rapid change as the week progressed, and it is possible to speak of a few moderate rises. They were nothing remarkable at any point, but selling, particularly the forced realisations, came to an end, and that alone put dealers on good terms with themselves. Small buying orders, too, came along, the "shop" gave a fair measure of support, and bears got a bit funky, so that from one cause or another matters began to look a bit brighter. The news that the Bank of France was to come to our assistance with considerable gold loans helped this market as much as any, and the extent of the improvement among leading counters may be judged from the fact that Modders were soon up to 4½ again, developments being reported good, while East Rands rallied from 3 1/16 to 3 5/16, Rand Mines from 4 1/16 to 4 5/16, Ferreiras from 15¾ to 16¼, and so on, Cinderella Deeps kept pretty steady on the news that the company is to be allowed to work its mine through one shaft, and Van Ryns were helped by the report which shows a largely increased profit, and gives evidence that there is no real difficulty in replacing Chinese by Kaffirs. Last Sunday a further 2,000 coolies left the Rand and the country is gradually becoming sweeter. Deep Levels were inquired for in a quiet way, supposed to be connected with the dividend declarations due next month.

Land and Finance shares rallied rather slowly, but there was a moderate rise in Central Minings which, being a holding company, go up and down with Kaffirs. Other movements were quite small and do not call for special comment. Rhodesian things were decidedly heavy for a day or two, mainly due to exceptional weakness in Rhodesia Explorations. Many adverse rumours have recently been in circulation regarding this company, and the directors have issued a brief statement denying that a new share issue or reconstruction is contemplated, and stating that there are ample funds in hand for all requirements. The rally on this announcement was very slight, and a good many shares were said to have come out in connection with an Edinburgh failure. Chartereds remain in the neighbourhood of 15s., and pronounced flatness was shown by Bankets and Lomagundas. The Eldorado crushing shows a yield of 1,332 ozs. from 2,534 tons against 1,331 ozs. and 2,584 tons in September, so that the improvement on the first return is hardly worth considering.

One or two interesting incidents enlivened the Diamond division. The first was the announcement of the past half-year's results by the Premier company. Formerly the company issued monthly returns, but last May it was announced that, in accordance with the wishes of the Transvaal Government, the output would in future be issued half-yearly. The figures were somewhat startling. Altogether the company washed 4,081,293 loads of ground, which yielded 1,115,748 carats of diamonds against a production for the previous six months of 774,230 carats. And at the meeting of De Beers three years ago Sir Lewis Michell, obviously referring to the Premier, declared that the company had "no formidable rival." But there has been a change of time since then, and De Beers has sung rather small. The publication of the above figures did not help prices, Paris being rather a heavy seller, De Beers quickly falling to 17⅛, Premiers to 9, and Jagers to 4 1/16. A rally was followed by a further reaction, but subsequently the market picked up again, probably due to a statement from the De Beers Company that all future dividends will be paid free of Cape tax. Some shareholders had evidently become rather nervous about the 1 per cent. profit tax recently enacted.

West Africans moved irregularly, and Broomassies alternately rose and fell, the fluctuations being between 11s. and 9s. Nothing happened in the Egyptian list. The market for Broken Hill shares was better, and it was said that a good many buying orders from the Colonies could not be executed for lack of shares. This caused a sharp advance in several instances, and after a reaction when other things went down quotations picked up once more. Horse Shoes and one or two more showed improvement in the West Australian division, but Kalgurlis closed off, and Oroyas became dull on fears that the next dividend will have to be reduced to at most 2s. per share compared with 2s. 6d. on the last two occasions. Times were not so good, and plenty of Deep Leads can be had for next to nothing.

After the dividend of 47s. 6d. was taken off Rio Tintos they were in the neighbourhood of 69¼, but the Bank rate went up, the metal went down, and Paris sold, and 66⅛ was soon reached. That, fortunately, was the worst point touched, and subsequently fluctuations were between 67 and 68¼. Both Paris and Brussels were disposed to sell again in the middle of the week, and throughout the metal was more inclined to fall than to rise. Anacondas dropped to 6 7/16 and recovered again to 7, and the movements in other copper shares, though less pronounced, were decidedly erratic. Cobars got down to 5 3/16 and back again to 5⅜, and Capes and Spasskys were distinctly off colour. The Boston Consolidated wants more money. The concentrator has been built on a larger scale than originally designed, and has cost more than estimated, thanks to delays, costly materials, and labour, and so on. It is therefore proposed to issue £252,000 7 per cent. first debenture at par, repayable at £105, but convertible into shares in the proportion of £3 of debentures for each fully-paid £1 share, the capital being increased for the purpose. The issue has been underwritten, so shareholders need not increase their holdings. Tin was flat and shares went down.

Among Miscellaneous things El Oros, Mexico El Oros, Camp Birds, Le Roi II., and Strattons all opened dull, but most of them rallied later on. Indians and New Zealands showed irregularity. Mill's Day Dawns were inquired for. Little went on in the Siberian Group, but the movements were not profitable.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Simmer and Jack Proprietary.—We have no right to laugh at anything contained in the report of a company so great and majestic as this one, but the unconscious humour of the general manager made us smile on the day the Bank rate went up, so his remarks really must be funny. He has been talking about Chinese labour and is so in love with those gloriously happy Chinkees that he gives vent to one or two most comical statements. Here is one: "Although the number of Chinese has been reduced by 282, and the number of natives increased by only 71, we had no great difficulty in supplying the largely increased tonnage to the mill, and at the same time maintaining our development, which is clear demonstration of the efficiency of Chinese labour." That seems to be rather hard on the 71 niggers who replaced 282 coolies and caused things to go better than ever. But the general manager clearly dislikes the Kaffir, as he goes out of his way to tell us—and this is where we laughed most—that the "percentage of loafing" among the natives was 7.1 per cent. and among the Chinese only 2.5 per cent. But even so it is four to one in favour of the "boys," as the general manager unconsciously shows. The coolies are such careful chaps, too, that only seven in every thousand involuntarily come up the shaft at express speed through playing diabolo with sticks of dynamite and only four in every thousand die peacefully and naturally. The remainder insist on living for the glory of Simmer and Jack. The 320 stamps pounded away for all they were worth during the year to June 30 and crushed 717,524 tons of rock yielding 165,811 fine ozs., while 535,966 tons of sands gave 93,560 ozs. and 181,558 tons of slimes 14,110 ozs. By-products were 216 ozs. and the reserve gold declared in December, 1906, 10,478 ozs., is added, making a total of 284,177 ozs., worth £1,197,639—a tidy sum. Value per ton crushed was 32s. 1.9d., while the total expenditure of £694,507, including £22,759 for renewals and replacements, represents 19s. 4.301d. per ton, the latter showing a reduction of 1s. 8.074d. per ton. But the loss of Chinkee may puff the expenses out a bit in the future. Balance of profit works out at £503,133 and other items ran it up to £524,881 against which profit tax, &c., absorbs £37,601 leaving £487,280. Then we have the sum of £63,350 brought in to be taken into account and after again providing two 5 per cent. dividends £243,389 remains to be carried forward. That seems pretty satisfactory, and it is rather a pity that the investments have to be written down from £211,886 to £50,364 because it rather spoils the look of things. The necessary credit is taken from reserve.

Van Ryn Gold Mines.—This well-known and capably handled Albu company did thoroughly well in the financial year ended June 30 last. It crushed 266,940 tons for a recovery of 116,757 ozs. worth £495,686 or £1 17s. 1.6d. per ton, as compared with £427,384 or £1 12s. 4.3d. for 1905-6, an increase of £68,301 being no less than 5s. 1.4d. per ton. Working costs at the mine, including all administration charges, were £290,571, equivalent to £1 1s. 9.245d. per ton, leaving a working profit of £265,115 or 15s. 4.4d. per ton, which shows an advance of £66,182 over that of the previous year, and averages £17,093 per month. These expenses show a reduction of 1.383d. per ton. Revenue from other sources, including reserve gold, was £24,225, making the total nett income £229,340, from which the directors deduct £2,000 written off shares in other companies, £2,585 for depreciation, and £434 licences and rents, leaving £224,321. Transvaal Government and income-tax is £24,770 and the substantial contribution of £40,000 is made to reserve, after which the directors pay two dividends aggregating 30 per cent. and carry forward £20,520 compared with £10,968 brought in. The return to the shareholders is 10 per cent. better than for the previous year. A general resurvey of the ore reserves has been made throughout the mine and the general manager is able to announce an increase in tonnage compared with the statement contained in the previous report. The company has fully developed ore reserves amounting to 910,200 tons of an average value of 8.4 dwts. and there are also 209,400 tons partially developed, giving a value of 9.8 dwts. The expenditure necessary to block out the latter tonnage will approximate £10,000. There are an additional 699,100 tons developed and 188,590 tons partially developed assaying between 2 and 5 dwts., making a grand total, including partially and fully developed ore of 2,007,650 tons. It is estimated that the ore completely developed will yield about 33s. 3d. per ton, but by adding the partially developed rock, which is of higher grade, and excluding all blocks under 5 dwts. the recovery value is increased to approximately 34s. 6d. In view of these very large reserves, the question of increasing the crushing capacity is under consideration, and if an addition should be decided upon the low grade ore could no doubt be treated. The chairman, Mr. F. A. Gillan, and the managing director, Mr. George Albu, speak temperately on the labour question, and while expressing regret that the company's coolies have gone, are glad to be able to state that, according to the latest cable advices, all the vacancies caused by the repatriation have now been filled by native labourers. Some temporary increase in working costs is looked for from the change, but the directors believe that, as the efficiency of the native labourer increases, expenses will come down to their normal level. It must never be forgotten that until three years ago the mines were always run with native "boys." The total cost of the import and export of the coolies, including accommodation and so forth, is £58,955, practically the whole of which has been provided and written off from profits. The financial position of the company is extremely sound, and in future profits of £20,000 a month are looked for from which a 30 per cent. per annum dividend should be easily provided.

Rand Mines Deep.—A mine so famously named as this one ought to be going ahead at a great pace, but instead of that things seem to be at a complete standstill. The report only contains one paragraph of any particular interest, this being to the effect that in view of the absorption of the Rand Victoria Mines and the Rand Victoria East properties by the Simmer Deep the agreements entered into with the first-named companies for the sinking of joint shafts on their properties have been terminated, the total amount expended by this concern, £36,270, being refunded. The chairman's speech at the annual meeting was marked by equal brevity. He had nothing to say except that under present circumstances it is unlikely that capital would be found to enable a proprietary company such as the Rand Mines Deep to exploit any of its ground, and we should think the whole proceedings lasted no more than five minutes. Happily the company is one of the few that can afford to wait, its expenditure so far having been extremely small, as there are cash balances to the amount of £37,462, besides £126,100 lent on security. In the year to June 30 the revenue from every source was £7,774 and the outgo £591 short of this sum, so that the balance of general expenditure and income to date is reduced by such amount to £12,508.

Coetzeestroom Estate and Gold Mining.—This company's report and accounts cover a period of 18 months to June 30, and shareholders may remember that in July, 1906, a circular intimated that the directors had successfully completed their arrangements for an entire change in the management of the company's affairs in South Africa. Since then great efforts have been made to carry out the scheme laid down at the general meeting held in April, 1906, which was that the small amount of capital remaining should be devoted to a thorough examination of the old workings with the object of ascertaining their extent and values. In the event of the conclusion being favourable it was proposed to proceed with development as speedily as possible. But the underground workings were in such a chaotic condition and the ground so rotten that work below would have been far too dangerous to attempt. It was therefore decided to proceed with the development operations upon a system of large open cuttings from the surface which, although involving the removal of an immense amount of overburden, would in the end prove to be the most economical and satisfactory plan of opening up the mine. One of these cuttings was commenced above the centre of the old main drive and has now been carried down to the reef, which it is satisfactory to state is of fair size and value. So says the report, and in addition a certain amount of work has been done in some of the old surface workings with the result that a fair quantity of ore has been opened up which is now available for the mill and can be worked at a cheap rate. Instructions have been given for the overhauling of the plant and equipment, and to generally prepare for entering the producing stage as soon as can be safely arranged for. Balance of development and general expenditure account is £5,235 and the cash balance £1,190, while £500 is owing to sundry creditors.

Companhia de MoCambique.—Some slight modifications have been made in the form of rendering the African receipts and expenditures of this undertaking, and under the new method the revenue appears at £128,375 compared with £126,860, and the expenses are down from £119,011 to £116,919. Thus an increase in the receipts has been accompanied by a fall of £2,092 in the outgoings. Increases in the proceeds from the poll and hut taxes, which become greater year by year, is due to the improvement in the methods of collection and the constant rise in population. It is said that the natives like to come into the company's territory because of the good treatment they receive. A good many items of income showed decreases and the majority are explained by the severe depression still felt in all parts of South Africa. Another cause is the reduction in harbour charges in order to attract business to the port of Beira, and the directors have no doubt that in time the temporary sacrifices will be richly rewarded. As a rule the expenditure items do not show any great difference compared with the preceding year. Receipts in Europe were £5,507, but the expenditure was £18,638, and after making allowance for sundry depreciations of £11,750 there is a deficit for the year of £13,426. The company's balance-sheet is not of the sort to send the shareholders delirious with enthusiasm, as on the credit side we encounter such items as preliminary expenses £47,545 and administration in Africa £495,817. In referring to the administrative part of the business, the directors express the utmost confidence in the future successful development of the "vast colonial domain which the Portuguese Government has entrusted to us."

Pusing Lama Tin Mines.—This seems a wholesome, business-like proposition, moderately capitalised, and when it was formed in 1904 the vendor showed his faith in the prospects by taking the bulk of the purchase price in shares. The company may not always do so well as it did in the financial year to June 30, because tin will not always be booming; but we like the statement in the report that the efforts of the management have been directed more particularly to working the property in a systematic manner by treating a larger proportion of the low-grade material than hitherto, than to working solely the

more limited portion of richer deposit at a higher proportionate cost of production. To do this economically called for the erection of further stamps, and the directors sanctioned an increase of 15 head, making 30 in all. Recent advices are to the effect that the new stamps are working satisfactorily and giving excellent results. To pay for the extra equipment and provide means for the acquisition of further property the company offered last December 3,895 new shares at the price of £2 5s. each, the issue being fully subscribed by shareholders. During the past year the total sales of tin ore dressed ready for the market amounted to 13,191 piculs, which realised a net amount of £86,778. This means a production of approximately 785 tons of black ore, realising an average of £110 11s. per ton at the mine. Revenue from every source was £88,171, and after deducting expenditure of all kinds, including depreciation, the nett credit is £48,992. To that is added £2,487 brought forward, making £51,479, of which £44,221 has been used in paying total dividends of 45 per cent. Reserve gets £1,131, the directors are entitled to £1,449 additional remuneration, and sundry appropriations are made against property and other accounts, leaving £1,233 to be carried forward. Including premiums on shares, the reserve fund is now £6,000, and the position all round seems good.

TINGHA CONSOLIDATED TIN MINES.—This is one of the numerous mining companies that has lately gone in for a change of managers, and needless to say shareholders are promised much better things in the future than have been encountered in the past. There is room for improvement. During the six months to the end of July 170 tons of tin have been recovered of a total value of £20,259, the yield of tin per cubic yard being 1.54 lbs., and the value 1s. 7.7d. against expenses, including office and London charges, but not income-tax and depreciation of 10.99d. With the advent of additional and more powerful plant it is expected that the cost of mining will be considerably reduced, and that is just as well, because tin prices have experienced a very heavy fall during recent months, and on the old basis of costs profits would be small indeed. The engines and boiler referred to in the last report as about to be installed on the Copes Creek Extended lease have been doing good work. The additional plant, which was also intended for the Copes Creek Extended, is, on the advice of the new general manager, being placed between the Tingha South and the Tingha South No. 1 claims, and a much more powerful plant will be installed on the Copes Creek Extended lease than that originally ordered in consequence of the hardness of the ground. The directors finally decided not to exercise the option over the gold leases at Avoca on the grounds that the company's capital would be required to supply new plants to effectively work the tin ground. It is probably wise to stick to the one branch of mining. When the Copes Creek plant is going, which should be by December, it is estimated that the monthly yield will be 50 tons of tin from all plants. Three quarterly dividends have been paid on the 10 per cent. preference shares, with a balance remaining of £5,458 including £2,640 brought in.

TOMBOY GOLD MINES.—This well-known company performed quite brilliantly during the year which ended on June 30 last. Ore crushed was 110,597 tons, from which bullion to the amount of $1,281,688 was realised at a cost of only $516,388, so that the profit on operations was $765,300 or about $332,000 more than in the previous financial year. Other items of revenue came to $13,435, making the total surplus $778,735, a really fine figure. It gives a profit in sterling of £155,311, and if we add the balance brought in, £47,363, there is £202,674 to handle. Capital expenditure incurred during the year, £11,520, is written off, and although the dividend is raised by 4s. to 7s. 6d. per share, being 37½ per cent. against 17½ per cent., the sum carried forward can be increased by £31,000 to £78,653. Ore reserves are now estimated at 408,000 or an advance of 8,000 tons on the year, meaning that 118,597 tons have been exposed within the period. Operations on the Argentine group of claims have proceeded steadily with satisfactory results, and quantities of ore have been met with which promise to add materially to the ore reserves. In a circular issued last June shareholders were told of certain steps being taken to improve the mechanical and metallurgical equipment of the property, from which it was expected an additional saving of $1 per ton could be secured. These improvements have been energetically carried into effect, and the new system which has been applied to the concentrating department of the entire 60-stamp mill will very shortly be in operation.

HASTINGS (BRITISH COLUMBIA) EXPLORATION.—The directors of this company have just submitted the ninth annual statement of accounts covering the year to March 31 to the unhappy shareholders, many of whom, if they trouble to think at all, will probably arrive at the conclusion that the figures might usefully be presented in better form. One of the company's mines is producing ore of a sort, and it is high time that a proper profit and loss account were drawn up, so that the exact position year by year can be readily seen. At present everything is jumbled up in the balance-sheet, which is not enough for a company over nine years in existence. Up to May 31, 1906, there was a total expenditure of £23,100, which the general outlay for the past year increased to £25,548. Development has cost a further £7,297, but £166 has come in from interest, &c., and £9,574 as the proceeds of ore shipped to smelters, the deficiency now appearing at £23,104. The company has paid two dividends of 1s. each in the course of its career, one in March, 1902, and the other in March, 1905, and these, amounting to £6,034, still appear among the entries on the credit side of the account, another result of the company's accounting methods. Actually the deficiency is increased by this sum. Gross value of the ore shipped from the Arlington mine in the twelve months was $64,858, and the nett smelter value, including lead bounty payable by the Government, was $52,076. Cost of mining and shipping same to $40,224, leaving a gross profit of $11,852. A certain amount of development work has been accomplished on the Arlington vein, with no very brilliant results, and the local manager has been endeavouring to locate the vein near the old "Mackenzie" workings, but without success up to the present. The prospect now, as always, is clearly waiting for something to turn up. The wages of all classes of labour have increased, and the 1,000 men employed at the mine were raised 25 cents per day. At the same time, the prices of all supplies have been raised, which makes it very difficult to operate at a profit. Matters practical. Negotiations for the sale of the company's interests in the Blairmore coal lands were lately in progress, but the matter did not proceed, and a deposit and instalment amounting to $3,300 were forfeited to the company.

MUNGANA (CHILLAGOE) MINING COMPANY.—For the year to June 30 2,082 tons of copper ore and 9,288 tons of lead ore were treated at the Chillagoe company's smelters, producing 332 tons copper, 1,080 tons lead and 150,046 ozs. silver. In addition 6,526 tons of flux ore were smelted at a slight profit, and there still remain 8,097 tons of heap roasted ore awaiting treatment by the new plant of the Chillagoe company. Working account shows a profit of £35,151, and the balance brought in was £32,970, making with other items a total of £68,179. A sum of £10,079 is allowed for depreciation, and after meeting general charges a credit remains of £55,831. The financial position is fairly strong. The main shaft at the Lady Jane mine having become distorted through movement of the ground, the board authorised the sinking of a further shaft, which has been named the Saddler. This shaft is now down to 228 ft., and is being connected with the main workings. A considerable amount of work was carried on at this mine with satisfactory results, and in the Girofla Mines the shaft has been deepened to 410 ft., where very satisfactory developments have occurred, opening up a large body of ore containing highly remunerative values in copper, lead and silver. Ore estimated to be in sight and at grass is 179,071 tons, containing 4,532 tons copper, 28,984 tons lead and 1,746,771 ozs. silver. No dividend is recommended in the report, but at the meeting held in Melbourne in September the chairman forecasted an early payment.

DAY DAWN P.C. GOLD MINES.—The first general report of this Queensland company issued since the reconstruction does not make very encouraging reading. There was a loss on operations of £2,728, and it appears that since the issue to the shareholders in February last of the general manager's report to December 31 developments on the New Dawn Reef have been less favourable than anticipated. The output was increased, but unfortunately when the accumulated quartz came to be crushed in May last it proved to be of inferior quality to the stone previously raised from the same reef, so much so that the yield per ton was only £2 11s. 10d. as compared with £5 17s. 5d. and £6 8s. 2d. from the two previous returns. The loss on working is attributable to the poor May crushing, but since then work has been discontinued in the poorer stopes, and it is therefore anticipated that the next return will show a considerable improvement. The future of the mine is said to depend largely upon the result of further development of the New Dawn Reef and upon the success that may be met with in driving the prospecting crosscuts from the No. 2 underlie shaft towards the neighbouring Talisman and New Dawn property. A considerable reduction has been effected in the London office expenses and a further saving under this head will be shown in the ensuing year.

VICTORIA AND QUEEN GOLD MINING COMPANY.—It is not very likely that many people here are interested in this Charters Towers gold mining affair, and that is just as well, because it does not look as though the mine will make anybody's fortune just at present. During the six months from January 15 to July 12 the revenue from every source was only £1,083, against which the outlay was £1,908, so that the operations resulted in a loss of £825. This increases the debit to £5,606, and has the effect of reducing the cash balance from £4,605 to £3,755. A little work seems to have gone on at the various reefs contained in the mine, but the Victoria and Queen is apparently the only one that offers prospects worth following up. According to the report, the stopes above the No. 4 level and the intermediate level appear to be extending upwards and to the westward on stone of fair quality, but averaging small in size. There is, however, a large area available above these workings which would yield profitably if the vein of stone increased in size. A second prospective possibility is the extension of the winze from No. 2A level on Craven's reef a distance of 130 ft., thus opening up a block which has not yet been tested. The end of the No. 4 level where the Craven's and Victoria and Queen reefs have junctions is not at present very promising, but as there is a very large area to the eastward it may be considered advisable at a later date to continue this level as a prospecting work. Four parties of tributors are now at work in the mine, and the machinery and the whole of the plant have been maintained in good order, so says the report.

EGYPTIAN MINES EXPLORATION.—This company was formed in July, 1900, and has just reached its first reconstruction. It acquired sundry mineral and other rights extending over goodness knows how many thousand square miles and floated off certain subsidiaries, but the concessions for prospecting have now expired by effluxion of time. Mining leases, however, have been

applied for and granted by the Egyptian Government for 30 years from May 1 with the option of renewal for a further period of 10 years at modest rentals, while a continuation of the prospecting rights over an adjacent area of country comprising about 400 square miles has been promised by the Government, and can be acquired upon payment of the rental and fulfilment of the labour conditions. The mining leases granted are the Eridia and the Fatua, and it appears that these properties which were floated off as subsidiaries now revert to the company owing to the inability of certain parties to fulfil their obligations to find working capital. A sum of £23,000 has been spent on their development, and it is in order to proceed with this that the reconstruction is proposed. Just note that "if all the shares are taken up a sum of £43,000 will be raised which, with strict economy, should bring the mines into a developed state, and it should then be more easy to provide the necessary funds for the doubtless then more economical method of working." So there is no finality about the present plan, and this is a point which must be carefully considered. Independent reports on the mines are favourable enough, and the formation of a large milling and mining company with a working capital of £150,000 was proposed, but no such company could be floated last year. No, indeed, nor in this. The present company has an issued capital of £215,000 in £1 shares, but the new one, to be called the Egyptian Mines Development, will have £60,000 only in 5s. shares, meaning a heavy reduction. These five shilling shares will only have 1s. paid, and are to be exchanged share for share, so that 19s. per £1 share is written off the present capital and a further 4s. must be paid up. Do you join on these terms? We should not with prospects of more to come.

Fortuna Company.—Why do unsuccessful companies omit to publish a profit and loss account? The failure to do so does not minimise losses, and it would surely be a far better plan than to lump everything into the balance-sheet, which to some shareholders is like a Chinese puzzle. This concern is one of the culprits. In the twelve months to June 30 the excess of expenditure over revenue was £481. Not a large sum truly, but it builds the deficiency to date to £25,778, which is pretty serious, and means that nearly half the issued capital has disappeared. And lead is falling, not going up. Exchange is said to have played a very prominent part in the accounts for the past year, but for which there would have been some profit, we are told. Negative consolation, truly. Ore smelted in the year was 1,282 tons, producing 852 tons of first quality lead, and the slags and fumes are estimated to contain a further 111 tons of second quality, the total produce being equal to 94½ per cent. of the assay contents of lead in the ore. Accounts of the mine are not very encouraging. The failure of the ore shoot in the San Pedro section caused a drop in production of 668 tons, and as the extensive trials made in the deep levels have not resulted in the discovery of ore of value, it has been decided to lease this part on a 17 per cent. royalty, by which the company will be relieved of the somewhat onerous pumping expenses. Last year the returns from the tributers and leased workings have increased by 148 tons, which, being produced without cost to the company, considerably minimises the loss the falling off in its own production would otherwise have meant. A fair amount of stoping ground has been opened up in the O'Shea's section, and in the Santo Tomas section the shaft of that name has been sunk to a 140 fathom level. Trials have also been made on the San Joaquin mine.

Linares Lead Mining.—This particular company was incorporated as recently as July 5, 1906, but the name is familiar enough, the present concern being a reconstruction of the old Linares Lead Company. Accounts are now submitted for the twelve months to June 30, and they show a profit of £16,280, of which £223 applies to the period prior to incorporation and therefore cannot be distributed. Allowance for depreciation is £1,000, besides which £2,500 is set aside to general reserve. Two dividends of 2s. 6d. per share each, making 25 per cent. for the year, absorb a further amount of £11,350, leaving, after providing directors' percentage, a small balance to be carried forward. Negotiations are in progress for the acquisition of a lease with option of purchase of a property known as the San Leon mines, and the company has also acquired an interest in the Alamillos Company. Arrangements have been made for the purchase of the ores from the mines leased by the company to tributors and others, which by increasing the quantity dealt with in the smelting works reduces the cost per ton of ore smelted, and in addition should leave a fair margin of profit on the conversion of the ore into pig lead. Considerable benefit has been derived during the year from the high prices realised by the sale of the produce, which has more than counteracted the effect of the lower rates of exchange at which remittances to Spain have been negotiated.

Famatina Development.—This company's shareholders have just received a copy of the interim report of the mine superintendent showing the position of the mine after two years' continuous development work. The results are said to be far better even than those foreshadowed in the earliest reports on the prospects of the mines, "and from the statements already made from time to time by Mr. Thomas of the high values shown in the course of development it need only be pointed out that the mines continue to more than justify and confirm all such statements and expectations." All of which seems very encouraging, and we shall be more than pleased if everything turns out well. It is expected that by the end of the year at least 150,000 tons of ore will be in sight, most of which will be available for stoping, and this means more than three years' supply for the smelter. The erection of the latter is making excellent progress, and it is expected that smelting will commence during the month of January next.

Indian Collieries Syndicate.—During the year ended June 30 the company made a profit of £5,867, and brought forward £2,826 making £8,693. From this the directors propose a dividend of 10 per cent., and carry forward £1,193. The output of coal was disappointing owing partly to severe cholera among the labour, partly to a serious deficiency of railway wagons and partly to disorganisation consequent upon a change of management at the collieries. According to the report, the company's connection with Mr. White terminated somewhat abruptly, and Mr. Mackay is now in charge of the collieries. The market for coal has been and is very good, and a substantial portion of the expected output has been sold forward for three years from January 1, 1908, at remunerative prices, thus practically assuring profitable working for that period. During the year the capital of the company was considerably increased, and since the close of the accounts additional properties have been acquired, and are in process of development.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and November 2, 1907:—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Nov. 2, 1907.	Total Receipts into the Exchequer from April 1, 1906, to Nov. 3, 1906.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212

Bills otherwise issued	2,500,000
Treasury, November 5, 1907. Total	£15,713,000

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the week ended Oct. 14, $6,058, increase $2,305; aggregate from July 1, $65,612.

Argentine North Eastern.—Traffic receipts for week ended October 4, £2,999, increase £230; aggregate from July 1, £39,698, decrease £2,780.

Assam Bengal.—Traffic receipts for week ended September 28, Rs. 1,12,303, increase Rs. 22,659; aggregate from July 1, Rs. 11,88,814, increase Rs. 1,03,596.

Bilboa River and Cantabrian.—Traffic returns for October, £7,934, decrease £1,779; aggregate from January 1, £90,975, decrease, £10,553.

Buenos Ayres Central.—Gross receipts for Sept. and Oct. £23,746, increase £5,137.

Canadian Northern Railway.—Traffic receipts for 10 days ended Oct. 31, $309,800, increase $66,900; total from July 1, $3,549,400, increase $911,200.

Egyptian Delta.—Traffic receipts for week ended October 19, £5,856, decrease £538; aggregate from January 1, £140,937, increase, £16,869.

Lucknow Bareilly Railway.—Traffic receipts for week ended October 5, Rs. 31,567, increase Rs. 9,283; aggregate from July 1, Rs. 3,65,772, increase Rs. 65,338.

Midland Uruguay.—Receipts for month of October, £6,600, increase £864; aggregate from July 1, £23,430, increase £2,000.

North Western of Uruguay.—Traffic receipts for Sept., $18,500, decrease $2,142; aggregate from July 1, $61,300, decrease $3,046.

Quebec Central Railway.—Traffic receipts for the 4th week of October, $30,639, increase $2,901; aggregate from January 1, $851,935, increase, $69,654.

Quebec and Lake St. John.—Traffic receipts for Sept. $65,604, increase $3,149, aggregate $471,220, increase $52,696.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended October 5, Rs. 21,818, increase Rs. 1,248; aggregate from July 1, Rs. 2,98,516, increase Rs. 51,126.

Uruguay Northern.—Gross receipts for month of Aug., £1,934, increase, £373; aggregate from July 1, £3,675, increase £105.

White Pass and Yukon Railway.—Traffic receipts for week ended October 31, amounted to $18,814.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending November 2, £1,380, increase £59; aggregate from July 1, £23,810, increase £1,508.

Cockermouth and Keswick Railway.—Receipts for week ending November 2, £787, increase £41; aggregate from July 1, £18,482, increase £570.

East London Railway.—Traffic receipts for August, £3,769, decrease £504.

East and West Yorkshire Union Railways.—Traffic receipts for the week ended November 2, £477, increase £68; aggregate from July 1, £7,838, increase £1,633.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending October 30, £669, decrease £31; aggregate from Jan 1, £35,377, decrease £1,596.

Blessington and Poulaphouca.—Traffic receipts for week ending October 30, £12, increase, £1; aggregate from July 1, £464, decrease £45.

Bristol Tramways and Carriage.—Traffic receipts for week ending November 1, £4,867, increase £97; aggregate from July 1, £96,254, decrease £1,020.

British Electric Traction.—Receipts of all the Associated Companies for the week ending November 1, £26,863, 421¾ miles.

Burnley Corporation.—Traffic receipts for week ending November 2, £1,238, increase £125; aggregate from July 1, £23,368, increase £973.

Dublin and Blessington.—Traffic receipts for week ending October 30, £114, decrease £5; aggregate from July 1, £2,901, decrease £77.

Dublin and Lucan.—Traffic receipts for week ending November 1, £113, increase £11; aggregate from July 1, £2,648, increase £231.

Dublin United.—Traffic receipts for week ending November 1, £5,950, increase £1,305, aggregate from July 1, £127,654, increase £29,149.

Edinburgh and District.—Traffic receipts for week ending November 2, £4,967, increase £369, aggregate from January 1, 1907, £219,416, increase £1,154.

Hastings and District.—Traffic receipts for week ending October 31, £851.

Isle of Thanet.—Traffic receipts for week ending November 2, £314, increase £55; aggregate from Oct 1, £1,862, decrease £64.

London County Council.—Traffic receipts for week ending October 26, £31,700, increase, £4,733, aggregate from April 1, £947,491, increase £155,813. Miles 116¼, against 106¾.

London General Omnibus.—Traffic receipts for week ending November 2, £19,477, decrease £1,789, aggregate from July 1, £382,027, decrease £30,820.

London Road Car.—Traffic receipts for week ending November 2, £8,005 increase £1,353, aggregate from July 1, £156,008, increase £13,859.

London United.—Traffic receipts for week ending November 1, £5,817, increase £494, aggregate from January 1, £289,236, increase £12,137.

Provincial Trams.—Traffic receipts for week ending November 2, £1,531, increase £109; aggregate from Oct 1, £7,678, increase £383.

Rossendale Valley.—Traffic receipts for week ending November 1, £198 increase £3.

Sunderland District.—Traffic receipts for week ending October 30 £156, increase £70, aggregate from Jan 1, £20,997, increase £2,243.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending November 3, £1,272, increase £218, aggregate from January 1, £51,409.

FOREIGN.

Anglo Argentine.—Traffic receipts for week ending November 4, £18,549, increase £1,251, aggregate from January 1, £732,700, increase £70,040.

Auckland Electric.—Traffic receipts for four weeks ending October 11, £10,214, increase £486, aggregate from January 1, £103,888, increase £4,054.

Brisbane.—Traffic receipts for month of October, 1907, £13,537, increase £1,816.

British Columbia Electric.—Nett earnings for September $[illegible], increase $14,210. Aggregate nett earnings including income from investments from July 1 to September 30 $[illegible], increase $[illegible].

Buenos Ayres Grand National and Nova Tramways.—Traffic receipts for week ending November 4, £7,950.

Calcutta.—Traffic receipts for week ending November 2, Rs. 43,148, decrease Rs. 3,654, aggregate from January 1, Rs. 21,19,185, increase Rs. 1,78,142.

Cape Electric.—Traffic revenue for month of September, Cape Town, £9,336; Port Elizabeth, £2,721.

Carthagena and Herrerias.—Traffic receipts for the month of October, £4,007, increase £332; total from January 1, £45,109, increase £3,336.

Geneva Trams.—Earnings for September, fr. 228,011 increase fr. 8,467.

Kalgoorlie Electric.—Traffic receipts for August, £4,549; aggregate from January 1, £31,955.

Lisbon Electric.—Earnings for September [illegible].

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 17,721, increase 18¼ per cent.; aggregate from January 1, Rs. 3,44,483, increase 20¾ per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for September £43,000.

Mexico.—Nett earnings for month of September, $203,325, increase $21,796, aggregate nett earnings from January 1, $1,545,283, increase $93,126.

Perth (W.A.) Electric.—Traffic receipts for week ended November 1, £1,532, increase £104; aggregate from January 1, £61,547, decrease £2,078.

Rio de Janeiro.—Nett earnings for September, $212,460; aggregate from January 1, $1,530,534.

Sao Paulo.—Traffic returns for September: nett earnings, $114,093, increase $11,093; aggregate from Jan 1, $[illegible], increase $28,124.

Twin City Rapid.—Traffic receipts for the month of September, $561,446, increase $27,295, aggregate from January 1 $[illegible], increase $322,835. Nett traffic receipts, $310,170, increase $12,915, aggregate from January 1, $2,35[illegible], increase $[illegible].

The Investors' Review.

The Week's Money Market.

BANK RATE 7 PER CENT. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

Since the middle of September the Bank of England has lost nearly £10,000,000 nett of gold by export, and in the fortnight ended yesterday the nett exports were £4,298,000. It should be necessary merely to state these facts to demonstrate that a 7 per cent. Bank rate had become imperative. The Bank of England simply could not permit United States financiers to take away more of its metallic reserve, and if a 7 per cent. Bank rate is not sufficient to fend off further shipment of the metal then we must have an 8 per cent. rate, and a 9 per cent. rate, until it becomes impossible for gold to be withdrawn. The reserve in the Banking Department is now down to £17,695,000, and has declined £3,139,000 on the week. It is £1,382,000 below the figure of a year ago, and there is a larger internal suction upon the gold reserve than usual at this time of year. All the gold has not yet gone to meet the expansion of Scotch bank paper money at the November term, and the average amount sent in recent years has only been about £750,000. But the internal circulation in coin was increased by £884,000 during the past week, and hence the total reduction in the coin and bullion held has been £3,004,000, and the stock is now down to little more than £28,725,000. Were it permitted to go much lower, nervousness would certainly develop regarding the general banking position at home.

It is no doubt true that the Bank of France is coming to our assistance, and already £1,245,000 has come in, but it is only borrowed gold, as we explain elsewhere, and moreover the Bank of France cannot spare much without endangering its own position. Already it has had to advance its rate to 4 per cent., and although its return is rather better than last week's, thanks to a shrinkage of £3,500,000 in the note circulation, it is still far from being relieved from the danger of its notes falling to a discount. We must therefore depend upon our own resources, and the more we can do this, at whatever sacrifice, the sooner will the present crisis be over. Already New York is finding difficulty in obtaining further credit with which to buy gold, and the metal booked to go is only the amounts ordered early in the week.

On the whole the open market is backing up the Bank, and discount houses yesterday put their three months' rate up to 6¾-⅞ per cent. The six months' rate, however, was given at only 6 to 6¼ per cent., but these should be very profitable figures indeed, because the crisis, if well handled, is likely to be over before the end of the year. Part of the business in short bills still goes to the Bank, but there is not a great deal of three months' bills in the market. The best of them are bought for Paris. There is really no free discount market at present, although a little more disposition was shown to do business this morning, and some houses worked at the finer rates quoted in our table. One or two of the banks also were buying bills from the brokers at 6⅞ per cent., and credit is available in places.

Other Deposits have shrunk to the extent of £1,413,000 in the past week, but their total is still about £43,440,000, and less additional borrowing at the Bank than might have been expected occurred during the week, so Other Securities went up by no more than £1,260,000, many bills held by the Bank having doubtless run off against the new advances. The market was also assisted by the release of Treasury balances to the extent of nearly £500,000.

Short loan rates have therefore been comparatively easy, and seven-day money went up yesterday to 5½ per cent. as the highest quotation. The usual rates both yesterday and to-day were 5 per cent. for call and 5¼ per cent. for notice money. No change has been made by the clearing banks in the rate allowed by them on deposits, which remains at 4 per cent., but the discount companies have advanced their allowance by 1 per cent. to 5 per cent. for call money and 5¼ per cent. for notice money. Bills are not coming forward freely, much of the commercial business being done on a cash basis—at any rate, the American part of it. It is, indeed, suggested by the *Times* City Editor that some part of the heavy internal drain of sovereigns is due to private shipments of gold to New York to meet engagements there, it being impossible to create credit in the States wherewith to move the cotton and other produce bought. Whether this be so or not, it is undoubtedly true that the smash in America is the main, although by no means the exclusive, source of our present troubles.

Next week £609,000 in raw gold is due in from South Africa, and £35,000 in bars from other sources. The American demand shows no signs of abating, and the price in the open market is still 78s. 0⅛d. per oz. But on Monday last New York paid nearly 78s. 1d., including brokerages, for what it bought.

On Monday the Caledonian and North British Railway companies will pay out over £770,000 in interest and dividends. Other disbursements on that day bring the total for the week up to nearly £1,000,000, and the calls on new issues falling due within the week come to less than £600,000, the heaviest being £200,000 on Buenos Ayres and Pacific debenture stock, payable next Friday. The aggregate for that day is, in fact, nearly £500,000, since £100,000 is then due on Cargo Fleet debentures and £125,000 on Loa Nitrate debentures, besides smaller sums.

SILVER.

Prices for silver steadily improved during the first part of the week owing to some fair purchases of both spot and future metal being recorded on Chinese account. The highest points were reached on Wednesday, when quotations were 28 1/16d. and 28⅜d. per oz. respectively, but Indian advices are still unsatisfactory, and when China turned round and became a seller the market reacted to 27 3/16d. per oz. for cash and 27 3/16d. per oz. for delivery two months forward. Applications for the Rs. 30,00,000 Council drafts on India last Wednesday amounted to Rs. 61,30,000, all in bills, and tenders at 1s. 3 29-32d. received about 47 per cent. Next Wednesday another Rs. 30,00,000 will be offered.

BANK OF ENGLAND.

The Stock Markets.

The 7 per cent. Bank rate, with a by no means remote possibility that it may go higher, constitutes a severe trial to the Stock Exchange. It is happily a trial that never lasts very long, and therefore very dear money should not permanently hurt any individual firm or company whose finances are in a healthy state. It has often been said in this weekly survey that the Stock Exchange is better able to stand a shock like that given to it this week than we ever remember it to have been. This is true, and yet the market stands to be severely hit by the enormous mass of outside speculation still unliquidated, speculation which has been kept from ending in bankruptcy by the banking facilities accorded to the gamblers. A warning of what may happen was given to markets by the liquidation of an outside gambler's account, which had to be accomplished immediately after last pay-day. Until this gambler pulled up, or rather his brokers, the Stock Exchange knew nothing about his position, but the failure of the firm through which his dealings were mostly conducted brought to light a staggering mass of accounts open for the rise in securities of every description—mostly of the "wild-cat" order, but including, it is said, £350,000 in Consols, of which amount the said gambler has been a bull for years past—since the war some say; and when suspension of the brokers took place the whole of the paper hitherto carried outside the market was flung back upon the Stock Exchange. The account had to be closed, and the market had to assume the burden of carrying the stuff flung overboard. Obviously a few experiences of this kind might bring the Stock Exchange into great danger, however free of commitments it itself may be, and we can only hope that the banks and outside finance houses which have contributed to create the monstrous speculation slowly liquidating for the past five years or more will be able to continue to support the clients who have their money until the present acute credit distress has passed away.

Business has not been good this week in spite of the fact that investment does play some part in helping markets; but neither has it been very bad, and the removal of fears about a railway strike had a most stimulating effect yesterday upon Home Railway stocks. In other directions, however, the tendency of prices has been downward, and we do not see how they can take a turn for the better until it is seen whether a 7 per cent. Bank rate stops the export of gold. If it does not, liquidation must continue, because the excessive rates for money that will now be current must drain away the last sixpence from multitudes of outside gamblers who have been hanging on in the desperate hope that they would get a chance to reduce their losses. Throughout the kingdom, as throughout the world, the fashion of having recourse to credit in order to carry securities to amounts far beyond the means of the nominal holders has produced such a mass of rottenness as even a 7 per cent. Bank rate may not be enough to sweep into oblivion, strong purge though it be.

What course should the public pursue in present circumstances? It should calmly stand by, and above all things refuse to be tempted to enter into any commitments whatever demanding recourse to credit. This is not the time to buy bulls of any security, although we continue to insist that it may not be a bad time to invest. Those, indeed, who have spare cash lying by ought to come to the help of the fettered market by judiciously investing their money in proved securities whose quality warrants the expectation that they will recover and stand firm as a rock when the present trials are over. Above all, feelings tending towards panic should be resolutely suppressed. Instead of looking at the blackest side of everything, men should turn their minds towards the hopeful signs, towards the splendid exhibition of national energy given by the returns of our foreign trade, towards the unassailable position occupied by this country as the greatest creditor nation the world ever saw. Let the good side be looked at, and not the bad. The mere fact that through our foreign trade and investments abroad the country must at the present time be drawing in from, or earning abroad, something like £200,000,000 per annum, ought to reassure us and prevent any giving way to blind alarm. Only in the event of important debtors

failing us, of which there is no present indication, would there be ground for nourishing dread. After all, the country has before now passed through crises as severe as this, if not as universal or widely diffused. But the very universality of the disease has comfort in it because where all are involved losses must be distributed to an extent never before experienced, and the more they are distributed the less probability is there that a complete breakdown will occur at any one point. The United States itself will recover its equanimity by and by, and may be taught a little wisdom by its experience and a little more respect for old-fashioned honesty.

Consols and Other Trustee Stocks.

The above-mentioned incident in the Consol market had the effect of depressing the price of the stock quite irrespective of dear money, but that also played its part, and when most borrowers on the stock at the monthly settlement found themselves compelled to pay 6 per cent. for money to December some of them had to sell. The exhaustion of operators for the rise in Consols has been continuous for the last six years, and it is consequently one of the weakest markets in the Exchange, although the commitments of dealers there may not be serious. The week's decline was 15s. in the cash price, because much of the selling was to liquidate the outside gambler's account, but the price for the December account is only 10s. down on the week, and no other Home Government security fell more than that. India stocks, however, continue depressed on the famine prospects, and the 3½ per cent. stock is £1 down. Amongst other trustee securities the Bank of England stock has lost 5½ on the week, and some of the Municipal and County stocks are lower, as well as Mersey Harbour Board stock. Some further decline has also taken place in London County stocks, although on the whole there has been no disposition to disturb this part of the market. The Colonial list displays losses where any change has taken place. They have been rather numerous this week, affecting New South Wales, Queensland, Victoria and New Zealand stocks to the extent of 10s. or £1, and the liquidation of a gambler's account has driven Rand Water Board stock down 4½. The market for it is so weak that any attempt to sell causes an immediate recoil. For all that the stock should be a good security, and it now looks cheap.

Foreign Stocks.

Continental Bourses are labouring in the same trough with all the rest, and the advance in the Bank of France rate to 4 per cent. has naturally sent a shiver through the Paris Bourse. French Rentes, however, have not gone back so far, but German 3 per cent. stock has receded to little more than 80, Prussian Consols going down with them, and all the inter-Bourse list has been slipping down, Argentine and Brazilian issues being from 1 to 2½ lower. Chilian bonds, too, have continued to lose ground, Chinese are weaker, and the earlier issue of Japanese 4 per cents. has lost 25s. on the week. Business has been heavier in Japanese bonds and Russian 1906 scrip than anywhere else, especially towards the end of the week. The Russian Government has now admitted a deficit of £19,000,000 on its Budget, and we may be sure that this is the minimum.

Home Railway Stocks.

Until the announcement appeared that an agreement which averts a strike had beeen arrived at between the railway boards and their servants through the diplomatic skill of Mr. Lloyd George, the Home Railway market was sickly and almost devoid of business, but it woke up on Thursday morning and for most of the day speculators for the fall and eager speculators for the rise were buying back or buying with feverish energy. Before the day closed some of the bloom had gone off, but compared with a week ago most of the prices were up to a quite cheering extent; in fact, Central London stock was the only laggard in the list, and other things like Great Western and North-Western closed 3 higher, while the gains in Caledonian, North British preferred, Great Eastern, Lancashire and Yorkshire, Great Northern preferred and North-Eastern were from 1 to 2½. This market therefore provided a most cheering relief to the general gloom, but investors must not run away with the idea that prices are going to continue to rise, because if they do they doom themselves to disappointment. No effect, for instance, was produced amongst the privileged classes of stocks which are all lower where changed and the decline has affected stocks like Great Western rent charge, North-Western and North-Eastern guaranteed, as well as the 6 per cent. debenture stock of the District company. Among preferences, too, like Caledonian, Great Central, as well as some Metropolitan and South-Eastern issues, there are losses on the week, but Chatham preferences have recovered, especially the arbitration preference.

Indian and Colonial Railways.

All the Indian list is again down with the exception of the debentures of the Nizam's Railways, in which, however, scarcely any business has been done. In others declines have ranged from 10s. to £3, the heaviest fall being in Bengal and North-Western stock. Much excitement has again developed in the Canadian Pacific market, and that company's shares are down 6½ on the week as a result of the strenous conflict waged between bull and bear. The Continent continues to unload these shares, and neither United States nor Canadian markets are able to absorb the paper thrown out. Grand Trunk stocks have also been flat and the ordinary is getting back towards the rubbish price which tempts the shrewd buyer. It is not there yet, however, and the largest fall took place in the third preference stock, down 4¼ on the week, this being followed by losses of 3 and 4 respectively in the first and second preference stocks. On the other hand, Mashonaland debentures have rallied 4 and 6, while those of the Rhodesia Railways are 2 and 6 better xd. We hope they will continue firm, so that prudent holders may escape because Money market conditions now ruling are sure to prove the destruction of many impostures.

United States and Foreign Railways.

It has continued to be most difficult work dealing in Yankee Railroad shares, and yet a fair amount of business has been transacted in Union Pacific, Atchison, Missouri, Southern Pacific and Pennsylvania shares. Generally speaking prices have relapsed, but some few are better on the week, such as Milwaukee, New York Central, Norfolk and Reading. The declines have in no case been so severe as in Canadian securities. Bonds, though, are still losing ground where they move, and we must again warn the public to abstain from buying even the best of those for the present, until we see to what extent the chaos is allowed to spread ruin in the Republic.

Foreign Railway stocks have suffered more than they deserve, and we really cannot account for the weakness in the Argentine market except by inference. Probably enough speculative holders in other stocks, people gambling on margins and such like, have been obliged to part with good stocks in order to liquidate their accounts. Also there have been such heavy issues of additional capital by some of the leading Argentine Railways as to have weakened the solidity of the market. Much of the new stock, in all probability, has not yet had time to reach the custody of the ultimate investor and unplaced, or half-placed, stocks are always dangerous ballast in a storm. On grounds like these the fall of from 2 to 4 in strong securities like Buenos Ayres Great Southern, Rosario, Buenos Ayres and Pacific and the Great Western common may be explained. The whole foreign list, however, is depressed and Brazilian stocks, if not quite so heavily punished, are just as weak as Argentine, while the Mexican group has been flabby to a degree. Uruguay Railway issues, though happily overlooked, have also dropped in many instance, and the Cuban group has been quite flat, United of the Havana ordinary stock having lost 4. Antofagasta ordinary has also been conspicuously depressed.

Banks, Breweries and Commercial Securities.

Very few Bank shares have risen on the week, but there are one or two minute advances to be noted, Capital and Counties shares, for instance, having risen ½ as well as the shares of the Imperial Bank of Persia, but Home and Colonial Bank shares were, if they moved at all, rather lower, and the adverse changes are so numerous as to indicate a certain degree of nervousness. This we hope will not develop, because if the public loses confidence in our banks all is lost. Happily there are no indications that sales are being pressed, and in most instances we should infer that the flatness comes from the dealers who, ever ready to anticipate events, put prices down in the hope of keeping sellers away. At times like these this policy is not good. The Brewery list may be passed by in silence, with the one remark that Watney, Coombe's preferred stock has now got down to about 35, and £1,000 nominal of it could not be sold at that. London Docks deferred stock was dealt in yesterady at 53.

Most of the movements in Industrial and Trading securities are downward, and there has been a sharp relapse in the "A" and "B" debenture stocks of Goldsbrough, Mort and Co. They have simply been marked down. English Sewing Cotton debenture stock is also lower, and a good many other debentures have suffered to a greater or less extent. Gordon Hotels 4 per cent. debenture stock, for example, has been pushed down 3, and the debenture stock of J. R. Roberts' Stores is 5 lower, while Underground Electric profit-sharing notes are now quoted at 40 to 45 with business almost impossible in them. Telegraph Construction shares, too, are down 2½, and it is hard to find any favourable change whatever whether amongst stocks, bonds or shares. Even Humber shares have slipped back a trifle on the proposed new issue, and the cycle share market generally is out of heart, though not depressed further. English Cotton Spinners shares, however, are firm, and Aerated Bread shares have gone up to 6.

All active securities in the Electric group have fallen back with the exception of South London Electric ordinary shares, which have been marked up ⅜, and the debenture stock of the Knightsbridge Company, quoted 1 higher. Bournemouth and Poole debenture stock is also rather firmer, and was actually bought yesterday at 101½. Other changes, however, are losses of from 2s. 6d. to 7s. 6d. or 10s., and almost the whole of them have been unaccompanied by dealings. Amongst Financial Land and Investment descriptions Hudson's Bay shares and Peruvian Corporation preference stock and debentures have been most depressed. Business has not been lively in any one of them. The other movements are not numerous, but nearly all of them are declines. Egyptian Estates ordinary shares, however, seem to have attracted a buyer or two. Chartered debentures closed 1 down. The movements amongst Financial Trust securities are just in line with everything else, but here the dealings are rarer than almost anywhere else outside the Brewery list. Gas stocks, too, have changed for the worse in a few instances, and on very slight provocation. As for the Insurance list, it displays more weakness than might have been expected, but that also is due in great measure to the lack of business. London Assurance and Norwich Union shares are both 1 down, but the other declines have in no instance exceeded ½. Again the common and preferred stocks of the Carnegie Steel Trust show advances, and the play in the common was almost frenzied yesterday, most of it being on Yankee account. The public here, however, have been drawn into this bubble combine to a greater extent than we like to think about. The market for our own Iron, Coal and Steel securities has been rather listless, and prices have accordingly been but slightly disturbed. Some few share issues have rather improved, and among them Cammell, Laird's ordinary have gained ¼ on the news that the company has been restored to the Government list of contractors on conditions which seem to point to hidden corruption somewhere, but whether amongst the officials of the Admiralty or those of the company it is impossible to say. Some few debenture issues are down, however, particularly Beardmore's, which have lost 2½. Fairfield debenture stock is also 1½ lower, and the only favourable changes in this class of stock are gains of 1 each in Armstrong, Whitworth and Pease and Partners debenture stocks. Shipping securities are steady on the whole, but Furness, Withy's assortment has relapsed on the news about that fresh capital juggle noticed elsewhere. Orient debenture stock has also been marked down 3, and Cunard fully-paid shares are ½ lower in spite of the dazzling performances of the *Mauritania*. Royal Mail ordinary stock and P. and O. preferred have both been marked 2 lower, but there does not seem to be any noticeable amount of selling in either. Telegraph securities have now and then lost ground, but that list may be considered steady on the whole, and nothing of much importance has happened amongst Tramway and Omnibus securities. B.E.T. preference shares and 5 per cent. debenture stock, however, have been flat, and naturally London General Omnibus issues are conspicuously lower. On the other hand, San Paulo Tramway shares have been put up.

Friday Evening's Markets.

It amounts to little, but the mood in the Home Railway department was again cheerful, and prices would have been dancing uphill but for the money shadow. Other markets were calm, and there was quite a good business doing in the Kaffir Circus, though it was small. Even Yankees looked up, because a tale went round that Congress is to be summoned in special session to empower the President to issue £20,000,000 more greenbacks. Few knew in the least what that would mean, but the idea of money of any sort getting loose conveyed a sense of cheerfulness, and the market flickered up, only to sag again in places, for it gets little or no effective support.

A rather important suspension in Manchester was reported this afternoon, as well as one in New York.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: 2⅛ p.c. Ann. 1905, ½, to 79⅞-80¼, do. Ac. ¼, to 80-80⅛, Irish Ld. Stk. Ac. ⅛, to 83-84, Transvaal Gov. Ac. ½, to 92-93, Bk. England 5½, to 263-269, India 1931 Ac. 1, to 97½-98½, do. 1948 Ac ½, to 84⅛-85⅛, Indian R. Paper 1854 ⅛, to 63½-64¼.

Company Reports and Balance Sheets.

⁂ *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

Buenos Ayres and Pacific Railway Company.

The annual report of this go-ahead enterprise for its year ended June 30 last reveals satisfactory progress. Gross receipts came to £2,074,591 and working expenses to £1,199,842, leaving a profit of £874,749, that is to say, receipts increased by £456,226 and working expenses by £317,438, the proportion of expenses to receipts having risen from 54.52 per cent. in the previous year to 57.84 per cent. last year. The nett profit is none the less £138,788 larger and enables the board to meet all charges upon the various debenture stocks and guaranteed interest and dividends on the Bahia Blanca and North-Western and Villa Maria and Rufino stocks, leaving enough to cover the dividends on the two preference stocks and to pay a balance dividend of 4 per cent. on the ordinary stock, which gives it 7 per cent. for the year, tax free. Then after placing £5,000 to the staff fund, £40,048 is left to carry forward as against £18,123 brought in. The company's reserve fund now stands at £844,282, and although it is spending capital with great freedom there appears to be every justification for that course, as the lines are responding with satisfactory increases in traffic. There was last year an increase of 43¾ per cent. in the number of passengers and 23 in the receipts therefrom; in fact, the number of passengers carried last year was more than five times the number for the year ended June 30, 1900. Freight receipts were also good and show large increases both in weight and money, wheat especially having given £258,225 last year compared with £171,194 the year before. Some decline is shown in the number of horses carried and in the sheep, but cattle showed an increase, and the decline in money received for the carriage of live stock of all kinds was little more than £4,000. Enormous works are in progress on what may be called the two termini of the line, viz., Buenos Ayres and Bahia Blanca, and elsewhere. Bahia Blanca indeed will soon be the most commodious and easily accessible port of the Republic, and room will be found there for both the Buenos Ayres and Pacific and the Great Southern Companies, now working somewhat in rivalry to extend the facilities of the port. It has already been notified that the directors intend to create another 100,000 new shares of £10 each, and at the shareholders' meeting a resolution will be proposed to convert 200,000 existing ordinary shares of that denomination into stock.

Bahia Blanca and North-Western Railway Company.

As a leased property of the Pacific Company this little road is also showing development, and its mileage is rapidly extending. For many a day the length of the line was only 236 to 240 miles, but in the past year it jumped to 439 miles, and partly for this reason traffic receipts rose from £166,400 to £269,789.

The report issued by the company is of quite secondary interest now since the charges imposed by its stocks are taken care of by the Buenos Ayres and Pacific Company.

CORDOBA AND ROSARIO RAILWAY CO., LIMITED.

Failure of the maize crop through damage by locusts and drought, and injury to the wheat and linseed crops by frost hit this company pretty severely during the year ended June 30, and gross receipts fell short of expectations. A small decrease in the number of passengers carried caused a reduction of $2,852 in earnings from that branch, but in goods traffic there were increases of 13,775 tons and $110,555. Foreign traffic amounted to 241,480 tons, transit traffic to 213,075 tons, and local traffic to 158,952 tons, representing advances of 2,541, 1,633, and 9,601 tons respectively, while the gains in receipts were $41,147, $29,661, and $39,746. Gross earnings were therefore $96,794 up at $2,640,802, but unfortunately working expenses were $126,705 up at $1,580,258, owing to the enhanced price of coal, which cost the company some $70,000 more, and to the higher wages paid, with the result that nett revenue was $29,911 smaller at $1,060,544. Converted into sterling this gave £92,995 or £2,874 less, and with £118 from transfer fees the available balance came to £93,113 compared with £96,203. Interest in full having been met on the 4 and 6 per cent. debenture stocks and on the income debenture stock £4,805, or £1,199 less is transferred to special reserve in accordance with the 1895 scheme of arrangement and the 6 per cent. first preference stock receives only 3¼ per cent. against 4⅛ per cent. a year ago, and even to pay that £284 has to be withdrawn from the balance standing to the credit of the holders of the first preference stock, reducing it to £201. Capital expenditure amounted to £39,202, mostly for rolling stock, and in order to provide the necessary funds £50,000 4 per cent. debenture stock was sold at an average price of £89 4s. per cent.

TALTAL RAILWAY CO., LIMITED.

During the year ended June 30 further developments took place in the nitrate industry, and there are now 12 officinas at work in the district served by this line, while four more are in course of erection. One result of this activity was a big increase in the up goods traffic through the transport of machinery and timber, these two items being 4,015 and 4,932 tons higher respectively. Coal rose by 10,372 tons, the increase being accounted for by the fact that a year ago stocks were nearly exhausted, whereas now not only are the working officinas well stocked, but several new ones have laid in large supplies. On the other hand, the down traffic fell off by 11,724 tons, mainly because of a decrease of 11,884 tons in the quantity of nitrates shipped, caused by one officina being shut down for repairs and another being short of its combination quota from a scarcity of water. A reduction of 121 tons was shown in gold ore, and the total shipments were only 26 tons, with apparently little prospect of any recovery, while copper ore dropped by another 1,348 tons, against which there were advances of 382 tons in silver ore and 1,308 tons in miscellaneous. Receipts from goods traffic were consequently £17,232 up at £168,902, passengers rose by 14,662 in numbers, but the revenue was only £1,401 larger at £11,168; sundry receipts rose by £1,026, and with smaller gains in all other departments except telegraphs, where there was a small reduction of £69, the total revenue amounted to £193,487 compared with £172,624. This was an increase of £20,863, but unfortunately working expenses also rose heavily, chiefly because coal cost 33s. 7d. per ton compared with 23s. 6d. in the previous year, although the charges were further swollen by the higher wages and salaries paid, by the suspension of traffic for a fortnight in June on account of strikes and by the large proportion of up traffic compared with the down traffic. The total outgoings were £20,783 up at £118,751 or 61.37 per cent. against 50.76, and nett receipts were therefore only £81 better at £74,356. Balance brought in was smaller at £5,349, and with £79 from registration fees the total available was £80,164, or practically the same as for the previous year. Nothing, however, had to be provided this time for repairs or alterations to the line, and loss on exchange took no more than £636 against £1,086, and after providing £541 for interest and discounts the surplus was £101,176. Of this debenture interest took £22,000 and another £10,000 is transferred to general reserve, after which the ordinary shares receive their usual 7 per cent., and £4,088 or £301 less is carried forward. A considerable sum was spent on capital account during the twelve months, the total being £139,208, of which £51,044 was on additional rolling stock, £31,074 on land and property, £21,380 on branch lines and extensions, and £10,781 on new piers. Expenditure to date is £1,104,257, leaving a debit balance of £10,813, and as the company is going in for extensions on a large scale the directors propose to increase the capital by the creation of a further £200,000 in £5 shares, of which 30,000 will be offered at once to the shareholders in the proportion of one new share for every four held.

MEXICAN CENTRAL RAILWAY COMPANY.

Turned into United States currency the gross earnings of this company came to $15,607,000 for its past year ended June 30 last, and working expenses took $11,002,000, so that the nett earnings exceeded $4,604,000 exclusive of the interest, amounting to $138,000, collected on the bonds of the Tampico Harbour Company. These earnings were not enough to meet the company's charges, which, including $1,315,000 extra spent on improvements, took away $6,190,000. A balance of $208,000 was brought forward and $1,450,000 withdrawn from the subsidy trust fund in order to make good the shortage. That done, the balance left was $201,227. The business of the company was sensibly larger for the year, and stated in Mexican currency the gross income showed an increase of almost $2,000,000, the total earnings being $31,236,195 and the expenses $22,070,178. During the year $1,315,430 gold was spent on improvements, and charged to income, this being in excess of the sum mentioned above as having been charged to revenue. The exports from Tampico rose by more than $110,000,000 on the figure of the previous year, but the imports were not quite so large. At the end of June the balance of the subsidy fund was reduced to $1,297,597 gold.

SALVADOR RAILWAY CO., LIMITED.

Salvador was not seriously bothered by revolutions or "scraps" with neighbouring republics during the year to June 30 last, and the result is a dividend of 3 per cent. for the ordinary shareholders against nothing for the year before. Business improved to a trifling extent, gross income being £130,852 or an increase of £3,350. Passengers fell away rather over £2,000, and freight, &c., showed small improvement, but most of the extra income came from special trains. Matters were further improved by a reduction in expenditure of £2,700 to £53,414, the ratio going down from 54.28 per cent. to 40.99 per cent., notwithstanding that a considerable outlay was made out of revenue to make good the damage caused by the floods of October last year. To the balance of nett revenue, which amounts to £77,438 compared with £71,121, must be added the sum brought forward, £6,244, and sundry other items, making a total of £84,290. Interest and redemption for the debenture debt requires £54,600, and after providing this money enough remains to pay the full 6 per cent. dividend on the preference shares and 3 per cent. on the ordinary, carrying forward £6,705. The Government has made punctually all its payments to the company on account of the subsidy. The general superintendent in Salvador reports that the price the planters are receiving for coffee is about 20 per cent. more than last year, and this should lead to a corresponding increase in the importation of foreign goods during the current year to replenish stocks which must undoubtedly be low. The harvest will probably be behind, as the rainy season commenced unusually late.

SOUTHERN MAHRATTA RAILWAY CO., LIMITED.

Gross earnings for the six months ended June 30 amounted to Rs. 72,59,094, and exceeded those of the corresponding half of 1906, the best previous half-year, by no less than Rs. 5,41,233. Of this increase the company's own line contributed Rs. 2,94,431, the Mysore State Railway Rs. 85,917 and the other lines worked Rs. 57,247. The coaching traffic showed improvements of 671,752 in numbers and Rs. 1,90,176 in earnings, and goods traffic increased by 40,950 tons and Rs. 334,205, the largest advances being in oils and oil seeds, cotton, manganese ore and salt, while grains other than wheat and miscellaneous goods were both lower. Working expenses rose by Rs. 1,32,973 to Rs. 37,70,610, charges being heavier under all heads except general and special, but the proportion to gross receipts was 2.22 per cent. down at 52.06 per cent. The nett earnings were consequently Rs. 4,08,260 higher at Rs. 34,80,378, and were equal on the Southern Mahratta line to 2.32, on the Mysore State Railway to 3.05 and on the other railways to 2.77 per cent. on the capital expenditure, including suspense, compared with 2.09, 2.70 and 2.52 per cent. a year ago. On the whole system, excluding the West of India Portuguese Railway, the mean rate was equal to 2.47 per cent. against 2.21. The company's share of the nett income was Rs. 6,90,533 or Rs. 68,325 more, and converted into sterling this gave £40,035 compared with £42,245, out of which a dividend of 15s. per cent. is again paid in addition to the £1 15s. per cent. due from Government. As stated a year ago, the company's agreement terminated on June 30, and the directors now announce that negotiations are still in progress with the Secretary of State for India as to the continuance by the company of the working of the present system of railways, and a considerable portion of the lines now worked by the Madras Railway Company, and they ask for the appointment of a committee of two from among the larger holders of stock to act in conjunction with them as representatives of the company in arranging the terms.

ALBERTA RAILWAY AND IRRIGATION COMPANY.

Sales of land during the twelve months ended June 30 comprised 33,070 acres vested by the trust deed for the debenture stockholders, and 180,769 acres formerly the property of the Canadian North-West Irrigation Company and free from the trust, making a total of 213,845 acres against 171,305 acres in the previous year. Of these 2,228 acres were irrigable, and realised an average of $18 compared with 11,383 acres sold for $11 14, while the non-irrigable land increased by 51,796 acres, and the average was the same in both years at $5 68. The total sales produced a revenue of $1,114,770 or an advance of $175,258, the average being slightly lower at $5 21 per acre. In addition 25,120 acres in which the company has a joint interest with the Canadian Pacific Railway were disposed of, on which the company's proportion of the profits was about $2 23 per acre. The estimated nett profits from these sales and from town lots was $349,523, but only the profits received in cash from sales of land free from the trust, or $8,691 is included in the accounts. Coal sales dropped by 70,877 tons to 122,647 tons owing to the miners' strike, and as the railway was also affected the gross earnings improved by $14,811 only to $107,068. The nett revenue is not stated separately, but the total income from all sources, including $18,070 or $2,997 more from water rentals, was a trifle of $2,158 up at $247,435. With $37,405 or $10,486 more brought forward the available balance was $284,030 compared with

$266,280, of which London office charges absorbed $16,855 and interest on prior lien debenture stock $44,673, leaving a surplus of $223,402, and after paying interest on the 5 per cent. debenture stock the sum carried out is increased by $23,407 to $60,902. Land-suspense account now amounts to $776,344, or an increase of $342,796, of which $609,792 is in connection with the sales of the company's own lands and $166,552 refers to sales of the Canadian Pacific Railway Company's lands, while the company still holds 548,347 acres unsold. Liabilities to creditors have risen by $12,792 to $397,165, but debtors for land, &c., are $797,796 up at $2,437,486, and cash comes to $274,106 more at $548,872.

Anglo-Egyptian Bank.

No trace of an Egyptian "crisis" appears in the accounts of this bank so far as its profits go. The gross income for the year ended August 31 was £207,260, or nearly £13,238 more than in the previous year. Nett income, however, was about £4,000 smaller because expenses increased by some £10,000 to £74,158, while the balance brought in was about £7,000 less than in the previous accounts at £29,000. A free income, however, of £162,102 all told, enables the directors to pay a final dividend at the rate of 20 per cent. per annum, which makes up the distribution for the year to 15 per cent., to add £40,000 to the reserve, making it £590,000 against a paid capital of £500,000, to again give the pension fund £10,000, and to contribute a few pounds more at £2,102 to the staff fund. All this done, £35,000 will remain to be carried forward. The balance-sheet adds up to £5,257,870, the liability on deposit and other accounts is about £536,000 less at £2,586,265, but that on bills payable is up about £140,000 to £1,484,502, and there was also an increase of about £100,000 in the contingent liability on bills re-discounted. Of the total, however, of these outside the balance-sheet, viz., £891,292, £727,214 had run off by October 31. Cash is over £200,000 larger at £1,158,430, but advances paid have again declined and are now about £1,255,000 less than a year ago at £2,768,240. Bills receivable have also gone down more than £100,000 to £982,238. These changes appear to indicate care in rejecting business of a doubtful or risky description.

The Eastern Telegraph Company.

It is not much use comparing previous figures because the latest report issued was for only three months in order that the company might in future make up its half-yearly accounts on June 30 and December 31. As far as can be judged, however, the revenue for the six months to June 30 last was again smaller than that of the recent years, and this is to be expected until the effects of the Russo-Japanese War and of the reduction in rates are gradually obliterated by the natural expansion of the business. Probably enough, as we have often reminded holders of the company's stocks, rates will have to be further reduced in the not distant future, but the company's income is so good as to inspire confidence that no evil effects will follow. In the past half-year the gross income came to £593,433 and working expenses took £202,703, while £40,854 was spent on maintenance of cables, depreciation, differences of the exchange and income-tax payable abroad. The nett free balance, including £1,252 brought forward, was therefore £351,128, and out of this all the usual dividends are paid, including two quarterly distributions of 1¼ per cent. on the ordinary stock, while £120,000 is placed to the general reserve fund, leaving £41,651 to be carried forward to the next account. This large increase in the balance forward goes mainly towards providing for the bonus always distributed at the end of the company's year. Although the addition just mentioned has been made to the reserve, its total amount is really about £10,000 less than was brought forward because the directors have debited it with £130,000 written off the value of the investments. That is a wise proceeding, for the very excellence of most of the securities in the company's possession has involved severe depreciation in a good many of them, and we are not at all sure that some of the things possessed ought not to be sold even now. The next best thing undoubtedly is to write them down, and the total is still £1,074,661, notwithstanding the adjustments of the past half-year. Nor is this the whole of the investments, for there is a marine insurance fund, a maintenance of ships fund, a land and buildings depreciation fund, and a fire insurance and security fund, &c., all of which, added to the general reserve, brings the total accumulations up to £1,697,859. In the balance-sheet the amount owing to the company is £465,404, exclusive of £5,820 in bills receivable, and the company owes £281,760 on traffic and other credit balances. Cash, including £162,000 deposited, amounts to £202,000, so the position is quite comfortable.

The Eastern Extension Australasia and China Telegraph Company.

In the June half-year this company's gross income was slightly up at £304,368 and working expenses, including £25,705 devoted to cable maintenance, were nearly £15,000 higher at £155,930. The free revenue was therefore £148,437, and after meeting income-tax and various other charges, including £15,048 for debenture interest, the sum of £132,603 left, together with £17,344 brought forward, enabled the company to pay the usual quarterly dividends of 1¼ per cent. each with £74,947 over to carry forward. As in the case of the Eastern Company the investments of the Extension Company have had to be attended to by writings off for depreciation, and accordingly £120,000 was withdrawn from the book value and set aside on account of investment fluctuations. As nothing was added to the general reserve fund during the half-year, while in addition £9,565 was spent on partial renewals to cables, it follows that the amount of it is now only £1,061,670 against £1,190,994 brought forward from December. During the past six months £241 was credited as profit on the sale of investments, but the securities held being nearly all first class, as in the case of the Eastern Company, they undoubtedly demand a good deal of writing down, the more's the pity. Altogether, however, this company's reserves amount to £1,448,670, so that its position is excellent. In the balance-sheet the cash shown amounts to £120,886. Traffic accounts due by the company figure for £253,072, while traffic and other debit balances owing to it stand at only £186,691, but the company has £75,476 still due to it by the Imperial Chinese Telegraph Administration and £180,000 of the reserves is sunk in spare cable held for renewals. In addition to the cash, bills receivable amount to £51,350 and remittances in transit to £19,850.

Dalgety and Company.

This great Australian trading company closes its year on June 30, and the report and balance-sheet presented for the past year seem eloquent of prosperity during the period. Gross profits have gone up by £55,899 to £427,490, and as charges rose only £16,270 to £164,441, while debenture interest cost at £115,306 only £867 more, it follows that the nett profit was £38,762 better at £147,743. The balance brought in, however, was, at £55,381, rather more than £1,000 down, so that the final result was an increase in the nett profit of £37,743, and the directors are easily able to pay the usual 6 per cent. dividend and to repeat the bonus of 1 per cent. to ordinary shareholders. In addition, the reserve fund has been strengthened by £35,000, bringing it up to £235,000, while £30,000, or £3,000 more, is written off freehold and leasehold premises, and £5,000 handed to the staff benevolent fund. All these distributions made, £63,124 is left to be carried forward. The balance-sheet is of the usual mystical description, and hardly worth analysing. Still there are a few changes of a noticeable kind, some of which may indicate increased prosperity and demand larger resources to handle the resulting increased business. Thus advances have risen by £371,268 to £4,803,458, and presumably a fair proportion of these advances are fixed. Then sundry creditors and customers' balances are £330,570 up at £1,998,000, but bills payable at £220,103 are nearly £160,000 down. Coming back to the assets we find sundry debtors and customers' balances £90,000 up at £653,999. Premises, plant, and furniture are also nearly £80,000 higher at £528,894, while bills receivable, &c., show an increase of £24,606 at £137,549. Cash, on the other hand, including money deposited, is down £200,478 at £247,340. Why have balances in transit between branches gone up by about £162,000 to £294,879? Is it merely because business originating in Australia has been so much larger during the past year? We never can give answers worth a doit to any questions of this kind because the directors, neither in their published reports nor in the speeches made ever disclose the company's real position. But that it does a massive and far-extending business is unquestionable, for if it did not the enormous amount of borrowed money invested—advanced on land, stations, stock, wool, and other produce, and including property in the company's own possession, would have brought it into trouble long ago. As it is the debenture obligations, which aggregate £2,791,320, show a decrease of £28,600 on the year.

British Columbia Electric Railway Co., Limited.

Although this company's principal business is the running of a tramway or light railway it also supplies electric power for various purposes and last year added 49,456 lights to its system, making a total of 216,786. Passengers carried rose by 3,886,184 to 16,281,766, and although separate details are not given of the working of the different departments they all seem to have prospered during the year ended June 30. Gross earnings amounted to £299,107 or £62,989 more, to which was added £3,082 from sales of bonus lands and miscellaneous receipts, making the total income £302,189 against £204,704. Operating expenses increased by £25,848 to £158,916, but renewals cost much about the same as a year ago at £26,161 and with an extra £6,740 at £23,286 from interest and dividends and £86 from registration fees the surplus showed an improvement of £42,298 at £140,484. Of this bonus to employees took £5,702, another £1,866 was transferred to capital amortisation fund, and £19,680 was written off for new issue expenses and discount on the 4¼ per cent. debenture stock issued at 98. Even then the disposable total, including £2,619 brought forward, amounted to £83,857 compared with £66,582, and the dividend on the deferred stock is raised from 6½ per cent. to 8, an increase which entitles the preferred ordinary stock to a further dividend at the rate of 1 per cent. per annum, after which £18,876 or £2,394 more is put to reserve and £862 is added to the sum carried out, making it £3,481. Expenditure on extensions and improvements and equipment for the year was £140,855, but £9,613 was deducted for sales of plant, &c., and in other ways the addition to property account was brought down to £127,912 at £1,140,424, against which the reserves now amount to £167,664. To provide funds for the general requirements, and in particular for the construction of a line from New Westminster to Chilliwach, a distance of 60 miles, an issue of £300,000 4¼ per cent. perpetual consolidated debenture stock was made. A good deal of this money remains in hand and we consequently find deposits and short loans against security £85,229 up at £139,229 and investments in marketable securities £10,119

higher at £282,752, while advances to subsidiary companies have risen by £32,220 to £273,285. Shares in subsidiary undertakings are unaltered at £248,414. Current liabilities show a small increase of £4,484 at £59,833, but on the other hand a rise of £12,327 to £39,023 in sundry debtors is neutralised by a drop of £13,542 to £9,670 in cash in hand. These last movements, however, are quite unimportant in view of the large amount of readily realisable assets, and the position as a whole is excellent.

CAPE ELECTRIC TRAMWAYS CO., LIMITED.

The Sea Point Railway having been expropriated by the Government and handed over to the municipality the rates charged by that undertaking have been considerably reduced and the directors of this concern, like those of omnibus companies in this country, raise a howl about unfair competition. Fares on Cape Town system had to be lowered to meet this competition, with the result that in spite of an increase of 185,993 to 12,563,303 in the number of passengers carried the receipts were £10,121 down at £131,594. In Port Elizabeth the number of passengers fell off by 229,501 to 3,676,035 and the revenue decreased by £3,161 to £39,696. In face of the adverse conditions caused by the continued depression the general manager at Cape Town went in for retrenchment on a wholesale scale, and it says volumes about the former extravagance that he was able to cut down the working expenses by more than £16,000. The reduction in Port Elizabeth was not quite so drastic, but even there £1,600 was saved and by this means the dividends declared by these two subsidiaries yielded £1,475 more at £62,610. As the company is now relieved from the incubus of the Camps Bay Tramway lease the total revenue including £19 from transfer fees was £12,378 better at £62,629. General charges, too, were reduced by £8,115 to £3,482 leaving a nett revenue of £59,147 against £38,654, but debenture interest required an extra £6,423 at £31,222 and in addition to setting aside £8,500 or £400 more for redemption of 6 per cent. debentures £4,200 was reserved for redemption of the 5 per cent. debentures. Then the premium on 6 per cent. debentures paid off took £510 and the balance remaining with £1,751 brought in was £16,466 compared with £5,751 out of which £4,000 is again put to reserve and £12,466 or £10,715 more is carried forward. The compensation awarded to the company for the expropriation of the Sea Point Railway was £41,200, which was paid over during the year and of this part was applied towards writing down the Consols held to 82 and the remainder was deducted from the outlay on capital account. Properties are now valued at £1,213,528 or a nett reduction of £27,015 and investments in Consols are £5,041 down at £32,800 to go against a paid-up capital of £491,222, a debenture debt of £560,200 and reserves of £205,489. Liabilities to sundry creditors and for interest and drawn debentures amount to £33,400, but the loan of £41,547 has apparently been repaid, while, on the other hand, £1,188 is due from debtors, £35,661 is due from Cape Town and Port Elizabeth offices for goods in transit and unremitted profits and cash has been increased by £18,548 to £19,341.

BRITISH AND CHINESE CORPORATION, LIMITED.

This corporation carried out two fairly big operations on behalf of the Chinese Government, the first being the issue of £650,000 Imperial Government bonds for the Shanghai-Nanking Railway in January and the second the issue of £1,500,000 of those bonds for the Canton-Kowloon Railway in April. The results to its revenue were decidedly satisfactory as gross earnings rose by no less than £35,604 to £54,930, and as administration expenses, including agents' commission and a donation of £100 to the China Famine Fund were only £4,107 up at £9,378 the nett profits, after providing £327 for income-tax, amounted to £45,225 against £13,988 for the previous twelve months. Of this £4,000 or £493 less was written off investments, leaving the surplus £31,530 up at £40,325, but the sum brought in was £3,705 smaller at £10,827 and the increase in the disposable balance was therefore £27,825 at £51,152. The directors use £20,000 of this total to commence a reserve fund, an appropriation at which the shareholders are not likely to cavil, seeing that their dividend is raised from 10 per cent. to 15, and even then £1,575 more at £12,402 is left to be carried forward. Advances and outlay on concessions during the year amounted to £7,710, but £25,201 was recovered and this item is now down to £18,282. A sum of £80,750 was invested and after deducting the provision for depreciation the securities held stand at £90,080 on which there is a contingent liability of £13,500. Sundry debtors come to £14,208 or £12,743 more and cash is £110,322 higher at £208,174, but this increase appears to mean nothing more than that the corporation has not paid off its floating liabilities to as great an extent as usual, as sundry creditors come to £154,682 against a trifle of £982 a year ago. With regard to the future the directors state that negotiations are pending for the final agreement for a loan to construct a railway of about 200 miles from Soochow, on the Shanghai-Nanking line, to Hangchow and Ningpo, constituting a very important development of the Yangtse Valley Railway system. On the other hand, efforts are being made to get the Nanpiao coal concession cancelled owing to the refusal of the administration of the Imperial Railways of North China to proceed with the development of the field in joint account with the corporation.

FRASER AND CHALMERS, LIMITED.

Profit was not so abounding with this company in the twelve months ended June 30 last as in the previous year because there has been a marked falling off in business from South Africa. Orders, however, from other parts of the world compensated to such an extent that the decline in the profit, before allowance for depreciation was deducted, came to only £4,089. This must be considered distinctly good because profits of the previous year were nearly £19,000 above those for 1904-5. The directors would, therefore, appear to be warranted in making up the dividend on both the preference and ordinary shares to 10 per cent. for the year, this meaning that balance dividends of 2½ per cent. on the preference and 6 per cent. on the ordinary are now recommended. After meeting these £638 will be left out of the year's profits, but the total balance at the credit of profit and loss will still be £88,741, a very nice sum only that it constitutes all the reserve the company possesses. One very satisfactory statement is made by the directors. Large extensions are in progress at Erith, especially a new factory built for the purpose of enabling the company to manufacture steam turbines. Most of the expenditure on this will come into the current year as the work was not far advanced before the end of last June, but the financial position of the company enables the directors to meet the outlay without issuing fresh capital. They declare it to be improbable that any occasion will arise for serious additions to the capital expenditure within the next few years. Nothing calls for special notice in the balance-sheet, but the holding of the company in the Allis Chalmers American Company still figures at £100, and again no dividend was received on the 6,500 7 per cent. cumulative preference shares of $100 still possessed by it. Cash has gone down to about £84,000 against £99,000 a year ago, and that is no doubt accounted for by the new works going on, but the company only owes £64,142 to sundry creditors and £22,232 on bills payable, or little more than £86,000 in all, while sundry debtors owe it £132,000, besides which £6,312 is owing to it on bills receivable, and goods in transit are entered at £21,288, stocks of machinery in course of construction, merchandise, &c., including all the depôts in South and West Africa and West Australia stand at the rather high figure of £240,642, which does not include the £13,421 of machinery sent to the company on consignment and forming a cross entry in the balance-sheet. But it is a good report on the whole.

ALLDAYS AND ONIONS PNEUMATIC ENGINEERING CO., LIMITED.

The report for the twelve months ended August 3 states that the improvement in the company's trading referred to a year ago has continued, and that business, in the motor department particularly, has increased. Nett profits, after providing for depreciation and all outgoings, were £15,412, to which was added £7,148 from the previous account, making a total of £22,560. Of this debenture interest took £3,590, and after paying preference dividend the ordinary shares get dividends and a bonus aggregating 10 per cent. and £12,558 is carried forward. The accounts are so framed as to conceal the amounts written off for depreciation, but judging by the directors' performances in other directions we imagine that they have not been on any too liberal a scale. Freehold properties at Small Heath are valued at £33,966, leasehold premises at the Matchless Works stand at £22,692 or an increase of £6,967 on the year, Birmingham properties at £4,963, and plant, machinery, &c., at £56,740, while £23,180 for goodwill and patent rights bring the total up to £141,541. Against these the reserve amounts to £13,000 and the sinking fund for redemption of leaseholds and for premiums for paying debentures to £3,230, making £16,230 or under 11½ per cent. of the capital outlay as the accumulations of 18 years. Trading accounts are slightly adverse, £31,598 being due to sundry creditors against £30,388 to come in, but cash and bills, thanks to a loan of £8,161 from the bankers, amount to £4,897, and there are also investments valued at £6,452.

SUNBEAM MOTOR CAR CO., LIMITED.

This company did extremely well on its small capital during the year ended August 31, and no fault can be found with the way in which the profits are divided up. Revenue on trading account was £17,098 and sundry receipts and transfer fees gave £40 making £17,138 in all. Administration expenditure of every kind took £7,943, interest on mortgage £210 and depreciation £1,029, leaving £7,956 nett. With £2,533 brought forward the total to be dealt with is £10,489 and after paying the dividend on the preference shares distributions aggregating 10 per cent. are made on the ordinary shares. Directors' fees and other payments take £600 and £2,000 each is devoted to goodwill and revenue, eliminating the one and building the other to £4,500, which includes share premiums of £2,500. The sum left to be carried forward is £1,315. The balance-sheet does not present anything striking. The finances seem in good order, and while capital expenditure has been on a fairly large scale depreciation allowance seems sufficient.

TRIUMPH CYCLE CO., LIMITED.

Again this company showed only a modest increase of £1,513 at £21,600 in its trading profits for the twelve months ended August 31, but transfer fees yielded £25 more at £80 and dividends on investments rose by £1,002 to £3,512, so that the total income was £2,540 better at £25,501. Most of this increase has been applied to depreciation, the allowance for which was £1,587 larger at £7,548, and after providing for directors' fees and income-tax and setting aside another £500 as reserve for bad and doubtful debts, the nett surplus was £10,313 compared with £15,428. Adding £1,250 brought forward, the disposable balance was £6038 up at £17,563, of which debenture interest and preference dividend took £4,375, and a dividend of 5 per cent. on the ordinary shares, or the same as for the pre-

vious year, £4,000. Of the sum then remaining, £750 is, as usual, put to the reserve against debentures and another £5,000 is written off goodwill, but £2,250 or £1,000 more is added to general reserve, leaving £1,188 to be carried forward. Outlay on the property exceeded the depreciation written off by £1,041, so that this item is up to £21,701, and plant, &c., also shows a small increase on balance at £25,665, but goodwill has now been reduced to £65,000. On the other hand, the general reserve fund stands at £14,500, and debenture reserve with added interest is about £1,000 higher at £6,023. Investments, less the reserve of £9,500, are valued at £26,855 or an increase of £3,068, and apparently yielded a very fair return last year. The current position of the company seems satisfactory as against liabilities of £19,520, sundry debtors owe £32,937 and cash and bills have risen by £4,702 to £11,937, while stocks come to £32,578 or £6,309 more.

Henry Bucknall and Sons, Limited.

Business does not improve with this company of cork-wood and cork manufacturers, and the good old days when dividends of 6 and 7 per cent. and even more were paid seems to have gone for ever. The directors say that the 1906 crop cost dearer and the Portuguese rate of exchange was again adverse, but in spite of these conditions the result of the year's trading showed only a small reduction. Profits for the twelve months to August 31 amounted to £41,474, and interest and transfer fees gave £4,949, making, with £4,604 brought in, a total of £51,027, of which London office expenses took £8,737, and after writing off a trifle of £357 for depreciation and providing for income-tax, the available balance was £41,038. Preference dividend having been paid, the ordinary shares get 4 per cent. for the year, and £7,038 is carried forward subject apparently to the bonus of 10 per cent. on their salaries which the directors propose to make to the secretary and clerks in the London and Lisbon offices. Nothing has been added to reserve for several years, and this fund stands at £50,000, notwithstanding that the property account is steadily increasing, and is now valued at £354,244 or £7,713 more than a year ago. Stocks of cork manufactured and unmanufactured, and new season's cork seem unduly large at £158,306, especially when taken in conjunction with the cash advances on cork for future delivery amounting to £55,907. Cash advances, expenses against leases of cork forests also appear heavy at £93,076, and we should like to know something more about the investments taken into the balance-sheet at £90,413, and regarding which the auditors state that current prices are slightly below the book value. Liabilities to creditors and on bills payable come to £64,550, and against these debtors and bills receivable total £55,351, and the company has £25,588 in cash, out of which, however, £17,000 has to be provided for the balance dividends now declared.

Liverpool Nitrate Co., Limited.

We thought this company did wonders in the year to June 30, 1906, when the dividend provided for the shareholders was 112½ per cent., but it is possible to go 37½ per cent. better than this on account of the past twelve months, the total return being no less than 150 per cent. The company's position is simply amazing. Touching on profits first, we find that the gross profit, transfer fees and interest included, came to £80,844, an increase of £7,308. Renewal of plant and machinery required £4,388, depreciation of debenture stock £981, and £500 was subscribed to the earthquake fund, leaving £74,975 nett. Actual credit brought forward was £6,010, making £80,985, and after providing the dividend of 60s. per share a sum of £6,000 is added to reserve and £8,985 is carried forward. The balance-sheet is quite unique. Paid-up capital is £44,000, and the property account appears at just £22,000. Addition now made increases the reserve to £50,000, meaning an excess of capital and reserve over the property valuation of £72,000. All this is liquid, being represented by stocks, investments, bills receivable, and cash, and the company is a marvellous example of what can sometimes be accomplished in joint-stock enterprise.

Amelia Nitrate Co., Limited.

A further rather serious drop took place in the profits of this undertaking during the year to June 30, despite the successful reopening of the oficina Amelia, which has enabled the company to maintain its quota under the combination. Trading profits are returned at £57,926 against £66,612 in the year before and £73,939 in 1904-5. Nett balance is £48,939 or a shrinkage of £10,164, but this time nothing has to be provided for debenture interest compared with £3,803. Next £23,000 is applied to debenture redemption loan account, completely wiping away the debt, and only £359 against £55,300 need go for debenture redemption leaving a profit to be handled of £25,581, which compares with nothing. As is well known, the company has been using the whole of its revenues for the purpose of paying off debentures, raising a loan for the purpose which has now been entirely liquidated. Consequently no less than £24,000 can be applied to the extinction of preference interest arrears, representing a payment of 48 per cent. and leaving £1,581 to be carried forward. The repayment of loans to the amount of £23,000 corresponding to an equal amount of debentures reduces the property valuation to £124,431 or considerably less than the amount of outstanding capital. Floating liabilities are heavy, much more so than last year, and the stocks held show an important advance. As announced in a separate communication to the shareholders, the board has completed negotiations for the purchase of valuable new grounds in the province of Antofagasta, and shareholders are now asked to confirm the agreement.

Langdale's Chemical Manure Co., Limited.

The directors of this concern do not enter into many particulars in their profit and loss account for the year ended September 30, and merely state that gross profits were £11,322, of which maintenance of plant, repairs, interest, directors' fees, bad debts, &c., took £5,356. With £727 brought forward, the amount to be dealt with was £6,693, and out of this a dividend of 4½ per cent. is paid and £1,000 is transferred to reserve, leaving £788 to be carried to the new account. A serious fire occurred at the works in March, which destroyed the greater portion of the grinding plant, and seriously disorganised the business, but it is stated that the loss was fully covered by insurance. The principal works of the company stand in the balance-sheet at £65,305, a value apparently placed on them two years ago, and the other two properties are valued at, "as at September 30, 1902," £1,500 and £342 respectively, so that such a thing as provision for depreciation is evidently unknown. This might not matter so much, perhaps, if a respectable reserve had been accumulated, but that fund with the present addition amounts to no more than £3,000, and even that is in the business. Arrangements have been made for the sale of the Peterhead property, which will shortly be completed, but the terms are not disclosed. Stocks are decidedly heavy at £36,142, and the company has had to borrow £3,088 from its bankers in order to carry them, but trading balances are favourable, as against £8,993 due to creditors and on bills payable debtors owe £24,125 and cash and bills come to £641.

Santa Fe Land Co., Limited.

The year ended June 30 showed a remarkable improvement in all branches of this company's business, and the profits on wood, cattle and sundries rose by £44,399 to £110,330. Rents only yielded £161 more at £4,457, but sales of land were £14,400 up at £29,340, and of this one-third is brought into revenue account giving a total of £124,567 compared with £75,207. Working expenses took £16,561 or £3,780 more, depreciation and repairs were £8,642 heavier at £18,142 and land tax required an extra £2,420 at £4,164, so that after providing £3,000 for debenture interest the outgoings were £14,842 up at £41,867. Nett profits nevertheless were £36,887 better at £93,718, out of which a dividend of 8 per cent. is paid against 6½ per cent. a year ago, and the allocation to reserve is doubled at £12,000 leaving £9,380 to be added to the balance carried out raising it to £20,398. The two-thirds of the cash receipts from land sold during the year, amounting to £19,560, have been written off freehold land account, reducing that item to £441,278, but the estancias, other than the Santa Catalina and La Barrancesa, have been increased by £17,196 to £203,942. This total, however, included 64,227 head of cattle, which stand in the books at the actual cost of £101,663, although the usual independent valuation puts their value at £218,270 or more than double. Expenditure on La Barrancosa for the year was only £4,039 making a total of £128,014, and the branch railways and rolling stock are valued at £65,757. Liabilities to sundry creditors are £4,961 up at £21,372 and bills payable come to £20,000 or £15,000 more, against which debtors have risen by £29,658 to £50,720, but cash has dropped from £58,559 to £49,068 and investments have been reduced by £5,054 to £28,730. Reserves will now amount to £52,000, apart from the £73,982 received from share premiums, and with the hidden reserves arising from the difference between the actual and book values of the cattle the position of the undertaking seems decidedly satisfactory. The directors therefore should have little difficulty in placing the 46,000 shares of the authorised capital which they propose to issue to provide for the developments of the business.

Scottish Trust and Loan Co. of Ceylon, Limited.

Whatever this company may have been at one time, it has for a number of years been engaged in tea growing only, and for the twelve months ended August 31 gathered a crop of 984,792 lbs. or an increase of 20,455 lbs. over the previous season. Market conditions were not altogether favourable for the quality produced, but the average price realised nevertheless came within .05d. of last year's at 7.45d. Nett proceeds, however, were £412 down at £9,320, and as the sum brought forward was £404 smaller at £1,766 the total income, including £171 from interest, was £11,257 or £822 less. General charges took £1,552, and after repeating last year's dividend and bonus of 15 per cent. £500 is written off investment of Government stocks and £1,000 is put to estate cultivation fund against £2,000 transferred to that fund a year ago, leaving £1,455 to be carried forward. Real estate account has been increased by £843 to £42,923 in connection with the company's rubber venture, but tea extension, factories, and machinery show a reduction on balance of £430 at £14,940, against which there are now the reserve of £11,000 and the cultivation fund of £3,000. Bills payable and sundry creditors are £3,514 down at £9,799, while debtors come to £967 less at £2,206 and stocks are £5,000 larger at £10,130, but this increase and the comparatively heavy outlay on the estates of the past year or two have so exhausted the company's resources that a loan of £1,897 has had to be obtained from the bankers, and even with that help the cash balance of £4,812 shown in the last accounts has disappeared.

Central Tea Company of Ceylon, Limited.

During the twelve months ended June 30 this company produced 432,905 lbs. of tea or an increase of no less than 67,285 lbs.

over the previous year, and at the same time the price realised was nearly ½d. better at 7.89d. per lb. The cardamom crop was also slightly larger at 8,107 lbs. and the price improved from 1s. 4¾d. to 1s. 7d. per lb. Receipts from all sources amounted to £13,386 and £195 was brought forward making a total of £13,581 of which £3,870 remained as nett profit. Preference dividend having been paid, the ordinary shares are given a dividend of 6 per cent. and £1,000 is placed to a rubber development account leaving £419 to be carried forward. The estates stand in the balance-sheet at £48,311 or over £37 per cultivated acre, if we include 89 acres cleared for rubber but not yet planted, and although the company has been in existence since 1896 there is no trace of any attempt to form a reserve fund. Liabilities on bills payable and to sundry creditors are heavy at £6,663 against which unsold produce amounts to £4,034, debtors owe no more than £6 and cash comes to £239, but the company possesses an investment of some sort, valued at £500. Advances to coolies at £1,160 seem large for a company of this size.

Malacca Rubber Plantations, Limited.

The report for the year ended December 31 last has only now been issued, and the directors explain that the delay was caused by the necessity of referring the accounts back to Malacca. Now that it has made its appearance it is not exactly calculated to arouse enthusiasm, as out of a total income of £28,989, of which £653 came from interest, the nett profits were no more than £3,841. Against this the preference dividend requires £6,689, but some such result was anticipated when the company was formed, and the deficiency of £2,848 is provided out of the guarantee fund deposited for that purpose. Out of a total area of 13,150 acres there are now over 6,000 acres in rubber for which the company paid £225,000, and has since spent £16,092, making a total of £241,092 out of the issued capital of £260,625, so that there is still a good balance of cash in hand. Creditors of £4,572 exceed debtors by £481, but stocks are valued at £2,110, and cash comes to £13,392.

Rochdale and Manor Brewery, Limited.

The position of this brewery company, although much improved during recent years, is still nothing to boast about, and the absence of any reserve fund would make us fear the result of any serious stroke of adversity. However, gross profits crept up a little last year to September 30, the gross amount being £16,420, including sundry revenue, and the nett £7,797, arrived at after providing debenture interest, compensation fund, and all other charges. Preference dividend takes £3,192, and the directors advance the ordinary distribution by ½ per cent. to 4, carrying forward £3,855 against £3,240 brought in. On balance property account was slightly reduced to £286,514, but the depreciation allowance of £1,385 is not very lavish, all circumstanes considered. Sundry mortgages and loans stand at £8,815, and creditors £4,139, against trade debts, loans, and rents receivable £4,254, stock £5,261, and cash £8,657.

Frederick Leney and Sons, Limited.

Trading profits of this brewery for the twelve months ended July 31 amounted to £36,635 and £7,665 came in from interest and transfer fees, making a total of £44,300. Outgoings, including £1,569 for compensation levy, absorbed £31,458, and with £3,564 brought in the nett balance was £16,406. Preference dividend having been paid the ordinary shares receive 9 per cent. for the year and £2,500 is transferred to reserve leaving £3,406 to be carried forward. Freehold and leasehold estates and goodwill are valued at £397,718, plant, &c., at £17,060 and farm, live and dead stock at £10,722 against which the paid-up capital is £150,000 and the debenture debt £120,000, while the reserve fund now stands at £42,500. It follows therefore that the company has had to borrow heavily, and loans and interest come to £104,679. In addition to this liabilities to sundry creditors at £24,191 exceed the estimated total of book debts, rents and loans by £8,757, but stocks come to £8,609 and cash, including £3,750 paid out for interim dividends, stands at £7,039.

J. Hey and Co., Limited.

There are only two directors on the board of this brewery company, the chairman and the managing director, due to the fact that a third member has just died. A new director will be appointed in his place. Last year to September 30 the company's profits and rentals came to £14,342, and £1,488 was brought in, a total of £15,830. Nett balance was £10,108, after providing interest on debentures, mortgages and loans, and the dividend on the ordinary shares will be 7 per cent., ordinary reserve is credited with £3,000 and £220 is placed to a special fund towards compensation charge under the Licensing Act of 1904, leaving £1,753 to be carried forward. What the company calls its real estate is valued at £212,353, and we notice that the mortgages and loans, including interest are £38,092, while on the other side loans with interest appear at £7,215. Reserve fund will now be £19,000. Trading accounts are adverse, and the cash balance is only £35. The nature of investments, £1,801, is not disclosed.

Second Edinburgh Investment Trust, Limited.

The revenue from interest, dividends, &c., for the twelve months ended September 30, including £17 from transfer fees, increased by £4,969 to £37,216, and £11,560 or £4,074 more was brought in, giving a total of £48,776 compared with £39,733. Interest and management expenses took an extra £539 at £14,452, so that the nett revenue was £8,514 up at £34,324, but the directors think it more prudent not to increase the dividend on the deferred stock beyond the 6 per cent. to which it was raised a year ago, and carry forward the larger balance of £20,074. Profit on sales of securities, which is not taken into revenue account, only amounted to £4,235 against £14,935 a year ago, and nothing came in from premiums on debentures issued, so that, including £3,024 from the previous account, there was £7,259 to be dealt with compared with £18,024, and instead of adding anything to reserve, the whole sum is carried to the new account. The only asset shown in the balance-sheet is an item "investments," which has been increased by £48,069 to £691,012, and all that the shareholders are allowed to know about this sum is that it is spread over 182 securities giving an average of about £3,800 each. Apparently this reticence suits the shareholders, as the directors, having employed the company's share and loan capital to the last penny, now propose to create an additional £120,000 in 10,000 preferred and 5,000 deferred shares of £10 each, to be issued as and when they think fit, and seem confident that the suggestion will be accepted.

Realisation and Debenture Corporation of Scotland, Limited.

The total income for the year ended August 31 showed an improvement of £3,671 at £64,089, but the company no longer cares to set forth in detail the sources from which its revenue is derived, and we cannot say whether the increase came from realisation of investments or from what is termed "financial business." A slight reduction in expenses to £28,520 gave a nett profit of £35,569 against £31,501, and after paying preference dividend and transferring £1,140, equal to a further 2 per cent., to the special preference stock reserve, the dividend on the ordinary shares is raised from 10 per cent. to 12 and the founders' shares receive an extra 4s. per share at 10s., leaving £15,429 to be added to the general reserve. In February last the ordinary share reserve fund of £9,613 was distributed amongst the shareholders, so that the amounts now set aside represent a nett increase on the year of £6,956 to a total of £142,564, apart from the insurance and guarantee fund of £4,172. Terminable debentures have been further reduced to £323,037, and on the other hand investments are £7,449 down at £838,515, and the estimated value of securities representing claims paid under guarantee policies is £600 lower at £17,991.

Missouri Land and Live Stock Co., Limited.

Formed in 1882 to carry on a stock farm this company long ago gave up that business and turned its attention to the gradual realisation of its properties. In February, 1903, it repaid 30s. of the capital and has since continued that policy until the share capital now amounts to no more than £1,500 in 30,000 shares of £2 1s. each 1s. paid. For the year ended June 30 the gross profits on land sales were £8,419 and interest and other receipts brought the total up to £9,741, of which administration and other expenses took £2,630 and £2,865 was transferred to suspense account against realisation of contractors' balances, leaving a surplus of £4,246 to which is added £2,966 brought forward. The company, however, has a suspense account of £12,000 and as the greater proportion of the assets have now been realised the directors consider it unnecessary to retain so large a sum. They, therefore, transfer £5,000 to profit and loss account, making the disposable balance £12,212 out of which a dividend of 2s. 6d. per share is paid and £8,462 is carried forward. On these figures a larger dividend could have been declared, but the company has only £1,133 in cash and under the circumstances it is considered advisable to restrict the distribution. Instalments and interest on purchases outstanding, however, amount to £16,627 against which £6,647 is held in suspense against their realisation and the directors promise that should funds come in during the current year an interim dividend will be paid out of the balance carried forward.

Walpole Brothers, Limited.

This company deals largely in hand-loom damask, and during the year ended August 31 found both trade and profits largely increased. In no previous year, say the directors, was there so much hand-loom damask turned out by the company's weavers, and when it is considered that this is one of the oldest and most extensive of Irish cottage industries, the fact is most gratifying, as affording evidence of extended appreciation of an important and valuable Irish manufacture. Nett profits amounted to £16,963, to which was added £2,597 brought forward, and after paying the directors' fees of £1,000 and preference dividend, the available balance was £14,560. Out of this the ordinary shares get a dividend of 10 per cent., £2,000 is transferred to reserve, £250 is added to bad debts reserve, £1,264 is written off premises account, and £1,000 set aside to form an assistants' pension fund, leaving £4,046 to be carried out. The directors state that they might have proposed an increased dividend to the ordinary shareholders, but they consider the interests of the company are best served by a careful handling of the assets, and in this they are much to be commended. As the result of their prudence in the past, the company is in a fairly good position, although we should like to see the reserve fund invested outside the business. Leases, goodwill, &c., after deducting the sum now written off, will stand at £62,052, and stocks are valued at £71,289, against which the reserve amounts to £18,000. Liabilities to creditors of £4,449 are trifling when compared with the £41,380 owing by sundry debtors and the cash balance of £2,699.

Colonial Gas Association, Limited

Sales of gas during the twelve months ended June 30 increased by nearly 9 per cent. and the revenue from this source was £1,254 larger at £17,894. Residuals also gave more at £1,611, and with £43 from profit on fittings, &c., the total income

amounted to £19,548 against £18,130. Working costs rose by £594 to £10,041, general expenses to £1,401, and after paying directors' and auditors' fees and writing off £1,045 for depreciation the nett profits were £786 up at £6,735. Including £768 or £77 less brought in the disposable surplus was £7,503 compared with £6,794, out of which the ordinary shares again receive 5 per cent. for the year and an extra £576 at £826 is transferred to reserve leaving £893 to be carried forward. Outlay on capital account exceeded the allowance for depreciation by £318, so the total of this item is now £109,177, and against this the reserve will now amount to £4,500, of which £2,162 is separately invested. Sundry creditors have been reduced by £301 to £480, while debtors are £254 higher at £2,621 and cash is much about the same at £1,634, but remittances in transit are £600 down at £1,450.

Blackpool Winter Gardens and Pavilion Co., Limited.

This favourite Lancashire resort did fairly well during the year ended September 30, and earned a gross profit of £11,165, to which was added £98 from the previous account, making a total of £11,263. Debenture interest required £5,944 of this, and after writing £1,000 off electric installation and transferring £500 to reserve and £100 to insurance fund, a dividend of 4 per cent. or the same as a year ago is paid leaving £941 to be carried forward. The position of the company, however, is none too good, as no depreciation is allowed on lands and buildings valued at £194,000, while the reserve only amounts to £5,500, and the insurance fund to £100. Electric installation stands at £17,000, and stock of furniture, plants, statuary, &c., at £5,000. Apart from the debenture debt of £113,000 the company owes £28,170, of which £27,000 is secured by a deposit of debentures for that amount, and on the other hand stocks of wines, spirits, cigars, &c., come to £3,421, but sundry debtors owe no more than £428, and cash is trifling at £132.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

E. P.—It is impossible to say. They are equally water-logged, and it will be many years before either can earn any nett revenue worth mentioning from ordinary traffic. This leaves 8s. to your credit.

D. H. C.—(1) The new enterprise will cater for such a very different class of patrons that we do not see how this company's business will be affected. There ought to be sufficient security for the debentures, so keep them. (2) We fear the price will go lower, not because the company is bad, but because of the universal tendency of markets, but think you might hold as the interest should be fairly secure.

C. F. B.—(1) We do not think the company is likely to do much good even after reconstruction, and if the shares were ours we would not join. (2) The shares are not a security we would recommend, but as you are a holder you might wait a little before selling on the chance of a recovery being brought about. (3) Prospects seem favourable for this company, but the price at present does not leave much scope for appreciation in value.

Litfield.—(1) The company, we believe, is well managed, and if you do not mind the risk of a temporary depreciation the shares might be held. (2) Yes. The stock is well covered, and should be a good investment.

B. W. J.—Both are pure gambles. Prospects of genuine success very remote. We should not care to recommend a purchase.

T. W. L.—(1) Quite good, but latest railway issue more attractive. (2) Look cheap and safe. (3) No hurry to purchase these, but interest should be fairly secure. (4) Interest safe, but yield is poor.

Gospel Oak.—(1) There has been serious liquidation lately causing the further fall. Intrinsically the stock should be worth more money, but it is impossible to say what the immediate future will bring. If you can afford the cash hold on, if not, sell. (2) We cannot answer this question in the way you put it.

W. G.—(1), (2), (3). All are in such a water-logged condition that they are not at present tempting, but might be watched. Probably reorganisation may be necessary. There is 1s. to your credit.

J. T. F.—No. The liability is too heavy.

W. F. F.—Reasonably safe, and quite a good investment. The company, however, may have to reduce its dividend owing to dear coal, and the 3 per cent. stock is better.

O. E. G.—(1) The shares seem quite fully priced at that level, as the company's business last year was phenomenal, and the chances are that its success will not be repeated for the current year. (2) As a speculation the shares seem fairly promising. You have sent too large a fee, and we therefore hold 1s. to your credit.

F. W. M.—On the whole, we should say not.

H. S. (N.W.).—There is just a chance that the price might be worked up, but it is only a chance, and we are almost inclined to think you had better sell. It will take years for the United States to work out of the present mess

American.—The stock you mention yields no revenue, and will probably go much lower in price. Better leave it alone.

T. M.—On the whole, yes, if that step will save foreclosure.

S. A. G.—This is the best company of its kind, and the shares seem well worth picking up at present level.

S. S. R.—No. The company is too overloaded with worthless rubbish and price almost certain to go lower. It is against our rules to "recommend" securities by name in this column.

T. J.—(1) The shares are being depressed by the financial distress, and perhaps some forced selling, but they are good enough, and you should keep them. (2) We fear there is no present prospect of a recovery, and, indeed, we expect the price will go lower. The only thing that supports the market is the "bear" account open and as this might cause a slight rally you might perhaps hold for the present, but clear out soon.

A. T. B. C. G.—We cannot guarantee that the prices will not go lower, but both are very good purchases at present quotations. Of the two we prefer No. 1 on the whole. Your questions relate to two securities only, and we therefore hold 1s. to your credit.

Cardigan.—Yes, the security is a very decent one, and you would not go far wrong to add to your holding.

G. R.—(1) Company has large reserves, but it is low grade stuff, and on present dividends the shares are pretty nearly at their full value. We should be inclined to sell. (2) Here also we think you should sell. The company is very hard up, is certain to want more money soon, and we doubt whether it can be put on a paying basis.

Paradox.—Thanks for remittance, which is sufficient. The bonds should be good enough for a lock-up. Offer 90 for them.

Grasmere.—(1) Highly speculative, and something akin to buying a "pig in a poke," as the directors give little or no information as to the securities held. (2) These are not worth even their present price, and are likely to go lower. (3) As a lock-up, these are fairly promising, but you will probably have to wait some time for a return. (4) We fear this company has had to face further heavy depreciation in its securities during the past year, and we think it would be advisable to wait for the report before buying. (5) Should not be touched even as a speculation. (6) Some of this company's subsidiaries begin to look promising, but we hardly think the time has yet come to buy. These answers increase our debit against you to 7s.

E. T.—We do not think you should sell now, as it is principally the general state of markets that is depressing the shares. It is a pity the capital account is to be increased, but the company's business has grown steadily, and should continue to do so.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Pennsylvania.—At the rate of $1·75 per share, payable on Nov. 30.

Southern Punjab.—Interim at the rate of 6 per cent. per annum for six months ended June 30, carrying forward £68,000.

MINES.

Briseis Tin.—Further interim of 9d. per share.

Golden Horse Shoe Estates.—Third interim for 1907 of 6s. per share, payable Dec. 13.

New Heriot,—30 per cent. (6s.) per share.

Scottish Gympie.—Final for year of 3d. per share, allocating £1,000 for directors' fees, and carrying forward £1,805.

MISCELLANEOUS.

Castner-Kellner Alkali.—At the rate of 16 per cent. per annum for six months ended Sept. 30, making 12 per cent for the year.

Chubwa Tea.—Interim for year ending Nov. 30, at the rate of 5 per cent. on the ordinary shares.

Claudius Ash Sons and Co. (1905).—Interim at the rate of 6 per cent. per annum on the ordinary shares for half-year ended June 30.

Colonial and United States Mortgage.—Interim of 2½ per cent. for six months ended Sept. 30.

Coburg Hotel.—Interim of 4 per cent. for half-year ended 31st ult.

Dennis Brothers.—12½ per cent., placing £12,000 to reserve fund, after paying off amount standing to the goodwill of the company, and starting an extra building depreciation fund with £2,000.

Land and Mortgage of Egypt.—Interim at the rate of 10 per cent. per annum for six months ended Sept. 30.

Lascelles Tickner and Co.—At the rate of 4 per cent. for year to March 31, 1908.

Lebong Tea.—Interim of 5s. per share on account of 1907.

Needham Tea —Interim of 1¼ per cent. on account of 1907.

Oxford.—Interim of 4 per cent. for half-year ended Oct 30.

San Donato Nitrate.—Interim of 7s. 6d. per share, being at the rate of 15 per cent. per annum.

San Lorenzo Nitrate.—Interim of 7s. 6d. per share, being at the rate of 15 per cent. per annum.

South Blackpool Jetty.—6 per cent., placing £250 to reserve.

South Durham Steel and Iron.—10 per cent. on the ordinary shares out of profits for year ended Sept. 30.

Transvaal and Delagoa Bay Investment.—2s. per share (10 per cent.).

Transvaal Coal Trust.—1s. per share.

Western Australian Bank.—Usual of 20 per cent. per annum, placing £25,000 to reserve.

MINING RETURNS.

Abosso.—Crushed 4,045 tons, 1,975 ozs.; tailings, 3,290 tons, 626 ozs.; old tailings, 1,071 tons, 117 ozs. gold; total, 2,718 ozs.

Angelo.—Milled 30,000 tons, 14,125 ozs.; profit, £31,712.

Associated.—Milled 10,080 tons ore; yield £20,685.

Associated Northern Blocks.—Milled 3,700 tons ore; slimes, treated, 1,290 tons; yield, £13,568.

Balaghat.—Quartz 4,700 tons, 2,264 ozs.; tailings, 4,368 tons, 381 ozs.; total, 2,045 ozs.

Barrett.—427 ozs., valued at £1,700.

Bonanza.—Crushed 2,697 tons, 932 ozs.; cyanide and slimes, 2,681 tons, 601 ozs.; total, 1,533 ozs.; profit, £2,498.

Briseis Tin.—Shipped 20 tons of tin.

British Broken Hill.—2,600 tons crude ore produced 423 tons concentrates, containing 258 tons lead and 10,575 ozs. silver.

Burbank's Birthday.—Tailings 1,356 tons; 642 ozs.

Burbank's Main Lode (1904).—Crushed 1,340 tons, 741 ozs.; cyanide 1,050 tons, 476 ozs.; total, 917 ozs.

Cason.—Milled 33,000 tons, 15,538 ozs.; profit £33,213.

Central Chili Copper.—Copper 215 tons.

Champion Reef.—Stone 14,422 tons, 8,408 ozs.; tailings 20,104 tons, 2,525 ozs.; total 10,933 ozs

Chinese Engineering.—Output, 26,000 tons; sales, 12,000 tons; consumption, 1,550 tons.

Crown Deep.—Crushed 37,940 tons, 10,510 ozs.; sands 25,600 tons, 3,936 ozs.; slimes 12,764 tons, 1,183 ozs.; total 15,629 ozs.; profit £32,500

Crown Reef.—Crushed 23,950 tons, 6,749 ozs.; sands and concentrates 15,765 tons, 2,369 ozs.; slimes 11,094 tons, 1,218 ozs.; total 10,336 ozs.; profit £21,000.

Dharwar Reefs.—Crushed 1,050 tons, 511 ozs.; tailings assay per ton, 6 dwts.

Driefontein Consolidated.—Milled 27,000 tons, 9,852 ozs.; profit £15,330.

Durban Roodepoort Deep.—Crushed 12,230 tons, 3,503 ozs.; sands 8,900 tons, 1,044 ozs.; slimes 3,379 tons, 219 ozs.; total 4,766 ozs.; profit £4,350.

Eldorado Banket.—Crushed 2,532 tons, 1,332 ozs. gold.

Ferreira Deep.—Crushed 23,500 tons, 9,567 ozs.; sands 17,195 tons, 3,294 ozs.; slimes 6,600 tons, 572 ozs.; total, 13,433 ozs.; profit, £34,300.

French Rand.—Crushed 17,500 tons, 2,807 ozs.; sands and concentrates, 14,000 tons, 1,757 ozs.; slimes 6,868 tons, 516 ozs.; total, 5,082 ozs.; profit, £3,500.

Geldenhuis Deep.—Crushed 38,830 tons, 7,775 ozs.; sands 23,220 tons, 3,144 ozs.; slimes 11,660 tons, 649 ozs.; total, 11,568 ozs.; profit, £16,000.

Giant of Rhodesia.—Treated 5,222 tons, 2,768 ozs.; profit, £6,096.

Glen Deep.—Crushed 19,700 tons, 4,258 ozs.; sands 12,480 tons, 2,491 ozs.; slimes, 7,085 tons, 588 ozs.; total, 7,337 ozs; profit, £9,100.

Glynn's Lydenburg.—Crushed 2,556 tons, 565 ozs.; cyanide 1,692 tons, 632 ozs.; slimes 864 tons, 369 ozs.; deposits, 1,566 ozs.

Golden Horse Shoe.—Ore treated 24,155 tons, 12,636 ozs.

Great Fingall.—22,305 tons ore, 4,051 ozs.; 21,781 tons tailings, 2,272 ozs.; 524 tons concentrates, 1,940 ozs.; total, 8,263 ozs.

Hainault.—Crushed 6,209 tons, 1,754 ozs.

Hutti (Nizam's).—Crushed 2,300 tons, 978 ozs.; 2,100 tons tailings, 200 ozs.; total, 1,178 ozs.

Jumpers Deep.—Crushed 19,650 tons, 4,967 ozs.; 12,580 tons sands, 1,459 ozs.; 6,475 tons slimes, 415 ozs.; total, 6,841 ozs.; profit, £5,100.

Kalgurli.—Treated 11,015 short tons, 7,392 ozs.

Killarney Hibernia.—Crushed 3,007 tons, 382 ozs.

Lace Diamond.—43,055 loads washed, yielding 3,879 carats, equal to 9 carats per 100 loads.

Lake View Consols.—Treated 11,520 tons, 3,183 ozs.

Lancaster West.—Crushed 6,684 tons, 1,224 ozs.; 5,618 tons cyanide, 1,117 ozs.; total, 2,341 ozs.; profit, £2,320.

Le Roi No. 2.—Vancouver.—Crushed 1,444 tons, yielding 90 tons lead concentrates and 154 tons zinc concentrates. Shipped 60 tons lead concentrates; net receipts £1,168, being payment for 39 tons lead concentrates.

Lloyd Copper.—Production 57 tons.

Merton's Reward.—Crushed 689 tons ore, 270 ozs.; 485 tons sands, 117 ozs.; 201 tons slimes, 48 ozs.; total, 435 ozs.

Meyer and Charlton.—Crushed 12,910 tons, 1,842 ozs.; cyanide, 2,920 ozs.; total, 4,762 ozs; profit, £7,471.

Mills' Day Dawn United.—Crushed 1,991 tons, value, including residues, £10,200.

Mount Boppy.—Clean up from 6,000 tons, 1,005 ozs.; cyanide, 3,906 tons, 1,509 ozs.; slimes 2,012 tons, 981 ozs.; concentrates, tonnage 27, 150 ozs.; total, 3,735 ozs.

Mount Morgan (Queensland).—Treated 21,510 tons ore, 7,845 ozs.; copper, treated 13,852 tons ore and metalliferous flux, and produced 405 tons blister copper, containing 401 tons copper and 4,050 ozs. fine gold.

Mysore.—10,750 tons quartz, 15,347 ozs.; 15,000 tons tailings, 2,173 ozs.; total, 17,520 ozs.

Mysore West and Mysore-Wynaad Gold.—Cyanided 2,592 tons, 281 ozs.

New Comet.—Milled 24,000 tons, 8,475 ozs.; profit, £10,800

New Goch.—Crushed 21,301 tons, 4,096 ozs.; cyanide 2,752 ozs.; total, 6,848 ozs.; profit, £7,007.

New Heriot.—Crushed 9,430 tons, 4,799 ozs.; profit, £8,452.

New Kleinfontein.—Milled 33,302 tons, 8,358 ozs.; sands 22,710 tons, 5,054 ozs.; slimes 10,625 tons, 718 ozs.; total, 12,730 ozs.; profit, £20,097.

New Modderfontein.—Crushed 24,304 tons, 6,805 ozs.; sands and concentrates 15,670 tons, 2,130 ozs.; slimes 10,601 tons, 1,073 ozs.; total, 10,008 ozs.; profit, £15,012.

New Vaal River Diamond.—Diamonds registered by the diggers, £4,550.

Nigel.—Crushed 10,650 tons, 4,605 ozs.; profit, £7,153.

No. 2 South Great Eastern.—Crushed 1,424 tons, 690 ozs.

North Broken Hill.—Treated 2,380 tons crude ore, producing 400 tons concentrates, containing 276 tons 12 cwts lead and 7,354 ozs. silver.

North White Feather.—Crushed 1,610 tons, 750 ozs. bullion.

Nourse Mines.—Crushed 33,040 tons, 8,645 ozs.; sands 23,465 tons, 4,167 ozs.; slimes 9,566 tons, 688 ozs.; total, 13,500 ozs.; profit, £20,050.

Nundydroog.—Quartz 7,000 tons, 5,442 ozs.; tailings 7,290 tons, 752 ozs.; total, 6,194 ozs.

Nymagee Copper.—Production 61 tons.

Ooregum.—Stone 10,718 tons, 5,503 ozs.; tailings 8,500 tons, 728 ozs.; total, 6,231 ozs.

Oroya Brownhill.—Crushed 11,656 tons, 7,078 ozs.

Peña Copper.—Output of ore, 16,500 tons; shipments of ore, 9,120 tons. About 78 tons fine copper in precipitate produced.

Pniel Diamond.—Value of diamonds registered, £10,617.

Prestea Block A.—Crushed 7,760 tons, 3,290 ozs.; tailings 4,502 tons, 1,052 ozs. bullion; total, 4,342 ozs.

Princess Estate.—Crushed 9,000 tons, 2,844 ozs.; cyanide 6,271 tons, 1,330 ozs.; total, 4,174 ozs.; profit, £5,334.

Rhodesia Consolidated.—Crushed 1,760 tons, 1,069 ozs.; cyanided 780 tons, 321 ozs.; total, 1,399 oz.

Roberts Victor Diamonds.—31,052 loads washed, producing 13,400 carats, equal to 43·1 carats per 100 loads.

Robinson Central Deep.—Crushed 21,185 tons, 8,483 ozs.; sands and concentrates 13,600 tons, 2,514 ozs.; slimes 8,030 tons, 818 ozs.; total, 11,815 ozs.; profit, £32,297.

Robinson Gold.—Crushed 38,580 tons, 16,800 ozs.; sands and concentrates, 25,795 tons, 6,772 ozs.; slimes, 13,873 tons, 1,726 ozs., total, 25,298 ozs.

Roodepoort Central Deep.—Crushed 8,676 tons, 2,155 ozs.; cyanide, 6,260 tons, 1,002 ozs.; total, 3,157 ozs; profit, £2,047.

Roodepoort United.—Crushed 15,500 tons, 4,088 ozs.; cyanide 2,353 ozs.; total, 6,441 ozs.; profit, £10,285.

Rose Deep.—Crushed 28,500 tons, 6,243 ozs.; sands 19,210 tons, 2,950 ozs.; slimes 10,228 tons, 597 ozs.; total, 9,790 ozs.; profit, £14,000.

Scottish Gympie Gold.—Crushed 7,900 tons, 2,800 ozs.

Sons of Gwalia.—Crushed 13,295 tons, 3,131 ozs.; tailings 7,550 tons, 1,092 ozs.; concentrates 217 tons, 583 ozs.; slimes 4,450 tons, 380 ozs.; total, 5,186 ozs.

Surprise Gold.—Crushed 3,009 tons, 842 ozs.; cyanide 2,397 tons, 386 ozs.

Talisman.—4,305 tons of ore, value £18,655.

Tasmanian Smelting.—Silver-lead bullion shipped contained 820 tons lead, 120,000 ozs. silver, 468 ozs. gold.

Tingha Consolidated Tin.—Production of tin 27½ tons.

Tolima.—65 tons, value £3,500.

Tomboy Gold.—Crushed 8,600 tons, value $58,000; concentrates shipped 365 tons, value $28,000; total value, $86,000.

Transvaal Gold Estates.—Crushed 9,150 tons, 2,779 ozs.; Central cyanide 3,974 tons, 1,123 ozs.; Central slimes 3,309 tons, 779 ozs.; Kameel's cyanide 1,212 tons, 220 ozs.; Kameel's slimes, 655 tons, 131 ozs.; old slimes 250 tons, 80 ozs.; Elandsdrift 226 tons, 136 ozs.; total, 5,248 ozs.; profit, £8,632.

Van Ryn.—Crushed 23,180 tons, 6,573 ozs.; sands 15,535 tons, 2,227 ozs.; slimes 7,645 tons, 683 ozs.; total ozs., 9,483; profit, £17,212.

Village Deep.—Crushed 27,500 tons, 5,039 ozs.; sands and concentrates 20,530 tons, 3,310 ozs.; slimes 7,165 tons, 635 ozs.; total, 8,984 ozs.; profit, £9,000.

Village Main Reef.—Crushed 40,500 tons, 9,750 ozs.; sands and concentrates 30,602 tons, 4,414 ozs.; slimes 14,026 tons, 1,001 ozs; total, 15,165 ozs.

Vivien Gold.—3,095 tons ore, 657 ozs.; tailings 1,900 tons, 258 ozs.; concentrates 52 tons, 49 ozs.; total, £4,084.

Vogelstruis Estates.—8,255 tons, 2,198 ozs.; tailings 6,430 tons, 573 ozs.

Voorspoed Diamond.—Washed 26,658 loads, producing 5,662 carats.

Wanderer (Selukwe).—Cyanide 14,880 tons, 1,821 ozs.

Wankie (Rhodesia).—Output, 10,875 tons; sales, 7,635 tons.

Whim Well Copper Mines.—1,051 tons (22 per cent.), £23,215.

Willoughby's Consolidated.—Crushed 1,420 tons, 645 ozs., equivalent to 9·08 dwts. per ton; cyanide 1,392 tons, 237 ozs.

STATE OF SAN PAULO 5 PER CENT. EXCHEQUER BONDS.—Messrs. J. Henry Schroder and Co. have received a cable from their Santos agents advising them that they have further encashed £18,800 in respect of the surtax collected weekly for the service of this loan, making a total of £308,600 encashed since August 1.

London and County Banking Company has opened a branch at 67, Sandgate Road, Folkestone, under the management of Mr. G. W. Perkins.

Baku Russian Petroleum.—Production of crude oil for week ended November 2 was 260,000 poods, equals 4,258 tons.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending November 3 was 220,000 poods equals 3,606 tons.

The India Office and the Madras Railway Company have agreed upon £3 10s. per cent. per annum as the rate to be used in calculating the annuity by which the railway is to be bought by the Government.

TRADE AND PRODUCE.

Cotton (from our Manchester correspondent).—A generally unsettled feeling has prevailed in our market this week, and the business put through in yarn and cloth may be described as generally unimportant. The irregular state of affairs in financial circles is reflected in our market, and the fluctuations in the price of American cotton have also added to the unrest and uncertain outlook. Buyers have not sufficient confidence to anticipate future requirements, and purchasing has been done from hand to mouth simply to meet actual requirements. The news with regard to the American crop has been of a rather "bullish" character. Some low estimates have been issued, and owing to the comparatively poor forward movement the "bears" are getting a little anxious. We are very much in the dark, however, as to what the yield will turn out to be. Messrs. Neill Bros.' views, which should shortly be known, are waited with some interest. The general demand for piece goods has been on a small scale. Our large consuming markets of the East have not been in the mood to purchase freely, and manufacturers have had to be content with small lines, and in most cases at poor rates. Nothing particularly fresh has come through concerning China, and the rather discouraging news from India with regard to the crops has caused some anxiety. Some fair lines were put through for Japan early in the week, but the demand has quietened down. For the Levant and Egypt a miscellaneous business has been done in various fancy goods. Buying, for the most part, however, is to meet absolute requirements or to make up assortments. Manufacturing all round is unremunerative, especially where bought yarns are used. Printing cloths as made in Burnley seem to get worse and worse from a producers' point of view. Looms here and there are stopped owing to want of work to go on with. No improvement can be recorded in the demand for heavy goods such as T-cloths and Mexicans. Shirtings all round are fairly well held, but low-grade cloths are not deeply sold. In the distributing houses a fair business has been done in goods suitable for home consumption. Buying for the spring is being deferred, as lower rates are expected. American yarns for home use have only met with a quiet demand, and the production of the spindles has scarcely been sold. Irregularity in prices is beginning to creep in, and concessions, which were scarcely expected, are being granted. Spinners, on the whole, however, maintain their position fairly well, margins being wide and remunerative. The demand from abroad at the moment is not important. There is business to be done for India at a price, but offers, as a rule, do not come up to the requirements of producers. Bolton spinnings remain firm with a steady business from day to day.

Considering the financial panic in America and the general rise in the Bank rate, Sir Jacob Behrens and Sons remark in their circular that it is a matter of surprise that cotton has been able to maintain its position. "Futures" have fluctuated, and mid-American has played a game of see-saw in the neighbourhood of 6d. per lb. being quoted in Liverpool one day above and the next below, without deviating to any great extent from the central figure. The American markets were adversely affected yesterday by the closing of a large print works owing to financial difficulties. Egyptian cotton is quiet and unchanged.

Wools.—Quotations for all fine merino tops and some cross-breds have been readjusted, and are now ¼d and sometimes more below those lately ruling, principally on the report that the new Australian clip is in some instances of a faulty description. Home-grown wools have not declined further in the majority of cases, but Irish, Welsh, and some North varieties are down, and Scotch and Devon tops are easier. Spinners have been keeping out of the market as much as possible, and are trying to get at prices even lower than present quotations, but top makers decline. Australian wools are still dearer than last year, and there is evidently the intention all round to wait and see the result of the New Zealand sales, which open next week. Spinners and manufacturers are both well enough supplied until the New Year, and do not need to rush in on an uncertain market.

Coal.—On the whole, this trade seems in a little better condition than it was last week, and the downward tendency in prices has for the present been checked. Foreign orders are again coming into the market, though some buyers abroad still seem to think that if they wait a little longer they will get their coal even cheaper, and here and there prices in the open market show a slight rise from the contract figures of a few weeks back. Hull and Grimsby exports to distant markets for the last week of October show a decrease on the return of the corresponding week of last year, but this is partly due to the closing of the Baltic season and the fact that large supplies had been rushed there in the preceding week. Home trade is still sufficiently good to absorb the output from the Sheffield districts. Welsh trade is not buoyant, but not worse than can be expected under the present state of financial affairs, and prices, if they do not rise, are at least not going down. House coals, it is declared, are likely to go firmer.

Iron and Steel.—The prospects of pig-iron do not show any improvement. There is still a good deal of business doing in Cleveland deliveries, but it is mostly on old contracts. Of new orders there are practically none, as buyers are afraid to do any business for forward delivery, and do not need any for present requirements. Even the low prices do not tempt them, for they declare that quotations must go lower still. Exports of Cleveland are still good, and production is still not sufficient for requirements in this respect, and stocks in Connal's stores were reduced to 118,518 tons by the end of October. In the hematite trade things are still worse, if anything. Barrow trade has fallen off both at home and abroad, and there are no indications of any likely improvement. It is the same in the steel trade, though it is expected here that the cheaper prices may induce a little new business in shipbuilding materials and in rails.

Copper.—In spite of the efforts of speculators to keep prices up, there has been no real strength in the market this week, and each temporary rally has been immediately followed by a drop to still lower levels. The rise in the Bank rate on Thursday increased the pressure to sell, and as there was little or no support from actual consumers, prices fell to £59 2s. 6d. for both cash and three months.

Tin.—Weakness in the Eastern markets has been reflected here by a gradual sagging of quotations. Liquidation was pretty general, and large quantities of the metal were thrown on the market from day to day. The pressure to sell increased in strength towards the close of the week, and on Thursday values were no better than £135 5s. for spot and £137 10s. for three months. To-day a rally to £137 10s. and £139 respectively was brought about, and the market closed firm.

Tea.—A quieter feeling has taken the place of last week's animation, partly owing to the high Bank rate and partly also because country buyers evidently are not willing to follow the advance in prices, but importers are in a sufficiently strong position, for the stock in London is less and home consumption greater than at this time last year, and there is also the probability of small supplies from India and an earlier closing of the season than usual. The quantities of Indian brought forward at auction amounted to 43,154 packages, of which 38,048 packages sold on garden account at an average of 8.80d. Teas over 8d. had an irregular market and occasionally easier prices, quotations sometimes showed ¼d. decline from the high rates reached last week. Ceylon offerings were only 13,748 packages, and this small quantity, being also of good quality, checked the easier tone that the Indian market suffered from, though here and there some of the better teas were quoted lower, and the average for the week came to 8.86d. against 8.48d. in 1906. Java sales consisted of 2,051 packages, which, in sympathy with other growths, sold with less activity and with a slightly easier tendency.

Sugar.—As consumers have evidently no stocks, the moderate trade demand here and abroad seems sufficient to absorb the present offerings. Neither makers nor holders are anxious to realise, for, with money so much dearer and farmers asking high prices for next season's roots, it is difficult to contract for larger quantities than last year. No further news has come to hand about the beet crop and estimates still vary, but Mr. Czarnikow does not seem to think that 25,000 or 50,000 tons more or less in Europe will make much difference, considering that the world's consumption may vary by ¼ or even by ½ million tons. Russian stocks at the end of the season are expected to play an important part, but their effect has been generally over-estimated. Russia increased her sowings when stocks became exhausted, and those sowings yielded surprising quantities for two seasons, part of which may, of course, be due to permanently better cultivation. But exporting does not pay by a long way yet, and there are negotiations now pending to allow Russia to enter the Convention, if she agrees to limit her exports. It will be very interesting to watch the result. A slight change in legislation regarding allotments for home trade would render fabricants rather indifferent about forced exports, though the Government, of course, wish to attract foreign money. Anyhow, if we include Russian stocks there seems only about last year's quantity available in statistical countries. The American market, in spite of financial upheaval, has kept steady, more or less because of the probable deficiency reported from Cuba, and until this is definitely known business is likely to be only within narrow limits.. For the week landings were 31,000 tons, meltings 35,000 tons, and stocks were 208,000 tons. German exports for October are only 50,750 against 87,000 tons. French Exchequer receipts, however, are equal to 65,750 against 51,650 tons. Austria alone produced 369,000 against 304,000 tons, exported 48,000 against 57,000 tons, consumed 32,700 against 23,900 tons; stocks have increased 85,000 tons more than last year owing to a larger and earlier crop. In United Kingdom consumption is as moderate as last year, and the cane imports continue large, but America is not as bad as expected, imports for last month being 170,000 against 150,000 tons, meltings 185,000 against 206,000 tons; this week they are 35,000 against 20,000 tons, and the excess of imports reduces visible Javas by 24,000 against 5,600 tons for the week.

The Cult of the Rifle and the Cult of Peace. By H. S. Perris, M.A. (London: T. Sealey, Clark, and Co., 1, Racquet Court, Fleet Street, E.C.) Price 1s. nett.

London City and Midland Bank.—The statement for period to October 24 showed current, deposit and other accounts of £52,923,238, and acceptances on account of customers £3,569,562 against assets consisting of cash in hand and at Bank of England £9,875,875, money at call and short notice £6,127,490, investments £6,667,264, bills of exchange £5,979,939, and advances on current accounts, &c., £29,33 9,279.

NEXT WEEK'S MEETINGS.

Monday, November 11.

British Vacuum Cleaner.—Parson's Green Lane, S.W., noon.
Buenos Ayres and Pacific Railway. Winchester House, 11 a.m.
Central Province Ceylon Tea.—Oxford Court, E.C., 2 p.m.
Cleveland Trust.—Middlesbrough, noon.
Drake and Gorham.—66, Victoria Street, S.W., 2.30 p.m.
Goebel Brewing.—Winchester House, noon.
Nigeria Mahogany and Trading.—Winchester House, 3 p.m.
Phillips River Gold and Copper.—Salisbury House, noon.
Southern Mahratta Railway.—46, Queen Anne's Gate, S.W., noon.
Sweetmeat Automatic Delivery.—Winchester House, noon.
Tremelbye (Selangor) Rubber.—61, Gracechurch Street, E.C., noon.

Tuesday, November 12.

Bahia Blanca and N. W. Railway.—Dashwood House, noon.
Brazilian St. Railway.—Palmerston House, E.C., 1 p.m.
Burbank's Main Lode (1904).—3 and 4, Great Winchester Street, E.C., 12.30 p.m.
Central Uruguay Western Extension Railway.—River Plate House, 10.45 a.m.
Cheltenham Original Brewery.—Cheltenham, 2.30 p.m.
Cordoba and Rosario Railway.—Winchester House, 2.30 p.m.
Oakley Steel Foundry.—Winchester House, noon.
Orders and Handford Steamship.—Newport, 3.15 p.m.
Rohilkund and Kumaon Railway.—Gresham House, noon.
Sambas Rubber and Gutta Percha.—Winchester House, 2.30 p.m.
Sumatra Deli Rubber Estates.—Winchester House, noon.
Tomboy Gold Mines.—Salisbury House, noon.
Waterfall Estate and Gold Mines.—Winchester House, 2.30.

Wednesday, November 13.

Eastern Extension, Australasia, and China Telegraph.—Electra House, E.C., 3 p.m.
Eastern Telegraph.—Electra House, E.C., 12.30.
International Financial.—Winchester House, 2 p.m.
John Haslam and Co.—Bolton, 2.30 p.m.
Ouro Preto Gold Mines of Brazil.—6, Queen Street Place, E.C., 11.30 a.m.
Van Ryn Gold Mines.—Winchester House, 12.30 p.m.
Victoria Falls Power.—Salisbury House, noon.
West India and Panama Telegraph.—Winchester House, noon.

Thursday, November 14.

Boston Consolidated Copper and Gold Mining.—Winchester House, 12.30 p.m.
British and Chinese Corporation.—Cannon Street Hotel. 2.30 p.m.
British Columbia Electric Railway.—Liverpool Street Hotel, noon.
Dalgety and Co.—96, Bishopsgate Street Within, 12.30 p.m.
Dartford Brewery.—Winchester House, noon.
Fraser and Chalmers.—Winchester House, noon.
Goldfields of Mysore and General Exploration.—6, Queen Street Place, E.C., 2.30 p.m.
Manchester District Motor Omnibus.—Salisbury House, noon.
Nitrate Securities Trust.—Winchester House, 12.30 p.m.
Reynolds Bros.—Liverpool, 11.30 a.m.
Robert Younger.—Edinburgh, noon.
Santa Catalina Nitrate.—Winchester House, 2 p.m.
Volgelstruis Estates and Gold Mines.—Winchester House, 12.30 p.m.

Friday, November 15.

Algeciras (Gibraltar) Railway.—4, Coleman Street, E.C., 1 p.m.
Pan de Azucar Nitrate.—Winchester House, noon.
Santa Fé Land.—Salisbury House, 11 a.m.

London and South-Western Bank.—The statement for October 31 shows current accounts and deposits of £14,282,382, other liabilities £716,479, and acceptances and endorsements £41,540, against assets consisting of cash in hand and at Bank of England £2,115,906, money at call and short notice £1,158,860, British Government and other securities £2,278,600, and bills discounted, loans, &c., £9,524,563.

Blackpool Tower Co., Limited.

The tower and palace owned by this undertaking seem much more attractive to the holiday-maker than the rival pavilion, and in the twelve months ended September 30 produced a nett revenue of £41,204. Debenture and other interest having been met, £9,000 is written off for depreciation and £6,000 is added to reserve, leaving £15,561, which is increased to £17,356 by the balance brought forward. Out of this dividends are paid of 6 per cent. on both the preferred ordinary and ordinary shares, together with a bonus of 1 per cent. on the latter, and £1,076 is carried forward. The freehold land owned is valued at £149,380, the tower and buildings at £287,349 and the plant, machinery, &c., at £15,691, and on the last two items the depreciation allowance is by no means lavish at about 1½ and 1¼ per cent. respectively. On furniture and fittings, however, 10 per cent. has been allowed, bringing this item down to £20,145. On the other hand, the reserves now reach a total of £18,391, of which £12,000 is represented by loans on mortgage to the Corporation of Blackpool and £6,391 is held in cash. The current position is good, as against £9,348 due to sundry creditors debtors owe £2,201, stocks are valued at £12,614 and cash comes to £34,281 apart from the above-mentioned sum held on account of reserve.

COMPANY MEETINGS.

BAKU RUSSIAN PETROLEUM.

The eighth annual ordinary general meeting of the Baku Russian Petroleum Company, Limited, was held on Wednesday at Winchester House, E.C., Colonel Ivor Philipps, D.S.O., M.P., chairman, presiding.

The Secretary (Mr. A. S. Evens, C.A.) having read the usual notices,

The Chairman said that he could not pretend that the credit balance of £1,273 for the past year was other than unsatisfactory, but it was, roughly, due to the 1905 contracts and to the two months' strike at Baku. He thought that the strike cost the company £40,000 or £50,000. In a few words, the board's policy had been to develop the property. They had done their utmost in that direction by pushing on with the boring to the greatest extent they thought possible, and they were now, he hoped, approaching the time when satisfactory results would be got from this extensive boring programme. The future depended to an enormous extent on the state of things in Russia, because the labour problem was the one that was "up against them" all the time. In July last year the directors accepted the nomination of two gentlemen by the leaders of the agitation, and hoped that by doing so they had brought peace to the company. The overwhelming majority of the board had only been in office since July last year, and even they had not had the free and independent control of the company for that year and a-quarter, owing to contracts made by the previous board. Those contracts were not completed until February of this year, and the new board could really only be responsible, as far as the sale of production went, for the oil sold and delivered after that date. He did not wish to shirk any responsibility for the action which was taken in 1905. All he wanted was to point out that five members of the present board had nothing whatever to do with the result now before the shareholders. In 1905 the company had a large floating debt. There were great difficulties in raising the necessary funds, and the board, after the most careful consideration, and with the recommendation of the general manager, made the forward sales at the price ruling in Baku at that date. Almost immediately after those sales were completed the disasters and massacres of August, 1905, occurred, and the oil industry was put on an entirely different foundation. With derricks destroyed and business at a standstill, it was practically impossible to raise any money in London for the restoration of the properties, and it was merely the fact that the hand money in connection with the advances on those sales was still in the company's safe that enabled them to restore their property. He believed that most of those sales could have been cancelled just after that disaster, because the buyers would willingly have had their bills back. What would they have done if they had cancelled them? They could not have got the money in London or anywhere to restore the property. After continued negotiations, spread over some months, they managed to reduce the amount by nearly half, so that the board at that time was not idle. They had hoped that the production would have been better, and that those contracts would have been completed sooner than they were, but owing to the smallness of the production the contracts were not completed until February of this year. Unfortunately the agitation had again sprung into existence, and had taken the form of criticising all the previous acts, good and bad, of the previous management, and by suggestion had undoubtedly led some shareholders to believe that the present board was in some way responsible for them. They had already answered many of these charges, and they left as far as possible all those charges of mismanagement which referred to a period anterior to the appointment of the majority of the present board. But they had received the reply that they had failed to answer seven-eighths of the charges, and another circular had been issued making certain definite charges and repeating some of the old ones. One of the first was that the company never had adequate working capital, but a further charge that the refineries had to be sold showed that this reference was to the working capital when the company was started, because it was found that those refineries were sold in 1899 and 1903, and he would ask how the present board could be held responsible for such action? The next charge was that the development of the properties had been neglected, but take the actual position. The last official monthly return showed that the company, without any special spouters or anything of that sort, had reached the position of the sixth largest producing company in Baku in September. Then there was a charge that the directors were putting out the wells to contractors, but an official return showed that they were at least committing that crime in common with all the other producers at Baku. There was no doubt that the cost of production had gone up enormously, but it was not special to their property any more than to any other. The chief reason probably was that the wells were yielding on an average less oil than formerly. Not the wells of this company only, but the wells in the oilfields generally, and here again the chairman referred to the official statistics. In 1899 each well on an average produced 532,000 poods, and in the ten years from that date the average production per well in Baku had fallen to 202,000 in 1905 and 223,000 per annum in 1906. If the average amount of oil produced from any well was reduced by one-half the cost of production per pood must be considerably greater. As the value of oil went up royalties in kind went up, and there had been a rise of 50 per cent. per pood in these alone since 1904. Another reason for the increased cost was the greater depth of the wells, necessitating stronger engines, the

larger diameter of the wells, stronger balers and plant generally, and, of course, with the increased work, it also meant more fuel for the boilers. Wages, too, were higher owing to the labour troubles, and finally there was the increased taxation. The board was doing its utmost to increase the production, and the delay was simply owing to the difficulty in completing new wells again due to labour troubles. One of the charges was that the debit on profit and loss account stood at £158,000, but it stood at that in 1904 and also in 1905, and although he agreed that the first opportunity should be taken of writing it off, he did not see how the present board could be blamed because that debit was there. The agitation had a wonderful story about an exchange of accommodation bills with the Russian company in respect of a sale of oil to that company, but it was all moonshine. The actual facts were that 3,000,000 poods had been sold at Bourse prices less a small percentage for delivery over twelve months, and on this an advance of £30,000, or 10 copecks per pood, had been received, but no bills had been given in exchange, and the oil as it was delivered had to be paid for in cash monthly. The next point was the wonderful story about £400,000 which had appeared at intervals since May, 1906, and he hoped that he would be able to nail that lie to the counter once and for all. There was nothing like that loss in 1903 and 1904, in 1905 the price received for all oil exceeded the general average market price, but in 1906 there was a loss. The loss on the Mazout Company forward compared with market price contracts was £39,000, and there was a total loss in that year of £47,000 compared with the average market price. Taking the Mazout sales, on which they had been told there was a loss of £400,000, the whole value of the oil delivered under those contracts was £265,000. The next charges were that they had refused financial assistance, and had made no serious effort to meet the financial situation, that they had done nothing themselves and had prevented others from doing it. They were as anxious as anyone to put the financial affairs of the company on a satisfactory basis, but it was almost impossible to do so as long as those agitations went on. The board considered it essential for the company's welfare that some scheme for the provision of working capital and for the reorganisation of the capital should be carried through. So far the schemes had failed owing to the withdrawal of financial support when it was found that there was this active and perpetual hostility to the board, and they hoped that shareholders would realise before it was too late that a house divided against itself must fall. Having undertaken the task they would not willingly abandon the interest committed to them. The property to-day was in a better position than it had been for a long time, and with such an asset there should be no difficulty in arranging the finances if they would only pull together. He and his colleagues were assured of the overwhelming support of the shareholders at a poll, but he would remind them that, if the agitation continued, they were seriously embarrassing the chances of the company's being steered successfully through its present difficulties. He moved the adoption of the report, which was seconded by Mr. Alfred H. Drew.

Mr. W. Rutherford, M.P., moved an amendment to the effect that the report, balance-sheet, and accounts should be received, but not adopted, and that a committee should be appointed to look into them, and also to consider the question of management and finance, and report, and that the committee should have the right to see the books and papers, notwithstanding article 104. He said that he had visited the company's property, and had come to the conclusion that the best had not been made of the whole of it. The committee were not seeking for any seats on the board; they would, in fact, decline to join the present directorate without the assurance of some change of policy on the part of the majority of the members. The attitude which the committee had taken up was exclusively with the idea of trying to rescue the property, which they believed to be valuable, from what they considered to be incompetent hands. Mr. A. C. Holzapfel seconded the amendment. Mr. Rutherford said that if the amendment were carried it would be proposed that the committee should consist of himself, Mr. Holzapfel, Mr. F. Shaw Kennedy, Colonel T. H. Morris, and Mr. Arthur Gladstone; and also that, in order to receive and consider the committee's report and transact the rest of the business, the meeting should stand adjourned till that day week, at the same time and place. The chairman stated that he was not prepared to accept the amendment for the adjournment of the meeting; and he was advised by the solicitor (Mr. Stevenson) that the proposal contained in the first part of the amendment was not in order because it was not in the notice convening the meeting. The solicitor gave the grounds on which he had advised the chairman that the amendment was out of order. Mr. Rutherford observed that if the chairman ruled his amendment out of order on the grounds stated by Mr. Stevenson it would be, in his opinion, "a piece of uncommonly sharp practice." Mr. Beverley said that he regarded the amendment as a sensible proposal. If there was nothing that the board need take exception to, the more carefully the accounts were examined the more support they would have. After further discussion, which was characterised by great disorder, Mr. Rutherford asked for a vote of the meeting, on his amendment. There were loud cries of "All," and he declared it carried. The Chairman afterwards put the original motion, which was defeated, and a poll was demanded on this and on the proposals for the re-election of retiring directors. It was decided that the poll should remain open till 4 o'clock on Thursday afternoon at the company's offices. Amid considerable confusion resolutions were declared carried by members of the committee in favour of the election of Mr. Rutherford, Mr. Shaw Kennedy, and Mr. Holzapfel.

The poll on the resolutions moved at the meeting was closed at 4 p.m. on November 7, when the following results were announced:—Receiving and adopting the report and accounts for the year ended December 31, 1906: For the resolution, 499,173; balance in favour, 282,787. For the election of Col. Ivor Philipps, D.S.O., M.P., 497,573; balance in favour, 286,762. For the election of Mr. Alfred Henry Drew, 497,573; balance in favour, 286,762. The Chairman thereupon declared that the profit and loss account for the twelve months ended January 13, 1907 (December 31, 1906, old style), and the balance-sheet at that date, together with the reports of the directors and auditors, were received and adopted, and that Colonel Ivor Philipps and Mr. Alfred Henry Drew were elected directors of the company.

The proceedings then terminated.

MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY.

A meeting of the shareholders of this bank was held at Manchester on November 4, when the following resolution was moved by the Chairman of the bank, Edward Donner, Esq.:—

"That the acquisition of the business of the Lancaster Banking Company, Limited, by the company on the general terms of the draft agreement submitted to this meeting be approved, and to enable the same to be carried into effect that the capital of the company be increased to £9,480,000 by the creation of 33,000 new shares of £60 each."

After a brief reference to the preliminary agreement which had been signed by the directors of both banks, the Chairman said: "The figures which have formed the basis of the terms of the amalgamation have been fully put before you in the circular which you have received, and they have also been commented upon in the Press. I do not think, therefore, that I need occupy your time by going over them. I would rather give you reasons why we think this amalgamation would be advantageous. It is becoming more and more desirable that we should be established at Lancaster, at Preston, and in the North of Lancashire, especially as so many of our customers are constantly going to the Lake District to settle there. Another important advantage which we think will be gained is that, the district served by the Lancaster Bank, being in the main an agricultural one, their business would combine very favourably with our own. The only towns in which at present we compete with the Lancaster Bank are Blackpool and St. Anne's. We shall, therefore, enter upon an entirely new and, we hope, fertile field, and it is obvious that an alliance with an old bank like the Lancaster Bank is far more advantageous to us than the opening of new branches by ourselves in their neighbourhood. As regards terms, the exchange of shares is made on the market valuation of the shares of each bank, a slight advantage being given to the Lancaster Bank shareholders, as is usual when a smaller bank is amalgamated with a larger one. We have endeavoured to negotiate a perfectly fair arrangement between the two banks, and the amalgamation has received the unanimous approval of the Press here, in Lancaster, and in London. We believe that this union will greatly increase the prestige, power, and usefulness of this bank, and to secure these advantages has been our sole aim in the negotiations which have been carried on."

The resolution was seconded by Mr. George Barbour, supported by Mr. Benjamin Carver, and carried unanimously.

At a meeting of the shareholders of the Lancaster Bank, held on the same date at Lancaster, a resolution approving of the amalgamation was also carried unanimously.

SALVADOR RAILWAY.

The eighth ordinary general meeting of the Salvador Railway Company, Limited, was held, on Thursday, at Winchester House, Old Broad Street, E.C., Mr. Mark J. Kelly (chairman and managing director) presiding.

The Secretary (Mr. F. C. Tillbrook) having read the usual notices,

The Chairman said: "Notwithstanding the troubles in Central America during the early part of the year, in which Salvador was involved, and the climatic disturbances which followed them, we are able to meet you to-day with a report which I believe you will find a satisfactory one." After dealing with the details of the accounts, the Chairman went on to say: "I should be wanting in fairness to the Republic if I failed to point out that Salvador was the first of the five States to accept and to welcome with sincerity and eagerness the public-spirited joint initiative of the Presidents of the United States and Mexico for a conference of representatives of the five Republics, with a view to formulating agreements having for their object the assuring of permanent peace in that part of the continent. The conference, I am informed, will meet shortly at Washington, and there is reason to believe that under the friendly auspices of the United States and Mexico a thoroughly practical and workable agreement will be reached and that we shall hear no more of political disturbances in Central America, which has ever been itself the largest sufferer in every way by them. The ruler of Salvador, General Fernando Figueroa, who took up his office only last March, is known to cherish the greatest desire to live in peace with the other Republics and to be free to carry out a programme of development of the great resources of his

country. Our relations with his Government, as with the preceding administrations, are cordial and in every way satisfactory. With the object of attending to matters relating to the company's business, I propose to visit Salvador during the coming winter, and I hope to be accompanied by Mr. Spencer, in order that, for the first time, your property out there may be thoroughly inspected by an expert, and technical details of management settled under the advice of a competent engineer on the company's board of directors. I shall endeavour in Salvador to deal with matters not only with a view to eliminating unfavourable contingencies, but also with the purpose of increasing the dividend-earning power of your property. The acquisition of one of the Acajutla undertakings in 1903 marked the turning point in the fortunes of your company, the accumulated debit balances from earlier years of working of the railway being soon wiped out, and progression on the right side of the balance-sheet having since been very fairly maintained. Indeed, although I have had to allude to wars, floods, and even a strike, nevertheless there has been no retrogression in the net results of the year, but, on the contrary, the enumeration of these happily passed events synchronises with our ability to begin this year to pay dividends on the ordinary shares. The directors are convinced, moreover, that they have by no means exhausted the favourable possibilities of your business, which, they feel sure is susceptible of useful expansion in the directions already outlined, besides necessary extensions later; in a word, I am happy to say that on your board we are all united in the policy of systematic development of our business of carriers by all legitimate means that may secure to our proprietors a progressive increase of dividends. We have recommended that a commencement be now made in paying a return to the ordinary shareholders, and we have done so with no intention of turning back, nor of being satisfied with any results which may fall short of putting their shares on a permanently satisfactory basis. (Applause.)

Mr. Maurice Ulcoq seconded the motion, which was carried unanimously.

A short discussion followed, in the course of which much satisfaction was expressed at the improved position of the company. In reply to a shareholder, the chairman stated that the suggestion that something might in future be paid to the preference shareholders by way of interim dividend should be considered by the board. The motion was unanimously adopted.

HUMBER, LIMITED.

The ninth ordinary general meeting of the shareholders of Humber, Limited, was held on Wednesday at Cannon Street Hotel, E.C., Mr. Edward Powell (chairman and managing director) presiding.

The Secretary (Mr. James T. Allbutt) having read the usual notices,

The Chairman said that the sales for the year ended August 31 last were nearly five times as large as those for 1900, the first year of the company's existence. This increase was mainly in the motor branch of their business, but the cycle branch had also shown steady progress in spite of the unfavourable summer. This year they were producing several new models. The profit for the past year was £154,434, against £106,558, and he estimated that, had they had possession of their new Coventry works the profit would have been £25,000 or £30,000 larger. At the last meeting he suggested that the ordinary shareholders should be satisfied with a dividend of 5 per cent. to 10 per cent. until a reserve had been built up to a sum which would pretty well balance the large item standing under the head of goodwill in the accounts. Had the business progressed in what might be regarded as a normal manner, he should have said, "Let us stick to that proposal until we have a reserve of £250,000." To meet the growth of their business, however, they had expended on land, buildings and additional stock over £250,000, to say nothing of the further outlay to complete the works at Coventry. In these circumstances the board considered that the financial position of the company should be strengthened, and that it would not be fair to ask the ordinary shareholders to wait so long, as it might be necessary to do this out of the profits. Moreover, the expenditure was required immediately. It was therefore proposed to pay 20 per cent. on the ordinary shares, to apply £5,000 to form the nucleus of a provident fund for the employees, and to transfer £85,000 to reserve, raising it to £125,000, which was sufficient to pay a dividend on both classes of shares for over four years. There then remained £9,000 to be carried forward. With regard to the future, he said that a number of gentlemen who assumed to know a great deal about the trade were saying that the "boom" in motors was passed, and that they must look for a considerable reduction in sales next year. There was, however, every indication that the company would do a larger home trade this year than they did last year, and their foreign trade was increasing by "leaps and bounds." So far as could be seen, their cycle trade next year would also be considerably larger. Mr. J. W. Davy seconded the motion, which was unanimously adopted. An extraordinary general meeting followed, at which it was decided to increase the capital to £600,000 by the creation of 100,000 new ordinary shares of £1 each. The chairman mentioned that the shares would probably be issued at a premium of 10s. per share.

EAST FINGALL GOLD MINES.

An extraordinary general meeting of the East Fingall Gold Mines, Limited, was held on Thursday at Cannon Street Hotel, E.C., to consider resolutions for winding up and reconstructing the company. Mr. George Bargate presided.

The Secretary (Mr. W. Fenton Pugh) having read the notice convening the meeting,

The Chairman said: Before arriving at the decision to reconstruct, your directors thought it wise to consult with several of the largest shareholders, who not only approved of their action, but have promised them the material support necessary to carry it through to a successful issue. We desire to point out that there are no current liabilities and that the liquid assets of the company amount to about £5,000. You may very naturally ask why the work suggested in the circular of July 6, 1907, has not been carried out. About this time negotiations were commenced which are still under consideration, and which if carried out would materially reduce the expenditure in working the property, and as these matters are still under consideration I cannot refer further to them at the moment. At the same time we had brought to our notice the new mining regulations of an Act which came into force about that time, which would entail a considerable additional expenditure on additional airways and ladderways and considering the amount of money at the disposal of your directors, it was impossible for them to continue the work, and they decided that it was desirable to temporarily suspend operations until they could consider means to procure additional capital and find some cheaper and more speedy method of doing this development work. Down to a depth of 200 ft. from surface there was a satisfactory and profitable lode, but there exists between that depth and 500 ft. a barren zone, below which depth the Great Fingall have found rich ore in highly payable quantities, and your directors decided to sink the shaft to the 500 ft. level and drive off it to the lode from that point. At about 400 ft. in sinking the shaft we came to the first indications of a continuance of the lode in depth by cutting a narrow leader containing rich ore. This confirmed our views as to the desirability to continue the sinking to the 500 ft., and drive from there until we struck the lode, and by crosscutting to the north we again met with success, and proved over a length of 110 ft., a continuance of the leader found at 400 ft., and which gave an average value of 1 oz. 16 dwts. 5 grs. This wants still further development, but before proceeding with it it was considered by your chairman and directors that the proper course was to continue the sinking of the shaft to 650 ft. and drive to the lode at greater depth and prove it at that level, where there are fair prospects that the ore-bearing part of the lode will be found in greater width, as has been the case in the adjacent property, and when operations are resumed your directors intend to complete the work at the 650 ft. level, as indicated in the circular to the shareholders of July 6 last, and this work will be largely facilitated by the use of the diamond drill. Your directors have not lightly entered into this proposal which they now place before you. No other course really was open to them, as it would never do to leave the property as it is, fully equipped with excellent machinery, good supplies of fuel and stores, and by all precedent every prospect of success attending our efforts in the lower depths. Your directors, therefore, strongly recommend that the resolutions which I now propose be adopted, and before proposing these resolutions for your consideration I would like to add that as the company is in no immediate need of money it is proposed that the shilling call now being arranged for shall be made 3d. per share on application, and the balance in calls of 3d. per share at intervals of not less than 60 days. He concluded by moving the resolutions embodied in the notice calling the meeting.

Mr. F. D. Leslie seconded the proposition.

Replying to questions from shareholders, the Chairman said that, so far as they could estimate at the present time, the diamond drills would be available somewhere towards the end of the present year or very early next year. The minimum number of shares upon which they would go to reconstruction would be 200,000, which would provide £10,000. Any shares left over and not applied for would be offered to the shareholders.

The resolutions were then put to the meeting and carried unanimously.

The Irish Times, Limited.

A fine, steady income is provided by this well-established Irish newspaper and profits for its year closed September 30 last amounted to £33,330 before income-tax was deducted. Deducting income-tax, the free profit was £31,8[illegible]3, to which £2,863 brought forward has to be added, making £34,739 in all. From this the directors write off £2,585 for depreciation and out of the balance meet the dividends on the two preference share issues and make up the ordinary dividend to 10 per cent. for the year by a final payment at the rate of 13 per cent. per annum. All this done and after placing £1,000 to reserve there is still £3,048 left to carry forward. The total reserves in the balance-sheet amount to £9,305 and the company owes £9,891 to sundry creditors, but sundry debtors owe it £25,017.

Tenders for the issue of £15,000 "D" (5 per cent.) Stock of the Croydon Gas Company must be sent in to the Secretary at the Company's office, Katherine Street, Croydon, not later than 9 a.m. on Wednesday next, November 13, 1907.

The London Joint Stock Bank has opened a branch at 37, Market Place, Kingston-on-Thames, under the management of Mr. Frederick Boston.

Mr. Walter James Heriot, of Messrs. C. J. Hambro & Son, has accepted a seat on the Board of the National Discount Co.

Mr. George Comber, of Manchester and Knutsford, has been appointed a Director of the Lancashire and Yorkshire Bank.

Prices of Mine and Mining Finance Companies Shares.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 515. New Series. SATURDAY, NOVEMBER 16, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,

"Investors' Review" Office,

Norfolk House, Norfolk Street,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Should we put a Premium on our Gold?

Always when money gets dear in London, superficially through a reduction in the gold reserve by exports, the cry arises: "Why not put a check on gold exports by some other means than an advance in discount rates?" What is aimed at by those who put this question is the imposition of a premium on the metal, and the underlying idea is that in this way domestic credit users might get their banking money at low rates, while the foreigner who came for gold would be compelled to pay whatever price the Bank of England cared to ask. It is plausibly argued in support of this view that the Bank of France charges a premium when the demand for gold made upon it becomes inconvenient. "Why cannot we do the same?" it is asked. We could; there is no doubt of that, if we are prepared to sacrifice our position as the mercantile and financial Clearing House of the world. Were it not necessary for this reason that our sovereign should be maintained inviolate, so that from all the ends of the earth arrangements can be made to liquidate debts on the London Money market in perfect assurance that £100 worth of goods, no matter in what currency the sale had been originally made, would be paid 100 sovereigns for on demand, then we might imitate the Bank of France. In no other way, however, can this change be made, and it is worth the consideration of those who always start this kind of chatter in times of difficulty whether the loss would not in the long run much exceed any possible transitory gain. The Paris Money market is a rich one, but as long as the Bank of France puts up barriers against the free inflow and outflow of gold, Paris will have no chance whatever of supplanting England as the great world Clearing House.

And the position of the Bank of France has been weakened instead of strengthened by the policy pursued. Political expediencies, the consuming necessities of the State, have compelled the governors of the Bank of France to keep domestic rates of discount low at all hazards, and one consequence has been a dangerous inflation in the note circulation of the Bank. It was recently up beyond £200,000,000, and in the middle of November, 1873, it was under £120,000,000. What has happened in the interval to lead to the great increase in the display? By 1873 much of the Franco-German War finance had been carried to completion, necessitating an increase of nearly £68,000,000 in the note circulation compared with the total just before the war, and from then until now the population of France has stagnated. The industries of the country have no doubt expanded to a marvellous degree, but they would not even now require such a mass of currency to be afloat amongst the people were it not for the existing mass of the national debt and the mass of the country's investments of other kinds. The note circulation has, therefore, gone up mainly through financial demands, not only the demands of the French Government, but of the Russian Government, of joint-stock industries at home and abroad, of commitments in foreign loans and foreign stocks and shares in various parts of the world. The extent to which the French people have plunged into foreign risks of all

descriptions, including South African mines, during the thirty-four years that have elapsed since 1873, has had much to do with the expansion in the note circulation, and it is fair to infer that if the French people had been compelled to find gold at every recurring pinch brought about by their excessive indulgence in speculative finance, the economic state of the Republic would have been much healthier than it is to-day. Its gold reserve at least would have been in better proportion to the active note circulation of the Bank of France.

We remain under the obligation to find gold for all comers if they have the wherewithal to pay for it, and to find it at the fixed statutory price, weight for weight in standard bullion against sovereigns or Bank of England notes. It is because of this obligation that we are accustomed to see the official rate of discount as well as market rates rise and fall with a frequency, and to an extent which the protected Money market of Paris never experiences. But this is not necessarily an evil, and, at any rate, it is the natural consequence of supply and demand. We are crying out now against the Yankees for their greed of gold, and fulminating against the Bank for letting the metal go in such amounts. "But for this," we are told, "the Bank rate might never have gone above 5 per cent., and the whole trade of the country would have escaped the punishment now meted out to it for sins not its own." That is not true. Dear money is only superficially the consequence of foreign demands for gold. The real cause is over-trading and over-speculation. This has gone on in the United Kingdom just as in the United States and on the Continent, if not to the same sensational extent or in the same apparently demented fashion. High rates of discount and for loans are therefore the expression of a universal shortage of assets, and a universal demand for something solid with which to fill the cavity produced by a relapse in values inflated beyond all reason. If we could imagine a world in which all men were prudent, and whose business was conducted on a basis strictly of barter; were nobody ever to try to "corner" the world's markets for any particular commodity; were nothing in the nature of falsification of market prices to be ever attempted; did masters in finance abstain from palming off upon the public misnamed securities of their own manufacture at prices altogether beyond their intrinsic value, the business of the world might run smoothly from year's end to year's end with scarcely an ounce of gold shifted from one market to another. Unfortunately, a world of this kind is far away, and we live in an age when credit is utilised to an precedented degree, not merely the credit necessary to move commodities, to carry them from the place of origin to the place of sale; nor even the credit requisite to call works of utility into existence designed to increase the wealth of mankind by their revenue, but the credit which consists in capitalising chimerical and often wholly unrealisable future benefits, and treating the paper capital thus brought into existence as solid exchangeable material. The whole world has indulged in this misuse of credit to a degree without parallel, and it is inevitable that the whole world should suffer when the flimsy structure thus reared collapses. Then everybody wants a real value, and the only instrument of universal exchange by which clamant debtors can be satisfied is gold. Therefore, money is dearer now the world over than it was some weeks ago. We alone are not suffering by the crisis in the United States. There was not a bank of any importance in Europe that did not put up its discount rate last week in imitation of the Bank of England. This is because the credit market is now a universal market, and it cannot be wounded at one spot without causing suffering everywhere. But we must find the gold to fill the void as long as the buyers can pay for it, even if the Bank of England rate has to be put up to 10 per cent. To refuse to do so would be to proclaim to mankind that the British Empire is no longer in a position to meet its engagements.

Consolidated Gold Fields of South Africa, Limited.

A spirit of comparative docility appears to have come over the directors of this company, and their report for the year ended June 30 last is no longer loaded with fulminations against those who sought to benefit the white and coloured populations of South Africa by giving them the chance to earn money at the mines. A year ago the directors were good enough to inform the public that there was "overwhelming" evidence to prove that, whether the system of recruiting was perfect or not, the supply of indigenous labour for the requirements of the industries of South Africa was "quite inadequate." There was much more of the same sort, and no body of men were in the past more active in agitating for the introduction of the Chinese coolies with all the pestilential moral and economic consequences of that invasion than the directors of this Gold Fields Company. Now it would seem from some of the observations made by Sir George Farrar—who himself but lately fulminated against the Home and Transvaal Governments for deciding to withdraw the Chinese, predicting all manner of calamities as likely to follow—that the Chinese experiment is at an end, and will not be repeated by the magnates. Incidentally he admitted that it was an experiment which had cost the mines £1,500,000, money indirectly or directly taken out of the pockets of shareholders in Witwatersrand mines the world over. He spoke in a chastened spirit, and the change was welcome. The Gold Fields board grumblingly comes into line.

In the report before us for the past year closed June 30 the directors of the company, while sadly admitting that the Chinese must go and dwelling on their "admittedly higher efficiency," also declare that "the representatives of the industry are giving their loyal and unanimous co-operation towards the substitution of a sufficient supply of Kaffir labour by carrying on their recruiting operations on lines approved of and laid down by the Government." There was not enough native labour a year ago, now there is plenty, and the mine controllers have not only gone thus far, but some of them are expressing pleasure, or feelings akin thereto, that the native whites in South Africa are to have a chance of earning their bread at last. There is room now for the Boer in the mines. The change, say the directors of this company, "has led to the employment of certain of the Dutch population, thus bringing local feeling and support into somewhat closer sympathy with the industry." Is not the phrasing dainty? What a pity it is that this door was not opened to Boer labour in the past, and that instead of blackening the character of the native whites without scruple or regard for truth, so as to bring about a war and Chinese labour, these masters of the mining industry had devoted their energies to the introduction of the most economical mechanical aids to mining, and striven to train native labour sufficient for the work to be done.

We shall let bygones be bygones, because it is never the policy of this Review to harp upon past mistakes once they have been corrected. As long as it seemed possible that the Chinese gangrene would be allowed to persist and to destroy progress in South Africa we opposed the mine masters and their policy tooth and nail. Now we resume the gloves, and shall gladly note every sign of improvement, of a better spirit and a wiser policy. All the same, we think it is to be regretted that the directors of this company have decided to pay a 12½ per cent. dividend for the past year, because they have not earned the money, nor do they possess it. It will take £250,000 to pay the half-crown per share, and the cash in hand, as shown by the balance-sheet at the date of the report, was only £206,827. Some of the dividend money will thus have to be borrowed unless large additions have been made to the cash in the meanwhile, which is hardly probable. But this is not all. The gross profit for the past year is brought out, excluding £998 in transfer fees, at £519,199, and of this £441,356 was left after provid-

ing for all current charges and debenture interest. But against this the directors had to write off £634,491 for depreciation, making the amount thus applied in two years £1,334,492. But £634,000 written off for the year leaves the profit and loss account about £193,000 to the bad on the year's business, and although the balance brought forward was £607,929, none the less is the company impoverished by the amount of the dividend, so much so that, after paying it and writing down assets to the amount named, there is only £85,168 left to carry to the new year. Five years ago the balance forward was £1,675,927, after paying 2s. 6d. a share as dividend, and market prices showed in addition a "further large unrealised profit." The contrast does not seem to indicate good finance, and we really should not care to be the banker of the company in present circumstances. We quite appreciate the hunger of the shareholders for dividends, especially as some of these shareholders probably enough hold their shares at £8 or even £10 apiece, but if the directors are really bent upon striving to restore the finances of the company to a solid position they ought to have resisted the pressure and husbanded every penny coming in from dividends or sales of securities, so as to solidify their morass.

In order to comprehend a little how matters stand, it may be expedient to compare further the figures of the present balance-sheet with those published five years ago. Capital remains the same, but the debenture debt has been reduced by £125,000 within the period. Sundry creditors are also less by about £475,000, but the profit exhibited has diminished on the comparison of these two years by no less than £1,841,000. That is to say, in the year ended June 30, 1902, the profit shown was £2,175,927 and for the past year it was £335,168. And yet in the interval the company has increased its investments in shares in companies, "taken at or under cost," by nearly £339,000. It has, however, reduced the amount lent by it on short call, presumably contango money, by £1,010,500 to £1,350,789, the changes in other items in the balance-sheet being of comparatively small moment. Some of these changes are in the right direction, but not the item "shares held." Does the increase there represent the product of jobbing, or is it the outcome of Stock Exchange failures? This company, it must never be forgotten, is the product of an insane period. Had it been started on wise lines it might have been a success throughout—putting aside the losses of the war period—for it has considerable interests in some excellent and profitable undertakings. It is the pricked balloons that smother it.

How much of its revenue for the past year came from dividends, how much from its contango business or from interest earned on money lent to subsidiaries, neither the balance-sheet nor profit and loss accounts, nor yet the directors' report, gives the slightest indication. But there are several of the mines in which the company is a large shareholder which ought to be doing very well. Summary accounts of a few of them are included in the report of Mr. Leslie Simson, appended to the directors' and managers' statements. The Robinson Deep, for instance, in its year ended August 31 last made £420,571 of working profit, and including sundry revenue and the accumulated reserve gold taken into the balance-sheet on November, 1906, displayed a profit balance of £450,200 all told, the average profit being rather more than 18s. 6d. per ton treated. Then the Knight's Deep showed a clear profit, including the reserve gold brought in, of £197,290, its profit on the ore and residues handled being upwards of 7s. 11d. per ton. A much weaker looking property, the Simmer and Jack East, showed a profit of 3s. 3.230d. per ton mined, and a total profit of £76,215, while even the disappointing Nigel Deep earned £27,462 but it appears to be drying up now altogether as a source of income. Then the Luipaard's Vlei gave £91,790 or 9s. 5.970d. per ton mined. None of these properties have ever been first-class in the way of possessing ore of high grade, but the Gold Fields company appears to possess, through these and one or two other investments, interests of value in large masses of poor ore, capable of being worked at an excellent profit if the latest scientific methods are applied to mining together with highly skilled and well paid white labour. For all that, the company is waterlogged by assets of a description that causes one almost to despair of its future.

Take the Nigel Deep as an example. Happily, the Gold Fields company does not seem to hold a large amount of its shares although we do not know how far it may be involved in loans to it—but that company was started with a capital of £450,000, and its shares were callously run up in 1905 to a price that made the property work out at a market value of upwards of £2,000,000. The shares are now worthless, and in 1897 half the capital was written off in order that a fresh issue of £200,000 might be made. There was never the slightest foundation for a capitalisation of this description, and one example may be taken as typical of dozens similar. Instead of carefully testing every property and, after having found out its value, capitalising it at a just figure, the controllers of this Consolidated Gold Fields Company, like every other promoting agency connected with South Africa, let their imaginations run away with them, and put untested properties on the market by dozens and scores at altogether imaginary valuations. Not content with this, they proceeded to assist in rigging the market, and by means of options, "pocket" orders, price-hustling purchases and combinations, all contrived by the interested croupiers of the gamble to develop a furore, all of which ended in this company finding itself loaded up, just like the Rand Mines and other similar promoting and jobbing concerns, with an inchoate and intolerable mass of shares, taken into the accounts, and probably often acquired, at figures for which there never was warrant either in the actual position or ultimate prospects of the properties played with.

Why does the Gold Fields Company now hold nearly £400,000 more in shares than it did five years ago, after having in the last two years written off more than £1,334,000 for depreciation? What is the real value of the £3,899,000 odd figuring as the book value of these shares at the present time? How much of the money still out on loan—borrowed by the company to lend again, presumably on contangos—could be recovered were the crisis under which all money markets are now labouring to force the company's bankers to call in their advances? How much of the money set against "sundry creditors" is owing to the company's bankers, and what has been pawned with them against the advance? Is the whole million nominal in Consols, representing half the reserve, thus pledged? If Lord Harris, at the forthcoming meeting of shareholders, would enlighten them upon points like these, the public would be in a better position to judge where the company stands. Does it stand, or is it merely a financial lean-to?

Economic and Financial Notes.

Boardman's United Breweries, Limited.

Are there any independent shareholders in this company, and if so, are they asleep? Its so-called report and balance-sheet for the year ended September 30 last has reached our hands and really constitutes an indictment against the board. Not an atom of information as to the business is given in the report, it is, in fact, no report at all. Everything relating to the trade, to the position of the properties or of the tied houses, to the sales of beer, to anything indeed except the changes in the directorate, is ignored, and we have to turn to the balance-sheet and meagre profit and loss account to try and discover what has been going on. The only striking fact emerging from the figures is that the profit for the year was only £6,134 after meeting current charges and debenture interest. This is quite £2,550 less than the previous year's profit and [illegible]

more than half the amount required to pay the preference dividend. The previous year's income was short of that dividend by £2,819, yet it was paid, and in the past year £5,700 was swallowed up in this way to pay the dividend for the first six months', money not earned. There is nothing to show that any true nett profit at all has been earned for years past. We cannot find either in the balance-sheet or in the profit and loss account any sign of money set aside or utilised against the wastage of property except a tiny sum of barely £155 called "reserve fund for depreciation." The "freehold, copyhold and leasehold public houses, tied houses, off licences, breweries, shops, warehouses, cottages, machinery, plant, goodwill, &c.," of the Boardman's Breweries stands at £289,478, and has apparently stood at that figure always. No reserve fund either has been formed against the mortgage of about £484,000 held by the company on the Cornbrook Brewery Co., Limited, and the capital reserve account, which stands amongst the liabilities at £45,386, seems to be merged in the business. What is the real value of the Cornbrook Brewery, and what is the depreciation upon the mass of assets lumped under the £289,478, and presumably referring to the Boardman's brewery and tied house property? There is no means of knowing, but if there are any independent shareholders they had better bestir themselves in order to discover the truth, for it seems to us that the company must be drawing very near a crisis. It owes £325,000 on 4½ per cent. debenture stock, and is in debt over and above to the Law Debenture Corporation for £14,000, and to the Manchester and County Bank for £4,188, and has outstanding individual mortgages, presumably upon tied houses, aggregating £5,063. We doubt whether the interest upon the debenture stock or on these various loans has really been earned, must doubt this as long as such reticence as the published accounts show is maintained. It is just possible, indeed, that there may be some motive for this reticence of a selfishly unworthy kind, but we fear that supposition is hardly tenable in view of the obviously poverty-stricken condition of the business which at the start was unquestionably over-capitalised in a quite shameless fashion. It is for the shareholders, however, to move and bring about light and reforms. How long will it be otherwise before the various creditors take steps to realise their security? Of what consists their security?

Agency, Land and Finance Co. of Australia, Limited.

The most that this company's shareholders can hope and pray for is that the assets will realise enough to repay the debentures, and no further capital calls will become necessary. Anything better than that must never be dreamed of, and proprietors can thank their stars if they escape with the loss of the £3 10s. at present paid up on the £5 shares. The whole thing seems in a hopeless sort of condition, but we cannot be sure of the true state of affairs because the directors supply a minimum of information. The report and accounts cover the twelve months to June 30, and although you would never think it after looking at the profit and loss account and balance-sheet, we know the season in Australia last year was favourable and the prices of wool and stock were also satisfactory. Unhappily, the present conditions with regard to weather are not so good, rain being required in New South Wales, so goodness knows what the next report will be like. Just to keep things in order we will just deal with the actual results, and then see what the directors have to say about them. Interest due or received after deductions for amounts considered doubtful was £1,037, and £1,078 came in from commission, exchange, &c., making £2,115 in all. On the other hand, general and other expenses reached £1,992 and £7,097 became payable for debenture stock interest or a total of £9,089, meaning a debit of £6,974. In addition to this £7,849 was written off for loss on properties realised, less recoveries, and the deficiency of £245,553 brought forward, an immense figure, was increased to £260,377. This is considerably in excess of the paid-up share capital at present held of £235,897, but the company gets the benefit of £40,985 paid on forfeited shares, so there is just a chance of a scrape through without further calls. Apparently, however, the profit and loss figures do not reflect the real results, since we are told that as practically the whole of the remaining properties are in the company's own hands (the result of foreclosures, no doubt) the directors have again this year only in a few cases taken interest on advances to the credit of profit and loss. The difference between receipts and expenditure on the remaining properties, which shows a very satisfactory surplus, has been applied in reduction of the book values of these accounts. Moreover, what are described as satisfactory realisations of properties have been effected, and during the year the directors have paid the balance of the debenture instalment of 15 per cent. due July 1, 1906—viz., 5 per cent. —and one-half of the instalment of equal amount due the day after the books were closed. Since then the remaining moiety of the July 1 payment has been provided, and 10 per cent. paid towards the instalment due July 1, 1908. This is very considerable progress, and reduces the amount outstanding from £133,236, as shown in the accounts, to £92,700, payable as to £11,587 on July 1 next, £34,762 on July 1, 1909, and £46,350 on the same date, 1910. A balance at bankers of £42,232 on account of properties has no doubt been exhausted by the payments mentioned, and the principal assets now consist of advances on land, stations, and stock and properties taken over £94,182, cash £11,377, wool in store and afloat since realised £2,000, and debtors, &c., £3,353. Floating liabilities are fortunately quite small and we wish the shareholders luck.

J. and P. Coats, Limited.

We have no adjectives left with which to describe the prosperity of this great combination. No matter what happens in one part of the world where it has factories, its general prosperity is never in the slightest degree checked. At the end of the twelve months there is one more display of splendid profits and further increases in the company's reserves. For the year ended June 30 last the nett profit, after carrying £42,446 to depreciation, was £3,056,125. To this £700,083 brought forward has to be added, so that the distributable amount reached an unprecedented total of £3,756,208. It is perplexing to think how the board of this company manages to stow away all this money, but they prove themselves quite equal to the operation, and for one thing fully £230,000 more has been set aside to various funds. Of this amount the reserve gets £500,000, the pension fund £50,964 against £120,101 a year ago, the marine and fire underwriting account £100,000 against £149,528, and the debenture premium account £25,000, the same as last year. This time the dividend reserve fund gets nothing, but then it amounts to £900,000 already. After making all these assignments and paying an extra 1s. or 2s. instead of 1s. by way of bonus on the ordinary shares, bringing the total distribution of these shares up to 30 per cent. for the year, a rate that absorbs £1,350,000, there is still £853,921 left to be carried forward subject to auditors' fees, &c. And there is no fake or humbug about these figures; almost everything in the balance-sheet indicates overpowering strength. The ordinary reserve fund amounts to £3,500,000, and the marine and fire underwriting account amounts to £500,000, so that the total accumulations of the company come to £4,900,000, while the pension fund for employees is over £349,000, and the company owes very little in any shape. Its trade debts are less than £390,000 and the debenture stock is only £517,817 against a stock and share capital of £10,000,000. Capital expenditure, however, was considerable during the year, amounting to £431,345, including additional shares secured in subsidiary companies, and the depreciation allowed on Ferguslie Thread Works for the year was only £42,446 gross, from which, however, £3,535

was written off for machinery superseded. Book debts, agents' balances, &c., after deducting estimated discount and providing for bad and doubtful debts, come to £1,378,407, and stock of goods and stores to £1,698,250, while investments, loans, and advances against mortgages figure at £2,557,016, and £1,045,016 has been advanced to subsidiary companies for stock and working expenses. This amount, however, includes also dividends declared by these subsidiaries, but not received at the date of the balance-sheet. Finally, cash at bankers and in hand reaches the fine total of £1,541,529, besides which £694,927 was due to come to the company on bills receivable, so that altogether the cash resources amount to over £2,236,000. It would be difficult to imagine, all minor drawbacks allowed for, a position more impregnable than this.

A Hard Case.

It is put thus by a correspondent:—"A stockbroker, A, has as his client the member of a firm who are raising more capital in £1 preference shares. The issue has not gone off, so they have made a market in the house to dispose of the rest. They are quoted $\frac{15}{16}$-1$\frac{1}{16}$ in the official list. A has also as a client a widow in very straitened circumstances, for whom he acts and advises. She applies to him for an investment of about £100, and he evidently being convinced of the soundness of these preference shares as an investment, recommends them, and is instructed to purchase 100. This 100 are sold as per contract note to the widow for 1 1-32 or 7½d. cheaper than the buying price in the official list. I may mention here that the way the shares were bought was direct from the firm who were issuing the preference shares, and in this way the stockbroker got the 5 per cent. discount (£5), 7½d. jobber's turn (£3 2s. 6d.), and his commission of 3d. (£1 5s.). At the same time, he saved his client, the widow, £3 2s. 6d., or 1-32 of the price as shown in the official list. There was no mention, however, of any commission outside the 3d. on the contract note sent out. Unfortunately, though these preference shares were an admirable investment, the widow got poorer, and is now forced to sell. She finds that there is absolutely no market, or practically none, the quotation having disappeared from the list, and no jobber in the house dealing in the shares. What can I advise her?"

There is no remedy for cases of this kind under the present rules and business arrangements of the Stock Exchange, and never will be any until a public auction in all non-speculative or obscure securities is established.

American Business Notes.

A certain amount of rhetoric has been expended on the return of the New York Associated Banks for the past week. Everybody told us that it is the worst on record, and that is doubtless true; but what strikes us in looking at it is that the amount of the specie reserve, or the average at least shown for the week, was still £34,142,400. This is a fairly large sum, and in addition the banks hold nearly £10,000,000 in greenbacks. Now, why not utilise all this currency and relieve the strain in the West, which has driven banks there to offer as much as 4 per cent. premium in order to get notes or any kind of currency (or is it only gold?) for the purpose of meeting the demands made upon them? If the New York Associated Banks were allowed to strip themselves of their reserve down to the last dollar if necessary in order to meet the hunger for currency, on the basis of paying 5 or 6 per cent. to the Federal Government as long as the reserve was depleted, and to whatever the amount of the depletion, there might be currency enough to abate the alarm and allow equanimity to resume its sway on people's minds. Surely that would be better than to continue the emission of altogether illicit paper money in the form of the Clearing-house certificates. How are these certificates to be redeemed, and what is the amount of them already created and outstanding? Will the Controller of the Currency get from the banks throughout the States a return of the amount of these certificates already issued? Last week the average of the loans granted by the New York banks rose by nearly £8,000,000, and presumably the whole of this addition is represented by Clearing-house certificates. That cannot be wholesome, nor is it pleasant to see the total of loans and discounts exceeding the total deposits by upwards of £20,000,000, for this must mean that credit is being stretched beyond cracking-point in order to try and stave off universal insolvency. And after all the strain, the deficit in the legal reserve is only £10,400,000, because the currency is hoarded.

Every day the Press agencies diligently send reassuring news. The money market is easing down, thanks to the cessation of business, and loans which were costing 50 per cent. last week can be had at from 5 to 25 per cent., latterly at from 6 to 12 per cent., with a rise to 15 per cent. now and then on Thursday. For all this slackening off, the paralysation of business increases, and we are less than ever inclined to believe the traffic returns of the railways. It must be past business these returns are based on, not the business of to-day. Some time, however, must elapse before the full consequences of the abandoned or childish financial orgies that have brought this crisis on the world can be revealed. Meanwhile the gold imports have done little to improve the position. No sooner does the metal arrive than either it or currency representing it is swept away by the banks in the interior, all of whom are ravenous for cash. Suspensions amongst them continue, and on Tuesday the Merchants' National Bank of Portland, Oregon, a considerable affair, stopped payment with liabilities to depositors exceeding £1,000,000.

Rumours *in crescendo* have been circulating all week regarding large shipments of gold to be made direct from Paris to New York. Quite early in the week the *Petit Journal* announced that the Bank of France had promised to lend as much as £30,000,000 altogether, and this was improved on by Wednesday, when the amount was raised to "at least £40,000,000." It is the great and much-negotiating Pierpont Morgan's doing. In addition to his credentials and "personal guarantee," his agent has taken to Paris the guarantee of the American Government itself in order to get the cash, but all in vain. As we stated weeks ago, the Bank of France is neither willing nor in a position to lend this or any amount of gold to New York direct. We do not even believe that Paris bankers of any kind will find the £3,000,000 which, the latest yarn is, Mr. Pierpont Morgan is trying to raise upon the security of the New York City revenue bonds mentioned below. Why should Paris involve itself further in American finance? The Bank of France is doing as much as it can in buying English bills with gold at fat rates of discount, and whatever gold it allows to be exported will come principally to London with, perhaps, some amounts diverted to ease the pressure from Egypt. Until they market their raw produce what can the people of the United States offer for the gold?

The attitude of French bankers towards the States is aptly illustrated by what happened this week with some Pennsylvania Railroad notes. It appears that large French holders of these, whose notes are lying with their agents in New York, sent instructions that they should be sold for gold, and that the gold should be exchanged for currency at the discount of the day, or, as the Americans put it, at the ruling premium. The New York agents of the French houses refused at first to sell the notes at all, and then when they did obey the order accepted cheques in payment instead of gold. This was not what the Frenchmen wanted at all, and naturally they are very angry at the way their orders have been disregarded. They simply wanted to have a chance of making a profit by dabbling in depreciated currency just like the American gamblers themselves.

In regard to the gold shipments to the United States it is worthy of notice that the great financiers and their banks whose business it is to play at fortune-building on the basis of 2 and 2 making 22 have fallen out of the running. At first some of the New York banks came forward ostentatiously as buyers of the metal here, particularly the big Rockefeller National City Bank, but their power was soon exhausted, and the National City bank confessed its impotence the other day by cancelling its last order, giving as a reason for so doing that the gold was not wanted. As if its managers would not have been as keen to make a profit by dealing in depreciated currency as anybody else. The steady buyers of gold have, therefore, been the great Jewish houses, if we leave out of account some small sums ordered by Chicago and New Orleans. It is these houses that have the cash, and the Rockefellers, Morgans, Harrimans, Havemeyers, Ryans, and others have the paper. They can carry through the Tennessee Coal and Iron Company paper, shuffle to their own profit, but to buy gold is beyond them. As fast as the gold arrives it is shipped West, and if the stream continues to run in its present force much longer the really wealthy, astute, and careful Jewish financiers will have the credit machinery in the interior of the country pretty well all mortgaged to themselves.

Meanwhile, the premium on acceptable currency continues to advance, and in the middle of the week 5 per cent. was paid in Pittsburg, that is to say, the discount on ordinary or "caddis" currency has risen to this figure there. Elsewhere it is 3½ to 4 per cent., with the lower figure the maximum in New York, on Thursday. Presumably the public will only accept gold, gold certificates, or greenbacks as legal tender, and distrust the notes issued by the National Banks on miscellaneous bonds or on share capital that may have been stolen or lost. It may not be so everywhere, but that must be the tendency, in spite of the fact that £3,400,000 of additional notes have been taken out by these banks since Mr. Cortelyou advised them to pawn their ledgers to raise the needful credit.

Banking credit, in other words, is so fly-blown throughout the Union that the more bank notes are multiplied the more will they tend to sink in exchangeable value. And meanwhile the 60 days' notice universally required by the savings banks of the Republic before they will pay over deposits, are swiftly running out, and it appears to be almost certain that there will be a rush for the money when pay-day arrives. What the total amount of savings bank deposits in the Republic may be we do not know, but the banks of this class in New York alone owe about £200,000,000, and in the meantime the Treasury has lent out more than it can afford. The total amount of Mr. Cortelyou's deposits is said to be about £45,476,000, of which the New York banks alone hold nearly £15,000,000. This is much more than the Treasury can spare, with its Panama enterprise to finance and its pensions to pay, let alone its navy to build and its existing fleet to send away to the Pacific as a disturber of the peace. Therefore, Mr. Cortelyou had to give notice on Wednesday afternoon that 10 per cent. of the deposits would have to be called in again, and he will soon have to repeat that intimation because the sudden collapse of industry all over the country, together with the slow sale of marketable commodities, must reduce the income of the Treasury.

What a sinister light is thrown on Trust finance, and the "absolutely solvent" assurances uttered about those that have failed, by the suicide of Mr. T. C. Barney, the expelled president of the failed Knickerbocker Trust. Gross irregularities that may lead to criminal actions have been discovered by the investigation into the Trust's affairs, and Mr. Barney could not face the exposure. The same kind of "irregularities" would probably be found in the corpus of the majority of those upas trees of finance. The desperate effort to be made to make the worm-eaten Knickerbocker look all right is but one more proof that this is so. Money to the amount of £2,000,000 is said to have been raised to allow it to pay off all deposits up to $2,000.

Pace Mr. Cortelyou, who has been holding forth in New York on the duty of the public to restore hoarded money to the banks, and on the duty of the banks to "deal liberally" with their customers, there is but one way by which relief of a genuine and effective kind can come. It is useless to go on borrowing gold, because at the best metal thus acquired merely postpones the worst effects of the crisis. The day soon arrives when it has to be sent back. In order to be in a position to recuperate, the United States must sell its produce abroad and get money that will be the country's own in exchange. Instead of doing this, however, the forestallers are still at work hoisting prices in the face of fate, still endeavouring to make water run up hill. In the panic of 1893 another course was followed. That was perhaps the worst recent eruption the Republic has gone through until the one it is now wrestling with, and then at that date the Federal Treasury had only $18,000,000 of surplus cash, and could do nothing to help the banks by depositing balances here, there, and all over the land in the way Mr. Cortelyou has so diligently followed until the treasure house was emptied. Bankers and merchants, therefore, had no choice but to sell everything the foreign markets would take for what it would fetch, and accordingly the cotton crop was marketed at prices as low as 8 cents per lb. Wheat fell to 70 cents, and maize to 48 cents the bushel, but the market reports this week indicate that prices for these and other products are actually being hoisted, and instead of exports pouring out by every available ship, they are declining. According to the preliminary statement issued by the department of commerce and labour, the exports for the month of October showed a nett decrease of $8,625,000 on the total for October of last year. A small increase of $5,457,000 occurred in bread stuffs and one of $532,000 in cattle, as well as one of $544,000 in mineral oils, but provisions fell off by $2,391,000, and cotton by no less than $12,767,000 (£2,553,400). The only inference we can draw from this is that frantic efforts are being made to prevent the markets from taking their natural course. When we see wheat, maize, cotton, and petroleum either rising or being held near previous figures, what conclusion can we come to except that the crisis is only beginning? Sooner or later the crops, the raw produce of all sorts in the Union will have to be flung upon foreign markets at any sacrifice. Every day that passes lessens the chance that good prices will be secured. In a very few weeks the Argentine crop will be beginning to compete with that of the United States, and the poverty of Europe is so great that consumption of all food products, as well as of minerals, is certain to be reduced. Thus the bolstering-up system, the habit of "cornering," if persisted in, will go far to complete for this generation the ruin of American finance. "But the banks must hang on in hope of concealing the extent of their crop commitments." Yes, that is probably the dominant influence at work, that and the reluctance of many a mighty operator to confess his bankruptcy. So the next act in the drama promises to be even more sensational than the one now being played.

In the middle of this week the cash price of wheat was 103 to 104 cents per bushel and for December the quotation was 104½ to 106¾ cents, and the bulls had it all their own way on Wednesday, partly because the crop is coming forward from the farmers much more steadily than usual. Currency cannot be found to pay for the cereals, the excuse is, but the crop is probably short. Anyway, the sales to foreign buyers continue disappointing, as well they may be. Spot cotton again is quoted at 10.80 cents per lb., in spite of Wednesday's weakness, and the price for futures over the whole cotton year until next August varies but little, the August, 1908, quotation on Thursday being 10.20 cents, a rise of .06 cent on Wednesday. For maize the spot price is 68 cents. And in regard to minerals it is stated by the *Iron Age* that the output

of pig-iron for October amounted to the "record breaking" total of 2,336,072 tons. Furnaces, however, are rapidly being put out, and the Carnegie Combine has already shut down 33 furnaces and dismissed 20,000 men. Altogether it is estimated that 100,000 men have already been discharged in the iron and steel trades.

Industrial disorganisation, indeed, is rapidly spreading. This is what we might expect, is inevitable, and before very long we shall find the United States Steel Corporation, Carnegie's masterpiece, dumping its raw produce the world over wherever it can find customers. In the detailed report of the company for the past quarter and for the nine months, we are gently informed that "during the last few months there has been difficulty for those desiring to purchase our commodities to secure adequate funds, and this has resulted in some curtailment." The directors, however, go on to express their confidence that this set-back will soon disappear. But, in plain English, they intimate that borrowed money with which to pay for orders given is no longer obtainable, and we do not share the views of the board that the difficulty thus encountered will soon pass away. It must intensify, and as we intimated last week, the number of the unemployed throughout the Republic has already run up to several hundred thousand. Dividends will be reduced, or suspended, by all manner of manufacturing companies, and throughout the winter the suffering of the masses is going to be unprecedented. A story was circulated early in the week that the American Smelting and Refining Company is going to "halve" its dividend. That is the great Guggenheim combination, and, but for its over-capitalisation, probably one of the best, or least objectionable, things of the kind in America. But it must suffer, everything is going to suffer, because of the harvest of folly which the country is now beginning to reap. Crazed financiers have conjured up a state of affairs which they have called prosperity by means of credit and credit alone, without regard to genuine assets behind the credit, merely with a determination to make money at no matter whose expense.

Reverting to the Steel Trust, there are some suggestive figures in the report which serve admirably to illustrate the enormous plundering capacity this cruel monopoly has enjoyed. No wonder railway passengers and servants have been sacrificed in their thousands and tens of thousands because of the bad material put into the roads; no wonder if many of these railroads and building companies without number are now on the verge of bankruptcy; they have been made to pay terrific prices for what they bought, and as long as they could borrow they never counted the cost. Among the statements, for example, made by the Trust's directors is one to the effect that since the combine was formed nearly £16,000,000 has been withdrawn from the earnings to make a reserve for the extinguishment of capital, and that during the same period no less than £53,200,000 has been added to the other assets from the same source. All this is in addition to paying dividends upon the dishonestly watered capital. We can therefore appreciate the observation of the directors to the effect that "it seems to be a recognised fact that stability of prices is to be desired by both the producer and the consumer, and that extremely high prices and extremely low prices are both objectionable." Just so. And what about honest prices?

A Marconi "wireless" of Wednesday's date sums up actualities and outlook in the industrial world with effective conciseness. The authority quoted is the *World*, of New York:—

> In the large cities drastic retrenchments are the rule, and many factories are suffering from the countermanding of orders. In Chicago 90 per cent. of the factories and shops have curtailed their staffs and the hours of working. Forty per cent of the building workers and 25 per cent. of the wood workers are idle. From Pittsburg it is reported that manufactories within a radius of 50 miles have dismissed 48,000 men and that 2,000 railwaymen have been discharged. Large manufactories in Indianapolis have dispensed with half their hands. During the past two days 21 saw mills in Northern Wisconsin have closed, throwing out 6,000 men. At Wilmington 4,000 men have been discharged from mills, and one firm has reduced its pay-roll from $243,000 (£48,600) to $77,000 (£15,400). In some small centres adverse conditions appear to be unfelt, and there has been no curtailment.

It is rather cruel of the Government of Mr. Roosevelt to refuse anything but cash in payment of Customs duties. In ordinary times the Treasury accepts certified cheques without question, but the crisis has developed suspicion even in that quarter, and so $60,000 a day in cash has to be raised to pay the duties collected at the Manhattan and Brooklyn offices. In the present scarcity of reliable currency that is a very serious matter, and the only way we can think of to remedy the ground for complaint merchants are finding in this stipulation is to coin gold. How long will it take the Philadelphia mint to turn out that £4,000,000 of eagles, or half-eagles, it is now said to be busy with?

Two companies, called the Consolidated Arizona Smelting Company, and the Arizona Smelting Company, said to possess a combined capital of $17,000,000 or nearly £3,500,000, are threatened with the appointment of receivers. In the beginning of the week the application was made in the Federal Court at Trenton, New Jersey, but was opposed by the counsel for the two companies, who declared that they were solvent, having assets amounting to $3,000,000 against liabilities of only a few hundred thousand dollars. On the strength of this statement the judge postponed his decision, and meanwhile we suppose something like an investigation will take place. But there will be scores and hundreds of companies in the States driven to the wall, not because they cannot show abundant assets of one kind or another, but because these assets are not realisable in cash.

From another direction we get a glimpse of the kind of furious waste that has been going on in the finances of New York City. In ten years the population of Greater New York, says the New York *World*, has increased by less than 25 per cent., but the city's budget is 85 per cent. greater. It was $77,500,000 in 1898, and in 1908 it will be $143,572,000, there being an increase of $13,150,000 between the current year and the coming one. And with all this enormous increase in the amount of money drawn from citizens, the municipality remains so hard up that arrangements have had to be made with a syndicate of bankers to take up $30,000,000 of 6 per cent. revenue bonds with an option to buy $20,000,000 more. Yet since October 1 $60,000,000 in taxes have been received by the Treasury. New York thus spends its revenue before it is received, and the taxes coming in next year must be used to withdraw these revenue bonds. That cannot be done and current expenses met at the same time; therefore further loans will have to be negotiated, and before all is over New York City may have to pay 10 per cent. for its accommodation. So it has been from one end of the Republic to the other, until the whole surface prosperity of the country rests upon a mountain of credit. But "two and two make twenty-two" in the calculations of the great men of finance.

Enormous though the annual amount demanded from the New York citizens now is, it is not enough. The average taxation per head of every man, woman and child in the city is $30, or, say, $144 per family, which is more than three times as much as the highest federal expenditure ever known in time of peace. That, says the same newspaper, has been only $10 per head, but even this excessive draft upon the people is not sufficient, for the city is plunging deeper and deeper into debt, and will apparently require upwards of $80,000,000 of borrowed money over and above the ordinary revenue in the coming year. The interest charges alone on next year's budget exceed $24,000,000, amounts that is to nearly £5,000,000, or almost as much as the entire ordinary budget of Chicago. Are these facts of a kind likely to tempt Paris bankers to ship gold against the short-term notes of the city?

Last week we were led into an involuntary error in mentioning the Title Guarantee and Trust Company. As no indication whatever was given to the contrary, we assumed this to be the New York company bearing that name, but it turns out that an Oregon company was referred to. We were, therefore, premature in indicating the approach of trouble for the big insurance companies, but only premature. They have been in the thick of the deluding finance of the past decade, and must now hold many millions sterling of unmarketable securities. The crisis will also affect their current revenues, and some months or a year hence we shall probably see the ravages beginning to make themselves visible in their accounts.

Another wild story circulated in New York was one to the effect that an enormous copper pool had been formed in London through help of which fabulous amounts of copper had been marketed, or, as some said, bought to be held against a falling market. It does not seem necessary to contradict a story of this kind if it gratifies those who concoct it or listen to it. It has doubtless served its purpose. What it will not do is to stay the subsidence of the copper market of all markets. Do the romance spinners think that consumers will be frightened into buying in this way?

Several of the railways in Mexico have been financed in the United States, and although their securities are known on this side to the sorrow of holders they are still controlled in the States. Amongst these is the National Railroad group which has been taken over by the Mexican Government, although the new securities to be exchanged for those of the individual companies cannot at present be issued. We are not sure, indeed, whether the credit disorganisation in the United States may not react upon Mexican finance in an unfavourable way, especially as Mexico has fallen into the blunder of fixing the value of its silver dollar without regard to its value in the international bullion market. The New York *Chronicle*, by the way, talks of this blunder as if it were something admirable, done for good and all. "The value of the Mexican dollar has been definitely established at 50 cents gold," it tells us, as if you could definitely establish a fraud, for that is what it amounts to, stripped of all misleading or pseudo-economic garbage. Silver has been falling of late, and the trade of Mexico is almost certain to be disorganised through the crisis, so that presently the silver dollar now legally fixed in exchangeable value may dip towards its true, honest value. In that case there will be increased difficulty in carrying out the amalgamation of the Mexican National Railroad with the Mexican International and the Interoceanic properties. Meanwhile, several of these lines have issued their accounts for the past year. It is unnecessary to analyse them here further than just to mention results. The Mexican National Company, which was once a narrow gauge line built partly with English money by adventurers who lined their own pockets through a construction company in the usual handsome fashion, is now to a considerable extent a standard gauge line, and some day it may be a profitable undertaking. For its past fiscal year, however, closed on June 30, the result was a deficiency of $431,427 gold after meeting interest on the prior lien bonds and paying 2 per cent. on the preferred stock.

On the other hand, the Mexican International Company was able to show a surplus on the year's working after meeting interest on the bonded debt and paying 4 per cent. on the income bonds to June 30. In fact, the surplus of $690,000 gold was not much less than the amount absorbed by these dividend payments which was little more than $731,000. The accumulated surplus is thus brought up to $4,825,000 gold, out of which $1,991,000 gold was spent last year for betterments, leaving still $2,834,000 unspent. We hope this surplus is genuine, but do not think that the Government of Mexico is going to have an altogether smooth course in effecting the consolidation of these roads under its control.

There must surely be some mistake. For weeks past, ever since the United States crisis began, bankers and business men in the Canadian Dominion have been reassuring us about their position. "We are all right," they have declared almost daily, "perfectly sound, no bad loans, no locks up. Instead of being involved in the New York whirlpool we have money there that we can withdraw at any moment," Canadian banks, of course, being entirely exempt from the conditions prevailing within the Republic, conditions which have forced the banks there to bid high for anything the public would accept as money. We never put much faith in this effusive profession of strength, and now the suggestive information leaks out that it may be necessary for the Dominion Government to withdraw a portion of the gold reserve held by it as security for the notes put in circulation by the banks in order that the Western grain crop may be financed. The banks themselves, or the four of them most concerned, cannot find the money needed. What does this mean? We thought the crop was financed already; it must have been if these Canadian gentlemen were telling us the truth. And when it is such a poor crop—not 10 per cent. of an average, we hear, in some districts—very little money should have been needed. Why this sudden indication of distress? We shall know all about it soon!

Passing Events.

It would be hard to gather from the weekly telegrams of the Governor-General to Mr. Morley that India is on the point of entering upon a famine period which, unless the weather soon improves, threatens to be the worst it has experienced since first the British set foot in the Peninsula. Last week's official message tells us that "fairly general rain" fell during the period in Madras and Lower Burma, but the falls were light in Burma. Everywhere else throughout India the week was rainless, and "the outlook grows steadily worse," so that "considerable contraction" in the area of spring crops throughout North-West and Central India must take place. The Viceroy adds that the demand for labour still continues in the United Provinces, and that general distress has not yet made its appearance. Relief works, however, have already been opened in one district in the United Provinces, and are on the point of being started in another. To make matters worse, the prospect of the winter rice crop in Bengal is getting most unfavourable, but Lord Minto winds up with the usual assurance that although the shortage of food stocks causes anxiety in some districts there is at present no apprehension of general scarcity; and in India itself the bureaucratic or European mind would appear to be contemplating the outlook with its usual serenity, for one Indian correspondent telegraphs to its newspaper here that the product of the recent political or social agitation in various parts of India may very likely be "a great outburst of industrial activity." How can that be with a famine threatening which before all is over will in all probability affect for the worse the well-being of the poorer classes from one end of our Asiatic empire to the other? It is a prospect absolutely appalling.

How is New Zealand going to raise £2,216,000 which the Government proposes to expend on public works during the current financial year? This is to include £1,125,000 on the railways, and most of that money, as we have frequently insisted, is applied in keeping up appearances. Without it working expenses would have to eat much more severely into the gross revenue. But where is the money to come from? The savings banks of the colony cannot furnish it all, nor yet its other banks, nor the insurance department. It cannot be found in London either, for there will be no money here to lend to any colony for a good many months to come. Would it not have been better for the colony and its Government if facts and portents had been recognised, and expenditure cut down in time? To go on regardless of consequences is to invite irretrievable disaster.

Every other week the story gets put about that Russia is coming for another loan, and now that the third experimental Duma is about to begin to talk rumour once more revives. A project for building a new railway at a cost of £96,000,000 is said to be ready to be laid before it, a good part of the sum to be devoted to the purchase of rails and rolling-stock and the enlargement of stations. That might be the ostensible ground on which the money is asked for, but it would not be spent in accordance therewith. Some of it would have to be diverted to keep the people of many provinces from dying wholesale of hunger, another portion of it would, as usual, slink into the pockets of the bureaucrats, and some more or less large slice of the balance might be used to fill the present and prospective budget deficits, thus sustaining the autocracy in its position for a few months or years longer. But is Paris in a position to raise a loan of this, or half this, amount for the Government of the Tsar? We think not ; rich though France is, there must come a day when a deaf ear will have to be turned to the wheedling of Russia, lest French credit and Russian should come to bite the dust together.

Rapid progress is being made with the completion of the Chilian Transandine Railway, a vitally necessary section of the transcontinental line in South America, and the directors in their report dated the 12th inst. hope that the second section will be completed in February, 1908, if not earlier. All the energies of the directors will then be concentrated on the final section, and the hope is that the entire line will be completed in considerably less time than the concession stipulates. Already the amount spent on the undertaking is £1,059,000, and all the issued share capital of the company, amounting to £780,180, has been used up, together with £278,100 in 5 per cent. debentures. Presumably as soon as the second section is finished a further issue of debentures will have to be made, and it is to be hoped that the position of the money market will by that time be more favourable, for the enterprise is a commendable one from every point of view, and it would be a great pity were its completion to be hampered by any difficulty in raising the needed funds.

We are glad to see that Charles Wilbraham Perryman has got his deserts at last. There has been no more persistent bucket-shop keeper of a fraudulent description in the City these many years back. The man was cunning, but perfectly unscrupulous, and traded to his own profit, and perhaps to that of his associates, on the ignorant cupidity of the multitude. No experience appears to teach certain classes of the community to avoid the snares enterprising gentlemen of this description spread before them. One of the counsel in the case remarked that speculating on "margins" was the best way of gambling on the Stock Exchange, because thereby risks were limited. If he had said losses were limited we should have agreed with him, for the majority of advertising bucket-shop keepers take precious good care that there shall never be any profits. Their business is to draw in money for "cover" on the pretence of buying or selling so much stock against the deposit, and their further enterprise usually consists in pocketing the money without carrying out the purchase or sale. If by any chance the half-initiated beguiler of this description does carry out his promises, and profits by chance result, he is seldom in a position to hand them over. And so those who have been ensnared are invited to put up the realised profit as fresh cover for a new gamble that always ends in loss. Perryman and those sentenced with him were experts in this kind of robbery by circular, or at any rate Perryman was, and he has now got the moderate sentence of four years' penal servitude, his two associates, George Harris, alias Martin, and William Henry Dacre Tyler, getting respectively eighteen months' and nine months' hard labour. This should give them time for reflection, and when they come out of jail the spirit of the gambler may be for the time being conjured out of the ignorant masses by their misfortunes. We do not pity them.

Mr. Horne-Payne is as sanguine as usual about the future of his beloved British Columbia, and sees no flaw in the Canadian economic condition. As regards the far future, we think him likely to be right about both regions, and possibly enough British Columbia will not suffer appreciably in the tempest now at the bursting. The Dominion as a whole, however, cannot escape the contagion, and it is too narrow a view to reckon on immunity merely because tightish money has thus far brought about no visible rent in the credit web. The best we can hope for is that the great natural resources of a fine if undeveloped country will enable it to quickly recover. But the domination of Protection is not a help to it!

With the greatest reluctance the De Beers Consolidated Mines have decided to "do" the British Exchequer out of the income-tax which the Courts decided it must pay, so long as the directors resident in England assumed a leading part in the direction of the company's affairs. The directors did not want to do it, but the pressure brought to bear from the Cape, where the company is now taxed at the rate of 10 per cent. on its total profits for colonial purposes, has been so persistent that it has been impossible to resist the arguments brought forward by their colleagues in South Africa. So baggage is to be packed up, and the seat of control transferred to Kimberley. The functions of the London office will in future be reduced to the transfer of shares, the issue of bearer warrants, the payment of dividends and interest, the purchase of machinery and supplies, and other matters of a formal character. We naturally regret the decision because the money would have come in very handy for the payment of interest on war debt, but can hardly blame the company for taking the step. It is not alone in feeling pressure from the income-tax authorities, and the Chancellor of the Exchequer must take care, or he will drive many of us into active revolt.

The British Cotton and Wool Dyers' Association seems to have done a bit better in the six months to September 30 last than it did in the corresponding period, which is well. Including income from investments, &c., and after deducting £804 for specific depreciation and £13,549 for repairs and renewals, the balance of profit is £55,463, an increase of about £19,500, or so we gather from the brief statement published. Administration, debenture interest, and £12,500 added to depreciation fund, make away with £35,139, leaving a profit of £20,324, or a good £19,000 more. The sum brought forward, however, was again lower, and the credit carried to the end of the financial year is £49,119 against £34,476 at September 30, 1906, and £81,989 the year before.

Letters to the Editor.

INCOME-TAX—APPEAL NOW!

Sir,—By the Finance Act, 1907, passed in the last Session of Parliament, the 133rd Section of the Income-Tax Act, 5 and 6 Vict., c.35 (whereby relief was granted whenever the profits of the year of assessment fell below the average) was abolished. All persons who shall receive a notice of charge for the current year (1907-8) desiring to appeal against the same, on the ground that it is excessive, are required to give notice of appeal within the time set out on such notice of charge, failing which the Commissioners of Taxes will not at any time thereafter entertain any application to have such assessment amended. Persons whose profits for the year ended prior to April 6 last fell below the average should at once take the necessary steps to claim repayment of any sum they are entitled to. We shall be pleased to advise your readers, without charge, whether or not they are entitled to any repayment, upon their sending us full particulars of their case, together with a stamp for reply.

Yours, &c.,

The Income-Tax Adjustment Agency, Limited,
E. Montague, Secretary.

Poultry, Cheapside, London, E.C.

Mr. A. Bonar Law, M.P., Kratilla, Helensburgh, has accepted the position of director on the board of the General Accident Fire and Life Assurance Corporation, Limited, of Perth, and chairman of its London committee, in succession to the late Sir Wollaston Knocker, C.B.

The Week in Mines.

We are anxious to start straight away and tell you all about the glorious doings of the Kaffir Circus since last week, but had best conform to usual custom and deal first with the arrangement of the fortnightly account. Easy contangoes and a 7 per cent. Bank rate do not, of course, go hand in hand, but in view of the grand times that followed speculators need not have cared an atom if contango charges had been 20 per cent., let alone the trifle of 8-9 that was charged. This was the general rate on gold shares and land and finance things, the Bank rate having gone up 2½ per cent. since the previous carry over, but there were a good many exceptions, albeit rates were never exactly light. Even the majestic Rand mines had to pay 6½-7½ per cent., Gold Fields and Randfonteins were continued at 7-8 per cent., East Rands at 6½-7½ per cent., and Modders at 7½-8½ per cent. These rates were 2 to 2½ per cent. heavier than last time, and Diamonds were also pretty expensive to carry over. De Beers, Jagers, and New Vaals could not be borrowed on for less than 6½-7½ per cent., but there were not so many takers in of Premiers, and the rate was only 5½-6½ per cent. The general charge on Rhodesians was also 8-9 per cent., but Tanganyikas, although costing much more than last time, were done at 4½-5½ per cent. The Chartered rate was ½d.-1d., West African and American shares were continued at 7-9 per cent., Siberians at 8-10 per cent.—by no means a stiff charge for such rubbish, West Australians were done at 7½-8½, and Broken Hills and Australian Copper shares at 6-8 per cent. Of the Copper things contangoed in the Foreign market Anacondas cost 6-8 per cent. to carry over, and Rio Tintos 6-7 per cent. Considering the general condition prevailing during the fortnight the making-up list did not present such a very bad appearance, although Diamond shares showed pretty considerable losses. De Beers deferred were down 2¼, Roberts Victor lost 1¼, Premier deferred 1, Jagers deferred 1$\frac{13}{16}$, and the preference shares of the leading companies smaller amounts. Among gold descriptions there was a drop of ¾ in Ferreiras and of ¼ in Geldenhuis Deep and Estates and Wolhuter. Heriots, however, showed a rise of ⅜, East Rands and Modders put on ¼, and Rand Mines, Casons, Jumpers, and Van Ryn each $\frac{3}{16}$. Apart from a gain of 7-32 in Gold Trusts, movements in the Land and Finance group were small, and as to Rhodesians we need only mention an improvement of $\frac{5}{16}$ in Tanganyika. The West African assortment gives us a rise of 3s. in Broomassies, but the Nigeria things were lower. In the West Australian group Kalgurlis were up ⅜, but Oroyas and Black Ranges each fell $\frac{3}{16}$, and Hainaults 5-32. Barriers showed only the smallest changes, while among Coppers Rio Tintos were no less than 5¼ lower, Great Cobars dropped ⅝, and Mount Elliotts ¼. Tin things were easier, South Croftys falling ½ and Pusing Lamas $\frac{3}{16}$. Miscellaneous were also lower in a number of instances, including Mexico Mines of El Oro, Le Rios, and Nundydroop.

Thursday, November 7, will always be an historic day in the annals of South Africa Mining and "Financing." On that momentous occasion the directors of a concern called the Consolidated Gold Fields of South Africa pondered long and deeply as to whether they should expend a sum of £250,000 on the chance of making large fortunes for their friends and acquaintances in Park Lane and Throgmorton Street. Finally, the decision was come to to declare a dividend of 12½ per cent. on the capital of the company, requiring the said £250,000 (notwithstanding that losses on the year had called for the provision of £600,000 for depreciation), and, lo! the reward was magnificent, reaching a hundredfold the money so judiciously spent. Instantly the markets began to boom, and in due time when the £1 shares of the Gold Fields Co. again touch 19½, Rand Mines 13 (equal to 52, for the former £1 shares), Modders 16, and so forth, the people of the country will invoke blessings on the heads of those who worked these miracles with the sum of £250,000. Truly can it be said that the Kaffir Circus has had a magnificent time. The public is not breaking its neck in the effort to buy shares, but no doubt you remember a certain Wernher, Beit Trust called the Central Mining and Finance Corporation, formed with a capital of six million pounds, to knock spots off the detractors of South African gold mining and other shares. Just as it happened, this Central Mining and Finance Corporation fell upon evil days, and its directors were obliged to confess to the loss of very large sums of money, and the shares of the concern fell to 50 per cent. discount or worse. Bears were getting more obstreperous than ever, and the opportunity being afforded by the above-named expenditure of £250,000, it was decided to punish them with great severity. Arrangements were made that two large Continental cities, known as Paris and Berlin respectively, should buy "quite spontaneously" considerable numbers of Kaffir shares, the money being supplied from London. Now these bears, although exceedingly strong animals, are by temperament very timid, and as it was not expected that the Bank of England rate would go higher than 10 per cent. during the winter, and a big smash in a great country called the United States had only engulfed about 250 trusts and banks, instead of 255 as some pessimists had predicted, a great commotion arose, and the bears, instead of standing their ground, rushed to cover for fear of being shot down, the hunters being great shots and always scoring "bulls." (*To be continued.*)

South African gold and kindred shares commenced to go up at the end of last week, and have scarcely ever looked back. Prices went ahead at a tremendous pace, and the game was kept up till a late hour every night in the Street. The output figures published on Monday did not quite reach expectations, but what of that? Were not many mines disorganised by the change from coolie to native labour? Things will be right enough presently. The labour returns again showed up extremely well, and every month brings additional evidence that no difficulty need ever have been experienced in obtaining an adequate supply of native "boys." In some instances the rise in prices has been quite sensational. Only last week we recorded that Modders had been below their par value of £4, but they recovered at a great rate, and have risen a long way over 5. Gold Fields went above 3, and in other directions quotations advanced in brilliant fashion. Once or twice the bears had a go at the market, and reactions sometimes occurred, while the bulls took profits, the opportunity being too good to be missed, but the shops were always ready to further support, and prices were soon blazing away again.

Land and Finance things were not so easily moved as Kaffirs, but once they were started a pretty good performance was given, and we need say little more about Rhodesians than that Chartereds were taken up to 1$\frac{5}{8}$ buyers. A few days ago you could not have sold 200 shares at 15s. Tanganyikas, Rhodesia Coppers, and the Banket things all behaved admirably, but Diamonds were somewhat erratic. They improved when Paris bought, and fell away again as soon as the support was withdrawn. De Beers has decided to dodge the British income-tax by transferring practically all its business to the Cape.

West Australians started with a fairly good tendency, but there is not much "go" in this section and Great Fingalls did not benefit from a cable reporting better developments. Oroyas showed flatness at the close. The final dividend for the past year is 2s. 6d., making 11s. 6d. for the year, a very fine return; but—and it is a big but—it is pretty obvious that nothing like this must be expected in the future. The market had not been expecting more than 2s. a share per quarter next year, but the directors say that an intrusion has been met with in the ore pipe in the Oroya Block No. 5 level, and if the extension of the rich vein is not met with it will be necessary for the directors to consider the position as regards the output early next year. Broken Hills were quiet, but after showing dulness were inclined to rally. Nothing of consequence happened in the West African assortment, and Deep Leads were not very grand.

Copper shares have shown rather considerable fluctuations, Tintos at times being distinctly wild. On the opening day of the week they moved between 62¼ and 64¾, and although they ended at the best on that day the improvement could not be altogether maintained, thanks to a continued fall in the metal. Anacondas were not helped by the suspension of dividends by one of the Amalgamated dependents, and Mount Lyells became flat on the disappointing results for the past half-year, the dividend being much below the more optimistic anticipations. Great Cobars were badly upset at one time by forced liquidation, but recovered a good part of the loss, and all the movements in the group were not the wrong way. Tin was flat, but shares kept up very well.

Among Miscellaneous the American division was inclined to weakness at first, but later on recovered a little. Siberians ended just a shade harder, and Indians picked up here and there, Nundydroog recovering from some weakness. New Zealands finished steady.

MINING NEWS.

*** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

TRANSVAAL GOLD RETURNS.—The gold output for October from the Witwatersrand mines was 532,903 ozs., and from the outside districts 20,560 ozs., giving a total of 553,553 ozs., worth £2,351,341; as compared with 538,034 ozs. valued at £2,285,424 in September, which contained a day less. The subjoined tables show the output and values for the past six years.

* Includes £33,766 not declared previously.

NATIVE AND COOLIE LABOUR.—The returns for October show that the natives distributed to the mines by the Witwatersrand Native Labour Association numbered 11,428 as against 7,130 lost by time expiration and other wastage, making the gain for the month 4,298, and increasing the number of "boys" employed to 99,610. In the subjoined table are shown the number of natives and Chinese employed on the Rand during the past year:—

Month.	Natives Joined.	Natives Left.	Net Gain or Loss.	Natives Employed end of Month.	Chinese.
October, 1906.....	9,845	7,387	2,458	76,035	53,134
November	9,061	6,919	2,142	78,177	53,094
December	9,843	6,789	3,054	81,231	52,889
January, 1907	10,079	7,734	2,346	83,567	53,828
February.....	10,673	6,578	4,095	87,662	53,736
March	11,146	7,967	3,179	90,841	53,651
April.....	8,318	7,335	983	91,824	53,588
May	7,649	7,804	155*	91,669	53,400
June	6,065	8,014	1,882*	89,787	51,497
July	7,952	8,146	194	89,593	51,441
August.....	10,285	7,962	2,321	91,914	49,871
September	10,743	7,345	3,398	95,312	46,260
October	11,428	7,130	4,298	99,610	42,538

* Nett Loss.

From the above it will be seen that the loss of Chinese was much more than made good by the increase in the number of natives at work, and all indications go to show that no difficulty will be experied in replacing the coolies as the repatriations become due.

INDIAN MINE CRUSHINGS.—The following table gives the total monthly returns from the Mysore Field alone, for 1907 and the previous five years:—

	1902.	1903.	1904.	1905.	1906.	1907.

ESTATE, FINANCE, AND MINES.—This is a biggish venture, and the accounts now submitted cover a period of about 14 months to June 30. They do not make a very brilliant display, but might be worse. The concern is interested in quite a number of undertakings, and the directors begin by telling us that they have acquired a considerable block of shares in the Consolidated Rand-Rhodesia Trust and General Exploration, which has a group of properties similar in character to and in the neighbourhood of others owned by this company. The price paid was £45,500 in shares, giving control, but how many shares were acquired for this money remains a secret with the directors. Just note, however, that the chairman and one of the directors are the same on both companies and when we look at the Rand-Rhodesia Company's assets we are by no means as sanguine as the board that, "if carefully administered," the company will turn out well. Its last accounts showed a deficit to profit and loss of £19,419, and the cash is £1,444. The Johannesburg real property has not been doing very grandly, and the Randfontein Deep, in which a larger interest is held, has £40,000 in cash, but is shut down, "the anticipation of a valuable reef being discovered not having been realised up to the present." At Rand-kop **mining operations have produced substantial profits, and we gather that the company got shot of six-sevenths of its holding in the** Kamfersdam mines at a good profit just in time, as owing to a large fall of reef at the moment when the mine was expected to make profitable returns the company had to shut down. A farm in Bechuanaland called Ganna Aar was sold at a profit. Next we **come to the Consolidated South Rand Mines Deep, in which a very** large interest has been secured "at a price which is very little in excess of its cash in hand." One hears a good deal of this sort of talk, and it is most fallacious to suppose that shares are necessarily cheap because the market value is equalled by the cash held. All might be spent, and the mine turn out a rank failure. The company is interested in estates in England, some being apparently a **bit backward, while others are progressing in a manner which** is very satisfactory to the board. Said board has been keeping a watchful eye on the management expenses, and has effected further reductions. More will follow, the directors hope, and they might perhaps have a look at their own fees, these for the period being £1,834. Total income for the 14 months under review was £28,172, and the outgo £11,911, leaving £16,261 nett. Of that £10,000 goes to reserve, making it £20,000, which will come in **useful when the depreciation question comes to be handled, and the** balance still left is carried forward, making the total credit £11 549.

UNITED SOUTH AFRICA ASSOCIATION.—We like to be lenient with companies that come forward with a clear and frank statement of their position, even though the state of affairs revealed is bad. It is those concerns whose accounts are deliberately designed to deceive that excite our animosity. The United South Africa Association has made heavy losses, and tells us so straightforwardly and fairly. The profit and loss account for the year to June 30 shows the heart-breaking debit of £104,121, mainly owing to the abandonment of the claims to which special reference was made in the last **report. Deficiency brought forward was £22,815, making a total** of £126,937. Against this must be set the appreciation in the holding in the Premier Diamond Company which stands in the books at a low figure. At a conservative valuation the directors think the assets are worth £180,000, against the issued capital of £253,100, and proposals are made for getting rid of the loss which comes in the way of dividend payment. In effect it is proposed to write down the capital by 50 per cent., **which will be done by handing over the assets to a new under**taking having a capital of £126,550 in 10s shares, these to be exchanged share for share against present holdings. We do not know that shareholders can do otherwise than accept the scheme, and with luck it may lead to the payment of dividends, as the company holds 9,378 deferred shares in the Premier company.

JOHANNESBURG GOLD FIELDS.—Sooner than repeat the dismal story related last year the directors of this sadly disappointing company prefer to say practically nothing in their latest annual report made up to the usual date of June 30. The position as regards the property and tree plantation remains precisely the same, no development having occurred in the meantime, and we may assume that no market has been found for the blue gums valued at £10,308. The freehold estate is down for £70,080. Little is said about the investments, but that little is distressing. They have depreciated a further £38,000 in the twelve months and on June 30 the market value of stocks and shares appearing in the books at £113,018 was £74,932, a loss of £38,086. A

portion of the British and Colonial stocks have been realised and the proceeds applied in discharge of the amount shown by the last balance-sheet (£20,000) to have been due on loan account thus leaving the company quite free of debt. Administration has been kept down to the lowest possible point and the balance of expenditure account is now £21,397 compared with £20,508.

Vogelstruis Estates and Gold Mines.—In the year to June 30 last this company had an average of 54.2 stamps in operation against 43.2 in the preceding year and milled 90,084 tons, an increase of 22,969 compared with 1905-6. The recovery shows an average yield of 7.26 dwts. per ton or somewhat less than in the preceding period, but on the other hand working costs have been reduced. Gold produced realised £139,248, an advance of £30,340, and other items brought the income up to £144,104. Mine expenses were £103,927, Johannesburg office expenses £1,196, profits tax £750 and engineer's fees, including arrears, £1,650. This means a profit on operations of £36,581, but a good many further charges have to be met from this sum, including London office expenses £1,249, debenture interest £5,999, directors' fees £1,000, depreciation £11,614 and written off development £3,500. Sum still left is £12,581 and out of this the directors have paid a dividend of 5 per cent. carrying forward £16,393 against £15,058 brought in. Ore reserves at the close of the accounts were 180,028 tons, showing an increase of 7,618 tons, but the consulting engineer points out that the chief advance in development during the period is not so much the actual increase in tonnage for the mill but in the sinking of the main shaft, enabling driving operations to be conducted on two levels Nos. 10 and 11 below the level at present being operated upon for mill requirements. By the end of the present year the engineer thinks it probable that driving will be proceeding on the 12th level.

Sub Nigel.—This is one of the numerous South African companies which have the misfortune to report the complete suspension of operations during the last financial year ending on June 30. At one time it appears the directors had under consideration the possibility of making an arrangement with the Nigel Deep by which some exploratory work might be done through the drives running from the latter company's shaft adjoining the Sub Nigel property. They were, however, advised that operations conducted in this way would be extremely expensive and uneconomical and it has therefore been considered advisable to wait until the general outlook presents a more settled appearance. The depression from which the share market has been suffering would naturally be prejudicial in the matter of realising investments. Already those investments are so seriously depreciated that the directors have thought fit to write off from the credit to profit and loss the sum of £40,000, reducing their book value to £70,000 odd. The appropriation is a mere matter of bookkeeping because we gather that the profit was in no sense the product of ordinary earnings and the company never paid anything for the investments. In various ways the company gathered a revenue of £4,953 in the year under review and spent all but £176, which is carried to the balance of credit of income and expenditure account raising it to £40,963. Deduct the £40,000 just mentioned for depreciation and there remains £963 to be carried forward. Cost of the property was the trifle of £542,979, the issued capital being £700,000, outlay on equipment is £29,252 and on main shaft "E" £7,598. There are no floating liabilities worth mention, cash is £4 569, loan against security is £33,500, on which there is no less than £6,200 of accrued interest, an amount which sets one thinking, and debtors owe £2 059. Among the loans is one of £8,500 lent to the Central Nigel Deep, but that concern is in a bad way, as we know, and some of the cash may have to be written off as lost.

Mount Lyell Mining and Railway.—It is always difficult to judge the position of a company from a cabled summary of its report, and we are rather at a loss to understand one or two items in the extract just telegraphed to this side from Melbourne. We gather that during the half-year to September 30 202 399 tons were treated, apart from metal-bearing fluxes 10,544 tons and purchased ore 332 tons. These gave 4,143 tons of blister copper, containing 4 090 tons copper, 344,715 ozs. silver, and 9.334 ozs. gold. Operations resulted in a profit of £128 728 from all sources after allowing for dividend and income taxes £10.552, depreciation £11.740, and mining exploration £17,348. The profit earned shows a reduction of something like £136,000 compared with the previous half year, due, according to the news to hand, to the fall in the price of copper, which during the period receded from £105 to £64. This made the sale of copper more difficult, so that stocks at the close of the half-year were 1,072 tons in excess of those existing at March 31. It must be assumed that no credit whatever is taken for this unsold metal, as despite the heavy fall in price the average price realised was £96 15s. 6d. per ton, against £106 9s. 3d., a decline not nearly serious enough to account for the big drop in income. Cost of producing the blister copper was 15s. 5·20d per ton, being 1s. 0·23d more than in the previous six months. Balance at credit of profit and loss is reported at £402,351, and the liquid assets in excess of liabilities at £402,657, including stock on hand, but excluding outstanding debentures £40,200. The dividend proposed is 1s. 3d. per share, with a bonus of 9d., or 2s. in all, compared with an aggregate of 3s. 6d. last half-year. The price of the shares scarcely flinched when the details came to hand, but it had already fallen from about 60s. to 28s. Developments at the 850 ft. and other levels are expected to be of a satisfactory character. Ore reserves are estimated at very large totals, those in the Mount Lyell mine being 3,668,511 tons averaging 0·55 per cent. copper, 195 ozs. silver, and 0·030 ozs. gold per ton, while the North Mount Lyell, including the Lyell Tharsis mine, contains 438,020 tons having an estimated value of 5·75 per cent. copper, 1·33 ozs. silver, and 0·005 ozs. gold. "Alt gether, taking quantity and quality of reserves of ore, the mine never appeared to better advantage than at present."

British Broken Hill Proprietary.—During the half-year to June 30 this company concentrated 67,258 tons of crude ore which yielded 9,544 tons of concentrates containing 5,936 tons of lead and 252,507 ozs. of silver. After going up from April to July prices of lead and silver took a distinct turn downward and immediate prospects do not favour a strong rally. Revenue from all sources was £145,875 and after meeting expenses at the mine the balance over was £48,571. Interest on investments and transfer fees produced £1,624 making £50,195 from which a good number of small charges have to be provided, including £2,136 for income-tax and £2,233 on account of depreciation. Sum brought in was £12,938 and the credit available is £54,834. From that it is proposed to pay on December 7 an interim dividend of 1s. 6d. per share. Cost of mining was 13s. 11d. per ton and of concentrating 5s. 9d. per ton against 13s. 1¾d. and 5s. 5½d. respectively for the previous half-year, increased wages and the difficulty of conducting ordinary operations whilst setting up and making connections with the new plant being responsible. Ore reserves down to the 600 foot level are estimated at 525,000 tons irrespective of the ore found at the 800 foot level, which we imagine will prove to be very considerable. Arrangements have been made with the Zinc Corporation designed to make things easier for that unfortunate concern and it is hoped that the Umberumberka water scheme will be carried out. A sum of £12,000 is to be spent on an electric power plant when the modernising of the plant and machinery will be fully completed. Considerable capital outlays, however, will be incurred in shaft-sinking to the 1,000 feet level.

Brilliant and St. George United Gold.—This company submits a revenue account for the period from February 11 to August 22, 1907, and a balance-sheet made up to August 16, which is somewhat unusual. Tons crushed were 7,586, yielding 4,205 ozs. of gold and 12,840 tons of sands cyanided gave 8,329 ozs., the total value being £28,145. Other items brought the revenue to £29,673, but working expenses took £25,766, office expenses were £932, and £2,702 was allowed for depreciation, leaving the trifling profit of £273. But the company brought forward the remarkably large credit of £52,073, making £52,346 in all, and from this two dividends of sixpence each have been declared, absorbing with tax a sum of £7,560 and leaving £44,786 in hand. Part of this, however, is represented by plant, machinery, and buildings. According to the report, the output from the old mine has steadily declined, and must continue to do so as even the prospecting points on the newer veins cannot be expected to disclose any large bodies of stone to compensate for the exhaustion of the remaining blocks on the main reef. We gather that the future must now depend largely upon the results obtained from the Identity and Hope mine, but water is evidently giving some trouble, and the remaining 200 feet or so of sinking will occupy more time than anticipated.

Ouro Preto Gold Mines of Brazil.—Owing to the scarcity of labour there was some reduction in the quantity of ore treated during the year ended June 30 compared with the preceding twelve months. The amount was 72,703 tons, which gave 24,500 ozs. of bar gold worth £97,872. Other items brought up the revenue to £99,007 from which the general expenditure in Brazil took £82,490 and in England £1,990 leaving £14,527 nett. Balance from previous account was £1,145 making £15,672, and in view of the large capital outlays for the year the directors think it prudent to write off the sum of £7,000 against buildings and machinery. Another £1,933 is allowed for depreciation and after providing 18 months' preference dividend bringing the payment right up to date the sum carried forward is £1,243. The superintendent estimates the reserves of ore available for stoping at 202,510 tons, or practically three years' supply of the mills and the directors consider the prospects satisfactory. The development of the mine is kept well ahead and the value of the ore continues at a figure which is profitable, as the company is able to work at a low cost.

Rambutan.—This Malay tin mining company was formed as recently as May, 1905, and in making a profit for the year to June 30 of £3,199, the directors think the mine has done very well, bearing in mind the experimental nature of the early working. A dividend of 1s. per share was paid on May 1, and after liquidating a debit of £46 brought in there remains a credit of £1,802. Capital is only £27,000, and while the cost of the property was £12,750 a sum of £16,072 has been spent on plant, &c. This was considerably in excess of anticipations and as the company has thought it right to buy a large area of adjoining land for £15,000 this amount has been borrowed from bankers. In order to provide the money and the necessary capital for working the land a reconstruction of the company was to be proposed, a rather remarkable state of affairs considering that a dividend was paid last May. However, at the beginning of October information reached the board that a serious breakdown had occurred, and mail advices now show that there has been a partial collapse of the dredger boiler. Owing to the impossibility of getting suitable plates on the spot this means a suspension of work for some time, and the directors intend to defer their financial schemes until operations commence again and profits are being shown.

Gopeng Tin Mining.—We are glad to note the continued success that attends the operations of this undertaking. The profit earned during the year to July 31 was £22,376, the highest

ever touched, and includes the profit on working the Ulu Gopeng and dividends on New Gopeng shares. One dividend of 1s. 3d. and three of 1s. 6d. per share, making 5s. 9d. in all, have been declared, and the balance in hand now amounts to £9,466. The general managers regard the year's returns as satisfactory on the whole, despite the falling off in the latter part of the year owing to the hardness of the ground, so hard, indeed, that the force of water available was insufficient to break it. The lode still runs rich, but it has been decided to abandon the attempt to hydraulic it, and preparations are being made to remove operations to another hill, where there is a good depth of payable alluvium. This should mean a material increase in the output.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

F. P. C.—Company undoubtedly has good prospects, and you would probably find the step you suggest more advantageous than averaging.

NEWRY.—(1) A fair security, but we expect you will get it cheaper by waiting a little. (2) This ought to be a good security in time, but the market is a very limited one, and you might find it difficult to realise. (3) We do not care much for this company, and while the debentures may be all right, they are far from first-class, and on the whole we think should be left alone. (4) Yes, if you could get them at, say, £2 or £3 below the price you quote. Company's prospects are excellent. (5) This also seems to have fair prospects, and should be a fair speculative investment.

K. V.—The custom of joint-stock banks of allowing 1½ per cent. less than Bank rate on deposits is only effective when the latter is 5½ per cent. or under. When that rate is exceeded the clearing-house banks have agreed not to go beyond 4 per cent. Discount houses, however, must follow the market or Bank rate in order to attract deposits. As money may not long remain dear, it seems a pity to disturb your existing arrangements. (2) We believe the shares will go much lower before the turn comes, although the company is a powerful one. The shares were marked xd. on the 14th inst. (3) We think you should hold the shares. (4) Not just yet. So far as we know, the fall is due entirely to the trouble in the United States. (5) No. One of the best shares of the kind, but traffic receipts are bound to suffer, and we fear the price will go lower. Send it to Mr. Fish. We should be inclined to take the profit.

ALPHA.—(1) Yes. You may have to wait a considerable time for an improvement owing to the American position, but the security is good enough, and should ultimately recover. (2) This, too, is worth buying, as the company has a fine chance with the growing prosperity of the country. (3) Somewhat speculative, but the company is doing better, and there is a chance of improvement. (4) Wait. This is too dear in present circumstances. (5) On the whole this is better worth buying, although here also the prospect of a rise is a little remote. (6) As Canadian interests in this are large, you will probably get the bonds cheaper presently. In the long run they should improve. (7) Intrinsically this ought to be worth more, but it has gone ahead just a little too fast, and the United States trouble has upset the board's calculations. The company, however, is sound at bottom and the stock should recover. (8) Too high yet for a speculative purchase. (9 and 10) Neither of these would suit your purpose, as we think they are both quite as high as their position warrants, and there is little scope for further improvement.

MONTREAL.—(1) Van Ryn, New Kleinfontein and Simmer Deep. (2) Should be good enough, but will probably go lower in present circumstances. These answers leave a debit of 3s. 6d. after deducting the balance of your deposit account.

NOMEN.—We are doubtful if they are worth buying even at their present level.

W. P.—Stock named is good, and will ultimately go above present price, but you must be prepared for the possibility of a further drop first.

W.—(1) Security good, but we think that by waiting you may be able to get the bonds at, say, 2 points lower than your price. (2) Not yet, as here also the tendency seems to be downwards. (3) Not in existing conditions of the market. (4) Only if you can get them at about 15s. less. (5) Should be left alone. (6) Company's prospects good, and a purchase at about par should turn out all right. (7) A fair security, but we expect to see them go lower. (8) Company doing well, but bonds may go lower on selling by holders forced to realise. (9) Similar position to (8) but worth watching. (10) Should leave these alone, company's financial position is full of difficulties.

S. S. R.—We are still of the same opinion. See the article this week.

D. R.—(1) Good property, but shares too dear. (2) Not to be touched at any price. (3) Excessively capitalised, and the market for the shares purely artificial. Do not touch now. (4) A respectably sponsored mother of companies, but shares too dear. (5) Do not care for them; too much manipulation. (6) A genuine enterprise in honest hands, but shares very high. Some others in this group more attractive, although there are no prospects of immediate rise. (7) Leave these alone at present, the value of ore too low in present state of market. This puts your account 4s. 3d. in debit to queries department.

F. E. D.—(1) Yes. The company is admirably managed, and its financial position seems excellent. (2) No. The share is only a £5 one, and is excessively priced. (3) Do not be in any hurry to buy. The company has just reduced its dividend by an appreciable amount, and the shares seem likely to go lower yet.

T. C. W.—We think these might be held for the present as there is bound to be a reaction by-and-by from the recent heavy decline.

T. C.—The market may go higher yet both for No. 1 and No. 2, but if it does, sell at least part of holding because reaction will follow. Do not put any of the money released in No. 3, because the dividend may have to be lowered, but a purchase of No. 4 may turn out well, and we see no objection to No. 5.

B. W. J.—Second issue not quoted, but issued on identical terms as to payments and drawings. Yours must be the first

D. H. C.—(1) This should now be cheap, and worth buying. (2) Good, but will probably go lower. (3) We rather think this had better be sold.

J. I.—Should be excellent, but will be cheaper by-and-by. The company's floating debt is so huge. Wait.

Mexico.—Nominally it is a gold standard, but with the silver dollar arbitrarily valued at 50 cents to the gold dollar, which is an unreal price.

NEXT WEEK'S MEETINGS.

MONDAY, NOVEMBER 18.

Australian Commonwealth Trust.—Winchester House, 3 p.m.
British Investment Trust.—Edinburgh, 12.30 p.m.
Consolidated Deep Leads.—Winchester House, noon.
Kenward and Court.—11, Queen Victoria Street, E.C., 3 p.m.
Russian Petroleum and Liquid Fuel.—Winchester House, 2.30 p.m.
San Miguel Copper Mines.—23, Queen Victoria Street, E.C., 3 p.m.
Swazieland Corporation.—Winchester House, noon.
Trafford Park Estate.—Manchester, noon.

TUESDAY, NOVEMBER 19.

Amazon Telegraph.—42, Old Broad Street, E.C., noon.
Anglo-Egyptian Bank.—27, Clement's Lane, E.C., 3 p.m.
Canadian Oil Fields.—Winchester House, 2.30 p.m.
Coetzeestroom Estate and Gold Mining.—Winchester House, noon.
Consolidated Goldfields of South Africa.—Cannon Street Hotel, noon.
Delagoa Bay Development.—3, Gracechurch Street, E.C., noon.
Estate, Finance, and Mines.—River Plate House, noon.
Gopeng Tin Mining.—Redruth, noon.
Hope Bros.—46, Ludgate Hill, E.C., 11 a.m.
Johannesburg Goldfields.—Winchester House, 11 a.m
New Zealand and Australian Land.—Edinburgh, noon.
United South African Association. — Cannon Street Hotel, 12.30 p.m.

WEDNESDAY, NOVEMBER 20.

Boardman's United Breweries.—Manchester, noon.
British Borneo Para Rubber.—Glasgow, 2.30 p.m.
Cape Electric Tramways.—1, London Wall Buildings, E.C., noon.
Ceylon Land and Produce.—Leadenhall House, E.C., 3 p.m.
Components, Limited.—Bournbrook, noon.
Delhi, Umballa, Kalka Railway.—Winchester House, 11.20 a.m.
Kamfersdam Mines.—Winchester House, noon.
Lamson Paragon Supply.—Winchester House, noon.
Land and House Property.—Winchester House, 2.30 p.m.
New Hudson Cycle.—Birmingham, noon.
Oriental Gas.—Finsbury House, noon.
Queensland Investment and Land Mortgage.—Cannon Street Hotel, noon.
Raleigh Cycle.—Lenton, Notts, noon.
Santiago Nitrate.—Winchester House, 12.30 p.m.
Walkers, Parker, and Co.—Winchester House, 2.30 p.m.

THURSDAY, NOVEMBER 21.

Castner Kellner Alkali.—Cannon Street Hotel, noon.
Chilian Transandine Railway.—144, Leadenhall Street, E.C., 3 p.m.
Lanka Plantations.—12, Fenchurch Street, E.C., noon.
Nobel Dynamite Trust.—Winchester House, 1 p.m.
Salar del Carmen Nitrate.—Winchester House, 2 p.m.
Turffontein Estates.—8, Old Jewry, E.C., noon.

FRIDAY, NOVEMBER 22.

San Francisco Breweries.—Winchester House, 3.15 p.m.
Scottish Australian Investment.—Winchester House, noon.

Tenders for the issue of £15,000 "D" (Five per Cent.) stock of the Croydon Gas Company were opened on November 13, when the amount was allotted at prices ranging from £107 to £112 per £100 stock. The average price obtained was £108 13s. 0d. per £100, applicants at the lower price receiving 70 per cent. of the respective amounts applied for.

The directors have allotted the balance of the total issue of £500,000 £4½ per cent. First Debenture stock of the Royal Mail Steam Packet Company, and the final letters of allotment have been posted.

TRADE AND PRODUCE.

Wheat.—A better and more cheerful tone was noticeable in the markets this week, and during the first day or two a fair amount of business was done at better prices, spot and futures being both in good demand at from 1½d. to 2d. higher than last week. Later, transactions were of a more retail character, but at full prices, English wheat being very firmly held in spite of liberal offerings, and foreign being from 6d. to 9d. dearer than last week. Farmers' deliveries last week came to 77,721 qrs. averaging 35s. 10d., against 63,764 qrs. averaging 26s. 6d. a year ago. From abroad we imported 303,000 qrs. against 289,100 qrs. last year, and the quantities of wheat and flour on passage are again a little higher at 2,005,000 qrs. this week against 1,995,000 qrs. last to the United Kingdom, and 1,570,000 qrs. to the Continent against 1,710,000. American markets strengthened at first on the firmness of the English ones, and prices gradually hardened. They weakened again for a while under rumours chiefly that large operators were liquidating, but the unfavourable crop news and heavy export acceptances sent prices up again 2 to 2¾c. dearer. The visible supply for the week shows an increase of 67,000 bushels.

Cotton (from our Manchester correspondent).—A rather irregular feeling has prevailed in most sections of our market during the week under review. No particular fresh feature has presented itself, and, on the whole, the tone has been quiet. The general outlook for trade is uncertain. We are receiving some rather discouraging advices from abroad, and the state of finance at home rather makes against free operations. Manufacturing at the present time is practically unremunerative, and in the opinion of some authorities relief cannot come without short time being worked. The dispute in the spinning section is also causing anxiety. It remains to be seen what will be done next week, but it is feared that a serious crisis will arise. Both sides seem determined to be very firm. Nothing fresh of moment has transpired with regard to the prospects for the American crop. The opinion is growing that the yield will not be nearly equal to that of last year, and 12,000,000 bales is being mentioned. Messrs. Neill Bros. have not yet issued their forecast, and Manchester is anxious to see what their figures will be. Quotations in the raw material have again fluctuated, but there is not much change on the week. In piece goods for export a little more inquiry has been dealt with than last week, but the sales cannot be described as important. Small lines in shirtings for Madras and Calcutta have been put through, but poor accounts of the crops in India result in buyers operating sparingly. The China market is not entirely stagnant, small lines being mentioned, but free buying at the present time is out of the question. The Mediterranean markets have been slow to give out orders of any importance. Printing cloths here and there have moved off to a fair extent for South America. Home trade demand is fairly encouraging in the distributing houses, but manufacturers of such cloths are not receiving many orders to make. In various weaving centres more looms are stopped for want of work to go on with. To buy yarn to-day and produce cloth is undoubtedly a lean business. American yarns for home consumption have moved off quietly, chiefly in small lots to meet immediate requirements. No free buying for distant delivery is reported. Spinners maintain their position fairly well. Coarse counts are doing rather better. The business in shipping yarns has been quite unimportant. The Continental demand is much quieter than a month or two ago. Bolton yarns remain firm with a quiet steady demand from day to day. Best qualities in combed descriptions command very full rates.

Until financial troubles in America are less acute, says Sir Jacob Behrens and Sons' report, there does not appear to be much chance of cotton advancing in price, although the statistical position is a strong one. Weather reports are not altogether favourable; but as the consumption of cotton in America is likely to be curtailed, these reports have very little effect upon the market. Holders of cotton in the South will only sell for cash, and as this is scarce, the movement of this crop will probably be retarded, unless, of course, circumstances should compel holders to part with their stocks, in which case lower prices would no doubt be the result. We have no change to report in Egyptian cotton, the demand for which keeps quiet at steady rates.

Wool.—Markets are quieter and decidedly weaker for both merinos and crossbred tops. At Bradford latest values of 64's and over are now about 7½ per cent. below the highest point, and at this price buyers are only taking for present use and leaving futures untouched as a rule. The position is too critical to indulge much in speculation, not that it is exactly weak or that the high Bank rate has affected it much, less in fact than was expected either here or abroad, but the news from Australia is still contradictory. The New Zealand sales are not yet in full swing, and as at this time of the year makers are not anxious to increase their stocks, to buy in an uncertain market is not necessary. Spinners remain busy and yarn schedules have not as yet been altered to correspond with the lower rates for wool. Manufacturers also are well employed, many mills where cheap tweeds are made being worked overtime, and colonial markets are showing an improved demand for fine goods.

Coal.—There is nothing of importance to note this week in coal. Business, if quieter than a month or two ago, is, if anything, better than it usually is in November. Heavy demands are still coming in from some quarters abroad, and prices for steams have again gone up a little. Coking coal and coke are both in less demand owing to the depressed iron trade, and therefore cheaper; house and gas varieties are firm. The recent very great activity and high prices in the Durham coal trade, says the *Engineer*, have brought the miners an advance of 6¼ per cent. in wages for the next three months, and on the year wages have risen 21¼ per cent. In Wales also the rate is to be raised another 2½ per cent. on December 1, and will then be at 60 per cent. above the maximum according to the standard of 1879. Output at the Welsh ports is regular at a fair maintenance of price.

Iron and Steel.—The shipbuilding trade, upon which the prospects of these metals more or less depend, continues in a depressed condition, and the outlook is considered worse than it has been for some years. Consequently there is little doing in hematites. Production and prices have both been reduced, at one time this year East Coast mixed numbers realised 82s. 6d. per ton, and now they are 70s. Mixed Bessemers are at 69s., being a drop of 9s. since August, but buyers cannot be tempted into the market, for they are waiting for lower prices still, and so little is being bought that makers are only producing sufficient to cover existing contracts. Cleveland pig-iron prices are steadier. The 7 per cent. Bank rate has cleaned out the weaker warrant holders, and in stronger hands the downward movement of prices has been checked. They rose, in fact, last Wednesday 1s. 3d. per ton, and, though the lowest of the year, 49s. 3d., was touched on Tuesday, traders seem to think that now they may remain pretty steady throughout the winter. Connal's stores are still subjected to heavy withdrawals, and exports this month are heavier than is usual in November, large deliveries going to the Continent. Only 105,400 tons are now held compared with over 750,000 tons last year in the spring, and over 500,000 have been taken out this year up to date.

Copper.—Prices have fluctuated within narrow limits this week. They opened at a decline of 25s. under Friday's values, but rallied quickly on some influential bidding, and rose to £61 for cash and £60 10s. for three months. But the tendency generally has been weak with a slack demand and free liquidation, and the price has hovered between £58 10s. and £59 for both cash and three months, relapsing to-day to £58 2s. 6d. for spot and £57 17s. 6d. for forward metal.

Tin.—Eastern quotations kept at a comparatively high level at first, and markets here under an active demand were firmer, rising to £142 cash and £143 5s. for three months, but renewed weakness in the East caused a relapse here, and Wednesday's market opened well under closing prices of Tuesday. Thursday again saw prices lower still, business being initiated for January at £139 15s., and on heavy liquidation they dropped to £136 15s. cash and £138 5s. three months. Later the tone was steadier, but the spot price did not move, and forward metal was only 5s. better.

Tea.—The Indian auction was dull, which was only to be expected with a heavy Bank rate and large supplies, 46,727 packages being brought forward by importers. Large quantities had to be withdrawn, and where sales were effected prices of common and medium grades dropped ¼d. per lb. Higher teas came down even more, as much in some cases as 1d. per lb., and on the 42,624 packages sold on garden account the average came to 8.44d. against 8.80d. last week and 8.07d. a year ago. Ceylon auction, on the other hand, was very small, only 11,284 packages being offered, but even so, the market could not take the supply at last week's rates, and, as in Indian, prices for common and medium dropped about ¼d. per lb. 8.60d. was the average price for the week against 8.46d. in 1906. Java sales of 1,390 packages met with rather more competition than the others, but with prices easier than last week. Next week's sales will be smaller, and if only the offerings during the next few weeks can be kept on a moderate scale, Messrs. Gow, Wilson and Stanton, Limited, think it likely that producers will reap considerable benefit, because not only is home consumption on the increase, but stocks of all teas in the kingdom are nearly six millions below what they were last year, and the Indian tea available will evidently be much less than last season.

Sugar.—The financial crisis and high Bank rates have caused no weakness in the sugar market, and May is still held for about 9s. 9d. This, we learn from Mr. Czarnikow's circular, is partly due to interruption of navigation caused by the low water on the Continent, which prevents, during the height of production, a pressure of prompt sugars, and likewise reacts on distant deliveries. But the principal reasons are the high prices asked for roots, and especially the less favourable news about crops, which are decidedly less optimistic than in October. There has been snow in Russia, and two to three centigrades frost in Germany and Austria, which, however, seems to have done no harm to the roots still in the ground (estimated last week at 10 to 20 per cent. of the crops), though some uncovered stacks may have suffered. It appears, however, that the usual improvement in yield or weight of the later harvested roots is not the same as last year, and many factories in North-Eastern Germany, and especially in France, do not expect to get more than they declared in October. The Paris market has thereupon improved from 26.62 francs to 27.32 francs, and this rather influences the other markets, notwithstanding that the nearer statistical position is not particularly strong. October stocks, of course, depend largely on October production, which in countries outside Austria began later, and is no criterion for October-December developments. The New York market has become weaker, and quotations for 96 per cent. centrifugals has been reduced from 3.90 to 3.80 cents equal to 9s. 9d. c.i.f. for 96 per cent. non-preferential, equal to 8s. 9d. f.o.b. Hamburg for 88 per cent. nett beet. The decline chiefly affects the Louisiana crop, and as doubtless the buying of sugars in New Orleans is for the time being handicapped by the financial situation, planters who must realise have had to submit to the dictation of consumers. Landings in the three ports were 27,000 tons. Meltings 33,000 tons, leaving stocks at 202,000 tons.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation. — Earnings for the week ended Nov. 7, $6,417, increase $2,043; aggregate from July 1, $88,526.

Argentine North Eastern. — Traffic receipts for week ended October 11, £2,832, decrease £469; aggregate from July 1, £42,530, decrease £3,250.

Assam Bengal.—Traffic receipts for week ended October 12, Rs. 1,17,032, decrease Rs. 2,246; aggregate from July 1, Rs. 14,25,259, increase Rs. 1,04,973.

Bilbao River and Cantabrian. — Traffic returns for October, £7,934, decrease £1,779; aggregate from January 1, £90,975, decrease, £10,553.

Buenos Ayres Central. — Gross receipts for Sept. and Oct. £23,746, increase £5,137.

Canadian Northern Railway. — Traffic receipts for week ended Nov. 7, $241,800, increase $80,900; total from July 1, $3,791,200, increase $992,100.

Egyptian Delta. — Traffic receipts for week ended October 26, £6,163, increase £670; aggregate from January 1, £147,100, increase, £17,539.

Lucknow Bareilly Railway. — Traffic receipts for week ended October 12, Rs. 25,588, decrease Rs. 112; aggregate from July 1, Rs. 3,88,442, increase Rs. 62,308.

Midland Uruguay. — Receipts for month of October, £6,600, increase £864; aggregate from July 1, £23,430, increase £2,000.

North Western of Uruguay. — Traffic receipts for Oct., $25,400, increase $9,775; aggregate from July 1, $80,256, increase $6,284.

Quebec Central Railway.—Traffic receipts for the 1st week of November, $15,633, increase $1,392; aggregate from January 1, $867,568, increase, $71,046.

Quebec and Lake St. John. — Traffic receipts for Sept. $65,604, increase $3,149; aggregate $471,220, increase $52,696.

Rohilkund and Kumaon Railway. — Traffic receipts for week ended October 12, Rs. 21,355, decrease Rs. 2,278; aggregate from July 1, Rs. 3,21,300, increase Rs. 50,277.

Uruguay Northern. — Gross receipts for month of Aug., £1,934, increase, £373; aggregate from July 1, £3,675, increase £105.

White Pass and Yukon Railway. — Traffic receipts for week ended October 31, amounted to $18,814.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending November 9, £1,391, increase £10; aggregate from July 1, £25,201, increase £1,518.

Cockermouth and Keswick Railway. — Receipts for week ending November 9, £766, increase £34; aggregate from July 1, £19,247, increase £604.

East London Railway. — Traffic receipts for August, £3,769, decrease £504.

East and West Yorkshire Union Railways. — Traffic receipts for the week ended November 9, £447, increase £72; aggregate from July 1, £8,285, increase £1,705.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric. — Traffic receipts for week ending November 6, £689, decrease £13; aggregate from Jan 1, £30,066, decrease £1,010.

Blessington and Poulaphouca. — Traffic receipts for week ending November 6, £8, decrease, £2; aggregate from July 1, £471, decrease £48.

Bristol Tramways and Carriage. — Traffic receipts for week ending November 8, £4,862, increase £218; aggregate from July 1, £101,116, decrease £802.

British Electric Traction.—Receipts of all the Associated Companies for the week ending November 8, £27,105; 421½ miles.

Burnley Corporation. — Traffic receipts for week ending November 9, £1,229, increase £113; aggregate from July 1, £24,597, increase £1,086.

Dublin and Blessington. — Traffic receipts for week ending **November 6, £130, increase £15; aggregate from July 1, £3,031, decrease £62.**

Dublin and Lucan. — Traffic receipts for week ending November 8, £99, increase £6; aggregate from July 1, £2,747, increase £237.

Dublin United.—Traffic receipts for week ending November 8, £5,696, increase £1,028; aggregate from July 1, £133,350, increase £30,142.

Edinburgh and District. — Traffic receipts for week ending **November 9, £4,803, increase £186; aggregate from January 1 1907, £224,220, increase £1,340.**

Hastings and District. — Traffic receipts for week ending November 7, £894.

Isle of Thanet. — Traffic receipts for week ending November 9, £338, increase £78; aggregate from Oct. 1, £2,200, increase £14.

London County Council. — Traffic receipts for week ending November 2, £31,064, increase, £6,749, aggregate from April 1, £979,155, increase £162,562. Miles 110½, against 106¼.

London General Omnibus. — Traffic receipts for week ending November 9, £20,066, decrease £264; aggregate from July 1, £402,693, decrease £40,083.

London Road Car. — Traffic receipts for week ending November 9, £9,013, increase £1,748, aggregate from July 1, £166,011, increase £15,719.

London United. — Traffic receipts for week ending November 8, £5,778, increase £531, aggregate from January 1, £295,014, increase £12,068.

Provincial Trams. — Traffic receipts for week ending November 9, £1,508, increase £81; aggregate from Oct. 1, £9,186, increase £464.

Rossendale Valley. — Traffic receipts for week ending November 8, £202, increase £1.

Sunderland District. — Traffic receipts for week ending November 6, £453, increase £55; aggregate from Jan. 1, £21,066, increase £2,299.

Yorkshire (West Riding) Electric. — Traffic receipts for week ending November 10, £1,166, increase £65; aggregate from **January 1, £52,575.**

FOREIGN.

Anglo-Argentine. — Traffic receipts for week ending November 11, £18,663, increase £1,212, aggregate from January 1, £71,963, increase £71,252.

Auckland Electric. — Traffic receipts for four weeks ending October 11, £10,214, increase £386, aggregate from January 1, **£103,888, increase £4,054.**

Brisbane. — Traffic receipts for month of October 1907, £13,537, increase £1,816.

British Columbia Electric. — Nett earnings for September $62,701, increase $14,210. Aggregate nett earnings, including [illegible] **investments from July 1 to September 30, $219,569, increase $[illegible].**

Buenos Ayres Grand National and New Tramway. — Traffic receipts for week ending November 11, £8,078.

Calcutta. — Traffic receipts for week ending November 9, Rs. 46,984, decrease Rs. 1,573, aggregate from January 1, Rs. 21,66,169, increase Rs. 1,76,569.

Cape Electric. — Traffic revenue for month of October, Cape Town, £9,780, Port Elizabeth, £2,804.

Carthagena and Herrerias. — Traffic receipts for the month of October, £4,007, increase £332, total from January 1 £[illegible], increase £3,336.

Geneva Trams. — Earnings for September, fr. 228,011, increase fr. 8,467.

Kalgoorlie Electric. — Traffic receipts for October, £3,693, aggregate from January 1, £39,925.

Lisbon Electric. — Earnings for September, milreis 120,091.

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 17,721, increase 18¾ per cent.; aggregate from January 1, Rs. 3,44,483, increase 20¼ per cent.

Melbourne Tramways and Omnibus.—Traffic receipts for September £43,000.

Mexico. — Nett earnings for month of September, $203,925, increase $21,796; aggregate nett earnings from January 1, $1,545,283, increase $93,126.

Perth (W.A.) Electric. — Traffic receipts for week ended November 8, £1,381, decrease £55, aggregate from January 1, £62,928, decrease £2,140.

Rio de Janeiro. — Nett earnings for September, $212,460, aggregate from January 1, $1,530,534.

Sao Paulo. — Traffic returns for September — nett earnings, $114,093, increase $11,093; aggregate from Jan 1 $[illegible], increase $28,124.

Twin City Rapid. — Traffic receipts for the month of September, $561,446, increase $27,295, aggregate from January 1 $[illegible], increase $322,835. Nett traffic receipts, $310,170, increase $12,945, aggregate from January 1, $2,459,836, increase $[illegible].

The Investors' Review.

The Week's Money Market.

BANK RATE 7 PER CENT. (Raised from 5½ per cent. to 6 per cent. on Monday, November 4, and from 6 per cent. to 7 per cent. on Thursday, November 7.)

Norfolk House, Friday Evening.

We must make up our minds to endure it; the Bank rate will have to be again raised, and soon, perhaps at once. The Bank's position looks stronger, no doubt, than it was a week ago since the reserve has risen by £3,419,000 to £21,113,000, but of the improvement thus shown £2,934,000 is due to borrowed gold, the Bank of France having sent us over £3,000,000 in the past fortnight against our bills discounted by it at 6 to 6½ per cent., and within three months that gold will either have to be sent back again or the bills will have to be renewed on possibly still more onerous terms. We have not only to find this gold in the interval, but to meet a foreign demand for the metal of indefinite magnitude in the meantime and to build up the Bank reserve by at least another £5,000,000. In ordinary circumstances the product of the mines ought to enable us to do this, but the times are altogether extraordinary, giving us no immediate hope of being able to replenish the Bank's depleted stock.

How strained the position of the market is can be inferred from the legends upon which it feeds. The Egyptian demand is "off," it is told; "Egyptian banks have no funds here and cannot draw gold." But is it not that because the Egyptian crop has not yet been brought to market? It is being held back in the deluding hope of better prices, but directly the American crop is flung out, as it must soon be, Egyptian cotton will also come upon the market, and gold, as usual, will have to be found to pay for it. Most of that gold we must find, because the Bank of France will meanwhile have gone as far as it dares in assisting us to meet the United States' demand. Its position also is relatively stronger than it was, because against a loss of over £3,000,000 in the metal within the fortnight its note circulation has shrunk £6,708,000, but for all that "gold in hand" is still less than 55½ per cent. of the amount of the active note circulation.

But India will "unearmark gold." India cannot. Her exchange is adverse now, and can probably only be kept from going worse by "loan operations" in London, at present impossible. Equally impotent is Germany in spite of the small parcels of the metal being wrung from that quarter, and if Russia is compelled to forward much gold her Imperial Bank rate will be forced up to a height that will threaten a general moratorium. Already banking credit costs 8 to 9 per cent. on acceptable security in Petersburg and Moscow. Wherever we turn, therefore, we get plain notice that we must rely upon ourselves alone. The most vigorous action, and prompt as vigorous, is thus necessary if the unbroken credit of the country is not to be dangerously breached.

The greater is the necessity that the open market should sustain the Bank of England. Beguiled by comparatively low rates for short loans—day and seven-day rates have never been higher than 5½ per cent. this week and call money has dipped to 4 and 5 per cent.—and hampered by the fine rates at which the Bank of France took picked bills our discount market has worked at 6½ per cent. most days, and the Bank of England has been so much out of the market that £1,582,000 of its other securities have run off within its week. But the comparative ease of the short loan market has been due almost wholly to the influx of borrowed gold, only £237,000 in coin and £247,000 in notes having come back from the active circulation, against which the Treasury has absorbed £168,000. And the borrowed gold still left will all be swept away forthwith. Yesterday and to-day £1,171,000 nett was taken away, and to-morrow morning further sums are said to be going, so that the *Mauretania's* first voyage will be distinguished by a cargo of gold larger than any ship ever before carried.

The bill brokers ought to work hard up to Bank rate with such facts and prospects before them, not taking even six months' remitted paper much below it. We heard yesterday of six months' notes under 6 per cent., and at 6 per cent. such business as there is has been done readily enough. It is too low as things are, but happily long usances are not abundant, and with bills of all usances the utmost discrimination is exercised. None but the very best class of American produce bills will be looked at. As to January bills, the market is far from anxious to take them at any price. It therefore quotes Bank rate.

Gold export reports, the floating alarms of an excited market, and a sense of nervousness everywhere prevalent made the discount market harder these last two days, loans remaining easy enough. Brokers who quoted 6⅝-¾ per cent. yesterday for threes to-day gave out 6⅞-7 per cent. Business was not to be done below 6⅞ per cent., and there was no Continental buying. The rate for sixes hardened to 6¼ per cent., and one says "An 8 per cent. Bank rate to-morrow;" another cries. "No, on Monday," and only a small minority deprecates the expectation of immediate change. If a further advance can possibly be postponed without injury it unquestionably ought to be, but we have great doubts.

Gold to the amount of £400,000 is due in from South Africa on Monday, and another £50,000 is coming from India. Nothing more was heard to-day of the £500,000 from Russia, but a 7 per cent. rate is bound to attract parcels of the metal from unreckoned on quarters, and some go so far to say that Egypt is send-

ing some back. In that case the crops must have been borrowed upon in the summer so that the Egyptian crisis might be stifled. To an extent that was so, perhaps, but not to a great extent.

Easy as short loan rates were to-day the Bank lent a little credit at 7½ per cent. for a week, but then the India Council was calling in.

SILVER.

A good deal of uncertainty still prevails in the market for bars, and business has been on a very limited scale. The bazaars continue to hold off this market, although, according to Messrs. Samuel Montagu and Co.'s report, there is a good up-country demand at Bombay, and China has also been buying there. Quotations fell to 26⅞d. per oz. for cash and 27⅛d. for delivery for two months forward, or the lowest figure since July 1, 1905, and then rallied to 27 3/16d. and 27 1/16d. on purchases from China. The demand, however, was small and easily satisfied, and with stocks in Shanghai standing at 122 lakhs of sycee, support from that quarter is likely to be unimportant for some time to come. Immediately the orders were covered prices resumed their downward course and close to-day at 26 15/16d. per oz. for spot and 27 1/16d. per oz. for future shipment. Applications for the Rs. 30,00,000 of Council drafts on India on Wednesday only amounted to Rs. 47,50,000 in bills and Rs. 4,00,000 in telegraphic transfers, and as the prices offered were below what the Council would accept no allotments were made. The amount to be offered next week is reduced to Rs. 20,00,000.

NEW YORK'S ATTEMPT TO BUY FRENCH GOLD.

From an authorative source we get to-night the inner story of the "gold from Paris" rumours with which New York has been buoying itself up this week. Negotiations have been going on, but with groups of Paris bankers, not directly with the Bank of France itself. The first attempt to get these bankers to contract for a supply of gold to the States has come to nothing, chiefly because the Bank of France was entirely hostile to the operation, and imposed such terms as made it dangerous to join the gold-furnishing syndicate. Its members would have been bound to return the gold to the Bank at a given date, and might have been left bears of the metal, and obliged, therefore, to buy it back at any price. The guarantee or security offered by the agents of New York financiers was also considered short of what the circumstances demanded. But New York must have gold, or prices will collapse and the harvest have to be sold, and to-day negotiations have been resumed on the basis of more tempting offers to the French bankers. Whether or not they have ended in a contract to supply gold to enable American financiers to continue to hold crops and galvanise prices, we cannot say at the time this goes to the printer, but the hostility of the Bank of France to any transaction of the kind is as resolute as before, and it will not give its gold on any easier terms. This is not to be wondered at, because all the gold contracted for would have to be furnished by the Bank either at once or later, since the other French banks, like our own, possess little of it beyond till money. Therefore the Bank of France will insist on a trustworthy guarantee that the gold it is asked to part with will be replaced on a fixed date. This guarantee New York cannot give, nor can the Washington Government give it without leave from Congress.

The Stock Markets.

Once more the Stock Exchange has shown its inherent strength in completing without a hitch a settlement that might have been expected to reveal much weakness. One firm was said last night to be short of a few thousands, but the account as a whole was cleared with apparent ease, in spite of the high rates for money. This once more proves the markets to be right in asserting that there is no weak position of magnitude inside the Exchange. We agree in this

view, but there is plenty of weakness outside, and if any trouble arises in any part of the country among credit wielders or generators it will immediately react with disastrous effect upon the prices of public securities of all classes, bringing markets down. And we fear there will be trouble outside, because the public has been, to put it bluntly, such a fool for so many years back. It is simply impossible that the crazy finance which has been in fashion can have left no widespread traces of bankruptcy behind it, and until we know that all the banks of the country are strong enough to nurse the diseased accounts many of them must be sitting upon and to stand the racket of deficiencies shown by these accounts—deficiencies that could no more be made good by the debtors in present circumstances than an aeroplane could sail to the moon—the utmost prudence and caution must be exercised. How any man could be so left to himself as to speculate for the rise with 10 per cent. money in prospect is more than we can fathom.

Because the prospects and position are thus we are by no means unduly exhilarated by the display of firmness made this week in various markets. It was quite natural that Home Railway stocks should rebound, because a weight had been lifted off men's minds by the removal of all fears of a strike. Perhaps also it was in order that the Kaffir Circus should wake into febrile professional activity on the strength of the Gold Fields dividend, but these movements cannot be other than transitory in present circumstances. It may be, and is, right enough to buy well-secured stocks and shares for investment, to buy within one's means; but it is altogether wrong to enter into account-to-account engagements for the rise in speculative stocks just because the immediately dreaded mischief has not developed as feared, or because some show, false and misleading though it be, of improvement has been made in particular quarters. With all the earnestness we can command, therefore, we beseech people not to be misled by the superficial tittle-tattle of the market tout, who is but a sort of social maw-worm and pest at the best of times, and whose influence is now dangerous in the highest degree. We know this kind of busybodies and their patter. Because there has been a fall, "now is the time to buy." "If you miss to-day's chance, you may miss a fortune." "The crisis is over, all danger past, therefore buy big." This kind of babble is just now no better than an exhibition of criminal lunacy, and no one with any regard for peace of mind, let alone for purse, should listen for a moment to tipsters of this description.

We are very glad in other respects that prices have risen, and sincerely wish they would go up further still, so as to enable people to sell out who have been holding on to securities on which they have seen losses accumulating. On every advance people thus circumstanced should take the opportunity to close their speculations, no matter at what loss, because we are only in the first stage of a world-enveloping financial liquidation, the end of which no man can see. But the public has been buying for investment, the brokers all tell us. Well, we have no objection to that, provided they buy with judgment stocks of substance or stocks covered by top dressings of share capital that would protect holders of the underlying securities from permanent harm. It is better, indeed, to invest spare money amongst the tried or well-covered securities, looking only to the certainty or high probability of uninterrupted interest and dividend returns, than to allow large balances to lie idle with the banker, because it is to be feared that before the worst of the credit-induced calamities now upon us have passed away we shall have banking troubles to deal with in this country. The banks whose affairs may come into view through suspicions being aroused need not be really insolvent; they may be only locked up, but to be locked up at the present time is to be in a position of danger.

Contangos.

As intimated above, money ruled at high rates for the settlement just concluded. Bankers usually charged 7 per cent. on continued loans, except to the money brokers, who got most of their money at 6½ to 6¾ per cent., but where new advances were asked for the charge was sometimes 8 per cent. and seldom less than 7½ per cent. It naturally followed that inside the Stock Exchange money was stiff, that is to say, 7 to 8 and 9 per cent. on most speculative issues in which any appreciable account for the rise was open. 7 per cent., for example, was paid in the Foreign market, sometimes more, rarely less, as against 3 to 5 per cent. a fortnight before. On Home Railway stocks, too, the contango rates were unpleasantly higher, except for Brighton "A," Dover "A" and one or two other stocks in which there was a heavy account open for the fall. And even on Dover "A" there was a sensible contango instead of an almost invisible one a fortnight back. Bears have been busy in Hudson's Bay shares and they also proved scarce for delivery, but on American Railroad shares 8 to 9 per cent. were pretty general rates, and the contangos on Argentine, Mexican and other Foreign Railway stocks likewise rose to 8 and 9 per cent. The contango on Grand Trunk ordinary stock was kept down by the bear account, but bargains for the rise in the preferences cost more to continue, and the rate on Canadian Pacifics shares was little below the ruling American rate.

Consols and Other Trustee Stocks.

Coming to the details of the market, the firmness in prices looks almost marvellous in view of such rates for money. Consols even show some advance on the week, and the only serious relapse in all the Imperial Trustee group, as it may be called, was a fall of 30s. in India 3 per cents. Domestic Municipal stocks were also steady and one or two of the County Council issues again improved. Colonial stocks, however, were all down where they changed and Victoria 3½ per cent. stock closed 2 lower on the week. The few movements amongst Colonial and Foreign Municipal stocks were also adverse, but as a rule they have not moved at all.

Foreign Government Stocks.

The Foreign market did not quite come up in elasticity to the domestic standard, for Chilian bonds were again unpleasantly depressed, as well as several of the Chinese issues and one or two Brazilian loans. The Argentine group, however, was better in response to the bullish sentiments now prevalent in regard to all Argentine securities, and there was a rally in Japanese 4 and 4½ per cents., as well as in Russian 1906 bonds and German and Prussian 3 per cents. The higher Bank rate in France has as yet made no impression whatever on the price of French Rentes. Mexican bonds, it may be added, were amongst the weakest in the market, and we are somewhat doubtful about the immediate future of that country.

Home Railway Stocks.

It is in the Home Railway market, however, where exhilarating times have been seen, dealings there having been broader, less spasmodic and more systematically bullish than anywhere else, with a good substratum of investment, too. Consequently, all the ordinary stocks are better on the week, and some of them have risen in a most refreshing style. North Western, for instance, is 7½ up, while Metropolitan and Great Northern preferred are both 4½ higher, the other improvements among English stocks ranging from 2 to 4 and appearing on all the leading securities. Caledonian ordinary has jumped 7 and the deferred, together with North British preferred and deferred, 3 to 3½. Great Central preferred, too, has gained 5¼ on the week and Great Eastern 5¼. Nothing, indeed, has been left out or gone the wrong way, not even Central London or "little Chathams," and we should be delighted to think that this improvement must continue. Unhappily, we can only regard it as a passing phase, partly because of the outlook in the Money market, but more because the avoidance of a strike amongst railway servants does not imply any improvement in the business habits of railway boards and managers.

The great question of closing the capital accounts and the perplexing one of economies in working and wise treatment of the customer all remain open, and will give much trouble before they are settled. Yet without a curtailment in expenditure, both on capital and revenue account, involving a cessation of competitive building and of redundant competing train services, what hope is there that the position of the holder of the ordinary stocks is going to improve? Less stir by much occurred amongst the debenture, guaranteed and preference stocks, and some of them still betrayed a tendency to recede. Great Central lower preferences however, rose, as well as Chatham arbitration and second preference stocks, and there were small improvements in a few others.

Indian and Colonial Railway Stocks.

Indian Railways continue to lose ground, but not in any alarming fashion, people having failed so far to grasp what the famine news may mean to that stricken dependency. It might mean bigger railway earnings. The gamble has continued its customary unbridled course in Canadian Pacific Railway shares, but on the week they are not much worse because the crisis in Canada still hangs off. Bears have absorbed much of the paper thrown out by German holders, and the superficial position is weakened only by the extent to which the bear account has been reduced. The covered securities of the company have not been so firm, and the business in them is narrow to a degree. Grand Trunk ordinary stock has picked up a little on the week, and only the preferences have had occasional spasms of flabbiness. Rhodesia Railway bonds have again risen from 2½ to 4½, and the first issue of the Mashonaland Railway is 3½ better, thus giving perplexed holders a more favourable opportunity to clear out than might have been anticipated.

United States Foreign Railway Shares.

Even in the Yankee Railroad market the changes have been favourable rather than otherwise on the week; at any rate, the declines have been insignificant and mingled with rallies. Among the ordinary shares the most depressed have been those of the Milwaukee Company which sellers have been flinging out in order to escape the necessity of avoiding the call of £4,000,000 due at the beginning of next month on the latest issue. Otherwise prices have held up well on the week's comparison, so far at any rate as the ordinary stocks are concerned; but Baltimore preferred, Atchison preferred and Missouri preferred are from $3 to $4½ down. Bonds also continue to recede with a few exceptions, and Pennsylvania 4½ per cents. are 2½ lower.

A most sanguine view has begun to pervade the Stock Exchange about the immediate future of Argentine Railway stocks. The excellent news about crops and farm stock in the Republic has created the impression that whatever country is going to suffer this coming winter, Argentina is in the position to gain by the loss in other parts of the world. There is no small foundation for this view, and the buying is consequently well grounded. As yet, however, it has done little more than stiffen prices, and ordinary stocks have not all responded to the hopes of the bulls. The leading ones, though, are from 3 to 4 up, Buenos Ayres Western leading, and the Great Western, Rosario and Great Southern following with improvements of 3 each, preferences in most instances bringing up the rear with gains of ½ to 1, although a few show a lagging tendency. Brazilian Railway stocks are also better, and there has been a hustle up in Mexican ordinary in spite of the lack of enthusiasm in that quarter. Cuban Railway issues may be called steady, and the shares of the Central Company are decidedly stronger. In fact, the Foreign Railway market has been, if not much more inconvenienced by orders, at any rate decidedly more hopeful. Still a few weak spots remain, noticeably in Antofagasta issues and in preferences of some of the greater Argentine Railways, and in securities like South Austrian obligations or the shares of the Nitrate Railways.

Bank and Brewery Shares.

A long array of declines are again visible in the Bank market with hardly a rise to break the monotony. Nervous people appear to be selling a little, and we do not like that symptom at all. The shares of English banks certainly ought not to be pressed upon a reluctant market because jobbers immediately take fright and quote prices sharply down. For example, the shares of the London Joint-Stock Bank are 30s. below the price of a week ago, although very few of them have been flung out by holders, and the other declines of ½ to 1 have seldom been produced by what might be called active selling. Amongst the shares that are harder on the week are those of the Spanish Bank of the River Plate, the London and River Plate Bank and the National Bank of Egypt. The shares of the Imperial Bank of Persia, too, are a fraction up, but the only English bank issue quoted higher are the £12 paid shares of the National Provincial.

Another pretty general slide has taken place in the Allsopp group of stocks with no business going on. Guinness's ordinary stock has also been put down 10, and the £10 preference shares of the Camden Brewery Company were sold yesterday at 17s. 6d. St. Louis Brewery ordinary and preference shares, in fact, are the only securities in the Breweries list which have risen on the week, and they have done so on the unexpectedly good dividend announcement made by the board.

Commercial and other Miscellaneous Securities.

London Docks preferred and deferred stocks have been flat, and closed lower. The changes in most of the Commercial list are likewise unpleasant, and in no way reflect the glow of better things diffused elsewhere. Now and then a price has gone up slightly, but often the improvement is a mere sixpence and rarely or ever important enough to, as it were, resist the current. Shares alone show these improvements, and the weakness in industrial debentures is not only more pronounced but less relieved by a few improvements than in the case of shares. The debentures of the Imperial Paper Mills of Canada, for example, are quoted 34½ down on the week, and a fall of 18½ has occurred in the debenture stock of the Electric Construction Company dealt in yesterday at 59½. Other relapses are less sensational, but unpleasant enough, as, for instance, in Borax Consolidated first debenture, Castner-Kellner first debenture, Gilbey's perpetual debenture, Imperial Tobacco debenture, Savoy Hotel, Strand, debenture, Underground Electric profit-sharing notes and Western Canada Cement debenture, which are all from 2 to 2½ down. Fine Cotton Spinners 4½ per cent. debenture stock is almost the only security of the kind in the list that leaves off at an improvement. Motor shares, however, have shown a little resisting power, thanks to the Motor Show and gigantic advertising; but, on the whole, this part of the list is depressing.

Electric, Financial Land and Investment, Financial Trusts and Insurance.

About a dozen and a-half changes have occurred on the week in the Electric group, and only two of these are favourable, the ordinary shares of the Charing Cross Company and of Crompton and Company having both risen 2s. 6d., but Charing Cross 4 per cent. debenture stock is down 30s., and Canadian General Electric common shares are $2 worse. Hudson's Bay shares have risen ½ on the week, and Pekin Syndicate ordinary shares have been pushed up 1¾. Peruvian Corporation stocks and bonds are also better, so that the Financial Land and Investment list is a little more encouraging. For all that the majority of the movements are adverse, and Chartered debentures were put into the official list last night at 86-90. A long array of declines appears under Financial Trusts, and some of them are unpleasantly severe. One or two, however, such as the deferred stock of the Railway Investment Company and the North-Western deferred stock of the Conversion Company have resisted the current. Indian and

General preferred stock is also up on the week, but the securities of Trusts known or suspected to be implicated in American Railroad finance are all lower. The deferred stock of the American Investment Trust, for example, closed 6 down on the week, and the deferred stock of the British Investment Trust, as well as the deferred stock of the Investment Trust, is 4 lower. Gas stocks have not moved often, but there are half-a-dozen changes for the worse in that section, Brentford consolidated and new stocks being marked down 2 to 3. Insurance shares are also for the most part lower by a few shillings, Commercial Union alone closing ¼ better.

IRON, COAL, AND STEEL AND OTHER STOCKS.

Nothing cheerful can be said about Iron, Coal, and Steel securities, whether Home or American. Indeed, the transfer of the Tennessee Company to the United States Steel Trust has had a bad effect upon its sinking fund bonds, which are 5 down on the week, as well as on its common stock. At home, too, the changes are with scarcely an exception unpleasant. Beardmore debentures, for instance, were sold yesterday at 90, or 7½ down on the week. Dunderland debenture stock is 3 down, Fairfield 4½ per cent. debenture stock 1½ down, and Nantyglo preference shares have lost 3, but wonderful to state, United Collieries debentures are quoted 2 higher. Furness, Withy ordinary and preference shares have risen a little on the latest financial transformation effected, otherwise the Shipping list is stagnant enough. The market for Tea shares also shows signs of tiredness, although the declines are few. On the other hand, Anglo-American Telegraph ordinary and preferred stocks are decidedly up, and Great Northern Telegraph shares are 2 higher, while a slight recovery has taken place in Eastern Extension shares on a steady investment demand. Tramway and Omnibus descriptions, however, make a display the reverse of cheering, for although B.E.T. preference shares are ¼ up, the ordinary are ⅜ down on the week, and London General Omnibus stock has fallen 6. San Paulo Tramway shares also are 2 down, and Anglo-Argentine 6 per cent. debenture stock has lost 3.

FRIDAY EVENING.

Markets lost bloom to-day on the sick feeling prevalent throughout the City, and prices as a rule shaded off a little, Consols, Home Rails, and most things being lower to-night than last night. At first the Yankee market seemed a little less flabby. It was stirred by the tale of "gold from Paris," but soon went back with the rest of the list. Kaffir shares were easier also, although the mid-monthly settlement in Paris has been arranged comfortably amid an abundance of money at 3 to 3½ per cent., except on outside or distrusted stuff. Business was small everywhere, but the ignorant and impressionable are eager to buy for the rise.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Ann. 1905 ½, to 80⅞-80¾, do. Acc. ½, to 80⅞-81, India 1931 Acc. ½, to 98-99, do 1948 Acc. ½ to 85-86. **Fall:** Exchequr. 3 p.c. Bds ½, to 99-10⅛, Bk. England 3, to 260-266, Indian R. Paper 1, to 62-63, do. 1854 1, to 62½ 63½.

CORPORATION AND COUNTY STOCKS.—Rise: Metro. Cons. Stk ½, to 100-101, L.C.C. 3½ p.c. and Acc. both ½, to 99-100, Southampton Harb. 1, to 102-104. **Fall:** Metro. Water "A" 1, to 84-87.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Fall: Canada (Dom.) 1908 Bds. ½, to 99 100 do. 1910 1, to 100-102, do. 1910-35 1, to 100-102, do. 1938 1, 94-96, Cape 1881 1, to 98-100, do. 1917 23⅛, to 101½-1 2½, Indian Imm. of Natal 1, to 98-100, Manitoba 1010 Dbs. 1, to 101-103, Natal Cons. 1919 2, to 101 103 N.S.W. 4 p.c. Bds. 1, to 99-101, do. 1915 1, to 99 101, N. Zealand 4 p.c. Con. Db. 1, to 99-101, Newfoundland 1941 3½ p.c. 1, to 79-81 Sierra Leone 1, to 99-101, Straits Setdmts. 1, to 100-102, B it. Columbia (Perw.) 1, to 81-83. Brit. Guiana 3 p.c. 1, to 83 85, Canada (Dom.) 4 p.c. Stk. ½, to 99-100, do. 4 p.c. Reduced 1, to 100 102, do. 4 p.c. Ln. 1 to 100-102, do 3 p.c. KELLY'S QUEEN BLOCK GOLD MINING.—They do things in a funny way in Charters Towers. During the six months which ended on August 26 last the revenue on gold account was £15,367 and £17 came in from other sources, making £15,384. Against this the expenditure was £10,084, leaving a profit of £4,400, which is all right. But the company brought forward a debit of £4,005 and instead of applying the revenue to writing this down, two sixpenny dividends were paid absorbing £7,200, so that the deficiency is actually increased to £7,705. We don't understand all this, but suppose it is right enough, since the directors have pleasure in presenting the report in which these things appear, and the auditors are obviously quite content. A certain amount of development work has been done during the period with results only passable at best.

Baku Russian Petroleum.—Production of crude oil for week ended November 9 was 278,000 poods, equals 4,482 tons.

Messrs J. Henry Schroder and Co. have received a cable from their Santos agents advising them that they have further encashed £21,500 in respect of the surtax, collected weekly, for the service of the State of San Paulo 5 per cent. exchequer bonds, making a total of £330,100 encashed since August 1.

Critical Index to New Investments.

RENARD (INDIA) TRANSPORTATION CO., LIMITED.

This is an offshot of the Renard Road and Rail Transportation Company floated in May last, and has been formed for the purpose of providing a customer for the parent company's productions. It acquires an agreement to purchase two Renard trains before January 1 next at a discount of 20 per cent. off catalogue prices, and four more within a year of their arrival in India, ten in the second year, twelve in the third year, and at least twenty per annum after that. In ordinary business a manufacturer would probably be very uncomplimentary if it was suggested that anyone should pay him for the privilege of becoming his customer, but it makes all the difference that the two parties to the bargain are limited liability companies, and the parent exacts 2,500 of the 5,000 £1 ordinary shares for its generosity in granting such terms. The other 2,500 go to the promoters who obtained the agreement, and the same gentlemen nett a further £2,500 in cash for underwriting the 25,000 preferred shares forming the balance of the capital. These preferred shares are entitled to 7 per cent. and one-third of the balance remaining after a like dividend has been paid on the ordinary shares, and the directors have received 5 per cent. of the surplus. As regards the prospects of the venture proving a success, the directors can only put forward the opinions expressed by various experts, and the whole scheme is so unattractive that we expect the underwriters have had to earn their commission.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

ROHILKUND AND KUMAON RAILWAY CO., LIMITED.

A very big increase in third-class passengers, mainly on the Bareilly-Kasganj section sent the revenue from coaching traffic for the six months ended June 30 up by Rs. 81,036 to Rs. 933,474. Receipts from goods traffic were Rs. 112,040 higher at Rs. 812,904, and of this increase Rs. 90,652 came from general merchandise, Rs. 20,802 from construction and revenue stores due to carriage of boulders and stone ballast for the new extensions and of coal and wood fuel for locomotive purposes to meet the necessities of the increased traffic. The cart and truck services produced Rs. 6,981 nett against Rs. 5,382 and there was a considerable increase in earnings from stock running and through traffic over foreign lines. Including these and somewhat larger receipts from telegraphs the total income showed an improvement of Rs. 2,11,913 at Rs. 15,20,482. Working expenses, however, rose by Rs. 1,20,650 to Rs. 6,45,584, the proportion to earnings being 42.17 per cent. against 36.86 per cent. The increase was general, and resulted chiefly from the maintenance of the Bareilly-Kasganj section being debited to revenue for the first time. Maintenance of way from this cause took Rs. 38,537 more, locomotive department charges advanced by Rs. 24,480 and traffic expenses by Rs. 15,580, while carriage and wagon repairs were exceptionally heavy owing to repairs which could not be undertaken in the previous year. The increase in nett revenue was therefore Rs. 91,263 up at Rs. 884,308, of which the company's share was Rs. 3,23,000 or Rs. 98,267 more, and as the proportion pertaining to the Bareilly-Seeon extension is now included in the general figures, the income in sterling was £13,366 larger at £21,377. In addition the company received £3,010 as its share of surplus profits on the Lucknow-Bareilly State Railway, £405 from its carting agencies and £1,784 from interest on the Powayan Steam Tramway debentures for 18 months, and with £1,381 brought in and £43 from interest on deposits the total nett revenue was £28,708. After providing for sundry charges and paying £2,200 to the Secretary of State for estimated share of half surplus profits the disposable balance was £18,341 compared with £15,760. As, however, the new ordinary stock now ranks for dividend with the old ordinary stock, the dividend of £3 and bonus of 10s. per cent. requires a good deal more and the sum carried forward is only increased by £1,281 to £5,941. Capital expenditure on the original line was £4,042, chiefly on ballast and permanent way, but the outlay on extensions was £55,723, making a total of £701,247, and the credit balance is hardly now £38,753. Suspense account in India stands at £91,750 against which temporary loans of £61,485 have been raised pending the issue of 3½ per cent. debenture stock sanctioned in May, 1906.

DELHI, UMBALLA, KALKA RAILWAY CO., LIMITED.

Gross receipts for the year ended June 30 amounted to Rs. 22,21,330 and exceeded those for the previous twelve months

by Rs. 1,99,095, or about one lakh more than the increase in 1905-6. Most of the additional revenue came from passenger traffic, which showed that an extra 338,824 passengers were carried for Rs. 1,72,770 more owing to the exceptional pilgrim traffic to and from Shaneswar on the occasion of the solar eclipse in January. In goods traffic the quantity of coal carried was 66,276 tons larger, and the receipts therefrom rose by £19,612, and although less general merchandise was handled the revenue rose by £10,581, and in spite of small decreases under other heads the totals showed gains of 50,068 tons in weight and Rs. 25,105 in money. Nett earnings were £73,626 compared with £67,007, out of which an interim dividend of 3 per cent. has been paid for half-year, and after providing for interest on debenture stock and capital advances and Indian income-tax the surplus, including £7,427 or £1,716 more brought forward, was £8,891 better at £47,031. Out of this the usual final dividend of 3 per cent. is paid, but the bonus is increased from ½ per cent. to 1, making a total distribution of 7 per cent. for the year against 6½ per cent. last year and 6 per cent. in 1905. Then £5,000 is transferred to reserve and £380 is set aside to meet income-tax on undistributed revenue, leaving £9,651 or £2,224 more to be carried to the new account.

Colombian Northern Railway Co., Limited.

Gross receipts for the year ended June 30 amounted to £30,311, of which working expenses took £12,220 or 40.31 per cent. compared with 43.29 per cent. for the 14 months ended June 30, 1906. Nett revenue was £3,534 up at £18,091, and with £5 from transfer fees and £354 from profit on exchange account, the total, after providing for London office and other charges was £16,445. Adding £4,541 brought forward, the directors had £20,986 to deal with, of which debenture interest absorbed £9,000 and dividends aggregating 4s. per share have been paid, leaving £5,987 to be carried forward. Capital expenditure in Bogota during the year was £6,882 raising the cost of the line to £468,257, of which £299,930 has been provided out of share capital and £180,000, by an issue of 5 per cent. first mortgage debenture bonds. Creditors are small at £5,795, against £7,625 due from sundry debtors and £8,417 held in cash, while stores are valued at £8,642.

South Durham Steel and Iron Co., Limited.

For the first nine months of the year ended September 30 all the works of this company were kept going to their fullest extent, but the falling off in shipbuilding during the last quarter caused a shortage of specifications and consequent reduction of output. The reduction would appear to have been serious, as nett profits for the twelve months were down by no less than £59,061 at £125,383. Adding £4,093 brought in the disposable balance came to £129,476 compared with £187,695, of which debenture interest and preference dividend absorbed £31,500, income-tax, directors' fees, and debenture trustees' remuneration £4,055, and £1,500 went in donations to hospitals granted at the last annual meeting. Only £40,000 is written off for depreciation against £60,000 a year ago, and the reserve, which last time got £50,000, is ignored, leaving the directors with £52,421 at their disposal against £32,842. As, however, the new ordinary shares issued in June, 1906, are now entitled to a full year's distribution, even this help is insufficient to maintain the dividend at last year's rate, and the distribution is therefore reduced from 12½ per cent. to 10, and as the amount involved is only £3,750 less, £13,329 remains to be added to the sum carried out, raising it to £17,421. The new Talbot furnaces mentioned in the previous report are not yet ready, but it is expected that one will be in operation before the end of the year. In the meantime a further £57,316 has been spent on this plant, and as £45,353 was spent on the other property, the capital outlay, after deducting the allowance for depreciation, is £62,669 up at £835,039. Reserve, on the other hand, remains at £125,000, apart from the dividend equalisation fund of £25,000, and although this represents a fair proportion, it is a pity the directors did not see their way to add something in view of the steady growth of the property account. The expenditure on the Talbot process is taxing the company's resources pretty severely, and an increase of £45,212 in sundry creditors to £203,588 is accompanied by a decrease of £45,706 in sundry debtors, with the result that trading balances are adverse to the extent of £35,300. Stocks, however, are £21,305 larger at £255,826, and cash and bills have risen by £12,963 to £84,142.

Drake and Gorham, Limited.

This electrical engineering company devotes a good deal of attention to the lighting of country houses, and found the year ended June 30 anything but favourable for that class of business. Gross profits and estimated results of trading of sub-company amounted to £20,703, but of this expenses, including £8,033 for managing directors' and other salaries and £944 for directors' fees, absorbed all but £343, which is added to the balance of £1,056 from the previous account and carried forward. The directors put forward a variety of reasons for the failure to earn anything like an adequate return on the money invested, the principal ones being the general stagnation in electrical business, but they state that several satisfactory orders have been received, and express the hope that the company will resume its normal condition during the present year. The company does not appear to possess works of any kind, either freehold or leasehold, and out of an issued capital of £125,000 no less than £74,651 is represented by goodwill, patents and designs, against which there is a reserve of £13,000. Stocks are valued at £8,810, furniture and fixtures at £1,895, and plant and tools at £1,766. The rest of the capital is required to finance the large proportion of the business which is done on credit, as sundry debtors and bills receivable reach a total of no less than £50,705. Floating liabilities are £19,507, against which expenditure on works in progress, including approximate profit to date less £16,994 received on account come to £8,556, and in addition to £5,780 in cash the company holds investments valued at £6,742.

Brazilian Street Railway Co., Limited.

An increase of 24,858 to 1,548,734 in the number of passengers carried during the year ended July 31 resulted in a modest improvement of £393 at £24,101 in gross receipts. Working expenses, however, owing to higher wages paid and the enhanced cost of fuel and other materials, came to £3,010 more at £20,373 leaving the nett revenue £2,617 down at £3,728. These figures are calculated, as usual, at the exchange of 1s. per milreis and are corrected by the addition of the gain on exchange. The average rate actually ruling during the twelve months was 15.476d. compared with 16.36d. in the previous year, so that the revenue from this source was £1,095 smaller at £1,499, and including £780 brought in the total income came to £6,007 against £9,440. Debenture interest took £2,298 of this and £106 went for income-tax, and after transferring the usual £400 to the renewals fund and paying preference dividend the dividend on the ordinary shares must be cut down from 5 per cent. to 1½, with a reduction of £356 to £424 in the sum carried forward. The balance-sheet calls for no further remarks, as the principal items remain at last year's figures. Capital expenditure to December 31, 1898, is still calculated at 2s. per milreis and amounts to £154,750, while the outlay between that date and July 31, 1905, at 1s. per milreis is £4,138, or a nominal total of £158,888 and against these there are only the capital reserve of £757 and the renewals fund now amounting to £2,400.

Norwich Electric Tramways Company.

Whether the falling off was due to the miserable summer or not we do not know, but the number of passengers carried by this undertaking during the year ended June 30 showed a decrease of 80,439 at 7,220,714. Receipts from all sources, less £527 paid to the Norwich Corporation out of advertising revenue, amounted to £34,532 or an increase of £74, but outgoings, including £800 for "unusual legal expenses," were £26,549, and after making allowance for difference in stores in hand, came to £2,041 more. Nett revenue was consequently £1,967 down at £7,843, and with £204 from interest and transfer fees and £373 brought in, the disposable total was £8,420. Interest on the mortgage bonds absorbed £2,640 of this, and out of the balance £1,000 is again transferred to reserve, but the dividend is reduced from 2¼ per cent. to 1¾, and even then the sum carried out is considerably smaller at £160. Construction, equipment, &c., have cost £331,654. Nothing seems to have been written off for depreciation, while the reserve after 11 years amounts to no more than £6,197, or less than 2 per cent. Liabilities to creditors are moderate at £2,615, while debtors owe £717, and in addition to £2,588 in cash the company has £3,069 on loan and £975 invested.

New Hudson Cycle Co., Limited.

The year ended August 31 was not so profitable for this company as the two preceding ones, but the directors give no explanation of the serious relapse of £6,515 to £22,609 shown in trading profits. Rents, interest and dividends, and transfer fees yielded £1,292 more at £2,762, making the total revenue £25,371 against £30,594, and as on the other hand the allowance for repairs and depreciation rose by £1,577 to £8,810, while professional charges took an extra £370 at £1,419, the nett profits, after providing for directors' fees and management salaries, were £7,170 down at £13,301. Adding £11,910 brought forward, the disposable total was £25,211 or £5,528 less, of which dividends on the two classes of preference shares absorb £1,490, and the directors deserve commendation for the way in which they have dealt with the surplus. Last year they were in the happy position of being able, in addition to paying a dividend and bonus aggregating 15 per cent., to put £10,000 to reserve, and there was certainly the temptation to ignore the reserve this time in order to maintain the distribution somewhere near that figure. Instead of doing so, however, the directors prefer to put another £10,000 to reserve and pay no more than 5 per cent. on the ordinary shares, leaving £10,052 or £1,859 less to be carried forward. This £10,000 is practically used to wipe out the item of goodwill, so that the reserve remains at £20,000 against the leasehold factory valued at £7,616, and freehold properties of £25,635. Against an expenditure of £7,637 on plant, machinery, &c., £2,928 was written off for depreciation, leaving this item £4,709 higher at £35,818. Sundry creditors have risen by £1,136 to £41,068, but debtors are £1,615 higher at £42,400, cash and bills come to £1,998 more at £13,149, and stocks have been increased by £11,593 to £47,241. The indebtedness of the auxiliary company known as Instalments Department, Limited, however, comes to £10,576 more at £17,176, of which £10,000 is secured by debentures, and in order to provide funds for financing this account the company has been obliged to borrow £16,318 from its bankers.

Components, Limited.

Bad weather during the important part of the selling season upset all the directors' calculations during the twelve months

ended August 31, and trading profits were only a trifle of £406 better at £16,174. Dealings in the company's shares, however, appear to have been decidedly active, as receipts from transfer fees increased by £122 to £193, and with £690 from rents the total income was £530 up at £17,063. A reduction of £118 to £3,152 in the cost of maintenance and alterations of plant was much more than offset by the larger sum of £3,070 allowed for depreciation, maintenance of buildings took a trifle more at £589 and interest and bank charges rose by £246 to £1,149. Debenture interest was £851 heavier at £4,653, owing to the issue of £75,000 first mortgage debentures, so that nett profits showed a decrease of £1,103 at £4,449, but £15,059 was brought forward, giving a total of £19,508 to be dealt with. Out of this the directors propose to write off the cost of issuing the debentures, amounting to £5,937. The sale of the motor department has now been completed, and the value thereof deducted from property account reducing it to £63,518, while plant, machinery, &c., after adding £1,783 for expenditure during the year is £1,288 down at £64,942, and it is needless to add that the company has no reserves of any kind. The issue of debentures enabled the directors to pay off the bank overdraft, but sundry creditors are £3,220 up at £32,512. Against this, however, sundry debtors have risen by £9,939 to £57,396, and in addition cash and bills come to £9,145. Stocks have been reduced by £4,948 to £58,938, which seems to be a move in the right direction, and investments, no doubt as the result of the sale of the motor department, now stand in the books at £48,380 or £19,310 more.

J. B. Brooks and Co., Limited.

This company makes cycle saddles, saddlery, &c., and finds the business a pretty profitable one. No profit and loss account is submitted with the report for the year ended August 31, but after providing charges of all kinds, including depreciation and directors' fees, the nett balance is £13,093. Add £892 brought in and the sum for disposal is £14,785, which provides the preference dividend and 6 per cent. on the ordinary shares with £3,500 to reserve and £535 to next account. The directors have pleasure in reporting that the demand for the company's various productions is well maintained. Reserve fund now reaches the highly satisfactory total of £85,000, and there are investments, mainly high-class, to the amount of £59,444. Floating liabilities are quite unimportant, and debtors owe £15,756, cash is £8,747 and stock £31,573. Property and goodwill are down for £185,028 and the position all round looks good.

Queensland Investment and Land Mortgage Company.

Instead of a deficiency this company again shows a minute surplus of £1,448 as the result of its trading for the year ended June 30 last. The revenue all told came to £26,284, including £10,896 received from productive properties and £4,875 the amount of the interim dividend on the shares in the Queensland Cattle Co., Limited, held by this mortgage company. The Cattle Company has declared a dividend of 10 per cent. for the year ended March 31 last, half of which has already been paid, the other half being due at the end of the year. Thanks to the profit on the past year the debit balance has been reduced to £7,503, and the directors seem to be confident that this modest prosperity is going to continue and increase. The chairman has been out visiting Queensland, and as a result further large and successful sales of some of the company's properties have been made. For these and other reasons it is now proposed to get quit of the liability of £5 per share on the guaranteed shares of £5 5s. each. This cannot be done without the consent of the debenture holders, and there is £393,700 in 4 per cent. perpetual debenture stock outstanding, redeemable, however, at the option of the company on giving six months' notice under the local Act of 1903. Also the company owes £67,895 on terminable debentures and £3,546 on deposits at call, its total debt being £465,141 against a paid-up capital, chiefly in 5 per cent. non-cumulative preferred ordinary stock, of £313,170. The Queensland Cattle Company's dividend, it should be mentioned, is 1 per cent. down on the previous year, but some of the items in the Mortgage Company's balance-sheet show improvement, expenses of all kinds being less by £885. The total income, however, fell £626 to £26,285, so that although there was again a small profit last year it was £514 less than that of the preceding year. The basis on which a scheme to release the guaranteed shareholders is proposed seems therefore narrow, but the board points out that the liabilities are very much reduced, and makes proposals that would have the effect of bringing them down still further. Accordingly they have asked the assent of the debenture stockholders to the substitution of the properties held by the company, plus the uncalled capital of £1 per share on the "A" shares, together with a floating charge on all the unpledged assets of the company for the guarantee they now hold. They bring out the total of these assets at £816,736, and as they propose to reduce the borrowing powers of the company from £500,000 to £300,000 on January 1 next and to £200,000 by January 1, 1912, it would seem that the proposed change is feasible. These borrowing powers, we infer, are over and above those already exercised and represented by the above-named debt. It is entirely a matter for the debenture and share holders, and if they agree among themselves nobody can offer any objection.

Trafford Park Estates, Limited.

But for the Hooleyising to which it was subjected at the start this company might have been a prosperous one, yielding steady and probably growing dividends to its shareholders. As it is the issued share capital of £585,006 gets nothing, and will never have the chance of getting much that we can see. The profit for the year to June 30 last was only £17,087, and although with £19,628 brought forward the entire amount at credit of profit and loss was £36,715, the directors make no distribution. It does not seem to us that they can do so, because there is a liability of £493,250 on first and second debenture stocks outstanding and the company owes its bankers £8,052 besides £2,218 to sundry creditors, while its cash is invisible. And it brings into the balance-sheet as an asset £3,823 paid to date on account of costs of issue of new debentures. The debenture interest alone took £19,497, or more than the profit of the past year, and the £17,097 received from sales of land had to be paid over to the trustees for the debenture holders. Whether the expenses of conducting the business could be reduced or not we cannot say, but £2,500 seems to be a fairly liberal salary for the managing director, and the other directors get amongst them £2,000, working expenses altogether amounting to nearly £10,000. Naturally in the circumstances no reserve of any kind can be formed, but the trustees for the first debenture holders have received altogether £57,809, and the amount due for rent owing and accruing for sewering and road-making under a deferred payment arrangement and from the Corporation's tramways, &c., is £12,772. The company, moreover, has £65,038 invested in subsidiary companies on the estate, but its position is essentially a weak one, and we do not know that it will be much strengthened by the conversion of the first and second debentures into a new first debenture for £600,000. This operation is said to have been completed during the year and 450,000 of the new first debentures has been issued, dating as from July 1 last.

Debenture Securities Investment Co., Limited.

This company continues its admirable practice of presenting to the shareholders a six-monthly balance-sheet, report, and list of investments. In this every information as to the position of the company is afforded, including a list of securities acquired during the period. The gross revenue for the half-year is shown as £14,071, producing, after providing for administration, interest on loans and allocation of £1,000 to "writing down," a nett income of £11,750. This is equivalent to a gross return of £5 4s., and a nett of £4 7s. on a capital invested of £538,500. Loans, participations, and investments at book prices are credited at £100 less, while cash £13,050 raises the assets to £550,000. Considering that brewery stocks figure so largely among the investments £1,000 is not an excessive amount to apply to reduction of book cost, but the special reserve fund of close on £67,000 probably suffices to meet every contingency in an exceptional list, while loans against securities and cash at bankers and at call amounting to £29,000 place the company in a position to take advantage of dear money and low prices. The ordinary stock gets an interim dividend at the rate of 6 per cent. per annum.

Second Scottish Investment Trust Company.

The eighteenth report of this company shows an investment list "at or under cost," aggregating £537,900 against capital and loans of £519,000, and gross receipts of £32,835. After deducting fixed charges, expenses, and £6,000 applied in reduction of book value and investments, a nett revenue of £14,017 is exhibited. Dividends have been paid of 4½ per cent. on the preferred stock and 5 per cent. on the deferred stock, leaving £2,855 carried forward or £100 more than last year. The balance-sheet shows £5,000 as reserve fund, which does not appear to be invested in any more realisable securities than the rest of the holdings. Indeed, the most easily marketed securities in the list seem to be American Railroad common shares, representing at present prices about £6,200. The list of stocks accompanying the report gives as little information as possible. The face value of shares held is only given in two instances, which it is only fair to note carry a liability of over £11,000. Debts include a bank loan of £19,000, which will in all probability cost the company more in interest for the current year than it can earn in dividends at the average yield on the capital invested. It is almost impossible to check the value of the investments at present prices, but depreciation seems likely on a far larger scale than can be met by a reserve fund of only £5,000, which is all that can be shown after eighteen years' work, and an allocation of any such sum as £6,000, which is applied for that purpose in the period under review, while providing funds to meet calls will necessitate realisation at great sacrifice or loan-raising at high rates in the present condition of markets. The board has apparently greater faith in the judgment of other kindred concerns than in its own, judging by the holdings in investment companies, which amount to £41,000 stock, and nearly 23,000 shares of various and unstated denominations and perhaps they are right.

Colorado Nitrate Co., Limited.

It must be amazingly easy to direct a nitrate company. Otherwise the nitrate magnates could not look after so many as well as their multitudinous other interests. But what matters so long as the companies concerned produce good profits and something satisfying for the shareholders? This concern did not earn quite such a remarkable revenue last twelve months to June 30, as in the year before, but the profit was still a fine one at £145,500, the decline being little more than £2,000. Transfer fees gave £84, and there are deductions of £6,412 for debenture interest and £11,523 for repairs, renewals, and new plant. These appropriations are much smaller in the aggregate than those of last year, with the result that the nett credit, instead of being less is a good £2,000 better than last year.

Being a nitrate company, the revenues of the two years are still confused in a most bewildering fashion, and the accounts show a balance brought forward of £98,648, making £226,305. But from this we have to deduct transfers of £6,338 to depreciation account, £12,000 to debenture redemption account, and £38,000 to debenture sinking fund made last year. In addition, the dividend paid in November last took £48,000, and it will be noted that these appropriations are in excess of the sum then available. Last May a dividend of 20 per cent. was paid, and the directors now propose to pay another 20 per cent., making 40 per cent. in all, applying £10,000 to depreciation account in respect of the old property and £38,000 as provision for redemption of debentures (in excess of the two half-yearly drawings of £6,000 each). At present the debenture debt outstanding is £126,000 and the debenture sinking fund comes to £38,000, while old property account has been brought down to £130,000 and the new to £176,919. Liabilities on bills payable are £63,800 and to sundry creditors £13,699, the principal item among the remaining assets being stocks of nitrate and iodine, £115,285. The others are comparatively small and the cash balance is £235.

Santiago Nitrate Co., Limited.

After two years of difficulties and dwindling revenues this undertaking appears to have at last turned the corner, as for the twelve months ended June the gross profits showed an advance of £7,384 at £65,868. Outgoings, however, increased by £2,675 to £10,103, difference in exchange taking no less than £3,884, leaving a gain of £4,709 at £55,765 in nett profits. Of this an extra £630 at £13,875 was applied to redemption of debentures, and after writing another £1,000 off debenture issue expenses and providing £4,247 or £5,465 less for renewal of plant the disposable balance was £36,643. A year ago the directors thought it incumbent upon them to transfer the surplus revenue to reserve in order to wipe out loans from the bankers, but they apparently do not consider further provision of that sort necessary, and so give the shareholders a dividend of 10 per cent. and carry £16,643 forward. During the year £13,300 debentures were paid off and the property account was reduced by that amount to £220,274, exclusive of the oficina Mapocho, which remains at the old figure of £29,161. Reserves are unaltered at £59,913, and of course are all employed in the undertaking. Sundry creditors and bills payable have been reduced by £92,493 to £26,503, while on the other hand sundry debtors are £51,753 down at £15,647 and cash is £6,424 lower at £7,892. Stocks of nitrate, caliche and iodine show a small decrease of £937 at £46,133, but stocks and stores come to £4,879 more at £24,369.

Santa Catalina Nitrate Co., Limited.

Profit on sales of nitrate and iodine, including difference in exchange, came to £36,294 in the year ended June 30 and £290 was received on account of transfer fees and interest, making £36,584. London office expenses were £1,606, directors' fees being the modest amount of £1,000, donation to Valparaiso earthquake fund was £250, and £1,183 had to be reserved for income-tax. A sum of £2,021 was written off plant and machinery, and £2,695 off nitrate grounds, leaving £28,829 as the nett profit. With £2,322 brought forward, the disposable sum was £31,151, and two 5 per cent. interim dividends have absorbed £7,900, while a bonus of 15 per cent. accounted for £11,850. A final dividend of 10 per cent., making 35 per cent. for the year, is now proposed, £1,000 goes to general reserve, and £2,501 is carried forward. Profit was taken on the shipping quota allowed under the combination agreement, which, for the period under review, amounted to 323,437 quintals compared with 291,562 quintals in the previous year. The balance-sheet is a strong one. All the debentures have been redeemed, and the reserve now reaches £14,000 against a total property valuation of £71,230. Floating liabilities are not important at £9,112, and fluid assets of various kinds make up a satisfactory total.

Pan de Azucar Nitrate Co., Limited.

This company's achievements for the year to June 30 did not quite come up to those of the preceding twelve months, but the gross profit of £40,267, a drop of rather over £8,000, is by no means unsatisfactory. Transfer fees increased the revenue to £40,302 and the total outgo was £15,381, including insurance reserve £300 and £9,431 allowed for depreciation. This leaves a nett credit of £24,922, increased to £28,822 by the sum brought forward, and £13,200 is again devoted to the payment of 12 per cent. to the shareholders. Reserve is credited with £10,000 or £2,000 less, £1,823 is written off extensions and improvements to plant, completely wiping away the outlay of £6,162 and £3,799 is carried forward. In the period now being reviewed profit was taken on 410,750 quintals of nitrate as compared with 424,250 on the preceding year. The whole of the company's debenture debt of £80,000 has been redeemed the total capital now consisting of £110,000 in £5 shares, and on the other side the raw material and rights in land are valued at £79,417 and the buildings, plant and machinery at £61,019, a total of £140,436 against which there is now a reserve of £40,000 apart from the insurance account £1,200. Altogether a very fair position.

Nitrate Securities Trust, Limited.

In submitting the accounts for the year ended October 15, the directors say that they are glad to report that, notwithstanding the financial depression which has ruled generally throughout the year a gross profit has resulted of £20,290, of which £17,380 is retained as nett. This result, however, is not so wonderful as it looks as no less than £12,989 of the amount is represented by shares in an unnamed company or companies received as underwriting commission taken at par. What the market value of these shares is, or whether they have any value at all, we we do not know, but in any case it is not sound finance to treat them as realised profit. The directors themselves seem uneasy on the point, and transfer no less than £10,000 to a reserve against depreciation, after which they write off the preliminary expenses of £1,862 and declare a dividend of 5 per cent., leaving £1,669 to be carried forward, subject to income-tax. Of the issued capital of £100,000 in £1 shares £77,095 has been paid up and most of this has been employed in the purchase of securities to the value of £66,698, few of which, according to the auditors, are officially quoted. Credit is also taken under the heading of investments for the above-mentioned shares, making a total of £79,687, in addition to which an entry of £20,395 for calls on investments not yet due appears on both sides of the balance-sheet. Liabilities to sundry creditors are small at £1,158, against which debtors amount to £7,332, the Lilita Nitrate Company owes £4,915 paid out on its behalf, and in addition to £843 in cash, £1,000 has been lent on security.

Noakes and Co., Limited.

The depression in the London trade and the heavy expenses occasioned by the Act of 1904 are put forward as the causes of the miserably poor result obtained by this brewery for the year ended September 30. Trading profits and rents amounted to £41,958, and interest and transfer fees gave £5,504, making a total revenue of £47,462, but outgoings were heavy, and the nett surplus was only £4,266. Interest on debenture stock and deposits required £14,501, preference dividend took £12,500, directors', auditors', and trustees' remuneration £1,505, and £4,661 was allowed for repairs, after which £1,540 was written off for compensation charge and special law costs, £6,052 for depreciation, and £1,938 for bad debts, and £500 was reserved for income-tax. Adding £2,778 from the previous account the disposable surplus was £7,043, but for the reasons given above and "in view of threatened legislation," the directors have decided not to pay a dividend on the ordinary shares. The allowance for losses made from revenue do not appear to have been sufficient as a further £6,566 has been taken from reserve to provide for special losses which are not expected to recur, and part of this is now made good by a transfer of £5,786 from the profit and loss account, which leaves £1,257 to be carried forward. Additions to property account cost £24,602, and after deducting depreciation this item stands at £650,208, against which the reserve is no more than £10,000. Like most breweries the company does a good deal in the way of financing its customers, and has lent out £138,103, so that in addition to £300,000 borrowed on first mortgage debenture stock it has to rely to a fairly heavy extent on deposits which, with interest, come to £53,158. Sundry creditors total £10,971, against which book debts come to £16,375, and in view of the large sum it was considered necessary to write off we can only hope that the present amount is all good. Stocks are moderate enough at £11,075, and the company has a good cash balance of £14,667, apart from £5,907 in the hands of the trustees for the debenture holders.

Matthew Brown and Co., Limited.

This Lancashire brewery made a gross profit for the year ended September 30 of £25,172 and rents and transfer fees yielded another £7,045 making a total of £32,217. Expenses, including £1,027 for depreciation, took £12,346 and after providing for debenture and other interest, compensation levy of £1,321 and meeting administration charges, the nett balance was £12,755, out of which dividends aggregating 10 per cent. are paid and £1,015 is written off for additional depreciation. Brewery and other premises were reduced by £13,975 for sales and licences cancelled, against which £6,052 was spent on new property leaving a nett decrease of £8,861 at £301,540. Outlay on machinery and plant, on the other hand, exceeded the sums written off and this item is £576 up at £7,162 while the reserve fund remains at last year's figure of £60,000 and is all invested in the business. Liabilities to sundry creditors amount to £13,844 and exceed the book debts by £4,367, while £11,145 is due to the bank on overdraft, but this is practically balanced by loans to customers of £11,204 and cash, including £8,225 in the hands of debenture stock trustees, stands at £9,269.

Cheltenham Original Brewery Co., Limited.

Profits on trading for the twelve months ended September 30 amounted to £20,872, and rents, interest, and transfer fees yielded £4,060 or £24,932 in all, and after providing for all charges, including £600 for depreciation, the nett balance was £11,303. To this was added £492 brought in making a total of £11,795, of which debenture interest took £7,000 and preference dividend £3,600, leaving £1,195 to be carried forward. Freehold and leasehold property, goodwill, &c., are valued at £270,807, and the depreciation allowance of £600 seems inadequate, especially as the company has not a penny piece of reserve. Plant, machinery, horses, drays, casks, &c., have been transferred to a separate account for £13,428, reducing the property by that figure to £256,776, but the change, while commendable as making for greater clearness, does not alter the position in any way. Creditors are £4,506, and in addition £4,000 has been borrowed on mortgages, but against these book debts amount to £9,675, rents, loans, &c., come to £3,496, and stocks are valued at £10,972. Cash is £6,358, apart from

£4,220 in the hands of debenture trustees, and there are also investments of £1,672, but £1,900 has to be found for the debenture interest and preference dividend.

Dartford Brewery Co., Limited.

A considerable decrease in the demand for this company's products owing to the wet, cold summer was to some extent neutralised by economies effected in various directions, and its effect on nett profits was inappreciable. Gross profits amounted to £57,706, and rents, interest and transfer fees brought the total revenue up to £67,808, of which £8,266 was provided for depreciation and £1,150 was written off expenses of recent litigation, and after providing for all charges and debenture interest a surplus of £20,980 was left. Adding £633 from the previous account, the disposable total was £21,613, and after meeting preference dividend the ordinary shares receive 6 per cent., £530 is transferred to reserve and £808 carried forward. Freehold and leasehold estates and goodwill stand in the books at £680,223, and plant and rolling stock at £20,385, while the reserve, as the result of eleven years' accumulations, reaches a total of no more than £11,000. Liabilities to sundry creditors amount to £13,627, against £20,300 to come in from sundry debtors, £7,301 for stocks of materials, &c., and unexpired insurance premiums, and £1,991 in cash, but £12,300 has to be found somewhere for the dividend just declared on the ordinary shares, and as the other assets consist of £1,348 cash in hands of debenture trustee, an investment of £50 in Consols at cost, £2,334 balance of litigation expenses, which is to be written off during the next two years, the position is none too strong.

British Vacuum Cleaner Co., Limited.

The business of this company in all its departments is said to have shown a steady progress and marked improvement during the twelve months ended September 30, and it is true that the trading profits of £10,750 were considerably larger than those for the preceding fifteen months. Some part of this increase, however, seems to have been due to the acquisition of the territory operated by the North-Eastern Vacuum Cleaner Co., Limited, on the voluntary liquidation of that undertaking, and receipts from dividends in subsidiary companies showed a corresponding reduction to £358, but £15 from transfer fees and £1,429 brought in the disposable total was £12,552, and after writing off £1,687 for depreciation and transferring £2,000 to reserves, a dividend of 5 per cent. is declared on the ordinary shares, but in order to pay this the sum carried out is reduced to £202. By adding £15,516 on account of the purchase of the North-Eastern Company the item of goodwill and patents is brought up to £43,019, but shares in subsidiaries are now valued at £24,432 or £15,516 less, and against these the reserve now stands at £8,000, apart from £2,051 derived from share premiums. Liabilities, including balance of purchase of the North-Eastern Company's plant and accessories, come to £11,489 or £5,393 more, and sundry debtors are £2,000 down at £11,092, but cash shows the considerable advance of £4,946 at £10,273. During the year a substantial increase was made in the number of fixed plants installed, mostly on long-term leases, and to its other departments the company has now added house decorating, furniture removal, and window cleaning, so that it is gradually getting a good many irons in the fire. The inventor of the process has also designed a plant for dealing with the fine explosive dust in coal mines, one of which is in use at the Whitwood Collieries, Normanton, and the construction and working has been inquired into by the "Royal Commission on Mines."

Oriental Gas Co., Limited.

This company continues to make excellent progress in the development of its business, and the report for the twelve months ended June 30 reveals a very satisfactory position. Gas rentals increased by £1,925 to £71,108, residuals produced £1,668 more at £18,776, and with a small addition to transfer fees the total revenue showed an improvement of £3,596 at £89,897. Expenses naturally were heavier, and swept away £3,054 of this increase at £60,258, but dividends on investments at £2,079 and interest and discounts at £553 were both higher, and the nett surplus, including £7,730 brought in was £921 up at £40,001. Of this income-tax took £1,760, and instead of putting £5,000 to contingency fund the directors transfer £3,000 to that account, and write £2,775 off investments, but even then they are able to repeat the dividend of 8 per cent, and to raise the sum carried out by £808 to £8,538. The company has recently added a new gasholder to its property, but the cost of this was met out of a special fund accumulated in former years, and the capital account remains at £341,876. On the other hand, reserve and depreciation funds stand at £50,000 each, and the contingency fund now reaches £10,000, of which £63,225 is represented by investments outside the business. The current position, too, seems a very strong one as against only £7,109 due to sundry creditors, there is £17,830 to come in from debtors, and cash and bills amount to £16,406.

Orders and Handford Steamship Co., Limited.

No new vessels were added to this company's fleet during the twelve months ended October 31, and it is therefore all the more satisfactory to find that gross earnings improved by the substantial sum of £6,492 to £87,205. Port and general expenses rose by £3,300 to £32,666, but wages, victualling, coal, repairs and maintenance, &c., only cost a trifle more at £24,202 and small savings were effected in insurance and management charges at £11,200 and £3,435 respectively. After making the usual donation of £21 to Newport Hospital the available total, including £935 or £699 more brought in was £10,07[illegible] compared with £12,643, out of which the directors write an additional £3,000 at £8,500 off the value of the fleet and increase the dividend by 1 per cent. to 7½ per cent., leaving £1,014 to be carried forward. Four of the seven vessels owned have been built since 1900 and the average age of the fleet is only 6½ years, but the matter of writing down has been kept well to the front and the book value is now £100,500, representing the very reasonable figure of £4 16s. 5d. per ton. Of the amount due by the *Refugio* £8,500 was paid off during the year, leaving £5,500 outstanding, and current liabilities, including this balance, show a decrease of £9,561 at £11,144, against which sundry debtors have risen by £933 to £6,896, but cash is £882 lower at £1,378.

Ceylon and Indian Planters' Association, Limited.

This company's tea crop for the twelve months ended June 30 was 65,388 lbs. smaller than for the previous year at 9[illegible],430 lbs., but a better price was obtained and the profits from this source improved by £384 to £6,902. Profits on the cardamom crop were £427 larger at £1,091, but the sales of plumbago fell off by 67 tons to 271 tons, and the profits were £902 smaller at £4,080, so that the total revenue showed a decrease of £154 at £12,653. London expenses, however, took £224 less at £3,449, and with a much larger balance of £2,203 brought forward the total available was £1,076 up at £11,405. Of this £300 or £30 more was written off for depreciation, but only £1,214 was provided for cost of rubber cultivation compared with £1,855 set aside for that purpose and £1,800 written off extensions account a year ago, so the directors are able to raise the dividend from 5 per cent. to 8 and to add £2,890 to the sum carried out, making it £5,493. Block account remains at the old figure of £102,[illegible]00 or about £37 10s. per cultivated acre, and the company, of course, has no reserves, but in other respects the position seems satisfactory. A very trifling amount is due to creditors, and although cash is £980 down at £1,412 there is now a balance of £4,351 due from the agents, while the loan of £1,507 of a year ago has now disappeared. Coast advances, we are sorry to note, have been increased by £265 to £2,953.

Ceylon, Land and Produce Co., Limited.

The area under tea during the season ended June 30 was 89 acres larger than in the previous year, and with an increase of 31 lbs. to 466 lbs. in the yield per acre, the total crop rose to 1,164,593 lbs. or 102,385 lbs., and at the same time the average price was nearly 1½d. better. An increase of 423 cwts. to 3,026 cwts. in the cocoa crop was also accompanied by a rise of 16s. 7d. to 79s. 7d. in the nett average price, and the total income from all sources including £149 brought in was £55,830. Expenditure on account of crop took £38,249, office charges in London and Ceylon £1,010, and debenture and loan interest £1,555, leaving £15,025 to be dealt with. Out of this a dividend is paid on the ordinary shares at the rate of 15 per cent., which has been current since 1892, but in addition the distribution of a bonus of 5 per cent. is resumed, after an interval of seven years. Then £2,943 is added to reserve, together with £2057 from premiums received on the new ordinary and preference shares, £2,000 is written off cost of permanent improvements and £1,652 is carried forward subject to directors' remuneration and income-tax. Estates account stands at £144,650, against which the reserve fund will now amount to £28,500 or nearly 11 per cent., but it is, of course, all in the business. A little fresh capital was raised by an issue of 750 £5 shares at £1 per share, but the company is going in for rubber, and the help thus afforded is not very conspicuous. Liabilities to sundry creditors and on bills payable amount to £19,011, and on the other side produce in hand is valued at £7,813, and debtors, including balances due by superintendents, come to £3,459, while £2,710 is held in cash, but out of this the sum required for the final dividends has to be found. Coast advances are heavy at £3,312, but cannot be regarded as a readily available assets.

Lanka Plantations Co., Limited.

Although this company had an extra 28 acres to pluck the tea crop for the year ended June 30 was only 1,875 lbs. larger at 1,018,638 lbs., but the average price improved to 7-04d., and the receipts from this source rose by £1,070 to £30,201. The cocoa crop was also a little more profitable, an addition of 60 cwts. at 1,343 cwts. being accompanied by an increase of £1,851 to £4,915 in revenue, and with £25 or £12 more from rubber the total income came to £35,201 compared with £32,268. Proportion of Ceylon expenses charged to capital account was £460 smaller, but in spite of that the outlay was only £242 more at £24,558, and after providing for insurance the balance available was £2,679 up at £10,488. Adding £3,415 brought forward and deducting £1,581 for interest, &c., the nett surplus came to £12,330 against £9,076, of which the usual one-tenth of the sums charged to suspense account during the ten years ended June 30, 1906, amounting to £773, is written off. The directors raise the dividend on the ordinary shares from 3 per cent. to 4, and then write off the balance of the suspense account, leaving £1,473 or £1,042 less to be carried forward. Floating liabilities are £2,031 higher at £20,553, a decrease of £1,615 to £11,814 in bills payable being accompanied by increases of £1,150 in loans and £3,146 in sundry creditors, and against these stocks of produce are £4,063 up at £10,458, but debtors have dropped by £1,880 to £2,440 and cash is much about the same as a year ago at £1,720. Coast advances of £3,280 might be reduced with advantage. Capital account has been increased by £722 to £175,272, or over £52 per cultivated acre, and the company, of course, has nothing in the shape of a reserve.

MINING RETURNS.

Abbontiakoon Block I.—Crushed 5,120 tons, fully treated 4,845 tons, yielding 1,548 ozs. from plates, 1,425 ozs. bullion from sands and slimes; total, 2,973 ozs.

African Gold Dredging.—202 ozs., value £808.

Akrokerri (Ashanti)—Crushed 2,120 tons, 608 ozs.; 1,360 tons tailings, 166 ozs.; total, 774 ozs.

Alaska Mexican.—Crushed 19,920 tons ore, value $32,263; saved 305 tons sulphurets, value $19,111.

Alaska Treadwell.—Crushed 77,637 tons ore, value $68,209; saved 1,400 tons sulphurets, value $56,532.

Alaska United.—Crushed 19,540 tons ore, value $21,207; saved 330 tons sulphurets, value $10,503.

Ashanti.—Crushed 6,895 tons, 2,006 ozs.; tailings 243 ozs.; total, 3,886 ozs.

Ashanti Goldfields Auxiliary.—394 ozs.; value £1,536.

Ayrshire.—Crushed 8,030 tons, 1,435 ozs.; cyanided 6,480 tons, 1,241 ozs.

Battlefields (Rhodesia).—Crushed 1,550 tons, 918 ozs.; cyanide 1,168 tons, 536 ozs.; slimes 389 tons, 94 ozs. gold.

Brilliant Central.—Treated, 1,110 tons quartz; value, including concentrates, &c., £3,150.

Brilliant Extended.—Crushed 3.594 tons for £6,094.

British Broken Hill Proprietary.—2,746 tons crude ore produced 439 tons concentrates, containing 272 tons lead and 11,414 ozs. silver.

Broken Hill Proprietary, Block 10.—Treated 9,730 tons crude ore, producing 1,774 tons concentrates, containing 1,047 tons lead and 56,768 ozs. silver.

Broken Hill Proprietary, No. 14.—Treated 6,422 tons crude ore, producing 793 tons concentrates, containing 487 tons lead and 23,170 ozs. silver. Lead carbonates despatched 1,894 tons containing 606 tons lead and 20,830 ozs. silver.

Buffelsdoorn Estate.—Slimes 4,200 tons, 527 ozs.; profit, £804.

Burma Ruby.—179,000 loads washed, producing rubies valued at Rs.194,000; royalties, Rs.22,000.

Cape Copper.—Ookiep—1,222 tons at 14 per cent. equal 171 tons fine copper; Nababeep—4,594 tons at 4 per cent. equal 183 tons fine copper.

Chillagoe.—Treated 378 tons copper ore, 3,314 tons lead ore, producing 144 tons copper matte and 340 tons lead bullion, containing 58 tons copper, 340 tons lead, and 31,887 ozs. silver.

Chinese Engineering.—Output, 28,000 tons; sales, 19,000 tons; consumption, 1,650 tons.

City and Suburban.—Crushed 26,400 tons, 8,817 ozs.; profit, £10,814.

Consolidated Goldfields of New Zealand.—Progress of N.Z.: Crushed 4,802 tons ore, value £7,806, profit £3,077. Golden Fleece: Crushed 737 tons ore, value £1,370, profit £199. Wealth of Nations: Crushed 1,280 tons ore value £2,325, profit £1,167.

Consolidated Langlaagte.—Treated 23,850 tons, 7,748 ozs., £10,184.

Consolidated Main Reef.—Crushed 19,659 tons, 3,777 ozs.; sands and concentrates, 19,659 tons, 2,726 ozs.; total, 6,503 ozs.; profit, £7,260.

De Lamar.—Crushed 2,900 dry tons, yielding $31,765; surplus, $1,260; miscellaneous, $60; total amount, $33,085.

Duff Development.—Prospecting dredge 41 ozs.; No. 3 dredge 64 ozs.

Durban Roodepoort.—Quartz milled 11,990 tons, 3,000 ozs.; tailings 8,095 tons, 961 ozs.; slimes 3,940 tons, 201 ozs.; total 4,162 ozs.

East Gwanda.—Crushed 8,030 tons, 2,770 ozs.; concentrates 212 tons, 438 ozs.; cyanide 4,200 tons, 676 ozs.; total 3,884 ozs.

Empress (Rhodesia).—Riverlea: Crushed 3,800 tons, 502 ozs.

Ferreira Gold.—Crushed 23,000 tons, 8,828 ozs.; sands and concentrates 16,240 tons, 3,037 ozs.; slimes 9,035 tons, 1,176 ozs.; total 13,041 ozs.; profit £30,510.

Gaika Gold.—Crushed 2,304 tons, 817 ozs.; tailings 2,511 tons, 277 ozs.

Ginsberg.—Treated 10,686 tons, 3,559 ozs.; profit, £3,182.

Glencairn Main Reef.—Treated 18,600 tons, 4,105 ozs; profit, £2,788.

Globe and Phœnix.—Crushed 6,896 tons, 2,818 ozs.; tailings, average assay value per ton, 3·22 dwts; cyanide—4,312 tons, 424 ozs.; slimes 1,916 tons, 218 ozs.; total, 3,460 ozs.

Great Boulder Perseverance.—Treated 18,225 tons for 7,358 fine ozs. gold and 603 fine ozs. silver.

Great Boulder Proprietary.—Treated 19,994 tons, 12,182 ozs. tailings (old), 9,895 tons, 1,046 ozs.; total, 13,228 ozs.

Gwalia Consolidated.—Ore crushed 3,993 tons, 172 ozs.; sands 1,665 tons, 540 ozs.; slimes 1,505 tons, 287 ozs.

Hannan's Reward.—Crushed 2,125 tons, 412 ozs; royalties £257.

Ida H.—Crushed 1,350 tons, 949 ozs.; profit, £430.

Ivanhoe.—Crushed 19,800 tons, 3,350 ozs.; sands, 9,070 tons, 1,509 ozs.; slimes, 9,130 tons, 2,925 ozs.; concentrates, 1,600 tons, 3,449 ozs.; total, 10,233 ozs.

Jubilee.—Crushed 4,250 tons, 1,199 ozs.; cyanide, 3,408 tons, 506 ozs.

Jumpers.—Crushed 10,450 tons, 3,241 ozs.; tailings, 1,285 ozs.; current slimes, 469 ozs.; accumulated slimes, 309 ozs.; total, 5,304 ozs.; value, £4,503.

Knight's Deep.—41,160 tons, 13,619 ozs.; profit, £23,372.

Komata Reefs.—Crushed 2,400 tons, £4,350.

Lancaster Gold.—Crushed 15,900 tons, 2,053 ozs.; cyanide, 11,604 tons, 1,396 ozs.; total, 3,449 ozs.

Langlaagte Deep.—Crushed 29,778 tons, 7,230 ozs.; sands, 19,877 tons, 2,473 ozs.; slimes, 10,334 tons, 679 ozs.; total, 10,382 ozs.; profit, £9,500.

Langlaagte Estate.—Crushed 34,625 tons, 7,541 ozs.; concentrates, 410 tons, 566 ozs.; tailings, 20,460 tons, 2,675 ozs.; slimes, 16,852 tons, 1,368 ozs; total, 13,150 ozs.; profit, £21,500.

Le Roi.—Shipped 8,657 tons, containing 2,667 ozs. gold, 4,250 ozs. silver, and 208,000 lbs. copper.

Luipaards Vlei.—Crushed 15,672 tons, 2,878 ozs.; tube mills, 589 ozs.; cyanide, 1,667 ozs.; slimes, 250 ozs.; profit, £8,302.

Matabele Reefs.—Blanket: Crushed 2,045 tons 781 ozs.

May Consolidated.—Crushed 15,500 tons, 3,220 ozs.; cyanide 10,565 tons, 2,685 ozs.; slimes 4,415 tons, 363 ozs.; total, 5,668 ozs.; profit, £11,548.

Messina (Transvaal).—435 tons copper ore.

Montana. Drumlummon: Treated 5,136 tons; tailings and fines realise $9,000. Lucky Girl Group, Nevada: Crushed 1,900 tons ore, $14,500.

Mount Lyell.—Treated 31,158 tons ore. In addition 1,077 tons purchased ore and metal bearing fluxes converters produced 661 tons blister copper containing:—Copper, 653 tons; silver, 46,972 ozs.; gold 1,573 ozs.

Mount Molloy.—Smelted 1,108 tons own ore, 25 tons purchased ore containing 12 tons copper, producing 70 tons blister copper.

Mount Zeehan.—Output 45 tons silver-lead ore, containing 234 tons lead and 29 250 ozs. silver.

Myalls and Peak Hill Crushed 3.773 tons, 480 ozs.

New Primrose.—7,820 ozs. from 20,046 tons treated; profit, £14,016.

New Rietfontein.—9,150 ozs. from 17,200 tons treated: profit, £16,382

New United Main Reef.—3,069 ozs. from 9,408 tons treated; profit, £2,563.

New Zealand Crown.—Crushed 1,980 tons, value £6,458.

Nigel Deep.—4,385 tons, 2 139 ozs.; profit, £2 850.

North Broken Hill.—Treated 2,360 tons crude ore, producing 390 tons concentrates, containing 270 tons 2 cwt. lead and 7,176 ozs. silver.

North Randfontein.—Crushed 18,008 tons ore, 4,177 ozs; tailings 11,040 tons, 1,825 ozs.; slimes 6,907 tons, 654 ozs; total, 6,056 ozs.; profit, £9 200.

"O. K." Copper.—Treated 406 tons crude ore for 30 tons fine copper.

Oroya Black Range.—Crushed 3,811 tons, 2,271 ozs.

Peiser Diamond.—Washed 18,300 loads, yielding 1,835 carats diamonds, an average of 10·2 per 100 loads.

Penhalonga Proprietary.—Crushed 7,900 tons, 1,560 total ozs.; profit, £3,097.

Porges Randfontein.—Crushed 15,005 tons, 4,293 ozs.; concentrates 1,462 tons, 440 ozs.; tailings 9,324 tons, 1,416 ozs,; slimes 4,259 tons, 411 ozs.; total, 6,560 ozs.; profit, £9,800,

Rezende.—Crushed 3,600 tons, yielded over plates 945 ozs.; sands 2,950 tons, 256 ozs.; concentrates nine tons, 47 ozs.; profit, £1,400.

Rhodesia.—Colleen Bawn—Crushed 732 tons, 244 ozs.; by cyanide 474 tons, 688 ozs.; slimes 486 tons, 459 ozs.

Robinson Deep.—48,621 tons, 19,708 ozs.; profit, £36,448.

Robinson Randfontein.—Crushed 15,002 tons, 3,081 ozs.; concentrates 1,450 tons, 357 ozs.; tailings 9,450 tons, 1,704 ozs,; slimes 4,321 tons, 476 ozs.; total, 5,618 ozs.; profit, £4,800.

St. David's Gold.—Crushed 774 tons, 704·77 ozs.

Simmer and Jack—64,650 tons, 25,068 ozs.; profit, £48,125.

Simmer and Jack East.—30,470 tons, 9,167 ozs.; profit, £1,899

South Kalgurli.—Crushed 8,813 short tons, 2,712 ozs.

South Randfontein.—Ore crushed 15,990 tons, 3,555 ozs.; concentrates 1,800 tons, 463 ozs.; tailings 9,475 tons, 1,443 ozs.; slimes 4,736 tons, 479 ozs.; total, 5,940 ozs.; profit, £4,900.

Taquah and Abosso.—Crushed 4,369 tons, 2,675 ozs.

Theta Gold.—Crushed 1,580 tons, 298 ozs.; cyanide 1,035 tons, 96 ozs.

Treasury.—Crushed 9,200 tons, 1,783 ozs.; sands and concentrates 9,643 tons, 1,179 ozs.; total, 2,962 ozs.; profit, £1,214.

Tyee Copper.—502 tons of Tyee ore, value $6,535; 4,655 tons customs ore; total, 5,157, producing a total of 510 tons of matte.

Vereeniging Estates.—Output 26,700 tons.

Victoria Proprietary.—Crushed 1,057 tons, 276 ozs.

Waihi Grand Junction.—Crushed 3,680 tons, £5,980.

West Rand Central.—Crushed 2,575 tons, 481 ozs.; cyanided 2,075 tons, 379 ozs.; slimes, 1,125 tons, 173 ozs.; total, 1,033 ozs.

Windsor.—Crushed 5,125 tons, 528 ozs.; cyanide, 3,853 tons, 665 ozs.; total, 1,193 ozs.

Witwatersrand Deep.—Crushed 33,600 tons, 9,831 ozs.; sands and concentrates, 33,163 tons, 4,815 ozs.; total, 14,682 ozs.

Witwatersrand Gold.—Treated 34,500 tons, 11,192 ozs.; profit, £17,202.

Wolhuter Gold.—Crushed 20,800 tons; sands and slimes, 20,800 tons; from mill, 3,470 ozs.; from sands, 2,853 ozs.; total, 6,323 ozs.; profit, £6,103

Zeehan-Montana.—Output, 300 tons silver-lead ore, containing 180 tons lead and 20,400 ozs. silver.

Coupons due December 1 of the Imperial Japanese Government 5 per cent. bonds for yen 43,000,000 will be paid by the Yokohama Specie Bank.

Charles William Tomkinson, of the firm of Messrs. Hoare, Miller, and Co., of London, has been elected a director of the London board of the Thames and Mersey Marine Insurance Company, Limited.

The Union Bank of Australia has opened a branch at Opotiki, North Island, New Zealand.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Argentine Great Western.—Balance of 3½ per cent. on the preferred and ordinary shares, making 6 per cent. for the year ending June 30.

Burma.—£1 18s., per £100 stock as surplus profits for year ended June 30, 1907, over and above the 2½ per cent. interest guaranteed by the Secretary of State for India already paid.

MISCELLANEOUS.

A. and R. Thwaites.—13 per cent. per annum, carrying £1,222 forward.

A. Darracq and Co. (1905) —Further of 2s. per share (making 20 per cent. for the year) on the ordinary shares, placing £100,000 to reserve and carrying forward £27,000.

Apollinaris and Johannis.—Interim for six months ended Sept. 30 on the ordinary shares at the rate of 5 per cent. per annum.

B. Vickerman and Sons.—Interim of 3 per cent.

Boulton and Paul.—20 per cent. on the ordinary shares, carrying forward £20,040.

Callard, Stewart and Watt.—Final at the rate of 10 per cent. per annum for six months ended Oct. 5, making 10 per cent. for the year, carrying forward £1,000.

Cassel Cyanide.—20 per cent., making 30 per cent. for the year ended Sept. 30, also a bonus of 10 per cent.

Chirgwin Tea.—Interim on the ordinary shares of 2½ per cent.

Clitheroe Estate.—Further of 2½ per cent., making 5 per cent. for year to June 23, carrying forward £1,969.

Commercial Company of Salonica.—7d. per share, and an extra of 1d. per share on the ordinary and founders' shares in respect of year to May 31.

Dorman, Long, and Co.—Final of 5 per cent., making 7½ per cent. for the year.

Fine Art and General Insurance.—Interim of 4 per cent.

Hely's, Limited —6 per cent. for year ended Sept. 30.

Henry W. Bush and Co.—25 per cent. on the ordinary shares.

J. Lyons and Co.—Interim, payable on Dec. 1, at the rate of 25 per cent. per annum for half-year ended Sept. 30.

Kellner-Partington Paper Pulp.—At the rate of 20 per cent. per annum for the half-year ended Sept. 30, making 20 per cent. for the year.

Lloyds' Packing Warehouses.—On the ordinary shares of 8 per cent. for past year, placing £1,500 to reserve and £5,095 forward.

London Central Markets Cold Storage.—Interim of 2½ per cent.

London Nitrate.—Final on account of the year ended June 30 of 10s. per share, making 15s. for the year, placing £10,000 to reserve, £2,976 forward.

Mitchell and Co., Belfast.—At the rate of 10 per cent. per annum.

Nantyglo and Blaina Iron Works.—55s. per preference share on account of arrears.

Oroya-Brownhill.—Interim of 2s. 6d. per share.

P. and A. Campbell.—Interim of 2½ per cent. on account of year to March 31.

Books Received.

The Commercial Aspect of Rand Profits. By George A. Denny, A.M.I.C.E., &c. (London, *Mining Journal* Office, 46, Queen Victoria Street, E.C.) Price 1s. nett.

Traders and Railways. By Thomas Waghorn. (London, Effingham Wilson, 54, Threadneedle Street, E.C.) Price 4s.

SCOTTISH GYMPIE GOLD MINES.—This Queensland company did moderately well in the year to May 31, although the results did not nearly equal those of the preceding twelve months. Tons crushed were 90,950, yielding 39,210 ozs., worth £138,920. Interest and transfer fees produced £514, making £139,434 in all compared with £164,433, and after meeting expenses of every kind the balance of profit is £68,511 or £16,742, less dividends to the amount of 2s. per share or 10 per cent. have been paid from this, directors' fees are £1,000, and £1,805 is carried forward, against £295 brought in. The annual reports of the general and mine managers to May 31 last, as well as the report of the mining surveyor, have already been circulated among the shareholders.

The old-established and well-known "Electrician" Printing and Publishing Company, Limited, wishes us to state that it has no connection with "the Electrical Publishing Company, Limited," which has just gone into voluntary liquidation.

The Chartered Institute of Secretaries is an association of these essential officials in joint stock companies which is prospering and gathering up a nice little reserve fund. For the year ended August 31 last income exceeded receipts by £2,303, and altogether there was £11,838 invested in first rate securities, besides £1,500 on deposit at Lloyds Bank, and £403 in hand.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and November 9, 1907 :—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908	Total Receipts into the Exchequer from April 1, 1907, to Nov. 9, 1907	Total Receipts into the Exchequer from April 1, 1906, to Nov. 10, 1906.
Balances, April 1:	£	£	£

MEM.—Treasury Bills outstanding on November 9, 1907 :—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Total	£15,713,000

Treasury, November 12, 1907

LLOYDS BANK.—The balance sheet for October shows liabilities consisting of current and deposit accounts £65,853,502, and bills accepted or endorsed £2,284,184, and assets of cash in hand and at Bank of England £10,600,591, cash at call and short notice £4,458,744, bills of exchange £8,406,542, Consols and other investments £5,949,657, and advances to customers and other securities £36,465,798.

NATIONAL PROVINCIAL BANK OF ENGLAND.—The statement for October 30 shows liabilities on notes or bills of £603,640 and on simple contracts of £55,432,921, against assets consisting of cash on hand and at Bank of England £8,245,278, money at call and short notice £3,049, 549, British Government and other securities £14,735,630, and bills of exchange £35,356,383.

LONDON AND COUNTY BANKING.—Liabilities on October 31, amounted to £45,179,332 on simple contracts and £3,951,794 on acceptances, against which the assets were £6,554,702 in investments, £9,303,205 in bills of exchange, £20,139,209 in loans and advances to customers, £6,268,230 in cash at the Bank of England and on hand, and £3,454,714 in money at call and notice.

COMPANY MEETINGS.

EASTERN TELEGRAPH COMPANY, LIMITED.

The seventy-first ordinary general meeting of this company was held on Wednesday, Sir John Wolfe Barry, K.C.B., in the chair.

The Secretary (Mr. A. R. Hardie) read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—The accounts before you cover the first half of our new financial year, which now ends at December 31 instead of March 31, as heretofore. In the absence of an account for the corresponding period of 1906, it is somewhat misleading to attempt comparisons of income, as the present accounts include the most productive quarter of the year, viz., March quarter, which has hitherto been included in the final half of our financial year. This circumstance accounts for our being able, at the interim half-year, to make a further contribution of £120,000 to our general reserve fund, and to carry forward a substantial balance of over £41,000, whereas at the interim half-year in 1906, ending on September 30, no contribution was made to the general reserve fund, the entire balance of £117,000 being carried forward, and dealt with in the accounts for the three months ending December 31, 1906. In view of the above, we must not expect such a large balance for the current half-year ending December 31, 1907. I have again to record a considerable falling off in our receipts from traffic with South Africa, the decrease applying alike to ordinary, Government, and Press messages. I had occasion to refer at previous meetings to this branch of our traffic, which has shown a persistent reduction for some time, and although it may be dangerous to prophesy, I must say that I can see no important indication of any great improvement in this direction in the near future. On the other hand, I am pleased to record a continued increase in our receipts from messages exchanged with India, Egypt, and South America. Other branches of our traffic show but slight variations when compared with the corresponding half-year.

Owing to the alteration in the dates of making up our accounts, I think it will also be more satisfactory to defer any detailed comparison with regard to the expenditure side of the revenue account, but I may inform you that the accounts under review contain no items of an extraordinary nature. Certain items of expenditure, such as salaries and wages, show a continued upward tendency, in consequence of annual promotions and the necessary augmentation of the staff, but I am glad to say that the total expenses are considerably less on balance than they were for the half-year ended September 30, 1906, this being due to the fact that our repairing steamers have been exceptionally busy on work for foreign Governments and other companies, thereby reducing the charge in respect of maintenance of cables. During the half-year our s.s. *Britannia* has been specially overhauled, and, to meet this expenditure, £5,000 has been taken from the maintenance ships' fund, in accordance with our usual custom.

I will now refer to an item in the balance-sheet which the board has considered advisable to deal with on the present occasion. I allude to the investments in respect of reserve funds. As you are all aware, these investments have always appeared in our accounts at cost price, and full details have invariably been shown under Abstract "D," so that anyone could see the amount of appreciation or depreciation each half-year by comparing the cost with the prices ruling. Although the market value has at times been in excess of cost, and at other times below cost, it has never been our custom to make any corresponding adjustment of the figures appearing in the balance-sheet, and this action appears to have been approved by the general body of stockholders in the past. It has always been the practice of the board to invest our reserve funds in securities of the highest class, with the view of their being available from time to time when we may have to provide for expenditure out of the reserve funds. In consequence of the continued extraordinary fall in the market value of the stocks which we hold, in common with that of all other gilt-edged securities, we think that the time has come to make some provision in the accounts for fluctuations in the market value of our investments. We have carefully considered the matter in all its bearings, and are also anxious that there shall be no possibility of a misunderstanding on the part of any individual stockholder who may not be able to appreciate the question so readily as if some specific entry were made in the accounts, and may think that, large as is the amout of our available resources, they are, in fact, more than in effect can be realised. Although there is every hope that at some future date the investments will improve in value, it may be questionable if they will again reach the high prices at which we were obliged to purchase them some years ago. As stated in the directors' report, the sum of £130,000 has accordingly been taken from the general reserve fund and deducted from the figure appearing in the balance-sheet as representing the cost of the investments we hold. This, we think, will satisfactorily meet the case, and avoid the necessity for writing down or writing up the value of our securities, which is unnecessary in our case, and likely to lead to much misunderstanding. I think it is only right to mention that various sums, amounting in the aggregate to about £65,000, have been in former years, from time to time, credited to the reserve fund in respect of profits realised on sale of securities. Having referred to the question of depreciation of investments, I think it is an opportune time to again draw your attention to the great importance of reserve funds generally in connection with submarine cable enterprise. I think we may congratulate ourselves that our reserves now amount to £1,698,000. Looking through some of the earlier records of the proceedings of our general meetings, I find that it took some time, and not a little persuasion, on the part of the directors to convince the general body of stockholders that it was a wise policy to accumulate large reserves. This policy was initiated by your first chairman, the late Sir John Pender, and has always been unanimously and consistently supported by the board. I think it has been proved, and generally, if not universally, accepted, that the success of this company is in a large measure attributable to the creation and building up of substantial reserves.

I find that since the incorporation of the company no less than £4,386,000 has, at one time and another, been applied out of the general reserve fund towards the costs of cables, renewals, &c. This has enabled us to improve the carrying capacity of our system, and, by extending our service generally, we have been enabled to reply to actual competition, and to face with equanimity any threatened competition to which a successful undertaking such as ours is always liable. Besides, it enables us to keep our capital account and standing charges within reasonable limits, so that, while paying a substantial and stable dividend to the ordinary stockholders, we have at the same time been able to consider the interests of our customers by making important reductions in the tariffs from time to time. You will readily see, therefore, that the principle of maintaining substantial reserves renders the stability of the company more secure, besides ensuring the real value of your holding in the company, notwithstanding the present fall in the market price of your securities, which, as is the case with many other companies, and, in my opinion, is only of a temporary nature.

With regard to the question of wireless telegraphy, you will no doubt have read the extract from my remarks on this subject which I made at the general meeting of the Western Telegraph Company the other day. I have nothing further to say in connection with this matter. I now move the adoption of the report and accounts.

The Vice-Chairman and Managing Director (Sir John Denison-Pender, K.C.M.G.) seconded the motion.

The Chairman then replied to questions, and the motion was carried unanimously.

The retiring directors and auditors were then re-elected, and a vote of thanks to the chairman, directors, and staff brought the proceedings to a close.

EASTERN EXTENSION, AUSTRALASIA, AND CHINA TELEGRAPH COMPANY, LIMITED.

The 68th half-yearly ordinary general meeting of this company was held on Wednesday, under the presidency of Sir John Wolfe Barry, K.C.B.

The General Manager and Secretary (Mr. F. E. Hesse) read the notice calling the meeting and the report of the auditors.

The Chairman said: Gentlemen,—The gross receipts for the half-year under review amounted, in round numbers, to £304,000, or a few hundred pounds more than was earned in the corresponding period of 1906. In the latter period, however, an exceptionally large profit was made on exchange, and if this were excluded from the comparison the receipts would show an increase of about £8,000, which is derived from the natural growth of traffic. The working and other expenses amounted, in round numbers, to £156,000 against £141,000 for the corresponding period of 1906, showing an increase of nearly £15,000. Of this £3,000 is due to increased cost of maintenance of cables, £2,000 to additional cost of maintenance and renewals of instruments and electrical apparatus, and most of the balance is accounted for by the supplemental allowances which it was found necessary to make to the staff to meet the continual rise in exchange in the value of the dollar in the Straits Settlements and China, together with the exchange differences affecting the general expenditure in those countries due to the same cause. To appreciate the detrimental effect which the rise in exchange had upon the European staff serving us in the Far East it is necessary to mention that their salaries and foreign service allowances were fixed in sterling and converted into currency at a rate regulated by the rate of exchange of the day. Consequently, when the value of the dollar rose from 1s. 9d. to 2s. 4d., and our staff, therefore, received about $8½ for each pound instead of nearly $11½, while the purchasing power of the dollar had by no means increased correspondingly with the rise in exchange, your directors felt bound to grant suitable relief under such unfavourable circumstances. The growth generally of our working expenses and their increased ratio to gross receipts appears to be continuous and unavoidable. This is caused to some extent by the prosperity of the countries which we serve, as affecting the rate of exchange, but in a larger degree by the increased amount of work which we have to do for the same or less revenue. Consequently, when reductions of tariff come up for consideration, it is necessary to bear in mind that any increase in the volume of traffic which may be expected from such reductions must by the fact of increase of volume add to the actual amount of the working expenses as well as to their ratio to the revenue earned.

The nett profit for the half-year was roundly £132,000, and after adding to it the credit balance of £17,344 brought forward from the previous half-year, there remained an available balance of roundly £150,000. The usual quarterly interim dividends of 2s 6d per share, or at the rate of 5 per cent. per annum, have been paid for the past half-year, leaving a balance of roundly £75,000 to be carried forward.

During the past half-year some of our main line cables have been partially renewed at a cost, after making allowance for the value of the picked-up cable, of £9,565, and this amount has been charged against the general reserve fund. Your directors have also considered it advisable, in view of the continued heavy depreciation in the value of all gilt-edged securities, to debit the general reserve fund with £120,000 as a provision on account of investment fluctuations, which sum has been deducted from the cost of the investments.

As the shareholders will have received along with the report a statement of the remarks I made a fortnight ago at a meeting of the Western Telegraph Company in regard to the developments of wireless telegraphy, it is unnecessary for me to further allude to the subject on the present occasion. I therefore move the adoption of the report and accounts.

The Marquis of Tweeddale, K.T., seconded the motion, which was carried unanimously.

After a cordial vote of thanks to the chairman, directors, and staff the proceedings terminated.

FURNESS, WITHY AND COMPANY.

An extraordinary general meeting of Furness, Withy and Co., Limited, was held at the registered offices of the company, Baltic Chambers, West Hartlepool, on Saturday, the 9th inst.

Sir Christopher Furness, in moving the resolution, said the proposals contained in the resolution foreshadowed developments the most important in the history of the company. He wanted to emphasise the fact that they were not taking over the assets and liabilities of two companies, as had been erroneously stated. They were purchasing 39 modern up-to-date steamers, and, adding them to the Furness Line Fleet, all these vessels were of the highest class, and the average age of the 39 steamers was 3½ years. Seven of the steamers had been constructed at their own Middleton shipyard, and the remaining 32 were built by no less than 14 of the leading shipbuilders in the country. The profits of the 39 steamers from October 31 last came to the company, and the purchase was not to be completed before 1909. The balance of the money bore interest from October 31 last at 5 per cent. per annum. But by the acquisition of these two fleets the company became the proprietor of 504,582 tons of modern up-to-date steam shipping, exceeding in value £3,000,000 sterling, even at the very low estimate of £6 per ton, at the same time becoming the largest owners of British-owned cargo steamers in the world. (Applause.) These additional steamers would bear the most favourable comparison as regarded age, up-keep, and earning power with any in the world. They were built to the highest class, many of them for the purpose of running on regular lines for the conveyance of perishable cargoes, and one of the steamers built last year was the largest carrier of frozen meat in the world. An average profit of 11 per cent. per annum, free of income-tax, had been distributed during the past five years, and a large reserve fund had been accumulated. The dividends had been earned with facilities and properties hardly comparable with the conditions now prevailing. There was no intention of making a public issue, and the shares would be allotted to those whose names were on the register. He referred to the fact that the company had no debentures, nor any other obligations which were not of an ordinary character in a business such as theirs. By the passing of that resolution the company would possess 504,582 tons of shipping, which at the very low valuation of £6 per ton was equal in value to £3,000,000 sterling. In addition to this there were the ship yards, dry docks, wharves, plant, freehold property and facilities connected therewith, and he thought that there was no shipbuilding yard superior to theirs for turning out the class of ship which the company had hitherto made its speciality. The investments other than shipping exceeded £1,000,000 sterling, a very substantial sum of which was invested in collieries, and they would appreciate this fact when he informed them that their own requirements for coal totalled over 1,000,000 tons a year. The goodwill among the assets counted for nothing, but none the less it was a very real thing in their old established firm like theirs. The steamers proposed to be acquired were all profitably employed, and more particularly was this the case with those of the British Maritime Trust, Limited, which had chartered their steamers on a basis which, while securing to that company a fixed revenue, made it independent of the fluctuations of the freight market. These charters were to be taken over by this company, and it would be their policy to continue and extend this class of business. Of the 39 steamers which were being acquired, no less than 17 were so engaged over an average period of 2½ years from the present date, and which brought in an annual revenue totalling £90,500 on 100,873 out of the 240,485 tons dead weight they were now purchasing. This left 22 steamers for general employment, and he was sanguine that the estimate of a total additional revenue of £150,000 would prove to be a moderate one. The company's income from investments showed an increase on the corresponding period of last year, and their coal business had advanced. Improvements were also shown in general brokerage and agency business, and in the branch offices, indeed, every department of the company's vast business showed an increase, except the construction of new tonnage on the corresponding period of the previous year, which was a record one. His opinion had been asked as to a possible bonus for next year, and he was justified in stating that it would certainly not be less than last year. By the addition of these two fleets administration charges would be less, and a very considerable part of the insurance premium would be saved. The directors were assured in their own minds that the additional vessels would be a source of substantial profit to the company, and he believed that the present was the most favourable time that could be chosen for an operation such as they were being asked to authorise that day. When he commenced business the shipping of the United Kingdom was 7,000,000 tons, and he was proud to think that the Furness Line flag, the British flag in practically every important harbour throughout the world. (Applause.) They might take it from him that the company's interests in this new departure, as in all else, were being carefully watched by the directors, and that the property would be acquired on terms in all respects satisfactory. The directors intended to communicate to each shareholder the premium, rights, and conditions under which the shares would be exclusively offered to the shareholders. In asking their unanimous support for the resolution to give effect to the proposals, the shareholders would perhaps pardon him for pointing to the records of the past, and allow him to say that those who had successfully piloted previous developments had not less confidence in the course they now recommended. (Loud applause.) He then moved the resolution for raising the capital of the company to £3,500,000.

Mr. H. Withy seconded the resolution.

Mr. John S. Barwick, J.P., said he was fully convinced that the proposed purchases were in the company's best interests, and he hoped when the time came for issuing the new shares the directors would consider those who, like himself, required a permanent investment yielding a regular income. It was immaterial to him whether the existing shareholders were paid a cash bonus or a bonus comprised in the terms on which the shares were offered to the present shareholder.

The resolution was carried unanimously.

On the motion of Mr. S. T. Coulson, seconded by Mr. W. T. , a hearty vote of thanks was accorded to the chairman, and the proceedings then terminated.

BRITISH COLUMBIA ELECTRIC RAILWAY.

The eleventh ordinary general meeting of the British Columbia Electric Railway Company, Limited, was held on Thursday at Liverpool-street Hotel, E.C., Mr. R. M. Horne-Payne (chairman) presiding.

The Secretary (Mr. B. H. Binder) having read the notice convening the meeting and the auditors' report,

The Chairman said: I think we may congratulate ourselves particularly on two points—that we are able to recommend to you an increase in dividend, which places the deferred ordinary stock on an 8 per cent. and the preferred ordinary on a 6 per cent. basis, and that at a moment of unparalleled financial stringency, when money is being sought for on almost any terms, however extravagant. By the foresight of your directors your company is able to show cash and other liquid assets to the extent of over £180,000. Although I think that, in view of what has occurred during the past year throughout Great Britain, and, to a less extent, in Eastern Canada and the Eastern United States, we may look upon the fetish of municipal ownership as being quite dead, and I think that ratepayers all over the world clearly understand that municipal ownership almost invariably means extravagance and corruption, fat offices for aldermen and councillors, and unbearable rates for the rest of the population, I would like to state a few facts for the instruction of anybody in British Columbia who is still inclined to listen to agitators on this subject. From time to time during the past few years one has heard outcries against the Montreal Electric for paying 10 per cent on their shares at the expense of the public, and similarly against the Ottawa, Toronto, Winnipeg, and all other successful companies, and now no doubt the same cry will be raised against us. These people who raise this outcry always fail to mention that it is on a very small portion of the capital that the higher dividend is paid. In our case it is on less than four-fifteenths of the total money raised and expended in the enterprise, the bulk of the money still returning only a fraction more than 4½ per cent. I find that from 1898 to 1902 inclusive we returned less than 4½ per cent. per annum on the money actually put into the enterprise. In 1903 our investment yielded 4·8 per cent., in 1904 5·1 per cent., in 1905 5·2 per cent., in 1906 5·1 per cent., and this year, including our 8 per cent. dividend, the return on the actual cash invested is 5·564 per cent. It must be apparent, I think, to the most ordinary intelligence that an enterprise can be run by a board of directors, who are enabled to carry out a continuous policy from year to year and from decade to decade more economically and far more advantageously to the public they serve than by a body of men, however able, who are constantly changing from year to year. Another point at which the municipal officials are at a great disadvantage is that of finance. The cities of Vancouver and Victoria and New Westminster have for the past ten years been represented by a succession of exceptionally able mayors. But be a man as able as you please, if he be not brought up to finance in one of the great money centres of the world, I can conceive no more pitiable plight than to be suddenly called upon to raise several hundred thousand pounds yearly, and to raise it promptly, to meet the needs of ever-growing cities like those we serve, and to raise it in addition to the ordinary municipal requirements. Such a man must necessarily be a catspaw at the mercy of the financiers of London and New York, and when we consider that several of the greatest cities in the United States and Great Britain have during the past few years completely failed to raise money at 4½ per cent. to 5 per cent., it is obvious that smaller cities will in the future have to pay a return of a good deal more than our 5 564 per cent. for large sums of money. I trust we believe the days of cheap money for municipalities are gone once and for all, and I think that in the near future the embarrassments of municipalities will prove a serious menace to finance, and that

large sums of money will be lost in municipal securities during the next 10 years. Reverting to my remark as to the large amount of cash which this company has on deposit, I should like to point out that whilst money has been scarce in Canada, as in other places, no serious crisis has arisen, and the troubles of her great neighbour have been reflected only by the temporary difficulties of a few men in Montreal and Toronto who have been caught speculating in New York. I think Canadians may well point to this with pride and with exceedingly great satisfaction, and that we who are interested more or less directly in Canadian finance should feel and express a debt of gratitude to the wise heads, the presidents, vice-presidents, and general managers of the great Canadian banks, whose foresight and strength of character have produced such results. Returning to more general subjects, I am glad to report that the prospects of Canada in general, and in British Columbia in particular, have never been brighter. The fact is beyond all doubt that to-day Canada is one of the most prosperous, possibly the most prosperous, country in the world, and if the march of prosperity stopped for a few months it has been but for Canada's greater good—it has prevented a speculative boom which might have been disastrous, and it has stopped but to gain force for still greater forward strides. In British Columbia the tide of progress has not hesitated; on the contrary, it seems to be but just beginning. A great movement of rich emigrants set in this summer, and will be renewed next spring. These emigrants are chiefly come from the prairies and consist of the old-timers, who, having made money, are attracted by the more genial climate and beautiful surroundings of British Columbia to seek homes there. In 1901 we were serving altogether a white population of about 75,000. To-day we are probably serving some 150,000, and, personally, I have not the least doubt in ten years' time we shall have a white population of between 300,000 and 400,000 to provide for. I see nothing but success and prosperity before the country and our company.

Mr. G. P. Morton seconded the resolution.

A Shareholder asked if the board contemplated raising any further capital at present.

Mr. Norton: The chairman has asked me to reply that we do not wish to be bound at this meeting by any statement as to capital. We have nothing in contemplation at the present moment, but we are advancing so rapidly that we cannot very well bind ourselves. We shall advise shareholders at the earliest possible moment.

The resolution was then put and carried, and the proceedings terminated with a vote of thanks to the chairman and directors.

BUENOS AYRES AND PACIFIC RAILWAY.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held on Monday, at Winchester House, Old Broad Street, E.C., Mr. J. W. Philipps, M.P. (Chairman), presiding.

The Assistant Secretary (Mr. W. R. Cronan) having read the notice convening the meeting and the report of the auditors,

The Chairman, speaking of his recent visit to Argentina, said that he found the company's property in excellent order. The Argentine Great Western line, which the Pacific Company had taken over, was a magnificent undertaking. It wanted developing, but it was a line which would gradually add to the value of the whole system. They had taken a small interest in some hotels, which had so far been profitable. But the question whether the hotels actually paid or not was far from being the principal consideration. The hotels were situated at the other end of the Argentine Great Western line, and should attract people from Buenos Ayres, which was hot and relaxing in summer, over the railway, and thus increase the traffic. At the town of Bahia Blanca and all along the Bahia Blanca line he found that extraordinary progress had taken place. Dealing with the figures of the past year's working, he said that the receipts increased by £456,000. The profits were £138,000 more, and this enabled the board, after spending £60,000 on special renewals and placing £5,000 to the staff fund, to pay the balance of the 7 per cent. dividend to the ordinary stockholders, leaving £40,000 to be carried forward. This 7 per cent. had been earned in spite of the fact that the company had many hundreds of miles of line only just finished and beginning to earn money, which would undoubtedly pay well almost at once. At the present time there was £3,586,000 of capital locked up in unfinished works on the Pacific, the Argentine Great Western, and the Bahia Blanca lines. He felt sure it would be unanimously agreed that the best way to help the Pacific Company was to finish these works as quickly as possible and make them reproductive, as they would be. The current financial year began with almost a total failure of the maize crop, and there should therefore naturally have been a decrease in the traffics week by week, whereas they had had an increase to date of £95,000. On the Pacific line it was estimated that the land under wheat and linseed cultivation was 20 per cent. greater, and on the Bahia Blanca line it was estimated that the land under wheat was 100 per cent. greater than in the previous year. He concluded by moving the adoption of the report, which was seconded by Mr. Edward Norman. A stockholder inquired whether the published traffic receipts were not on increased mileage. The chairman replied that the Argentine Great Western receipts were included for both years, so that all the additional mileage to be allowed for was the mileage in respect of new line, which was not large, and did not produce an enormous amount of traffic in the first few months. Colonel Wheatley asked for some information as to the total further capital requirements for the company's concessions. The chairman said that what the board proposed to do at present was to finish the works in hand, and therefore all the capital they asked for now was a further 100,000 shares of £10 each. More money might be wanted of the Argentine Great Western and Bahia Blanca before again coming to the Pacific Company's stockholders. He did not think, beyond the present 100,000 shares, that it would be necessary to come to the Pacific stockholders again until after the annual meeting next year. A stockholder asked if it were not the fact that if the dividend were limited to 7 per cent., 8 per cent., or 10 per cent., it was in respect of the whole capital. So far as this company were concerned, they had debentures and preference stock carrying a lower rate, so that he presumed that the ordinary stockholders, if the profits allowed it, could be paid a great deal more than 7 per cent. The Chairman: You have mastered the whole thing, sir. (Hear, hear.) The report was then adopted, and the dividends, as recommended, were agreed to. The Chairman subsequently complimented the solicitor (Sir Frank Crisp) on the honour bestowed upon him by the King. Resolutions were afterwards passed authorising the conversion of 200,000 shares of £10 each into £2,000,000 ordinary stock, and further increasing the capital by 100,000 shares of £10 each. The board were also empowered to construct and operate certain new lines.

BAHIA BLANCA RAILWAY.

The 18th ordinary general meeting of the Bahia Blanca and North-Western Railway Company, Limited, was held on Tuesday at Winchester House, Old Broad Street, E.C., under the presidency of Mr. J. W. Philipps, M.P., the chairman.

The Assistant Secretary (Mr. W. R. Cronan) having read the notice convening the meeting and the auditors' report,

The Chairman said: Since I addressed you last I have had an opportunity of going to Argentina and of inspecting, among other things, the Bahia Blanca line. I went to Bahia by the new line from Huinca Renanco, on the Pacific, to Nueva Roma, adjoining the old Bahia Blanca line. The northern section of it was not opened when I went through, but it has been opened to the public since that time. Furthermore, I went over the Salliquels branch, which was then practically completed. There are two other little branches which had been built and were almost finished—the Macachin line and the Iris line—and no doubt they will be open for the wheat crop. Besides that, since our last annual meeting we have taken over the line to Rameco, which we bought from the Great Southern Railway at cost, plus interest. I may say that, taking these lines as a whole, I do not believe there is a mile of bad line all along that new part of the system. The new main line and branches go through good land throughout. The part which has been longest built is the Rameco branch, which is 32 miles long, and which we took over from the Buenos Ayres Great Southern. Along that branch when I was there the wheat was springing up on both sides of the line for almost the whole way from one end of the line to the other. As you will see from the manager's report, he estimates the increased area of wheat on our system at about 100 per cent. Well, I could not pretend, naturally, in so short a visit to make an estimate, but I will only say I am very much surprised that his estimate of the increased area was so little as 100 per cent. I should fancy myself, from what was told me, that it was quite likely the increased area would be 150 per cent., or something like that. During the year a great deal of work of importance has been done at Bahia Blanca. When the wheat harvest begins nine berths will be opened for sea-going vessels, and development is still increasing. A shareholder has written asking whether we could do something to hasten the time when our 3 per cent. guaranteed stock can be amalgamated with our 4½ per cent. guaranteed stock. What the shareholder proposes is that we shall allow any shareholders who wish to do so to pay up in advance at whatever sum is considered right by actuarial calculation, and that then we should give that money in advance, making the 3 per cent. stock 4½ per cent. from to-day. Well, it is an ingenious proposition, and has a good deal to commend it. I do not know what the Stock Exchange will think of it, nor what the legal gentlemen will think of it, but I may tell you that I will put the proposal before the board, who will consider what objections there are to it, and without pledging myself in any way I may say that at any rate we will give it fair consideration. Then I have been asked also to say a word as to the debt owing by this company to the Pacific Company, and what is the position between the two. Our line is worked and managed by the Pacific Railway Company, which pays 4 per cent. on our debentures and the interest on our shares, and from time to time the Pacific makes additions to our property, by building or otherwise, and calls upon us to find the money. We can find the money by issuing stocks, those stocks being guaranteed as to principal and interest by the Pacific. If the Pacific thinks that at any given moment the time is not opportune for the issue of stock, they advance any capital that may be needed for the works. That is the position. We have a debt owing to the Pacific, who, if they liked, could ask us to pay it off by giving them debenture stock in exchange, but if they adopt the course which they have done hitherto they will select an opportune moment for issuing the stock, and then ask us to issue it and pay off the debt with the proceeds. As the Chairman of the two companies, I can assure you that the position need not give a moment's doubt to the stockholders of either company.

Mr. Edward Norman seconded the motion, which was unanimously agreed to.

NITRATE SECURITIES TRUST.

The first annual meeting of the Nitrate Securities Trust, Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., Mr. Arthur C. Lowe presiding.

The Secretary (Mr. F. M. Frames) having read the usual notices,

The Chairman said: This is our first annual meeting, and I would it had fallen to my lot to address you in less climacteric times. Within a short time of the launching of this company the financial barometer commenced to fall, and it has been falling practically ever since. As you can readily imagine, the year has been one of exceptional difficulty and one fraught with considerable anxiety to your directors. Our gross profit comes to £20,261 10s. 4d. and our nett profit to £17,386 6s. 7d. Our paid-up capital is £77,095. At the time this company was formed very little action was taken to bring it before the public; in fact, our whole advertising expenses came to only £70. As a result there was a balance of some 22,000 shares unapplied for in the general way. A proposal was made to us on certain terms for this balance, and the board accepted it. At the time we considered it a fair proposal. At the due date for these shares to be taken up those concerned were unable to implement their bargain, and the shares were forfeited. The exact number of shares not taken up was 22,283. Now I turn to the question of dividend. This dividend, I am informed from different quarters, has come in for some criticism—on the one hand, that it errs from modesty; on the other, from undue liberality. Now, I do not wish there to be any mistake about this dividend. We on this side of the table are large shareholders, but that does not influence us one way or the other, and if it is not your pleasure to have this dividend I for one—and my colleagues are with me—have no wish to force it on you. I have a very large number of proxies here from most of the largest shareholders—sufficient to carry any point we can wish—but we do not intend to use these proxies, and, further than that, your directors will not vote at all. We will now take the question of depreciation. I do not know whether you are aware that only a few nitrate companies are quoted in what is known as the Official List of the London Stock Exchange, although dealings take place in most of them almost daily. In the present instance the value of our nitrate investments, except when specified in the case of the Lilita Nitrate Company, was taken by us from the quotations on October 15 in the Official List, from the financial Press, and from the daily list of prices issued by a well-known firm of stockbrokers who for some years have closely identified themselves with the nitrate industry. Turning to our work during the year, we have successfully floated the Lilita Nitrate Company. From all the accounts we have received the Lilita grounds promise well, and I look upon the shares we hold in that company as a very valuable asset. We have other important work in hand in the nitrate industry, with which we are so closely bound up, and which industry continues to show excellent prospects. I beg to move the adoption of the report and accounts.

Mr. Alex. Freeland seconded the motion.

Mr. Walter Miller contended that if due allowance had been made in the accounts for depreciation the profit claimed would not have been shown. There should, he added, be an inquiry into the condition of the company by some kind of committee. Mr. Moreton Knight and others closely questioned the Chairman as to the terms on which the proposal for taking 22,000 shares had been accepted. The Chairman stated that the application was a bona fide one. In the course of a protracted discussion Mr. Knight announced that he had applied for summonses against the secretary and company, and that they were returnable on Tuesday. An amendment, moved by Mr. Dale, declaring that the financial position of the company did not justify the payment of a dividend, and that the items of the balance-sheet called for investigation, was rejected by a large majority, only six voting for it. The proposition to pay the dividend of 5 per cent. was carried, with eight dissentients.

GOEBEL BREWING.

The eighteenth annual general meeting of the shareholders of the Goebel Brewing Company, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Sir Henry Seton-Karr, C.M.G. (chairman), presiding.

The Secretary (Mr. T. Toten Willcox) having read the notice convening the meeting and the auditors' report,

The Chairman said: I think I may again very fairly congratulate the shareholders upon the exceedingly satisfactory position in which we find ourselves to-day—(hear, hear)—and upon the results of the past year's trading shown by the accounts. You will see that after payment of our debenture interest we show a nett profit of £22,023, which is about £3,000 better than last year. This sum, with £7,237 brought forward, makes a total of £29,260 17s. 3d. available to be dealt with. We recommend that it be applied in the following manner:—(1) To the payment of a dividend of 7½ per cent. upon the preference shares for the past year; (2) to the payment to the preference shareholders of a further 37½ per cent. on account of the preference arrears due to them, making a total dividend of no less than 45 per cent. on the preference shares. (Hear, hear.) That is practically a six year's dividend in one. (3) We then recommend that a balance of £9,010 be carried forward to the credit of the current year's account. Our output is again increased, the advance being something over 2,000 barrels. It has been increasing steadily for some years now, and therefore the fact of this further increase is very satisfactory. We cannot expect as large increases now as we had in former years, but our total barrelage has grown to something between 85,000 and 90,000 a year. The policy followed by the directors in the past and to be pursued in the future of not dividing profits up to the hilt is a sound one. We have always put something back into the business, thus making our credit good, and enabling us to trade on the best terms for cash. In the second place we have always backed up our managers in spending what was necessary to keep our plant and machinery in thoroughly good order. In the third place the directors in London have always made a point of maintaining thoroughly good and friendly relations with our managers in America. When any negotiations are in progress on matters of policy we are careful that the correspondence shall be exchanged in good time; we make a point of sending one of our number out there or getting one of them over here to discuss matters, and we avoid unnecessary interference with the details of the management. These are the main features of the policy followed in the past, which we intend to act upon in the future. With regard to our prospects, I should like to say one word. Last year, when we met I told you that I confidently anticipated being able to announce the payment of the bulk of the preference dividend arrears this year. Everything has gone as we anticipated, and that expectation is fulfilled. I went further last year, and said I hoped that in a couple of years we should be able to recommend a dividend on the ordinary shares. Next year we shall be able to satisfy the legitimate claims of the preference shareholders with a comparatively small sum, and the whole of the balance with which we can deal will be free to go into the pockets of the ordinary shareholders. One cannot foresee the future, but if everything goes on as it is going on now I can see no reason, in spite of the financial troubles now existing in parts of the United States, why we should not be able to recommend a substantial dividend twelve months hence.

Mr. Edward Rawlings, who seconded the motion, said: Our Chairman has most ably explained the position to you, but there are one or two points to which I should like to draw your attention. With regard to its ordinary shares this company is absolutely a dividend proposition, and has been for the last three months. There is no doubt that a substantial dividend is now being earned in respect of the ordinary shares. The financial position in America you all know. It is one of those volcanic storms that occur at certain times. It will pass away, and probably do good eventually. What America wants is peace and quietness—to be left alone to work out its own salvation, and not to be worried by faddists, and so on.

The resolution was unanimously adopted, without any further comment.

INTERNATIONAL FINANCIAL.

The forty-fifth ordinary general meeting of the International Financial Society, Limited, was held on Wednesday at Winchester House, E.C., Mr. J. W. Philipps, M.P., the chairman, presiding.

The Secretary (Mr. R. H. Scott-Moncrieff) read the notice and auditors' report.

The Chairman: In April last some friends of mine purchased a considerable interest in this company. They asked me to join the board, and Mr. Michael Snell joined the board at the same time. I was elected chairman, and that is how I come to be addressing you to-day. After the report went out, Mr. Kendall resigned his seat on the board, and we have elected Mr. J. S. Austen to fill the vacancy. We are submitting to you twelve months' accounts, and as I have been a director somewhat less than six, and of those six I was away in South America for more than two, I am not very largely responsible for the results of the past year. In September, 1906, the then directors showed a reserve fund of £50,000, and to that we have added £842, being a profit on the sale of some old securities. But to get at the real state of the company a year ago you have to deduct the balance of the fluctuation account of £27,880, so that there was a nett surplus on the reserve fund of £22,050. There was also a balance forward of £11,000, and these figures added together make a surplus of £34,020. We have had to write all that off for depreciation. But that does not represent the loss of the past year, because we have written £4,500 from an inner reserve fund, and besides that we wrote up two securities by £11,000, so that the capital loss on the year has come to £33,620 on a capital of £350,000. On September 30 last we had £304,380 invested, and of that sum £135,000 was invested in the United States, £64,000 in South America, £34,000 in colonial investments, £30,000 in industrial and financial concerns, £10,000 in European, £10,000 in mines, chiefly South African, £51,000 in home railways and £6,000 in tea companies. Since September 30 there has been some further depreciation on the American investments. On the other hand, there has been an appreciation in Kaffirs and in Home Rails, but under these circumstances, unless conditions materially improve, we should not be justified in the present financial year, even if we earned it, in paying an interim dividend. I do not want you to gather that the company is not in a position to make money. Our revenue is all right; it is the state of the capital account that we have to consider. I am glad to tell you that, with the exception of about £400, the whole of the dividend of 5 per cent. which we recommend was earned outside profits from sales. As regards the current year, it is early to prophesy, but from what I can see I think we ought easily to earn 5 per cent., quite apart from profits on sales. So do not run away with the idea that we cannot make profit, because we can. One or two of the shareholders have asked when we propose to bring forward a scheme to deal with the liability on the shares. Undoubtedly that question must be dealt with sooner or later, and the sooner the better. But we must wait until matters improve. I now beg to move the adoption of the report and accounts and the payment of the dividend recommended.

Mr. M. B. Snell seconded the motion, which, after a brief discussion, was carried unanimously.

Printed for the Proprietors by ST CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by CLEMENT WILSON at Norfolk House, Norfolk Street, Strand, W.C.—NOVEMBER 16, 1907.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XX.—No. 517. New Series. SATURDAY, NOVEMBER 30, 1907. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:

One Reply to **One** Question—**One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.,** postage **4d.** extra. Bound Volumes **16s. 6d.,** or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Local Expenditure.

The appearance of Mr. Burns' report on the work of the Local Government Board for the past year, as far as the figures can be brought up to date, affords another opportunity to draw attention to the rapidity with which the substance of the middle and working classes may be said to be devoured by public charges. Many figures, especially those of the yield of rates, do not come down to a later date than the year ended March 31, 1905, and Mr. Burns has nothing to do with Scotch or Irish local administration, so that his facts relate to England and Wales alone. In these parts of the kingdom the levy of rates in the year named exceeded £50,000,000, and if we add in £5,482,000 raised in the same year on rates in Scotland, and the £3,008,000 raised in Ireland, we get about £64,500,000 as the local taxation load carried by the United Kingdom in that year. Adding this to the Imperial revenue collected from taxes in the past year, which is fair enough, since a small reduction in taxes was provided for in the 1906 Budget, we get a grand total of over £183,500,000 as the tax and rate burden of the inhabitants of the entire kingdom. This is equal to a charge of about £4 8s. per head of the population, man, woman and child, and we again say that it is becoming an intolerable charge. The way in which rates mount is on many grounds alarming, as well as the fashion in which local debts multiply. Of the total yield of rates levied in England and Wales in the year named, £25,048,408 came from poor rates £12,703,591 from the general rates in metropolitan boroughs, £12,514,053 from general district rates, and £5,314,742 from other rates.

Under modern habits of administration, there is a continual pressure to impose additional burdens upon the community. The variety of social demands which the administrator of this Local Government Board Department has to encounter, and if possible satisfy, is steadily increasing. All that relates to sanitation, to the provision of land for building, to the regulation of markets, hospitals, water supply, the provision of work for the unemployed, of assistance to emigrants, to the training of pauper children, the care of lunatics and many other duties fall upon it, and every fresh task imposed upon it by Parliament in obedience to the demands of the public involves additional burdens upon the ratepayer. Hence it has come about that the total receipts in England and Wales for 1904-5 came to £110,480,000. Of this income about £10,000,000 was drawn from the Imperial revenue in one sense or another, exclusive of the education grant, which involved £10,500,000 more. In fact, no less than £19,597,000 of the entire income of local bodies came from sources other than rates or than payment for services rendered, receipts from tolls, rents on municipal property, sales of property, &c. Water rates, for example, yielded £4,510,000, gas works £7,093,000, electric lighting undertakings £2,507,000, tramways and light railways £5,030,000 and harbour, dock, pier, canal and other dues and tolls £3,080,000. From other undertakings, such as markets, cemeteries, repayments for work undertaken on the public streets and chargeable to the private owners, sums of less magnitude were received. Many of these sources of income represent so considerable a profit to the muni-

cipalities that a portion of the product may be considered as additional taxation.

As for expenditure, it amounted in the same year to no less than £139,119,000, so that £31,387,000 had to be borrowed in order to make ends meet. The outlay for loan interest was no less than £13,154,000, and the total charges for debt, including repayments of capital and contributions to sinking funds, was £23,663,000. Another £19,597,000 was spent on education, and the outlay upon gas works was £5,158,000, on highways £10,277,000, on police £5,955,000, and on tramways and light railways £3,482,000. Loan expenditure was not so large as in 1903-4, when the borrowed money total came to £36,086,000, but it was about three times as large as the expenditure in 1884-5. No wonder therefore that the local debt of the country has been growing at a startling pace, or that many municipal and county authorities should now be in an embarrassed position, loan creating and vending by them having become almost impossible. In 1879-80 the total outstanding debt of local authorities in England and Wales was only £136,934,000, and at the end of March, 1905, this had risen to £466,459,000. The total now probably exceeds £500,000,000, and, added to the National Debt, represents a mortgage of nearly £1,300,000,000 upon the labour, the stored wealth and resources of the community. In Scotland there was a local debt of upwards of £61,340,000 at the same date, March 31, 1905. This includes the capitalised value of local annuities, and the local debts of Ireland then amounted to almost £17,000,000. Add these totals to the Imperial debt, and the local debts of England and Wales at the close of the same year, and we get an aggregate of £1,341,000,000 in round figures as the mortgage upon the people of this country. This is equivalent to something like £32 per head of the population, and is the handicap with which every British infant enters on the battle of life; and although the Imperial debt has been reduced since March, 1905, the addition to local debts since then, notwithstanding the difficulty that exists in getting loans floated, has far more than counterbalanced any such reduction. A position almost hopeless in its involvement is thus disclosed. How to put an end to the continual addition to the load borne by the country baffles the wit of man. A cry for retrenchment continually arises, and the recent municipal elections gave expression to the never-assuaged desire of the ratepayer to have burdens reduced, but there is no practical relation between this desire and the continually increasing demand of the people for more and more amenities. With one breath they call out for a reduction in rates, and with the next they make demands for improvements, for more money to be spent in providing working-class dwellings, for money with which to buy land to provide crofts or small farms for a community said to be suffering from land hunger, for machinery to be set up to provide work for the unemployed. Thus elected local bodies are hounded on to spend money whether they will or not, and the more they spend the more rates must advance. They are cursed when they pause and cursed still more when they go ahead. Yet a stop must be put to these continual increases in local charges, else the depopulation which has already become marked in rural districts, will extend to many towns, and we shall find the increased poundage levied upon ratepayers yielding a smaller return than the lower one did some years before. In London County rates ranged from 6s. 2d. to 10s. 2d. in the £ in parishes outside the City boundary in 1904-5, and in county boroughs ran from 4s. 3½d. to 10s. 1d. In 1879-80 the rates levied within the administrative County of London averaged 4s. 3d. in the £, and in 1904-5 the average impost was 7s. 0.8d. in the £. In the rest of England and in Wales the average at the earlier date was 3s. 0.9d. in the £, and in 1904-5 it was 5s. 8d. The average weight of these rates per head of the population over the whole of England and Wales was 17s. 4.3d. in 1879-80, and by 1904-5 it had increased to 33s. 2.4., or almost double. And the increase still goes on!

The cost of pauperism continues to be the most galling of all sources of local distress, and how any responsible politician can for a moment toy with schemes for old-age pensions, which must, if they are to be anything but derisory, involve a much added burden upon the tax and rate payer, while pauperism sucks away £14,000,000 or more per annum in England and Wales alone, is incomprehensible on rational grounds. The nett outlay upon paupers for the year ended March 31, 1906, exceeded £14,000,000 and of the total spent nearly 36 per cent. went in salaries and allowances to those whose business it is to administer the law. Indoor paupers cost £3,229,000 and outdoor £3,474,000, while lunatic asylums absorbed £2,355,000. Furthermore £1,900,000 was absorbed in the charges upon the pauper created debt, and £1,065,000 was spent upon buildings. Thus comparatively little of the money—that is to say, less than half—went really in pauper relief, and we have not the slightest doubt that were an intelligent and carefully localised system of dealing with the poor instituted, were workhouses almost, if not entirely, abolished, and the administration of the relief funds put under the direct control of the local councils, this outlay might be cut down by many millions. The total expenditure on relief in London came to 16s. 6d. per head in the year 1905-6. Outside London it was 6s. 10¾d. per head, and for the whole of England and Wales 8s. 2¾d., a most formidable levy upon the great majority of the working population. But it is not to be wondered at when indoor paupers in London cost £36 6s. each that year to maintain. Outside London the cost of indoor paupers was only £24 5s. 8½d. per head. We say "only," but it was still an excessive amount, for outdoor paupers in London cost, as far as can be ascertained, only £8 1s. 7½d. per head, and outside London £7 0s. 8½d., the average cost of each outdoor pauper to the ratepayer being for the whole of England and Wales in that year only £7 2s. 7d. per head. In other words, the indoor pauper cost the ratepayer £20 12s. 3½d. per head more than the outdoor, and he did so because the official locust plague is perennial. There is no sense in an arrangement which involves charges of this description, not one-half of the fruits of which really goes to the pauper. Mr. Burns, in his report, points out that the average cost per head of the outdoor paupers in London during the last six years has exceeded the cost per head of outdoor paupers elsewhere by from 15 to 21 per cent., but the cost per head of indoor paupers in London has been from 48 to 53 per cent. more than in unions outside London. That is no doubt true, and its truth is demonstrated by the corruption surrounding poor-law administration, which he has done so much to bring to light in the metropolis, but the difference in cost between outdoor and indoor pauperism must be approached from another point of view, and we once more repeat that until this mass of costly poor-law corruption has been tackled and thoroughly cleared away it is not merely vain but criminal to make preparations for adding yet one more burden to those already carried by the people, a burden, moreover, which is certain to become an instrument of widespread political corruption, worse than anything ever before known in our history.

Economic and Financial Notes.

Dear Food in Germany.

A somewhat startling picture of the increased cost of living in Germany was drawn in the Reichstag last Monday by Herr Scheidemann, the Socialist Deputy for Solingen. In a carefully-prepared speech he asserted that during the last ten years the cost of living is estimated to have risen by 33⅓ per cent., and he gives examples from the prices of articles of consumption, some of which had gone up more than 60 per cent.

Rye, for instance, is now 62.7 per cent. dearer than it was ten years ago, while wheat has risen 45 per cent. since 1901, and flour 34 per cent. since September, 1900. Barley is also 10 per cent. and potatoes 12 per cent. dearer than they were last year. A year ago, moreover, Dr. Wiemer stated that within the ten years then ended beef had risen by 30 per cent., veal by 41.5 per cent., mutton by 50 per cent. and pork by 40.6 per cent., while during the current year prices for every one of these commodities except pork have further advanced. The speaker also contended that the effect of the new tariff during the first year of its operation had been extraordinarily to increase the price of a large variety of articles in common use, and he pressed upon the Government the expediency of removing the duty on imported corn as well as of providing for a relaxation of the stringent regulations now governing the importation of foreign meat. He blamed the restrictive measures now in force for much of the misery which he declared the poorer classes of the people were now suffering, and said they had been imposed in the interests of the agrarians, and that they were inconsistent with the freedom with which employers of labour were permitted to depress wages by importing workmen from abroad.

To this indictment Herr von Bethmann-Hollweg, Secretary of State for the Interior, replied with some measure of success. His arguments were of the usual Protectionist kind, and did not always tell in favour of his conclusion, but he made good use of the fact that wages have gone up as well as prices, and he was quite right in insisting upon the influence of international factors in determining the prices on the German corn markets. Thanks to the higher wages paid, the consumption of all kinds of commodities had increased, he said, and there had been a general improvement in the standard of living. The amount of meat consumed in Germany is now nearly as great as in England, and so forth. All this may be quite true, and it does not follow that the nation as a whole has benefited by the severe measures of class Protection to which its population has been subjected. German agriculture, the Minister declared, has contributed to the prosperity of industry by placing large orders for industrial products, but the increased prosperity of industry has reacted to the detriment of agriculture by reducing the supply of labour in the country. Hence the demand for foreign labour, of which there is an increasing supply available. This only indicates how artificial the structure of agriculture and industry has become. What is gained on the one hand is lost on the other. Agriculturists succeed in raising prices, thanks to the Protective tariff, and for a time they get some benefit, part of which goes to the industrial sections of the community. These in turn pull away labour, force up wages in the rural districts, and bring in foreign workmen, until the whole forcing system ends in what is little better than a deadlock. First profit, next over-production upon a market growing narrower, and finally reaction all round.

Double Commissions.

We have received the appended communication on this subject from a correspondent, and readily accede to his request. His letter is valuable, because it indicates very clearly the current misconception of the public upon the now much agitated question of double commissions. Transactions such as he describes are not frequent upon the Stock Exchange, and are not those about which complaint is usually made there. Now and again a broker may have two clients seeking to go opposite ways in the same stock. One is a seller and the other a buyer. If it be a stock in which there in an active market the broker usually makes the exchange at the middle price, saving the jobber's turn, and in doing this doubtless considers himself fully warranted in taking a commission from each client. No broker of standing will render a contract to a client with a jobber's "turn" tacked on to the price if the transaction has not been passed through a jobber's books. And, at any rate, there is so little of this business done or doable that occasional occurrences of the kind cannot be deemed adequate foundation for a grievance. What the jobbers of the Stock Exchange complain of is not so much isolated transactions of this kind as the habitual resort of brokers to outside houses who engage the services of the brokers by means of a more or less handsome commission offered upon the business carried through by them in order that securities held by these houses may be unloaded upon the public without coming into the market at all. The promoting firm, let us say, has £500,000 of some particular stock to dispose of, and finds it inexpedient to offer this stock to the public openly in the ordinary way. It sends for brokers, and offers them a commission varying from ½ per cent. to perhaps 5 per cent. on whatever portions of the stuff they succeed in selling to the public. Stimulated in this way, these brokers offer the stock to their clients and charge these clients the ordinary commission on their purchases. For this sort of business there is no defence. It is dishonest and dishonouring to all concerned, except the unfortunate victim who may be "stuck" with the stock, to use the slang of the market. The same observation applies to the jobbing or punting business carried on by so many houses outside the Stock Exchange. It came into fashion with the South African "boom," as it is called, and to this day firms that were at any rate once reputedly amongst the wealthiest in the City continue to play in that class of security by help of brokers who serve them for a secret commission and work off at the higher price shares which the houses outside may have bought cheaper in quantity when the market was depressed. At times a great business goes on through channels of this description, and the jobbers in the market are naturally indignant that they should not only be deprived of their "turn" but of any control over the business done. They stand inside the Exchange to be shot at, as they often complain to us. Directly some firm that has been gambling through outside channels in this way comes to grief, the securities it has been playing with are flung back upon the Stock Exchange, where there may be no market strong enough or active enough to absorb them. Here, therefore, there is a real grievance which touches both market and public, but the market on the whole more than the public, and it seems to be beyond the wits of the committee to find a way to put a stop to it.

"Most of your readers are, as investors, interested in the discussion on the question of double commissions, and would, I am sure, be glad of a pronouncement from you.

"To me the practice seems indefensible and tends to destroy the confidence which should exist between brokers and their clients.

"Take a case. I send my broker an order to buy £100 of railway stock at best. As the price is about par the commission would be 10s. At the same time another client sends the same broker an order to sell the same amount of the same stock at £100 *nett*. The broker finds that he cannot get the stock from a jobber at less than 100½. He puts the two orders together, and sends me a contract of a purchase at 100½.

"*This is untrue.* What he has done is to add 10s. to the price, which he pockets as his seller's commission. His duty to me was to get the stock as cheaply as possible, and he could have got it at £100, which was the sum his other client was prepared to take, and actually receives.

"The broker, no doubt, satisfies his conscience, if he has one, with the reflection that I am no worse off than if he had bought the stock from a jobber, but that is not the point. He has failed in his duty to me to do the best for me.

"As an investor I have bought and sold shares in Hong Kong, Singapore, Ceylon, and Australia, and in none of these places is double commission charged. The seller only pays commission. Why should not the same rule obtain here, where the same broker acts for buyer and seller?"

The Underground Electric Railways Company.

A circular issued by Messrs. Speyer and Co. should do something to comfort holders of Underground Electric

Railways' profit sharing notes. In conjunction with Messrs. Speyer and Co., of New York, and Mr. Lazard Speyer-Ellissen, of Frankfort-on-Main, the Lothbury firm announces that the coupons due on the notes next Monday will be bought by them at their face value. Holders are, therefore, invited to present their coupons in due course to the London and Westminster Bank in order to carry through this arrangement. In taking this step, which is most honourable to all the firms concerned but nothing more than we are accustomed to expect from the Messrs. Speyer, it is explained that the first object is to prevent a disrupture of the enterprise and ensure continuity of policy and operation of the various lines as a unit. In the second place the coupons are to be paid, pending the elaboration of a plan of reorganisation which is now being prepared, with a view to placing the company upon a sound basis. Inevitably difficulties have been put in the way of any such plan by the serious financial position of money markets all over the world. This renders it inexpedient at the present moment to attempt to carry any reorganisation to completion. As soon, however, as it is ready, this plan will be made public, and submitted to noteholders and shareholders for their consideration and approval. A statement of the company's affairs is to be published with the plan, and holders of the sterling notes are invited to deposit these notes, along with the coupons, at the London and Westminster Bank, pending publication. The bank will issue deposited notes' receipts against the securities handed over, and these will be transferable by delivery. Dissent from the plan must be expressed within 21 days of its publication, and if not so expressed the holder will be deemed to have assented. Hope is expressed by Messrs. Speyer in the future of the undertaking. Traffic receipts are improving steadily if slowly, and it is impossible to believe that in a city like London, with its immense and constantly increasing population, lines of the kind controlled by this company can remain permanently unremunerative. The very bankruptcy of so many street rivals to the lines must help the company in the long run.

Russian Petroleum Company's Difficulties.

We are still unable to fathom the mystery behind the conflict which has ended in the victory of the opposition. The company's affairs have now reached a point where a special effort must be made to provide funds for the redemption of first debentures by January 1 next, and the liquid resources are insufficient for this purpose, but there is a special reserve of £132,000 which could be utilised provided the preference shareholders gave their consent. This fund is supposed to belong to that class of shareholders, but by the article under which it was constituted it cannot be drawn upon for their benefit until it reaches £250,000, and it is, therefore, a somewhat useless possession. In their need the directors, who are in no way responsible for the misfortunes of the company, sought permission to borrow up to £52,500 from the fund to meet this pressing obligation, and so prevent the debenture holders from seizing the property. To the average man the plan would seem to be the only one possible, considering the shortness of the time and the present state of the money market, but that was not the opinion of a few men who have vigorously opposed it. A first meeting of preference shareholders to consider the directors' proposal was adjourned for a week in order to enable those conducting the agitation to confer with the directors and see for themselves the real position of the company. Three representatives were appointed at that meeting, but they evidently went to the conference with their minds made up to insist upon unreasonable demands, and failure to come to an agreement was a foregone conclusion.

The first demand made was that the three gentlemen should be allowed to nominate four directors for seats on the board, as they felt that this "would inspire some confidence in the shareholders' minds in the future prospects of the company." On what grounds they based this assertion is by no means clear, and their action at the present critical juncture is not calculated to inspire too much confidence in their ability to bring prosperity back. The second condition was more reasonable, but except with regard to the question of the rate of interest, which they put at 4 per cent. instead of 6 per cent., we imagine they here merely expressed the intentions of the board. A third demand was that an independent expert and one of the representatives should be sent out to Baku at the expense of the company to report on the property. Such an expedition, however, would take more time than there is to spare if the obligation is to be met on January 1, and the proposal would appear to have been made merely to put off time. The directors, however, offered to call a general meeting at once to consider the proposals made if the agitators would withdraw their opposition and allow the money required to be taken from the reserve. Surely a fair enough offer if the malcontents really had the company's interests at heart, but it was declined. We seek in vain for any sound reason for this attitude in the speeches made at the adjourned meeting on Tuesday last, and when we remember that the agitation follows closely on those against the boards of the Baku and other companies we are forced to the conclusion that it forms part of an organised attempt to secure control of the Russian oil industry at a figure much below its real worth. Whether the Standard Oil men have a hand in the game or not we cannot say, but the tactics seem to be American in type and temper, and the fears of the preference shareholders have been excited with such skill that the board has been beaten at the poll. A three-fourths majority was necessary to carry the proposal of the board, and only 203,351 votes were recorded in its favour as compared with 112,975 against. For the present, therefore, the directors are helpless to avert seizure of the property of the company. Where will the preference shareholders' fund be if and when that occurs?

Population in the Canadian North-West.

A census of the North-West Provinces of Canada, Manitoba, Saskatchewan, and Alberta, was taken last year, and the results are now made public by the Ottawa Government. They must have been put together in haste, because very little attempt has been made to summarise or explain the figures. Page after page is filled with the population of numbered districts in these various provinces—and sometimes there are towns—but what the people are doing or what has drawn them into the lonely, out-of-the-way places we must guess, nothing is explained. Therefore, it is but summaries that we can give of the statistics. These, however, are tolerably pleasurable, since they show a remarkable increase in the population compared with the totals for 1901 or five years before. For the whole three North-West Provinces the increase has been 389,351, and the total population was at the date of the latest census 808,863 for the three. Out of this total 342,608 were females and 466,255 males. The population of the province of Manitoba itself, the oldest and most populous of the three, rose by 110,477 in the five years, and at the date of this census numbered 365,688, of which total 90,153 was in Winnipeg. That city, indeed, has more than doubled its population in five years, the figure just named being 47,813 above that for 1901. Very few districts, even in the province of Manitoba, contain 1,000 inhabitants, but the town of Brandon had a population of 10,408 according to the 1906 census, and of this total 4,652 were females. Brandon and Dauphin districts form together the most populous region of the entire North-West, and each last year had a total population exceeding 34,000, the two together showing a total of nearly 69,000. Over great regions of the province of Saskatchewan the population is so exceedingly scanty that most of the numbered districts show less than 100 inhabitants of both sexes together, and there are still a good many blanks. The Assiniboia East division, however, had a total population of 45,953 compared with 21,573 in 1901, and the entire population of the province rejoices in an increase of 166,494, the

total being 257,763. Alberta also shows a remarkable expansion of no less than 112,390, the aggregate being 185,412 as against 73,022 in 1901. But how small these figures must appear to those whose imaginations have been stimulated by the remarkable stories about the filling up of the North-West, population pouring in not only from Europe, but from the United States, and even from the Australian colonies, so as to occupy this great waste region of the globe, whose agricultural potentialities were only waiting the scratch of the plough to make everybody rich. No doubt there have been further increases during the current year, though these it is to be feared may be somewhat counterbalanced by the autumn and winter flight now said to be going on; yet at best the country is a raw one still, and must remain an exceedingly forbidding region to civilised and comfort-loving humanity for many a day to come. Cultivation of a kind, however, is spreading all over the land to a remarkable extent, and without going into particulars as to the number of horses, milch cows and other beeves, sheep or pigs which the population has managed to gather or rear, the acreage under cultivation may be worth noting. Thus in the entire North-West Provinces the area covered by the wheat crop in 1905 was 3,952,187 acres and in 1900 it was only 2,495,407 acres. The area under oats also rose from 833,390 acres in the earlier of these years to 1,697,429 acres last year. In the province of Manitoba the greatest increase measured by mere acreage has taken place not only in the area devoted to wheat, but in the sweeps of prairie given to oats and barley. Saskatchewan, however, shows proportionately a greater increase, since it in 1905 had about 1,382,000 acres devoted to wheat against only 487,170 acres five years before. Alberta's wheat area has risen from 43,000 to over 83,000 acres in the same time. Last year the aggregate wheat area of the three provinces rose to almost 5,064,000 acres, that under oats to 2,322,646 acres, and that under barley to 529,160 acres.

Rhodesian Banket and Baby West.

Attempts are frequently made, and just as often abandoned, to get a move on in the shares of the Rhodesian Banket and Eldorado Banket Companies. Booming such stuff is a herculean task, and since Abe Bailey and Co. gave the show away by peddling out shares in their thousands, after the most glowing reports had been spread about, the public sized up Bankets and their creators in a manner seldom witnessed, we regret to say. We have just got the reports of the Rhodesian Banket Company for the 12 months to June 30 last, and of the first baby, the West Rhodesian Banket, from the date of inception in November, 1905, to June 30, 1907. Baby West is no credit to its parent, but a stronger and healthier youngster came along in the following year, and was duly christened the Eldorado Banket. A report on this child's anatomy was circulated a little while ago, but the first report of the gentleman appointed to promote its welfare generally and induce others to supply the necessary financial assistance is not yet to hand. It is a disagreeable fact to be disclosed, but the moment these youngsters were put out into the world to make the family fortune their progenitors thought they could rest on their laurels, with the result that the family mansion appears to be suffering a little from neglect. Here we have the Rhodesian Banket Company announcing that during the year under review no work has been done upon the companies' properties. The directors decided to suspend operations on the claims owned in order to take advantage in the future of discoveries made at depth in the Eldorado mine. A mean-spirited action, to our way of thinking, to leave all the work to a nipper less than 12 months old; and the kid would probably kick, young as it is, except that the artful parents before putting it out took good care that they should always control its actions. The company has 180,053 shares in the Eldorado Banket, 96,993 in the West Rhodesian Banket, 569 claims, all situated in the Lomagunda District, which may blossom out into "subs" one of these days, and 100,000 acres of land (including a right to half-profits on all sales of stands). There's a collection for you; and even if you would not give a five-pound note for the whole pile of West Rhodesian shares, think of the wonderful achievements of Eldorado! That kid is a real brick, and goodness knows how the parents and their pals, Abe Bailey and Co.—especially "Abe"—would have got on without it. Eldorado was given a piece of ground and told to mine for gold, British as well as Rhodesian, the first-named being, until lately, much the easier to win. The pity of it—this vein is now worked out!

But Eldorado worked with a will, and has proved "pay chutes" so far for a length of 1,005 feet at the second level, the average value being 20 dwts. over the full drive. Not only that, but the face of the drive is still in pay ore, driving is being continued at the first, third, and fourth levels, and at all points good results are being obtained. The fourth level is 565 feet from surface, and for 1,250 feet at present driven the average value is 35½ dwts. to the ton. Think of it! Nearly two ounces to the ton, and the gold worth almost 85s. an ounce. Of course, crushing results—milling began on September 1—are not so dazzlingly brilliant, but in September 2,584 tons gave 1,331 ozs., worth £5,657, and in October 2,532 tons yielded 1,332 ozs., valued at £5,659. Curiously, the October profit was less than the September one; but what matters that when the general developments at Eldorado "continue to be of a most satisfactory nature"? "The mine has proved to be of much larger capacity than at first anticipated," and who knows but that one day a dividend will be declared. But what can we think of Eldorado's elder brother, who ought to be doing still better considering that he is a year older? He is a disgrace to the family. Although his claims cost no less than £300,000, £50,000 cash and £250,000 paper, the idle scamp decided to cease work last August, and intends to live for a bit on the £38,000 which he has in cash. Taking a leaf out of the Banket book, it has been decided to stop operations pending further developments at neighbouring properties, in the hope that the experiences gained there will be a great factor in cheapening the cost of opening up the claims. Rhodesian Banket has cash and loans of about £56,000, and a balance of expenditure over income of £4,634. For obvious reasons there is no profit and loss account, and the only other items we need mention are, share premiums £45,000—poor wretches who paid them!—and the share holdings in the subsidiaries, valued at £267,099.

Jumpers Gold Mining Company.

It was necessary to enter rather fully into the position and prospects of this Rand mining company 12 months ago, because the life of the mine is nearly at an end, and the shares have hitherto stood at an unjustifiably high figure. They are not worth touching now, although the value has been reduced by almost 50 per cent. in the past 12 months. This, however, is practically accounted for by the dividends paid during the year, aggregating 75 per cent. The general manager now reports that the development of the mine is completed, a further quantity of 82,341 tons of ore being exposed. This estimate exceeds the amount given last year of the ore remaining to be developed, the difference being accounted for by the new reef and certain small blocks developed on main reef and main reef leader. The reef in these sections is very narrow, but it can be profitably extracted by the method of close sorting underground. The payable ore reserves now remaining in the mine, after allowing for sections which appear to be unpayable, were estimated on July 31 last at 111,905 tons or sufficient to keep the mill going for a period of nine months, meaning that by the end of April next all the known good ore will have been used up. This, however, will not bring operations quite to an end. The managing director refers to other sources from which the mill may draw supplies, the extent of which cannot be at present estimated. The first is from what is known as the new southern reef, which so far has been explored only down

to the third level, and the second is the rock from the old waste dump. This dump is now being picked over, and possibly it may yield an unexpected source of ore which will contribute to the quantity available for milling. All this is, of course, pure conjecture, and so far as actual milling operations are concerned we imagine it will be unwise to expect them to yield more than 8s. or 9s. in dividends at the utmost. Accumulated slimes to the amount of 160,000 tons, which should keep the plant going from 18 months to two years after the mill has closed down, may possibly give another 5s., certainly not more when everything has been allowed for, making 14s. in all. Give a further 6s. as the value of the holding in the Jumpers Deep Company, and we get a total of just £1 to be received within the next two or three years. The shares would cost about 18s. to buy, and if we allow a modest 5 per cent. simple interest for the three years that will probably elapse before everything is cleared up—administration expenses will be running all this time—it is perfectly obvious that the chances of coming out on the right side are small. Something may turn up to give an extra shilling or so, but, on the other hand, we may have been too optimistic in our calculations. In the 12 months to the end of July the ore received from the mine was 170,928 tons, and 545 tons were picked from old waste dump, making 171,473 tons in all. Of this, 37,427 tons were sorted out as waste, leaving 134,046 tons to be sent to the mill. Quantity crushed was 134,071 tons, yielding 41,386 fine ozs. Sands and current slimes gave a further 22,458 ozs., making 63,844 ozs. in all, the total extraction being 9·524 fine dwts. per ton. Compared with the preceding year this shows an increase of 1·702 dwts., due chiefly to the method of underground sorting, which was carried on this year on a larger scale than hitherto, and the ore mined from the new reef, of an average value of 12·546 dwts., has also had a good effect. Against this we have to place an increase in the working costs of 6s. 1·222d. per ton compared with the preceding year, but the revenue being up by 8s. 9·406d. per ton, the working profit improves by 2s. 8·184d. per ton. It is said that the increase in working costs was to be expected, owing to such matters as the treatment of current and accumulated slimes, the mining of the thin reefs remaining on the property, closer mining and sorting underground, and the greater hauling and handling necessary as the mine approaches exhaustion. Value of the gold produced was £279,454, and the balance of profit came to £78,988. Including sum brought forward and other items, the total nett revenue is £89,318, from which the two dividends, aggregating 75 per cent., take £75,000. Directors' commission is £1,500, profits tax £2,939, and depreciation £7,229, leaving £2,650 to be carried forward.

In Praise of the South-Eastern Railway.

Neither its officials nor Mr. Bonsor and his board have recently been blowing their own trumpet that we have noticed, and it may not be amiss to let them know how a recent passenger appreciates their splendid labours, their unexampled care for passengers and the matchless success with which the trains keep a time of their own, which is rarely the scheduled time. No more striking example of that independence of character which is the Englishman's well-known dominant characteristic could be afforded to the benighted and servile foreigner when he lands upon our hospitable shores than the train crawling supplies. Here is the experience of a recent traveller in proof, an experience which leads him to take the view that he was being made the victim of an elaborate joke by the officials of the company. He came to England recently by the Nord express from Petersburg, which is actually run to time over the best part of a continent. It only stops five minutes in Berlin and three minutes in Brussels, and its passengers were landed at Dover in time to have reached London for dinner if Mr. Cosmo Bonsor and his merry men had not ordered it otherwise. At the great Continental stations along the route the train ran over there were buffets and refreshments cheap, varied and good; at Dover there was the bleak, shelterless pier to welcome the human cargo shot out of the steamer. Happily the night was fine, and deprived the foreigner of opportunity to joke about dripping Albion, but the pier refreshment-room is described as "mouldy," as incapable of providing even cheap civility, let alone decent refreshment. A better cup of tea or coffee could be got for 2d. at any refreshment-room on the Continent, and the buns offered to the appetite there do not bear the aspect of having come over with the Conqueror, as they seem to do at Dover. The sixpenny tea provided at the pier is, indeed, described as of a sort good for renewing the symptoms of sea-sickness. Those, however, who did not feel drawn to self-indulgence on the pier were at full liberty to walk to the town station and wait for the train there. Those who did so found the lights turned down, a fact that ought to have inspired them with admiration for the zeal for economy shown by the management. A two hours' wait had to be endured somehow, then a train was provided, by help of which the belated pasengers sauntered up to the metropolis, just in time to get to bed not too early. Dinner there was none, or opportunity for dinner. "Really," our complainant winds up, "a return from the Continent to 'England, home and beauty' is like slipping back a century out of modern civilisation as illustrated abroad. One almost regrets not to be stopped somewhere about Sevenoaks by masked highwaymen and made to disburse, so that the illusion may be complete." Ah, well! when the belated traveller does get to London he will find up-to-date bucket-shops in plenty ready to do highwayman duty right well. The complaint thus humorously put has its serious aspect. Dilapidation and decay mark all the efforts of the South-Eastern and Chatham road to keep pace with the march of civilisation, and until the system of management is changed from top to bottom there will be no recuperation.

American Business Notes.

Everybody in New York seems to have been pleased on Saturday because the return of the New York Associated Banks was not as bad as they had expected. There was actually a decrease of £802,500 in the loans and discounts, and that appears to have been seized upon as indicating the turn of the tide. Why this view should have been taken we do not care to guess, but surely it was inevitable that declining prices and the continued forced liquidation should have some effect of the kind. In reality the return seems to us to have been by much the worst yet made public, for not only were deposits down £1,900,000, but there was again a decrease in the specie amounting to about £310,000, notwithstanding the steady inpouring of gold from Europe. To be sure, the heavy amount, said to be £2,200,000, sent by the *Mauretania* was not received in time to be included in the week's averages, but most days during the week parcels of gold came in from somewhere, and still the interior drain was so severe that the amount held by the banks was further drawn upon, specie being down £310,000. At the same time greenbacks had been taken into circulation to the amount of £252,000, so that in spite of the sharp decline in the liabilities to depositors the reserve shows a decrease of £87,500, and the deficiency is now £10,821,000 against a surplus of about £881,000 a year ago. Altogether about £18,200,000 in gold had been imported or engaged for import up to the beginning of the present week, and New York has kept none of it. But the premium on gold has almost vanished, and call money is now cheap—5 to 8 per cent. on Wall Street early in the week, 3 to 6 per cent. later.

In spite of this ominous display the American Press has been set to work diligently to write things up, to talk of returning confidence, an early reopening of the banks, successful subscriptions for the Panama bonds, and for the short-term Treasury notes, and, above all, of "harmony" between President Roosevelt and the Morgan-Rockefeller group. By the second week of
